

THE ENCYCLOPEDIA AMERICANA

THE INTERNATIONAL REFERENCE WORK

COMPLETE IN THIRTY VOLUMES

VOLUME XVI

JEFFERSON, CHARLES E. — LATIN

JEFFERSON, Charles Edward, American Congregational clergyman: b. Cambridge, Ohio, Aug. 29, 1860; d. Fitzwilliam Depot, N. H., Sept. 12, 1937. He was ordained minister in 1887 and until 1898 was pastor of the Central Congregational Church, Chelsea, Mass. In 1898 he became pastor of the Broadway Tabernacle, New York, N. Y., where he preached for 32 years.

JEFFERSON, Joseph, actor: b. Plymouth, England, 1774; d. Harrisburg, Pa., Aug. 4, 1832. He was the son of Thomas Jefferson, the manager of the Plymouth Theatre, and was trained as a player in his father's company. He went to America in 1795, where, after a brief appearance in Boston and 7 years in New York, he became a member of the Chestnut Street Theatre in Philadelphia. There he remained until two years before his death, and was known as "Old Jefferson" because of his success in elderly parts.

JEFFERSON, Joseph, American actor: b. Philadelphia, Feb. 20, 1829; d. Palm Beach, Fla., Apr. 23, 1905. He was the fourth in line of a family of actors and the grandson of Joseph Jefferson (1774-1832). At the age of four he appeared in one of the then famous "Jim Crow" entertainments presented by Thomas Dartmouth Rice in Washington, D.C. His father, also named Joseph, died in 1842, and the young Jefferson began a career of barnstorming in the southern states, following the army into Mexico and appearing in Chanfrau's Theatre in New York and in Philadelphia and Baltimore. Becoming known as an excellent stock player, he visited Europe for study in 1856 and in November of that year joined Laura Keane's company in New York. His prominence began with his appearance as Dr. Pangloss in *The Heir at Law* and his creation of Asa Trenchard in Tom Taylor's *Our American Cousin* in 1858. He next appeared as Caleb Plummer in Dion Boucicault's version of *The Cricket on the Hearth* and as Salem Scudder in Boucicault's *The Octoroon*. In 1860 Jefferson appeared in a dramatization of *Rip van Winkle* in Washington, but was dissatisfied with it and had the play rewritten by Boucicault. Jefferson's *Rip* was an immediate success at the Adelphi Theatre, London, in 1865, and at the Olympic Theatre, New York, in 1866, and from that time the actor added few parts to his repertory, except for a new characterization of Bob Acres in *The Rivals*, which opened at the Arch Street Theatre, Philadelphia, in 1880. After 1866 his tours of the country and his

appearances in London (1875-1877) were a succession of triumphs. Jefferson was also well known as a painter, chiefly of impressionistic landscapes, and his *Autobiography of Joseph Jefferson* (1890) is considered a masterpiece of its kind.

Consult Winter, W., *The Jeffersons* (Boston 1881); Wilson, F., *Joseph Jefferson* (New York 1906); Jefferson, E. P., *Intimate Recollections of Joseph Jefferson* (New York 1909).

JEFFERSON, Thomas, American statesman, third President of the United States; b. Shadwell, Albemarle County, Va., April 13, 1743 (N.S.); d. Monticello, Albemarle County, Va., July 4, 1826. He was the son of Peter Jefferson, a successful planter and well-known surveyor, and Jane Randolph, who came of a famous Virginia family. Inheriting a considerable landed estate, he doubled it by his happy marriage (Jan. 1, 1772) with Martha Wayles Skelton, which also burdened him with inescapable debt.

Thomas Jefferson.

He was well educated in small private schools, where he was thoroughly grounded in the classics, and (1760-1762) at the College of William and Mary, where William Small taught him mathematics and introduced him to science. He associated intimately with the liberal-minded Governor Francis Fauquier, and read law (1762-1767) with George Wythe, greatest law teacher of his generation in Virginia, himself becoming unusually learned in the law. Practicing (1767-1774) until the courts were closed by the American Revolution, he was a successful lawyer, though his professional income was only a supplement to his living. He began building operations at Monticello before his marriage, but his famous mansion was not completed in its present form until a generation later.

His lifelong emphasis on local government grew directly from his own experience. He served as magistrate and vestryman, and at the age of 27 became county lieutenant. Elected to the House of Burgesses when he was 25, he served there, 1769-1774, showing himself to be an effective committee man and skillful draftsman, though not a ready speaker.

From the beginning of the struggle with the mother country he stood with the more advanced patriots or Whigs, and he grounded his position on a wide knowledge of English history and political philosophy. His most notable early contribution to the cause of the patriots was his powerful pamphlet, *A Summary View of the Rights of British America* (1774), originally written for presentation to the Virginia convention of that year. In this he emphasized natural rights, including that of emigration, and denied parliamentary authority over the colonies, recognizing no tie with the mother country except the king. As a member of the Continental Congress (1775-1776), he was chosen in 1776 to draft the Declaration of Independence. He summarized current revolutionary philosophy in a brief paragraph which has been regarded ever since as a charter of American and universal liberties; and he presented to the world the case of the patriots in a series of burning charges against the king. The Declaration is rightly regarded as one of Jefferson's major titles to enduring fame.

Partly for personal reasons and also in the hope of translating his philosophy of human rights into legal institutions in his own state, he left Congress in the autumn of 1776 and served in the Virginia legislature until his election as governor (June 1, 1779). This was the most creative period of his revolutionary statesmanship. Earlier proposals of his for broadening the electorate and making the system of representation more equitable had failed, and the times permitted no action against slavery except that of shutting off the foreign slave trade. But he succeeded in ridding the land system of aristocratic feudal vestiges, such as entail and primogeniture, and he was the moving spirit in the disestablishment of the church. With George Wythe and Edmund Pendleton he drew an elaborate and highly significant report on the revival of the laws (1779). His most famous single bills are the Bill for Establishing Religious Freedom (adopted in 1786), and the Bill for the More General Diffusion of Knowledge (never adopted as he drew it). His fundamental purposes were to destroy artificial privilege of every sort, to promote social mobility, and to make

way for the natural aristocracy of talent and virtue, which should provide leadership for a free society.

As governor (1779-1781) Jefferson had little power, and he suffered inevitable discredit when the British invaders overran Virginia. An inquiry into his conduct was then voted. He was fully vindicated by the next legislature, but these charges were afterwards exaggerated by political enemies and he was hounded by them to some extent throughout his national career. The most important immediate effect of his troubles was to create in his own mind a distaste for public life, which persisted in acute form until the death of his wife (Sept. 6, 1782) reconciled him to a return to office, and an aversion to controversy and censure from which he never recovered wholly.

During this brief private interval (1781-1783) he compiled his *Notes on Virginia*, which were first published when he was in France (1785). This work was described at the time by competent authority as "a most excellent natural history not merely of Virginia but of North America." It afterwards appeared in many editions, and it was the literary foundation of his deserved reputation as a scientist. In the Continental Congress (1783-1784) his most notable services were connected with the adoption of the decimal system of coinage, which later as secretary of state he tried vainly to extend to weights and measures, and with the Ordinance of 1784. Though not adopted, the latter foreshadowed many features of the famous Ordinance of 1787. Jefferson went so far as to advocate the prohibition of slavery in all the territories.

His stay in France (1784-1789), where he was first a commissioner to negotiate commercial treaties and then Franklin's successor as minister, comprised in many ways the richest period of his life. He gained genuine commercial concessions from the French, negotiated an important consular convention (1788), and served the interests of his own weak government with diligence and skill. He was confirmed in his opinion that France was a natural friend of the United States, and Great Britain at this stage a natural rival, and thus his foreign policy assumed the orientation it was to maintain until the eve of the Louisiana Purchase. The publication of his *Notes on Virginia* was symbolic of his unofficial services to the French, and those to his own countrymen were exemplified by the books, the seeds and plants, the statues and architectural models, and the bits of scientific information that he sent home. His stay in Europe contributed greatly to that universality of spirit and diversity of achievement in which no other American statesman, except possibly Franklin, ever equalled him.

Toward the end of his mission he reported with scrupulous care the unfolding revolution. His personal part in it was slight, and such advice as he gave was moderate. Doubting the readiness of the people for self-government of the American type, he now favored a limited monarchy for France, and he cautioned his liberal friends not to risk the loss of their gains by going too fast. Though always aware of the importance of French developments in the world-wide struggle for greater freedom and happiness, he tended to stress this more after he returned home and perceived the dangers of political reaction in his own country. Eventually he was

repelled by the excesses of the French Revolution, and he thoroughly disapproved of it when it passed into an openly imperialistic phase under Napoleon. But insofar as it represented a revolt against despotism he continued to believe that its spirit could never die.

Because of his absence in Europe, Jefferson had no direct part in the framing or ratification of the American Constitution, and at first the document aroused his fears. His chief objections were that it did not expressly safeguard the rights of individuals, and that the perpetual reeligibility of the president would make it possible for him to become a king. He became sufficiently satisfied after he learned that a bill of rights would be provided, and after he reflected that there would be no real danger of monarchy under George Washington. His fears of monarchical tendencies remained and colored his attitude in later partisan struggles, but it was as a friend of the new government that he accepted the offer of the secretaryship of state.

During Jefferson's tenure of this office (1790-1793) Alexander Hamilton, secretary of the treasury, defeated the movement for commercial discrimination against the British (1791) which he favored; and connived with the British minister George Hammond so as to nullify Jefferson's efforts (1792) to gain observance of the terms of peace from the British, and especially to dislodge them from the northwest posts. Jefferson's policy was not pro-French but it seemed anti-British. Hamilton was distinctly pro-British, largely for financial reasons, and he became more so when general war broke out in Europe and ideology was clearly involved. In 1793 Jefferson wanted the French Revolution to succeed against its external foes, but he also recognized that the interests of his own country demanded a policy of neutrality. Such a policy was adopted, to the dissatisfaction of many strong friends of democracy in America, and was executed so fairly as to win the reluctant praise of the British. At the same time, Jefferson avoided an open breach with France.

Jefferson helped Hamilton gain congressional consent to the assumption of state debts, for which the location of the federal capital on the Potomac was the political return. His growing objections to the Hamiltonian "system" were partly owing to his belief that the Treasury was catering to commercial and financial groups, not agricultural, but he also believed that Hamilton was building up his own political power by creating ties of financial interest and was corrupting the legislature. The issue between the two secretaries was sharply joined by 1791, when the Bank of the United States was established. They gave to the president their now-famous rival interpretations of the Constitution in this connection. The victory at the time and in the long run was with Hamilton's doctrine of liberal construction, but Jefferson's general distrust of power and his reliance on basic law as a safeguard has enduring value in human history.

By late 1792 or 1793 the opponents of Hamiltonianism constituted a fairly definite national party, calling itself Republican. Jefferson's recognized leadership of this group can be more easily attributed to his official standing and his political philosophy than to his partisan activities. In the summer and autumn of 1792, by means of anonymous newspaper articles, Hamilton sought to drive Jefferson from the govern-

ment. The alleged justification was the campaign being waged against Hamilton by the editor of the *National Gazette*, Philip Freneau. Jefferson had unwisely given Freneau minor employment as a translator for the State Department, but he claimed that he never brought influence to bear on him, and there is no evidence that he himself wrote anything for the paper. But he had told Washington precisely what he thought of his colleague's policies, and had already said that he himself wanted to get out of the government. Early in 1793 the Virginians in Congress vainly sought to drive Hamilton from office or at least to rebuke him sharply for alleged financial mismanagement. Jefferson undoubtedly sympathized with this attack and he was probably consulted about it. A degree of unity was forced on the president's official family by the foreign crisis of 1793, which also caused Jefferson to delay his retirement to the end of the year.

During a respite of three years from public duties he began to remodel his house at Monticello and interested himself greatly in agriculture, claiming that he had wholly lost the "little spice of ambition" he had once had. Nonetheless, he was supported by the Republicans for president in 1796, and, running second to John Adams by three electoral votes, he became vice president. His *Manual of Parliamentary Practice* (1801) was a tangible result of his presiding over the Senate; and his papers on the megalonyx, and on the moldboard of a plow invented by him, attested his scientific interests and attainments. These papers were presented to the American Philosophical Society, of which he became president in 1797. A private letter of his to Philip Mazzei, published that year, was severely critical of Federalist leaders and was interpreted as an attack on Washington. His partisan activities increased during the quadrennium, especially 1798-1800. He deplored the Federalist exploitation of the French issue, following the publication of the XYZ Correspondence, but his sympathy with France had declined. He disapproved of the Adams administration chiefly because of the notorious Alien and Sedition Acts, and his grounds were both philosophical and partisan. The historic Republican protest against laws that attempted to suppress freedom of speech and to destroy political opposition was made in the Virginia and Kentucky resolutions (1798). Jefferson wrote the latter as James Madison did the former, though his authorship was not known at the time, and in them he carried his state-rights doctrines to their most extreme point in his entire career. In invoking the states against laws which he regarded as unconstitutional, his resolutions were in the tradition which finally led to nullification and secession; but he was championing freedom, not slavery, and they were also in the best tradition of civil liberties and human rights.

The defeat of John Adams in the presidential election of 1800 can be partially explained by the dissension among the Federalists, but as a party they were now much less representative of the country than the Republicans. Jefferson's own title to the presidency was not established for some weeks, since he was accidentally tied with his running mate, Aaron Burr, under the workings of the original electoral system. The election was thrown into the House of Representa-

tives, where the Federalists voted for Burr through many indecisive ballots. Finally, enough of them abstained to permit the obvious will of the people to be carried out. Jefferson's own designation of the Republican victory as a "revolution" was hyperbolic. He had no intention of upsetting the financial system which was now firmly established, and he regarded himself as more loyal to the Constitution than his foes, though he was less a strict constructionist in practice than in theory. But he had checked the tide of political reaction, and he brought to his office a spirit of humane liberalism which was then exceedingly rare among the rulers of the world.

The political success of Jefferson's first term was attested by his easy re-election. Apart from foreign danger, his rather negative interpretation of the functions of the federal government suited the times. He exercised real leadership over Congress, but this was tactful and indirect. He restored the party balance in the civil service, but he was conciliatory in spirit and maintained essentially the same personal standards as his predecessors. In Madison, his secretary of state, and Albert Gallatin, his secretary of the treasury, he had lieutenants of the first caliber. He was relatively unsuccessful in his moves against the judiciary, which had been reinforced by fresh Federalist appointees at the very end of the Adams administration. He treated as null and void late appointments which seemed of doubtful legality, and the Republicans repealed the Judiciary Act of 1801 with his full approval, but he was rebuked by Chief Justice John Marshall in the famous case of *Marbury v. Madison* (1803). The effort to remove partisan judges by impeachment was a virtual failure, and the Federalists remained entrenched in the judiciary, though they became less actively partisan.

These partial political failures were more than compensated by the purchase of Louisiana (1803), the most notable achievement of Jefferson's presidency. His concern for the free navigation of the Mississippi had caused him, while secretary of state, to assume a more beligerent tone toward Spain, which controlled the mouth of the river, than toward any other nation. The retrocession of the province of Louisiana to France, now powerful and aggressive under Napoleon, aroused his fears and, for the first time in his career, caused his diplomatic friendship to veer toward the British. The acquisition of an imperial province, rather than the mouth of the river, was a fortunate accident, saving the West to the American union and the Republican Party. The treaty which Robert R. Livingston and James Monroe sent home aroused constitutional scruples in Jefferson's mind, but this was no time for constitutional purism and the president yielded to his friends, while strict constructionist arguments were taken up ineffectually by the New England Federalists.

During his first term Jefferson was subjected to a torrent of abuse from the Federalist newspapers which temporarily shook but did not destroy his confidence in a free press. He interpreted his re-election as proof of the wisdom of tolerance. He had more need to rely on his political popularity in his second term than in his first. The unsuccessful attempt to convict Aaron Burr (1807) of treason discredited him somewhat, and involved him in a political duel with Chief Justice Marshall. His major effort to

safeguard American rights during the relentless duel between the British and Napoleon was the Embargo Act (1807), which sought to bring economic pressure on them both by suspending American commerce. In the attempt to enforce this measure, which was particularly unpopular in commercial New England, the government exercised arbitrary power and infringed on individual rights, thus violating some of Jefferson's most cherished principles; and, for a variety of reasons, it failed of its purpose. At the very end of his term he signed an act which partially repealed it. Thus he retired from the presidency at a low point in his own popularity.

During the remainder of his life (1809-1826), he remained at home in Virginia. His failures tended to be forgotten, and as the Sage of Monticello he engaged in vast correspondence, with John Adams among others, which is in many ways the richest of his life. His last great public service was the founding of the University of Virginia (chartered 1819). He inspired the legislative campaign for a university, got it located in his own county, planned the buildings, outlined the course of study, and served as the first rector. He had long been troubled by debt, and the failure of a friend whose note he had endorsed brought him to virtual bankruptcy. But he was rich in honor, friendship, and domestic happiness when he died at Monticello on the 50th anniversary of the Declaration of Independence, a few hours in advance of John Adams.

He was a tall man, not specially prepossessing in appearance and rather indifferent to externalities of dress as he grew older, but amiable and generous in all personal relations. In his time he was the most conspicuous American patron of learning, science, and the useful arts—making distinctive contributions of his own in natural history and architecture. His policies were of their own day, and he himself said, "The earth belongs always to the living generation." But in its emphasis on the centrality of human rights and the supreme importance of freedom his philosophy is universal. He remains the best American exemplar of hostility to every form of tyranny.

Bibliography.—*The Papers of Thomas Jefferson*, ed. by J. P. Boyd and others (Princeton 1950-), being published in more than 50 vols., will supersede all other collections. Of previous collections of his writings, the best edited is that of P. L. Ford, 10 vols. (Philadelphia 1892-99), and the most extensive is that of A. A. Lipscomb and A. E. Bergh, 20 vols. (Washington 1903). Distinctive among separate publications are: Chinard, Gilbert, ed., *The Commonplace Book of Thomas Jefferson* (Baltimore 1926); Betts, E. M., ed., *Thomas Jefferson's Garden Book* (Philadelphia 1944); Boyd, J. P., *The Declaration of Independence: the Evolution of the Text* (Princeton 1945).

Much of the foregoing article is based on Dumas Malone, *Jefferson the Virginian* (Boston 1948), and *Jefferson and the Rights of Men* (Boston 1951), comprising vols. 1-2 of *Jefferson and His Time* (projected in 5 vols.). H. S. Randall, *Life of Thomas Jefferson*, 3 vols. (Boston 1858), remains the most extensive biography and is still valuable.

Among more recent works, the following are of special interest and importance: Kimball, F., *Thomas Jefferson, Architect* (Boston 1916); Bowers, C. G., *Jefferson and Hamilton* (Boston 1925); Honeywell, R. J., *The Educational Work of Thomas Jefferson* (Cambridge 1931); Chinard, Gilbert, *Thomas Jefferson* (Boston 1939); Koch, A., *Philosophy of Thomas Jefferson* (New York 1943); Dumbauld, E., *Thomas Jefferson, American Tourist* (Norman, Okla., 1946).

DUMAS MALONE,

Professor of History, Columbia University.

JEFFERSON, city, Iowa, and Greene County seat; 66 miles northwest of Des Moines; on the Chicago, Milwaukee, St. Paul and Pacific;

and the Chicago and North Western railroads. Jefferson is in an agricultural and coal mining region, and is a trading and shipping center. Industries include metal manufactures; livestock remedies; creameries; and egg and poultry packing plants. The city was settled about 1854 and was named for Thomas Jefferson. Pop. (1940) 4,088; (1950) 4,324.

JEFFERSON, city, Texas, and Marion County seat; on Big Cypress Bayou at the west end of Caddo Lake; 51 miles southwest of Texarkana; on the Texas and Pacific; Louisiana and Arkansas; and the Jefferson and Northwestern railroads. Jefferson is in a region producing cotton, corn, strawberries, timber and oil; and manufactures cottonseed oil and oil well supplies. The city was founded in 1836 on Trammel's Trace, the route followed by Sam Houston. In its early days it was the most important river port in Texas; Caddo Lake and Red River being then navigable to the Mississippi. Pop. (1940) 2,797; (1950) 3,161.

JEFFERSON, city, Wisconsin, and Jefferson County seat; altitude 792 feet; on Rock and Crawfish rivers; and on the Chicago and North Western Railroad, 25 miles northeast of Janesville. In an agricultural region, it has food-processing plants; also shoe and furniture factories, and woolen and carding mills. Here the county has an asylum and home, and a county farm. The St. Coletta School for Exceptional Children is located here. American Legion Park provides recreational facilities. Jefferson has mayor and council. Pop. (1950) 3,620.

JEFFERSON, river, Montana, a stream about 200 miles long, formed by the union of the Beaver Head and Wisdom (or Big Hole) rivers in Madison County. It unites with the Madison and Gallatin to form the Missouri.

JEFFERSON, State of, the name proposed for what is now the State of Colorado. In 1859 delegates met in an endeavor to establish a provisional government. A constitution was adopted for the "State of Jefferson" with an area somewhat larger than that of Colorado, extending from 37° to 43° north latitude and from 102° to 110° west longitude. The opposition to a state led to a second convention which, under the fiction of erecting a territory, established a new state and called it the "Territory of Jefferson." The constitution adopted by the first convention was ratified but never went into effect. The constitution adopted by the second convention was almost unanimously ratified Oct. 24, 1859, on which day a full complement of state officers was elected. The new territory was constantly embroiled with its neighbor territories, and when it was recognized by Congress in 1861, it was given the name of Colorado.

JEFFERSON BARRACKS, United States Army post, Missouri, a reservation in St. Louis County; altitude 418 feet; on the Mississippi River; 13 miles south of St. Louis; on the Missouri Pacific Railroad. The site was selected in 1826, replacing old Fort Bellefontaine on the Missouri River as a midwestern center for movements of troops and supplies. It was named in honor of Thomas Jefferson who had died that year. The reservation covers approximately 1,700 acres.

JEFFERSON-BURR IMBROGLIO, Imbrōlyō, a disputed presidential election which resulted from a defective clause in the Constitution and caused its amendment in 1800. By its original provisions, the person who received the highest number of electoral votes should be president, the next highest vice president. Each set of electors had informally agreed that to save the pride of the leading candidates (Jefferson and Burr, Adams and Pinckney) each pair should have equal votes, and with one exception never reflected that this meant a tie; one Rhode Island Federalist elector cast his second vote for John Jay instead of Pinckney, and there is an unproven charge that Burr intrigued for an extra vote over Jefferson. They, however, received 73 each, and the Federalist House had to choose between the two Democratic candidates. Rules were adopted for the balloting, among the chief being that the Senate should be admitted, that the balloting should be in secret session and that the House should not adjourn till a choice was made. The Federalists in caucus decided to vote for Burr; perhaps partly to spite the Democrats—Jefferson being their great national leader and the great Federalist terror, and the man the Democrats had intended to vote for as president—and partly because Burr as a New York man would consult Northern commercial interests, which the Virginian Jefferson might antagonize. They were right in this; Burr would not have laid the embargo. Their solid vote would have elected Burr by one (nine out of 16 states); but they could not hold their members, three of whom bolted and voted for Jefferson to satisfy public feeling in their districts. Thus Jefferson had eight states, Burr six, and Vermont and Maryland were divided. But the Burr electors in the last two secretly agreed with Bayard of Delaware, who had also voted for Burr, that if there were likely to be bad blood and danger from prolonged balloting, they would stop it by voting for Jefferson. The casting vote thus lay with Bayard, who justly commanded confidence; but as the agreement was not known the situation seemed much more perilous than it was. The balloting lasted a week without change. Some of the Federalists plotted to have it last till John Adams' term expired, and then let the others fight it out, or leave it by special act to Chief Justice John Marshall (Federalist), as a sort of regent trustee. The Democrats countered by resolving either to have Jefferson and Burr jointly (one of them certainly being president) call a special session, or to seize the capital by a militia force, call a convention, and revise the Constitution. Finally, after 34 ballots, the confederate electors decided that if Jefferson would give a guarantee for the civil service, he should have the election after one more ballot; he gave the guarantee, and was elected on the 36th ballot by 10 to 6 (states). Burr became vice president; that the attempt to put him at the head was mainly due to real fear for commerce is made probable by the fact that every New England state except the one (Vermont) which had no commerce voted for him to the last. This affair resulted in the passage of the Twelfth Amendment which obliged the electors to specify their choice for the offices on distinct ballots, and enlarge the range of choice to three candidates in case of tie.

JEFFERSON CITY, city, Missouri, state capital and seat of Cole County. Named for Thomas Jefferson, the city occupies 9.9 square miles and lies on the south bank of the Missouri River about 121 miles west of St. Louis, at an altitude of 625 feet. The city is on three federal highways, is served by the Missouri Pacific and the Missouri-Kansas-Texas railroads, and has an airport for charter service and private planes.

Besides being the state's political center, Jefferson City is the trading center for a radius of 50 miles, and contains manufacturing and processing plants which produce (among other things) shoes, work clothes, furniture, flour, dairy products, and dolls.

The city is governed by a mayor and a council whose members are elected from each of the city's wards. In addition to its public school system (which includes a junior college) Jefferson City has parochial schools for the children of its Catholic and Lutheran population; and Lincoln University for the higher education of Negroes, who represent approximately 10 per cent of the city's total residents. The university dates from 1866, when two Negro Civil War regiments that had been mustered out, raised funds to start the institution which was later (1879) taken over by the state. Among the city's churches, 16 denominations are represented. Jefferson City's library facilities include public libraries, the library in the Cole County Historical Society, and the state library, said to house one of the finest law collections in the United States.

State buildings located in the city include that of the Missouri Supreme Court, the Missouri State Penitentiary, the Executive Mansion, the state Office Building, and the Capitol. The first and second capitol were destroyed by fire (1837 and 1911). Jefferson City's third capitol, completed in 1917, is of special interest not only because it is an imposing building of Carthage marble, designed in an adaptation of the Italian Renaissance style, but also because of the works of art inside it or on its grounds, such as murals by Thomas Hart Benton and sculptural works by Robert I. Aitken, James E. Fraser, Alexander S. Calder, Adolph A. Weinman, Karl T. F. Bitter, and Hermon A. MacNeil. In the Capitol are also the Soldiers and Sailors Museum (containing historic relics) and the Missouri Resources Museum (displaying commercial exhibits, as well as exhibits of the state's natural resources).

History.—In December 1821, a few months after Missouri was admitted to the Union, a very small river settlement which had assumed the ambitious name of City of Jefferson was chosen as the site of the state's capital. It was platted the following year, incorporated as a town in 1825, and reincorporated as a city in 1839. Growth was slow, however. By 1840, exclusive of slaves, its population was less than 1,000. Until about 1860, increment came largely through settlement by German immigrants. Nevertheless, stage and steamboat services were established, and in 1856 a railroad connected St. Louis and Jefferson City. The capital now became important as a transfer point from railroad to packet boat on the journey to the West. Industrial progress was halted by the Civil War, and growth was not resumed until the 1880's. In 1881 the first shoe factory in Jefferson City was established, and by the early 1900's Missouri's cap-

ital was the largest producer of footwear west of the Alleghenies. Most of the city's working population is employed by the local or state governments.

Population.—Between 1890 and 1930, population increased from 6,742 to 21,596. In 1950 the population was 24,990.

JEFFERSONTON, Engagement at. Early in October 1863 the Army of the Potomac, under command of Gen. George G. Meade, lay around Culpeper Court House, with the advance of two corps on the Rapidan. General Lee, who was south of the Rapidan, determined to flank Meade's position, seized the Orange and Alexandria Railroad north of the Rappahannock, and intercept his retreat upon Washington. Informed of the movement, Meade withdrew his army to the north side of the Rappahannock, October 11, his rear-guard of cavalry having a sharp engagement with the Confederate cavalry at Brandy Station. Believing that the Confederate Army was moving upon Culpeper, Meade turned about and on the 12th threw three infantry corps and a cavalry division south of the Rappahannock, with instructions to push forward and find and strike Lee, if at Culpeper. When they reached Brandy Station the Confederate Army was nowhere in that neighborhood. At this time Gen. David McMurtre Gregg's division of Union cavalry was guarding the upper fords of the Rappahannock and Hazel rivers; on the morning of the 12th Colonel Gregg's brigade crossed the Rappahannock near Sulphur Springs; his pickets at Jeffersonton being driven in, he marched for that place, found it in possession of the enemy, drove them from the town and occupied it. That morning Fitzhugh Lee's cavalry division, leading the Confederate advance from near Madison Court House, crossed Hazel River at Stark's Ford and pressed on toward the Rappahannock. The 11th Virginia Cavalry drove Gregg's skirmishers into Jeffersonton and attacked the two regiments in the town, but was driven out after losing several men. The 7th and 12th Virginia were now sent to the left and right, encircling the town, a combined attack was made, and Gregg was utterly routed and driven across the Rappahannock, with a loss of about 400 men, most of them captured. The Confederate loss was about 40 killed and wounded. When Meade heard of the engagement, and that Lee was crossing the Rappahannock at Warrenton Springs, he hastily recrossed the river, withdrew to Auburn and Catlett's Station and, on the 14th, to Centreville, Lee following closely and attacking his rear at Auburn and Bristoe Station during the day.

Consult *War of Rebellion—Official Records*, vol. 29 (Washington 1889-1901); Walker, F. A., *History of the Second Army Corps* (New York 1886).

JEFFERSONVILLE, city, Indiana, and Clark County Seat; altitude 458 feet; on the Ohio River near the Falls of the Ohio and opposite Louisville, Ky.; 107 miles southeast of Indianapolis; on the Pennsylvania; Cleveland, Cincinnati, Chicago and St. Louis; and Baltimore and Ohio railroads; has river boat service, and is connected with Louisville by bridges. The municipal bridge connecting it with Louisville was built in 1930. At one time shipbuilding was Jeffersonville's principal industry, fleets of Mis-

Mississippi River packets and barges going out from its yards. At the U.S. Army Quartermaster Depot, within the city, supplies are manufactured for troops in nearby states; there was a supply base here in Civil War times, but the present depot was established in 1872, by Maj. Gen. M. C. Meigs (q.v.). Industries of the city include burial vaults and monuments, cement, building blocks and other building material, and smokeless gunpowder. The city is on the site of Fort Steuben, settled in 1786. Jeffersonville was laid out in 1802 and named for Thomas Jefferson, at that time president of the United States. In 1825 it was visited by Lafayette, and there is a monument to him in one of the city parks. It was incorporated as a town in 1815 and as a city in 1830. Government is by mayor and council. Pop. (1950) 14,671.

JEFFERY, Edward Turner, American railroad president: b. Liverpool, England, April 6, 1843; d. New York City, Sept. 24, 1927. He came to the United States in 1850 and in 1856 entered the employ of the Illinois Central Railroad Company, of which he became general superintendent in 1877-1885, and general manager in 1885-1889, when he resigned. He visited the Paris Exposition in 1889 as the representative of the executive committee of the citizens of Chicago, and was chairman of the grounds and buildings committee of the Columbian Exposition at Chicago until 1891. He was president of the Denver and Rio Grande Railroad Company in 1891-1912, its general manager in 1891-1900 and in 1912 became chairman of its board of directors. He was receiver for the Rio Grande Southern Railroad Company in 1893-1895, and then became its president. He was also president of the New Orleans and Northwestern Railroad, and was connected as director, chairman or vice president with various other railroads and trust companies.

JEFFERY, Walter J., Australian journalist and author: b. Portsmouth, England, Aug. 20, 1861; d. Feb. 14, 1922. After having been a sailor for 10 years he settled in Sydney in 1886, where he entered newspaper work and became eventually, successively, sub-manager of the *Evening News*, *Town and Country Journal* and *Woman's Budget*, and editor of the *Evening News*. Among his published works are *A Century of Our Sea Story* (London 1900); *The King's Yard*; *History of Australia*; and *English Naval History*. He collaborated with George Lewis Beck in *A First Fleet Family*; *Naval Pioneers of Australia*; *The Mutineers*; *Admiral Phillip*; *The Tapu of Bunderah*; and *The Mystery of Laughlin Isles*.

JEFFERYS, Charles William, Canadian artist: b. Rochester, England, 1869. He came to Canada in early life, received his art education in Toronto and New York, and engaged in black and white illustration in the latter city for some years. His pictures of pioneer life are very effective.

JEFFREY, Edward Charles, American botanist: b. St. Catharines, Ontario, Canada, May 21, 1866. He was graduated at the University of Toronto in 1888 and took his Ph.D. at Harvard in 1898. He was fellow in biology at the University of Toronto in 1889-1902, and

lecturer in that subject in 1892-1902. He was appointed assistant professor in plant morphology at Harvard in 1902, retiring as professor emeritus in 1933.

JEFFREY, Francis (Lord Jeffrey), Scottish judge and critic: b. Edinburgh, Oct. 23, 1773; d. Craigbrook Castle, near Edinburgh, Jan. 26, 1850. He was educated at the University of Glasgow and Queen's College, Oxford, and was admitted to the Scottish bar in 1794. He assisted in establishing the *Edinburgh Review* in 1802 with Sydney Smith, Henry Peter Broughan (Baron Broughan), and others, and after two numbers had been issued became its editor, a position which he held till July 1829. He showed great talents as an editor, and, although many of his literary judgments have been reversed by posterity, was accounted the greatest critic of his time. In 1831 he was made lord-advocate, and sat for several years as member of Parliament for Edinburgh. He was made a lord of session in 1834, and continued during a period of 16 years to be one of the ablest and most popular judges of the Supreme Court in Scotland.

JEFFREYS, George (1st Baron Jeffreys of Wem), English judge: b. Acton Park, near Wrexham, Wales, 1648; d. London, April 8, 1689. He was called to the bar in 1668, and soon after was chosen recorder of London. He was appointed chief justice of Chester, created a baronet in 1680 and became chief justice of King's Bench in 1682. He was one of the advisers and promoters of the arbitrary measures of James II; and for his sanguinary and inhuman proceedings against the adherents of Monmouth on the famous "Bloody Assize," was rewarded with the post of lord high chancellor (1685). After the abdication of King James, the chancellor, who had disguised himself as a seaman, was detected by a mob and carried before the lord mayor, who sent him to the lords in council, by whom he was committed to the Tower, where he died.

JEFFRIES, John, American physician: b. Boston, Mass., Feb. 5, 1744; d. there, Sept. 16, 1819. He was graduated at Harvard in 1763, studied medicine at London and Aberdeen, and returning to Boston in 1769 he entered upon a lucrative practice, which continued until the evacuation of the town by the British troops, whom he accompanied to Halifax. After serving as surgeon-general of the troops in Halifax, he was appointed in 1779 surgeon major of the forces in America. In the succeeding year he established himself in London in the practice of his profession, but also occupied himself much with scientific studies, and in the prosecution of his experiments in atmospheric temperature undertook, Jan. 7, 1785, a remarkable voyage in a balloon from Dover cliffs across the British Channel, landing in the forest of Guinnes in France. This was the first successful attempt at aerostation on an extended scale, and Jeffries in consequence received many attentions from the learned societies of Paris. In 1789 he returned to Boston, where he practiced his profession until the close of his life. He announced a course of lectures on anatomy in Boston in 1789, but so great was the prejudice against the practice of dissecting that on the evening of the second lecture a mob broke

into his anatomical room. The course thus interrupted was never resumed, and the single lecture delivered by Jeffries is said to have been the first public one on anatomy given in New England.

JEHOASH, king of Judah. See **JOASH**.

JEHOASH, pseudonym of **SOLOMON BLOOM-GARDEN**, Yiddish poet: b. Verzhbolovo, government of Suwalki, Russian Poland, April 1870; d. 1927. He came to the United States in 1890, and in 1900 he became a regular contributor to *Die Zukunft*. He had written verse from an early age and created a favorable impression with his first volume, published in America in 1907. Other volumes followed, and prior to his visit to Palestine in 1914 a collected edition of his works, including a volume of fables, was brought out in seven volumes. He edited with C. D. Spivak *The Dictionary of Hebrew Elements in Yiddish* (1911); and is author of *From New York to Rehoboth and Back* (3 vols., 1917-1918). Before his death in 1927 he translated the Old Testament into Yiddish.

JEHOIAKIM, the 18th king of Judah, was the second son of Josiah. His name was originally Eliakim. His later name was given him by the Egyptians who placed him on the throne, after deposing his brother Jehoahaz. He encouraged all the abominations and strange worship abolished by his father. He was a man of blood and oppression and reigned 11 years. The Babylonians invaded the country, and Jehoia-kim was taken in chains to Babylon, and with him the prophet Daniel. Jehoia-kim was reinstated; but when, contrary to the advice of Jeremiah, he rebelled against Babylon, the Babylonians promoted an invasion of Judah by neighboring tribes. Jehoia-kim died during the siege of Jerusalem, before Nebuchadnezzar arrived, and his body was thrown down in front of the walls.

JEHOL, jê-hôl'; Chin. rô'hô, province of China, in southwest Manchuria, just north of the Great Wall. Bounded by Hopeh in the south, by Chahar in the west, and by Liaoning in the northeast, it is the gateway from China proper to Manchuria. The area is 69,491 square miles. Its name is derived from Je Ho, "Hot River," a small stream flowing east of Chengteh, the capital. The topography is mostly rugged. The north, sparsely populated, is watered by the Liao River, the south by the Lwan. Rainfall is scanty. The most fertile areas are along the rivers where wheat, barley, corn, and beans are grown. Pehpiao, near the eastern border, is the center of a rich coal-mining area; iron and gold are also found. Two railroads cross the province and there is a fair network of roads. Chihfeng, in the center of the province, is the largest city. From 1933 to 1945 Jehol was a province of the Japanese puppet state of Manchukuo. After Japan's surrender in 1945 the Chinese Communists and Nationalists fought over the region. Its present boundaries were set in 1949, by the Chinese People's Republic. Pop. (1947, official est.) 6,109,866.

JEHOL, city, China. See **CHENGTEH**.

JEHORAM, or **JORAM**, the name of five Bible characters. Only two are of special importance. Jehoram, king of Israel, was the

second son of Ahab and Jezebel and succeeded his brother Ahaziah, becoming the 10th king after the division of the kingdom. He reigned 12 years. Three wars occurred in his reign. Moab revolted. Jehoram with the aid of Jehoshaphat, king of Judah, and the king of Edom defeated Mesa, the king of Moab, overran the land and destroyed its cities. Later followed two wars with Syria. In the first the Syrian armies were led by Ben Hadad, and in the second by Hazael, newly anointed king by Elisha. Jehoram lost his throne and his life in the revolt of Jehu. Jehu himself shot the fatal arrow, and Jehoram fell on the very piece of ground which Ahab seized from Naboth, the Jezreelite, and thus fulfilled minutely the prophecy of Elisha. **JEHORAM** was also the name of the 5th king of Judah, who succeeded his father Jehoshaphat on the throne and reigned eight years. He married the daughter of Ahab and Jezebel, the noted Athaliah. He put his six brothers to death and became an idolater. The Edomites revolted from him and became independent. His kingdom was repeatedly invaded by the Philistines on the west and by the Arabians and Cushites on the east. His last days were filled with suffering as he was subject to a form of malignant dysentery of a most severe type. Because of his wickedness he was refused a place of burial among the kings. Elijah had admonished him from time to time without avail.

JEHOSHAPHAT, 4th king of Judah after the revolt of the 10 tribes. He was characterized as a good king. He brought about cooperative relations with the kingdom of Israel. The marriage of his son Jehoram to Athaliah was intended to cement amicable relations with the other kingdom, but final results were disastrous for the royal line. The king tried to restore the maritime commerce of King Solomon, but his fleet was wrecked on its first voyage. His alliance with Ahab was not a great success and only brought him into difficulty. His campaign, when joining with Jehoram of Israel and the king of Edom, his vassal, against Moab, was very successful. He received tribute from the Philistines and Arabians. His internal management of the kingdom was admirable. At one time he sent forth a commission to teach "the book of the law of the Lord" in the cities of Judah. He established local judges in every fenced city and a double court of appeals, ecclesiastical and civil at Jerusalem. His reign was the most prosperous reign enjoyed by the kingdom of Judah. After reigning 25 years he died at the age of 60, and was succeeded by his son Jehoram (q.v.).

JEHOVAH, an erroneous pronunciation of the name of the God of Israel in the Bible, due to pronouncing the vowels of the term "Adonay," the marginal Masoretic reading, with the consonants of the text-reading "Yahweh," which was not uttered to avoid the profanation of the divine name for magical or other blasphemous purposes. Hence the substitution of "Adonay," the "Lord," or "Adonay Elohim," "Lord God." The oldest Greek versions use the term "Kurios," "Lord," the exact translation of the current Jewish substitute for the original Tetragrammaton, Yahweh. The reading "Jehovah" can be traced to the early Middle Ages and until lately was said to have been invented

by Peter Gallatin (1518), confessor of Pope Leo X. Recent writers, however, trace it to an earlier date; it is found in Raymond Martin's *Pugeo Fidei* (1270).

Of the various names of God found in the Old Testament, Jehovah (more accurately Yaweh) occurs the most frequently. The use of Jehovah by some Biblical writers and Elohim by others has given rise to the Jehovist and Elohist as terms to designate documentary sources. In a vision at Horeb (Exodus 3), Moses learned the name "Jehovah" or "Yahweh" as God's name, but there is some evidence that it existed in pre-Mosaic times; it occurred in proper names, such as that of Moses' mother, Jochebed (Exodus 6:20). In Exodus 6:2, 3, it is said the name was not known to the patriarchs. The writer of Job, who lays the scene of his book in patriarchal times, speaks of Jehovah or Yahweh only once (Job 12:9), and makes his characters use the term "Shaddai." Yahweh, Jehovah, is not employed in Ecclesiastes, and in Daniel is found only in chapter 9. In many of the Psalms, Elohim occurs much more frequently than Yahweh. To avoid repetition of this name, when the name "Adonai" preceded, Yahweh is written in the Masoretic text with the vowels of Elohim and is read Elohim instead of Yahweh. Throughout the New Testament it is rendered Lord, as in the Septuagint.

There has been much speculation as to the origin and meaning of the term. Attempts to connect it with any Indo-European deity or to trace it to Egypt or China, or efforts to identify it with other Semitic divinities have not been successful. Exact scholarship is wanting and sources are meager. It might be derived from a root meaning "to fall" or "to be," or "to blow" or "to breathe;" or it might derive from the causative "to make to be"—he who causes to be, that is, the Creator. From Moses' time on it had the meaning "He who is wont to be" or "He who will be." Thus in Exodus 3:13, 14, in answer to the question "What is his name?" the reply is given "I am that I am." Here the idea of God as active and self-manifesting Existence is conveyed—a meaning almost the same as that of the Father who "hath life in himself" of John 5:26. Some modern scholars translate it "the Eternal." In post-Mosaic times Jehovah (that is, Yahweh or Jahweh) became the common name for God, especially in a personal sense.

JEHOVAH'S WITNESSES. A Christian religious group, taking its designation from Isaiah 43:10 (American Standard Version of the Bible): "Ye are my witnesses, saith Jehovah." They maintain the doctrine that Jehovah is Almighty God; Christ is king of the promised new world; this king is now enthroned in heaven and soon will destroy wickedness in the earth by fighting Armageddon; and that only those who heed the warning now given and obey Jehovah will survive to live forever on earth in the new world. They preach this doctrine from house to house.

During 1955 more than 642,000 of these ministers preached in 158 lands. They are organized into 16,044 congregations that meet several times weekly to study and train for the ministerial work. During 1955 they spent more than 85,000,000 hours preaching, placed more than 30,000,000 Bibles and study books, distributed over 85,000,000 copies of their publications *The Watchtower* (in 41 languages) and *Awake!* (in 14 languages), and conducted more than 337,000 weekly Bible studies in

the homes of interested persons. Since 1920 they have distributed more than 643,000,000 books and booklets in over 100 languages and dialects, not including magazines.

In 1955 they held a series of international assemblies in 13 major cities of the world. Forty-five hundred delegates from the United States and Canada were sent to Europe to swell the total attendance to 403,682. International assemblies, held in different countries, are regular features of their activity and attract widespread publicity.

While Jehovah's Witnesses consider that their denominational existence dates from the time of Adam's son Abel, their modern organization, founded by Charles Taze Russell, began in the 1870s, and they were originally called Russellites. Their legal agency, the Watch Tower Bible and Tract Society, was incorporated in 1884. Their officers are N. H. Knorr, president (1942); F. W. Franz, vice president; G. Suiter, secretary-treasurer. Headquarters are located at 124 Columbia Heights, Brooklyn 1, New York. Branch offices operate in 78 countries to expedite the systematic, worldwide preaching work.

JEHOVIST, jê-hô'vist, sometimes called JAHWIST or YAHWIST, a hypothetical author of the Pentateuch (the first five books of the Bible), who used the word Jehovah or Yahweh as the name of God instead of Elohim, a term also used in many passages of the Old Testament. The writer who employed the latter designation is called Elohist. Most modern Biblical critics regard the Pentateuch as a compilation from two original records, one made by a Jehovist, the other by an Elohist. The Jehovist history is supposed to be the older of the two (by some critics it is dated 950 B.C.), and to have been an account of Jehovah's dealings with the Israelites up to the conquest of Palestine west of Jordan. It is a religious history of the attainment of the Promised Land. This history emphasized the supremacy of Jehovah as the one God, creator of the world, and the national God and Father of the chosen people, in whose affairs He interposed as He appeared to their early forefathers in the shape of a man or an angel.

In the Elohist record, which is supposed to cover the same period and to have been written about 700 B.C., a more modern interpretation of history is attempted. The anthropomorphic suggestions of deity are softened; Elohim interposes merely by a voice, speaking to his people in words of encouragement or rebuke. Through the narrative of the hypothetical Elohist there runs a tone of sadness, with anticipations of coming disaster and disappointment.

The Yahwistic or Jehovistic editor who combined these two histories is supposed to have lived in the 7th century B.C., while in the 4th century B.C. a third post-exilic writer added to these combined elements the legal codes which swelled the Pentateuch into the Hexateuch. See also ELOHIM; ELOHIST; PENTATEUCH; TETRAGRAMMATON.

JEHU, jê'hû, an Old Testament prophet active in Israel in the reign of Jehoshaphat (c.873-849 B.C.). He is mentioned in I Kings 16:1, 7, 12, and in II Chronicles 19:2 and 20:34.

JEHU, 10th king of Israel: d. 816 B.C. He founded the 5th dynasty and ruled in Israel, the Northern Kingdom, from about 843 to 816 B.C.

A captain in the army under Ahab, he was later general under Ahab's son, King Jehoram (Joram). At the battle of Ramoth Gilead, against the Assyrians, Jehoram was wounded and went to Jezreel to recuperate. The prophet Elisha saw this as an opportune moment to make Jehu king and lay upon him the task of ridding the country of the idolatry which had grown up during the reign of Ahab. He therefore sent one of his disciples to the camp at Ramoth Gilead to secretly anoint Jehu as king of Israel (II Kings 9). After his secret anointing as king, Jehu drove in his chariot to Jezreel, with a number of his men, killed Jehoram and the queen mother Jezebel, and wiped out the entire house of Ahab and all the priests of Baal and their followers. He also seized the throne of Judah, the Southern Kingdom, by killing King Ahaziah and his family. Jehu's reign was troubled by war with the Assyrians in which he lost the territory east of the Jordan. He was obliged to pay tribute to Shalmanezar III. This incident is depicted on the black obelisk discovered at Nineveh and now in the British Museum.

JEHU, a colloquial and humorously satirical name for a coachman; also for any reckless driver. It derives from the Biblical description of King Jehu's driving (II Kings 9:20): "The driving is like the driving of Jehu the son of Nimshi; for he driveth furiously."

JEJUNUM. See **INTESTINE**.

JELACIC OD BUZIMA, yě'lā-chēt-y' ōd bōō'zhē-mā, **COUNT Josip** (English, **COUNT JOSEPH JELLACHIC**), Croatian soldier and governor: b. Petrovaradin, Slavonia, Oct. 16, 1801; d. Zagreb, Croatia, May 19, 1859. He became an officer in the Austrian Army. In March 1848 he was made ban (governor) of Croatia. With the object of separating Croatia from Hungary and uniting it to Austria, he led his troops against the Magyars in the revolutionary outbreak of 1848, but did not succeed in gaining his objective. Jelačić continued as governor of Croatia, and was made a count in 1855.

JELENIA GORA, yě-lě'nyā gōō'rā (Ger. **HIRSCHBERG**; **HIRSCHBERG IN SCHLESSEN**; or **HIRSCHBERG IM RIESENBERG**), city, Poland, in Wrocław Province, on the Bobrava River, 60 miles west-southwest of Wrocław (Breslau). A railway junction and tourist center, its chief industries are textile and paper milling, wood-pulp processing, and manufactures of machinery, optical glass, castings, chemicals, pharmaceuticals, and tiles. Formerly in Silesia, Germany, it was assigned to Poland by the Potsdam Conference in 1945. Pop. (1946) 39,050.

JELlicoe, jěll'ī-kō, **John Rushworth**, 1st **EARL JELlicoe**, British admiral: b. Southampton, England, Dec. 5, 1859; d. London, Nov. 20, 1935. His father was Capt. J. H. Jellicoe of the Royal Mail Steam Packet Company; his great-grandfather was Admiral Philip Patton, second sea lord in the Trafalgar campaign. Jellicoe entered the navy in 1872 and served as lieutenant during the Egyptian war, 1882. About that time he began to concentrate his attention on naval gunnery and came under the influence of the progressive Capt. John Arbuthnot Fisher (later Lord Fisher), commandant of the gunnery school. In 1889 Fisher, as director of naval ordnance, made

Jellicoe his assistant at the Admiralty. Promoted commander in 1891, he was appointed in 1893 to Admiral Sir George Tryon's flagship the *Victoria* and was on that vessel when she was rammed and sunk by the *Camperdown* in the Mediterranean. He served as chief of staff to Admiral Sir Edward Hobart Seymour in China in 1898-1901, and at the time of the Boxer rising (1900) was severely wounded. After a period at the Admiralty as naval assistant to the controller of the navy, he commanded the cruiser *Drake*, and in 1905 became director of naval ordnance. He was rear admiral of the Atlantic Fleet, 1907-1908; third sea lord, 1908-1910; vice admiral commanding the Atlantic Fleet, 1910, and the Second Division of the Home Fleet, 1911-1912; and second sea lord, 1912-1914.

On the outbreak of World War I, Jellicoe was placed in command of the Grand Fleet, and hoisted his flag on the *Iron Duke* on Aug. 4, 1914, the day Great Britain entered the war. He was promoted admiral in 1915. He directed the North Sea blockade of Germany and the operations of the fleet in the Battle of Jutland. In December 1916 he was succeeded by Admiral David Beatty, and was appointed first sea lord in place of Admiral Sir Henry Jackson. In January 1918 he was raised to the peerage as Viscount Jellicoe of Scapa, and in 1919 he was promoted admiral of the fleet. He served as governor general of New Zealand (1920-1924), and in 1927 was New Zealand delegate to the Geneva Arms Conference. In June 1925 he was made Earl Jellicoe. See also **WAR, EUROPEAN—Naval Operations: Resources and Problems; The Battle of Jutland**.

Consult Bacon, Sir Reginald Hugh Spencer, *Life of John Rushworth, Earl Jellicoe* (London 1936); Altham, Edward, *Jellicoe*, Order of Merit Series (Glasgow 1938).

JELLIFFE, jěll'if, **Smith Ely**, American neurologist and psychiatrist: b. Brooklyn, N. Y., Oct. 27, 1866; d. Huletts Landing, N. Y., Sept. 25, 1945. After graduating from Brooklyn Polytechnic Institute in 1886, he took his degree in medicine at Columbia University in 1889, and the Ph.D. degree in 1900. He did extensive post-graduate study in Europe. He was instructor in materia medica and therapeutics and professor of pharmacognosy and technical microscopy at Columbia (1897-1907); professor of psychiatry at Fordham University, New York City (1907-1912); and (1911-1917) adjunct professor of diseases of the mind and nervous system in the Post Graduate Hospital and Medical School, New York. A pioneer in psychoanalysis in the United States, he was opposed to imprisonment of the criminally insane, favoring hospitalization instead. Some of his earlier published works included a study of the flora of Long Island, his Ph.D. thesis; also textbooks on botany, medical chemistry, and pharmacognosy. He revised G. F. Butler's *Materia Medica* in 1902, and translated and edited a number of works on paranoia and other neurological subjects from the French, German, and Italian. From 1900 to 1905 he was editor of the *Medical News*, New York, and from 1905 to 1907 was associate editor of the *New York Medical Journal*. In 1913, with Dr. W. A. White, he published *Modern Treatment of Nervous and Mental Disease*, and in 1915 the textbook *Diseases of the Nervous System*. In 1907 they had founded the *Nervous and Mental Disease Monograph Series*, (22 volumes), and in 1913 they founded the *Psychoanalytic Review* devoted to furthering a more scientific understanding of human conduct.

He was editor of the *Medical News* (1900-1905); associate editor of the *New York Medical Journal* (1905-1909); managing editor of the *Journal of Nervous and Mental Diseases* (1902-1945) and of the *Psychoanalytic Review* (1913-1945). He contributed many articles to the *ENCYCLOPEDIA AMERICANA*. Dr. Jelliffe was active in practice, limiting his medical work to diseases of the nervous system. Reference has been made to his more important publications in this branch of medicine.

JELLY includes every translucent juice so far thickened as to coagulate when cold into a trembling mass; as the juices of acid or mucilaginous fruits, currants, etc., which, by the addition of one part of sugar to two parts of juice, and, by boiling, have obtained a proper consistence.

1. Animal Jelly.—The soft parts, such as the muscles, skin, cartilage or integuments of animals, when boiled in water, yield a solution which on cooling solidifies to a tremulous jelly. Seventy pounds of bones, when treated with one pound of water in the form of steam, at a pressure of four pounds to the square inch and simultaneously digested in five gallons of water, will yield about 20 gallons of a strong jelly.

Animal jelly seems to be nearly identical in composition with the tissues which yield it, so that we are unable to trace any chemical change, except, perhaps, the assimilation of water during the process of its manufacture. The following analysis shows the average percentage of carbon, hydrogen and nitrogen in animal jelly:

	Carbon	Hydrogen	Nitrogen
1)	49.0	7.0	19.4
2)	50.0	6.5	17.5

2. Vegetable Jelly.—When the juice of fruits is heated with sugar, the liquid forms a stiff jelly on cooling. It appears from the researches of Frémy and others that unripe fruits contain a compound of carbon, hydrogen and oxygen called *pectose*; as the fruit ripens, this substance is transformed into *pectin*, the change being brought about chiefly by the influence of a peculiar ferment called *pectase*, which is contained in the fruits. As pectin is soluble in water, the expressed juice of ripe fruits contains a large quantity of this substance, which on heating to a temperature of about 105° F. is converted into one or more substances which have not as yet been completely studied, but which have the property of gelatinizing on cooling. The principal of these substances are *pectonic* and *metapectic* acids. This latter acid, when boiled along with another strong acid, whether mineral or organic, is decomposed, one of the products being pectin sugar, a substance which is closely allied to glucose, so that in all probability there is produced in the very process of manufacturing jellies more or less of this sugar, which certainly is not cane-sugar, and which might, therefore, be by some regarded as an adulteration. The processes which, in the living plant, result in the transformation of pectose into pectin may be imitated on a small scale by heating the juice of unripe fruit with the pulp, which contains the ferment pectase, or with a dilute acid which induces the same change as this substance. Alkalis also produce a similar effect.

JELLYFISH, the medusa-stage of *Hydrozoa* (q.v.), but more especially the common name of *Scyphozoa* (formerly *Discomedusa*), the second class of the phylum *Celenterata* (q.v.). A familiar example is the common large jellyfish of the coast of New England, *Aurelia flavidula*. It sometimes reaches the diameter of 10 inches; its umbrella-shaped body is convex and smooth above, and from the under sides hang down four thick oral lobes which unite to form a square mouth-opening also giving off four tentacles. The margin of the umbrella or disc is fringed and bears eight eyes which are covered by a lobe. Just under the surface are seen the water-vascular canals, branching out from four primary canals radiating from the stomach. When in motion, the disc contracts and expands rhythmically, on the average from 12 to 15 times a minute.

The *Aurelia* spawns late in the summer, the females having yellowish ovaries, while the sperm glands of the males are roseate in hue. The eggs are fertilized in the sea and the ciliated pear-shaped larva by October sinks to the bottom, attaching itself to rocks or shells, finally assuming a hydra-like shape, with often as many as 24 long slender tentacles. This is the *Scyphistoma* stage in which it remains about 18 months. From this it passes into the *Strobila* stage in which the body divides into a series of cup-shaped discs, each of which is scalloped on the upturned edge. These discs separate one after the other in March and swim away as miniature jellyfishes called *Ephyra*. The *Ephyra* is at first about a fifth of an inch in diameter, and becomes a fully formed *Aurelia* in April, reaching maturity in August. Another but less common jellyfish on the coast of New England and in the north Atlantic is the great *Cyanea arctica*, or "blue jelly," which is nearly two feet in diameter, sometimes from three to five, and with very long string-like tentacles, sometimes extending from 20 to 100 feet, which are filled with stinging or lasso-cells (*trichocysts*), so that the animal is poisonous to fishermen and bathers. While these forms undergo a metamorphosis, in fact, an alternation of generation, other kinds, as *Pelagia*, etc., are known to develop directly from the egg, and even the *aurelia* under exceptional circumstances does not pass through the *scyphistoma* stage. The jellyfishes are divided into a number of groups. They are most numerous in the tropical seas, comprising forms of great beauty. Consult Agassiz and Mayer, 'Acalephs from the Fiji Islands' (in *Bulletin of the Museum of Comparative Zoology*, Vol. XXXII, Cambridge 1899); Romanes, C. J., 'Jellyfish, Starfish and Sea Urchins' (New York 1885); Packard, 'Zoology' (1897); Arnold, 'The Sea Beach at Ebb-tide' (1902); Mayer, A. G., 'The Medusae of the World' (Washington 1911).

JELUTONG (Malay), an inferior kind of rubber prepared from a large variety of rubber trees that grow wild in the swamps of Borneo.

JEMAPPES, zhě-map', Belgium, city in the province of Hainault, five miles southwest of Mons, on the river Haine. It was here that the French under Dumouriez won a decisive victory over the Austrians under the Duke of Saxe-Teschén, 6 Nov. 1792. It was the first victory won by the French Republic and was followed by the occupation of Belgium.

Occupied by the Germans in World War I, it was one of the last towns to be liberated before the armistice of 1918. The town has glass and porcelain factories, and there are iron mines nearby. Pop. (1946) 12,467.

JENA, yā'nā, Germany, town, 12 miles east of Weimar, on the left bank of the Saale. It consists of the town proper and of four suburbs. It contains a famous university which was opened in 1558 and attained its highest prosperity toward the end of the 18th century, when it numbered Schiller, Humboldt, Fichte, Schelling, and Griesbach among its teachers and was attended by above 1,000 students; Arndt and Hegel later were professors here. In 1844 the number of students had dwindled to 411, but in the period before World War II the student body averaged over 2,500. It possesses an anatomical theater, botanical garden, observatory, good physical and chemical laboratories and an excellent library. Jena is famous as a center of the glass industry and for lens and optical manufactures. Pop. (1939) 72,323.

JENATSCH, yā'nātsch, **Georg**, or **Jürg**, Swiss political leader and soldier: b. Samaden, 1596; d. Coire, Jan. 24, 1639. He was educated at Zürich and Basel and became pastor of the Protestant church at Scharans, near Thusis, in 1617. He entered politics, espousing the cause of the Venetian and Protestant Salis family against that of the Spanish and Romanist family of Planta. He was the leader of the body which in 1618 put to death by torture the arch-priest, Rusca of Sondrio, and outlawed the Plantas. In 1621 he was one of the murderers of Pompey Planta, head of the opposition, and was forced thereafter to flee the country, abandoning his pastorate and becoming a soldier in the service of the French. The peace of 1626 between France and Spain left the Romanists in control and destroyed Jenatsch's hope of return to power. After killing his colonel in a duel he again fled from his native land, and joining the forces of the French he ably supported the Duke de Rohan in expelling the Spaniards from the Valtellina in 1635. Upon the failure of the French to restore the Protestant Grisons ascendancy he returned Romanist and joined the Spaniards in the plot that caused Rohan's downfall. Failing to secure ascendancy for the Grisons in the Valtellina, he again appealed to the French for support, but was assassinated by a Planta partisan. His career is interwoven with the long contest of France and Spain for the Valtellina during the Thirty Years' War.

JENCKES, or **JENKS**, **Joseph**, American inventor, grandfather of Joseph Jenckes, governor of Rhode Island (q.v.): b. Colbrooke, England, 1602; d. Lynn, Mass., March 16, 1683. He came to America about 1645 and settled at Lynn, where he established the first iron and brass foundry on the Western continent, and manufactured the first domestic utensils, machinery and tools produced here. He was granted a patent "for the making of engines of mills go by water" by the legislature May 6, 1646, and also received patents for a sawmill. He executed the dies for the Massachusetts coinage of 1652, including the famous "pine-tree shilling." In 1654 he is recorded as making a contract with the selectmen of Boston for "an

engine to carry water in case of fire," the first to be made in America. In 1655 he received a long-delayed patent for an improved grass-scythe which was vastly superior to any scythe then made and which has been adopted practically throughout the world without material change.

JENCKES, jēnks, or **JENKS**, **Joseph**, colonial governor of Rhode Island: b. Pawtucket, 1656; d. June 15, 1740. He was a land-surveyor and was commissioner of the Rhode Island colony in settling boundary disputes with Massachusetts and Connecticut, and was afterward employed by Massachusetts in similar troubles with New Hampshire and Maine. He served in various official capacities in the colony, was member of assembly in 1700-1708 and deputy governor in 1715-1727. He went to England in 1721 to lay the boundary disputes before the king; and in 1727-1732 he was governor of the colony, refusing re-election. His grandfather Joseph Jenckes (q.v.) was the noted inventor and scythe manufacturer, and his father, of the same name, founded Pawtucket.

JENCKES, **Thomas Allen**, American legislator, "Father of Civil Service Reform": b. Cumberland, R. I., Nov. 2, 1818; d. there, Nov. 4, 1875. A graduate of Brown University in 1838, he was admitted to the bar in 1840 and practised at Providence. The United States government retained him in suits against the Crédit Mobilier. He was secretary of the landholders' convention (1841), of the state constitutional convention (1842), and of the governor's council on its establishment. Elected to the state legislature in 1845, he was one of the commission appointed to revise state laws in 1855. From 1862 to 1871 he was a representative in Congress where he obtained enactment of the Bankrupt Law of 1867 and revisions of patent and copyright laws. His strenuous efforts on behalf of civil service reform continued after his congressional tenure, during which he had obtained passage of the bill making entrance to West Point dependent on competitive examinations.

JENIFER, **Daniel of St. Thomas**, American public official and signer of the Constitution: b. Charles County, Md., 1723; d. Annapolis, Md., Nov. 16, 1790. Inheriting a considerable fortune, Daniel of St. Thomas Jenifer lived at Stepney, his large estate in Charles County. He served as agent and receiver-general for Maryland's last two proprietors, held many public offices, and in his younger days was a justice of the peace of his county and later a judge of the province's western circuit. In 1760 he was one of the commission to settle boundary disputes with Pennsylvania and Delaware, and in 1766 was a member of the provincial court. He sat on the governor's council from 1773 to the outbreak of the Revolution. At first inclined to conciliation with England, he strongly supported the Revolutionary cause from the time of his election in 1775 as president of Maryland's Council of Safety. On establishment of the state government in 1777, Jenifer was appointed president of the Senate. The following year he was elected to the Continental Congress, serving until 1782. Subsequently for several years he was intendant of the Maryland revenues and

financial agent of the state. He was also one of his state's commissioners who conferred with Virginia commissioners in 1785 to agree on navigation rights in the border waters of Chesapeake Bay and the Potomac River. A delegate to the Constitutional Convention of 1787, he played a rather unimportant part in framing the Constitution which he signed for his state with James McHenry and Daniel Carroll. Judge Jenifer never married. He kept open house at Stepney and exchanged visits with Washington who seems to have had a partiality for him.

JENKIN, jěng'kin, (Henry Charles) Fleming, English engineer: b. near Dungeness, March 25, 1833; d. Edinburgh, June 12, 1885. He took his M.A. at the University of Genoa in 1850 and in 1851 began his career as an engineer at Manchester. In 1859 he became associated with Sir William Thomson, afterward Lord Kelvin, in experiments on the resistance and insulation of electric cables, and his researches on the resistance of gutta-percha were recognized as of great importance. He was elected a Fellow of the Royal Society in 1865 and appointed professor of engineering at University College, London. From 1868 until his death he was professor of engineering at Edinburgh University; and from 1882 was engaged in developing his invention of telferage, an automatic electric system for transporting goods in cars hung from overhead cables. He was author of *Magnetism and Electricity* (1873).

JENKINS, jěng'kinz, Charles Francis, American inventor: b. near Dayton, Ohio, Aug. 22, 1867; d. Washington, D.C., June 6, 1934. He studied at Earlham College and Johns Hopkins University, invented a motion picture projector having an intermittent movement (patented 1895), an altimeter, automobile self-starter, braking device for airplanes, the conical paper drinking cup, and devices in radiophotography, radio-movies, and television. He published *Vision by Radio*, *Radio Photographs*, *Radio Photograms* (1925); *Visual Radio and Television* (1928); *Boyhood of an Inventor* (1931).

JENKINS, Charles Jones, American jurist and statesman: b. Beaufort County, S. C., Jan. 6, 1805; d. Summerville, Ga., June 14, 1883. He was graduated from Union College, Schenectady, N. Y., in 1824, and after the study of law began practice in Augusta, Ga. He was a member of the Georgia legislature in 1830 and after a short service as attorney general of the state was a member of the legislature 1836-1850, and a leader of his party there. He was state senator 1856-1860, and was a judge of the Georgia Supreme Court 1860-1865. He became governor of his state in 1865, but was removed from office by Gen. G. G. Meade on Jan. 3, 1868, because of failure to pay for the reconstruction convention. He presided over the Constitutional Convention of 1877.

JENKINS, Herbert, British author and publisher: b. Norwich, 1876; d. London, June 8, 1923. He was educated at Greyfriars College, and in association with Sir George Hayter founded the publishing house of Herbert Jenkins Ltd. He created the fictional character Bindle in his books *Bindle* (1916), *Adventures of Bindle* (1918), and *Mrs. Bindle* (1921).

JENKINS, John Edward, English political and social writer: b. Bangalore, India, July 28, 1838; d. London, June 4, 1910. He was educated at McGill University, Canada, and the University of Pennsylvania, went to London and was called to the bar in 1864. He was agent-general for Canada in London, 1874-1876, and sat in Parliament for Dundee, 1874-1880. He became famous by the publication of his *China's Baby* (1870), a clever satire aimed at the struggles of rival sectarians to secure control of the religious education of a derelict child.

JENKINS, Sir Lawrence Hugh, British jurist in India: b. Cardigan, Wales, Dec. 22, 1857; d. Ealing, Oct. 21, 1928. He was educated at Cheltenham and Oxford University, and in 1883 was called to the bar. He became judge of Calcutta High Court in 1896, and from 1899 to 1908 he served as chief justice of the Court of Judicature, Bombay. After a year as a member of the Council of India, he was chief justice of the High Court of Bengal until 1915, when he retired. In 1916 he was appointed to the Judicial Committee of the Privy Council, and in 1924 was made a member of the board formed to determine the boundary between Northern Ireland and the Irish Free State.

JENKINS, Thornton Alexander, American naval commander: b. Orange County, Va., Dec. 11, 1811; d. Washington, Aug. 9, 1893. Entering the United States navy as a midshipman in 1828, he served therein during the war with Mexico. He was appointed to investigate European lighthouse systems and framed the law passed in 1852. He saw active service during the Civil War and was chief of the Bureau of Navigation 1865-1869. From 1869 to 1871 he was naval secretary of the lighthouse board and commanded the East India squadron 1871-1873. In 1870 he was appointed rear admiral and retired in 1873.

JENKINS, town, Kentucky, in Letcher County; altitude 1,527 feet; 28 miles southwest of Shelby; on the Sandy Valley and Elkhorn branch of the Chesapeake and Ohio Railroad. It was founded in 1911 by the Consolidation Coal Company for operatives in the coal mines of the district. About three miles south of the town is historic Pound Gap pass on the Virginia border. Pop. (1950) 6,921.

JENKINS' EAR, War of, popular name for the war between England and Spain, 1739-1743. Robert Jenkins, an English master mariner, was on a return voyage from the West Indies in 1731 when his brig, the *Rebecca*, was boarded by a Spanish guardacosta, whose commander cut off one of his ears and committed other outrages. The story at first attracted little attention, but repeated by Jenkins before the House of Commons in 1738, it became a contributing cause to the outbreak of war.

JENKINS FERRY, Arkansas, Battle of, took place April 30, 1864, when the Confederates under Gen. Sterling Price and Gen. E. K. Smith were repulsed from attacking Gen. Frederick Steele at the Saline River.

Consult *The War of the Rebellion: A Compilation of the Official Records of the Union and Confederate Armies*, Vol. 34 (Washington 1889-1901).

JENKINTOWN, borough, Pennsylvania, in Montgomery County, 10 miles north of Philadelphia; on the Reading Railway. Jenkintown is a residential suburb of Philadelphia. Beaver College for Women (1853) is there. Pop. (1950) 5,130.

JENKS, jěngks, **Albert Ernest**, American anthropologist: b. Ionia, Mich., Nov. 28, 1869. He has done research in Africa and Europe (1914, 1930), in New Mexico (1928-1931), and made several studies of the American Indian (1915, 1932-1938). He was professor of anthropology at the University of Minnesota from 1907 until his retirement as professor emeritus in 1938.

JENKS, **Edward**, English publicist: b. Stockwell, Feb. 20, 1861; d. Bishop's Tawton, Nov. 10, 1939. He was educated at Dulwich College and Cambridge University; was dean of the law faculty in Melbourne University, 1889-1892; professor of law in University College, Liverpool, 1892-1896; reader in English law at Oxford, 1896-1903; principal and director of the studies of the Law Society, 1903-1924; professor of English law, University of London, 1924, and dean of the faculty of laws, 1927-1929; elected fellow of the British Academy, 1930. His writings include *Constitutional Experiments of the Commonwealth* (1891); *A Short History of English Law* (4th ed., 1928); *Outline of English Local Government* (7th ed., 1930); *Government of the British Empire* (5th ed., 1937); *The Ship of State* (1939).

JENKS, **George Charles**, (pseudonym W. B. LAWSON), Anglo-American author: b. London, Eng., April 13, 1850; d. Auburn, N. Y., Sept. 13, 1929. He came to the United States in 1872 worked as a printer for 10 years, and began as a newspaper writer in Pittsburgh, Pa., in 1882. In 1895 he went to New York where he wrote dramatic criticism and contributed to the *Nick Carter* and *Diamond Dick* series of dime novels.

JENKS, **Jeremiah Whipple**, American political economist: b. Saint Clair, Mich., Sept. 2, 1856; d. New York City, Aug. 24, 1929. After graduation from the University of Michigan in 1878, he taught Greek, Latin, and German at Mount Morris College, Illinois, studied law, and was admitted to the Michigan bar in 1881. In 1883 he went to Germany for graduate study in political economy at the University of Halle, received his doctorate in 1885, and the same year published his thesis, *Henry C. Carey als Nationalökonom*. Returning to the United States, he taught political economy and English literature at Knox College, Galesburg, Ill., 1886-1889; was professor of economics and social science at Indiana University, 1889-1891; professor of political economy at Cornell in 1891-1912; professor of government and director of the division of public affairs at New York University, 1912-1917, and subsequently director of the division of oriental commerce and politics.

In 1899-1901 Dr. Jenks was adviser to the United States Industrial Commission in its investigation of trusts and industrial combinations in the United States and Europe. As special representative of the United States War Department he was sent to the Orient in 1902 to study

questions of currency, labor, internal taxation and police; in 1903-1904 was a member of the United States Commission on International Exchange in special charge of reform of the currency in China; and in 1907-1910 was a member of the United States Immigration Commission. He was president of the American Economic Association in 1906-1907, and was chairman of the board of directors of the Alexander Hamilton Institute. He was recognized as one of the foremost authorities on the trust question, and his writings are marked by scholarly and accurate investigation, and clarity.

He published *The Trust Problem* (1900; rev. with W. E. Clark, 1917). He was editor and part author of *Reports of the United States Industrial Commission on Trusts and Industrial Combination*, vol. 1 (1900); vol. 8 (1901). He compiled *Statutes and Digested Decisions of Federal, State and Territorial Law Relating to Trusts and Industrial Combinations*, 2 vols. (1900), and was part author and compiler of *Reports of Commission on International Exchange* (1904, 1905); *Citizenship and the Schools* (1906); and *The Immigration Problem*, (with W. Jett Lauck, 1913; 6th ed. rev. by R. D. Smith, 1925); with J. H. Hammond, *Great American Issues* (1921); with R. D. Smith, *We and Our Government* (1922); *Science of Business*, vol. 1 of *Modern Merchandising Course* (1927).

JENKS, **Tudor**, American editor and author: b. Brooklyn, N. Y., May 7, 1857; d. Bronxville, N. Y., Feb. 11, 1922. He was graduated from Yale in 1878, from the Columbia Law School in 1880, studied art in Paris in 1880-1881, practiced law in New York in 1881-1887, and 1887-1902 was a member of the staff of the *Saint Nicholas Magazine*. His writings include prose and verse, and a number of books for young readers. In 1902 he resumed his law practice.

JENKS, **William**, American clergyman: b. Newton, Mass., Nov. 25, 1778; d. Boston, Nov. 13, 1866. He was graduated at Harvard in 1797; ordained in 1805; served as pastor at Bath, Me. He was a chaplain in the War of 1812 and was for three years professor of Oriental languages and English literature at Bowdoin College. He settled in Boston, in 1818, engaging in special work among the seamen. He was a founder of the American Oriental Society.

He was author of *A Commentary on the Bible* (5 vols., 1834; 6 vols., 1851); *Explanatory Bible Atlas and Scripture Gazeteer* (1849).

JENNER, jě'n'ěr, **Edward**, English physician, discoverer of vaccination as a preventive of the smallpox: b. Vicarage, Berkeley, Gloucestershire, May 17, 1749; d. there, Jan. 26, 1823. He was apprenticed to a surgeon in Bristol; and in 1770-1772 was the pupil of the celebrated anatomist, John Hunter, in London. While there he also studied at St. George's Hospital. He returned to Berkeley to practice his profession. He was familiar with the belief prevalent among farmers and dairymaids that those who had had the common disease cowpox would not have smallpox, and seems to have been the first to give the matter serious study. By 1796 he had reached the conclusion that cowpox was protective against smallpox. A boy of eight whom he inoculated with cowpox in May 1796 developed

the disease, but when inoculated with smallpox the following July did not have that disease. See also **VACCINATION**.

In 1798 he published a short treatise, *An Inquiry into the Causes and Effects of the Variolae Vaccinae*, and in July 1798, Henry Cline, surgeon to Saint Thomas' Hospital, introduced vaccination into that institution. The practice was adopted in the army and navy and in the country generally, and soon spread to other countries, and honors and rewards were conferred on the author of the discovery. In 1802 a parliamentary grant was made to him of the sum of £10,000, and five years later a second grant of £20,000. Besides the treatise already mentioned, Jenner also published various letters and papers on the same subject, as well as on others. A famous paper of his on the cuckoo appeared in the *Philosophical Transactions* in 1788.

Consult Drewitt, F. G. D., *The Life of Edward Jenner* (London 1931).

JENNER, SIR William, English physician: b. Chatham, Jan. 30, 1815; d. Greenwood, Hants, Dec. 11, 1898. He was educated at University College, London, became in 1849 professor of pathological anatomy, and in 1860 of clinical medicine in that institution, and in 1861 physician to the queen. From 1863-1872 he was professor of the principles and practice of medicine in University College, and in 1868 was created a baronet. He was the earliest to establish the difference in kind between typhus and typhoid fevers.

JENNET, jën'ët, a small Spanish horse with a strain of Arabian blood, of high reputation for its beauty of form and its speed. The name is of English and French usage and was perverted from its original meaning, designating a horseman of a Berber tribe.

JENNIE GERHARDT, a novel by Theodore Dreiser (q.v.) published in 1911. The daughter of a poverty-stricken family, Jennie Gerhardt meets the Honorable George Sylvester Brander through her job of helping her mother take in washing. Senator Brander is charmed by Jennie's innocence and sweetness and, having become her lover, promises to marry her. Before the marriage can be performed, Brander dies and Jennie is left with her unsympathetic family. Her father sends her away in anger to have her child, and Jennie later obtains a position as household servant in another city where she meets Lester Kane, son of a moderately wealthy family. Jennie slips into a life with Kane that is routine and pleasant, even without benefit of clergy her only regret being that she cannot have her child, Vesta, with her. Their marriage is delayed for numerous family and financial reasons, and Lester, at Jennie's insistence, marries Letty Gerald. He provides a home for Jennie; but Vesta dies, and Jennie adopts two orphans. Lester falls ill and his death leaves Jennie with no one to take care of her.

Written in Dreiser's pedestrian and even pompous prose, *Jennie Gerhardt* was a revolutionary novel when it appeared, setting the stage for other naturalistic novels to follow. Moral transgressions, of the sort committed by Jennie not once, but twice, were considered wiped out only by death. Dreiser, the naturalist, treats the problem as one of the individual and society.

Jennie had no intellectual qualities; her desires and emotions were on an elementary plane. She placed a high value on very few things, with the exception of her child's welfare. She paid for her actions in loneliness and insecurity. She was, as the author says, one of those who . . . "come without understanding and that go again without seeming to have wondered why."

JENNINGS, jën'ingz, Herbert Spencer, American zoologist: b. Tonica, Ill., April 8, 1868; d. Santa Monica, Calif., April 14, 1947. He was graduated at the University of Michigan in 1893, received his Ph.D. from Harvard in 1896, and later studied in Germany at the University of Jena. He taught botany and zoology at various colleges and universities until 1905; in 1906 was appointed professor of zoology at Johns Hopkins University; and from 1910 to 1938 was director of the zoological laboratory there. After 1939 he was research associate at the University of California at Los Angeles. He served as associate editor of the *Journal of Experimental Zoology* and of *Genetics*. In research work he specialized in the physiology of microorganisms, animal behavior, and genetics. Among his works are: *Behavior of Lower Organisms* (1906); *Prometheus—or Biology and the Advancement of Man* (1925); *The Biological Basis of Human Nature* (1930); *The Universe and Life* (1933); and *Genetic Variations in Relation to Evolution* (1935); with others, *Scientific Aspects of the Race Problem* (1941). He also wrote numerous papers for scientific journals.

JENNINGS, Louis John, Anglo-American journalist and politician: b. London, May 12, 1836; d. London, Feb. 9, 1893. He was on the staff of the *London Times* in London, India and New York from 1860 until 1867, when he became editor of the *New York Times*. He attacked the Tweed Ring in the columns of the *Times* and was largely instrumental in bringing its activities to an end. In 1876 he resumed his residence in England, where he represented Stockport in Parliament in 1885-1886, and 1892.

JENNINGS, Sarah, DUCHESS OF MARLBOROUGH. See **MARLBOROUGH, DUKE OF**.

JENNINGS, city, Louisiana, Jefferson Davis Parish seat, altitude 25 feet, is located on the Mermentau River, 32 miles east of Lake Charles, on the Southern Pacific Railroad, in a rice, cattle and oil district. The first discovery of petroleum in the state was made here in 1901. The city has rice driers, elevators and mills, shipyards, wood preservation plants, petroleum refineries, and manufactures oil-well supplies. It was settled in 1884, and has a commission form of government. Pop. (1950) 9,663.

JENNINGS, city, Missouri, St. Louis County, is located just north of and adjacent to the city of St. Louis, on the Wabash Railroad. It is a home and business community, was settled in 1870, incorporated Dec. 27, 1946, and has mayor-council government. Pop. (1950) 15,282.

JENOLAN CAVES, Australia, about 70 miles west of Sydney near the Blue Mountain plateau in New South Wales. Arranged on four or five levels, the caves were formed by the

Jenolan River. Thousands of tourists visit them annually.

JENSEN, yĕn'zĕn, Adolf, German composer: b. Königsberg, Germany, Jan. 12, 1837; d. Baden-Baden, Jan. 23, 1879. An admirer of Robert Schumann, his work included *Lieder aus dem spanischen Liederbuch*; the song cycle, *Dolorosa*; *Gaudeamus* (12 songs for bass); the famous *Alt Heidelberg*; an opera, *Turandot*; and, in instrumental music, *Hochzeitsmusik* and *Erotikon*.

His brother, GUSTAV JENSEN (1843-1895), composed chamber music, piano pieces, and numerous songs.

JENSEN, yĕn's'n, Johannes Vilhelm, Danish novelist: b. Farsø, Denmark, Jan. 20, 1873; d. Copenhagen, Nov. 25, 1950. The son of a veterinary, he studied medicine at the University of Copenhagen before deciding on a writer's career. His first important novel was *Kongens fald* (1900-1901; Eng. tr., *The Fall of the King*, 1933), a story of the early 16th century, containing a notable psychological study of Christian II of Denmark. This was followed by *Madame d'Ora* (1904) and *Hjulet* (*The Wheel*, 1905), set in New York City and Chicago, which Jensen had visited in 1897. Another important early work was *Himmerlandshistorier* (1898-1910), a three-volume collection of stories of his native region. Travels in the Far East inspired the *Eksotiske noveller* (*Exotic Stories*, 1907-1915). Under the influence of Darwinian theory, Jensen wrote his major work, *Den lange rejse* (1909-1922; Eng. tr., *The Long Journey*, 1922-1924), a fictional saga of the evolution of the Northern peoples from the time of the glaciers to the 15th century, originally published in six parts. It was for this work chiefly that he received the Nobel Prize for literature in 1944. Jensen visited the United States for the second time in 1939. Besides books of lyric verse he published seven volumes of *Myter* (*Myths*), for which he created a distinctive form; translated Shakespeare's *Hamlet* into Danish; wrote several scientific works, including *Dyrenes forvandling* (*The Transformation of Animals*, 1927), and *Aandens stadier* (*Stages in the Development of Mind*, 1928); and at his death was generally considered Denmark's greatest writer.

JENSEN, yĕn'zĕn, Wilhelm, German novelist and newspaper editor: b. Heiligenhafen, Germany, Feb. 15, 1837; d. Thalkirchen, near Munich, Nov. 24, 1911. The author of more than 100 works, including tragedies, histories, lyric and epic poetry, he was distinguished principally for his novels, notably *Magister Timotheus* (1866); *Die braune Erika* (1868); *Eddystone* (1872); *Nirwana* (1877); *Diana Akhnoba* (1890); *Hunnenblut* (1895); *Luv und Lee* (1897); and *Vor der Elbmündung* (1905). While working as a novelist he was also the editor (1865-1869) of the *Schwäbische Volkszeitung* at Stuttgart, and of the *Norddeutsche Zeitung* (1869-1872) at Flensburg.

JENSON, zhān-sōn', Nicolas, French printer and designer: b. Sommevoire, Haute-Marne, France; d. Venice, Italy, 1480. He was master of the royal mint at Tours when Charles VII sent him to Mainz, Germany, to learn the art of printing from Johann Gutenberg, under whom he worked for three years. Jenson later set up his own printing establishment in Venice, and pro-

duced more than 150 books between 1470 and 1480, including many celebrated editions. He was named a count palatine by Pope Sixtus IV in 1475. His special contribution to the printing art was the introduction of a much-copied alphabet of roman capitals, to which he added lower-case letters of unsurpassed distinction. From these the English typographer, William Caslon (1692-1766), evolved the type face known by his name, while in the United States notable contemporary designs by Bruce Rogers also have taken Jenson's type as a model. See also TYPE AND TYPE FOUNDING.

Consult DeVinne, Theodore L., *Notable Printers of Italy during the Fifteenth Century* (New York 1910).

JENYNS, jĕn'inz, Soame, English politician and writer: b. London, Jan. 1, 1704; d. there, Dec. 18, 1787. He was elected to Parliament for Cambridgeshire in 1742, sat in the House until 1780, and was a commissioner of the Board of Trade and Plantations (1756-1780). He is chiefly remembered for the scathing review by Dr. Samuel Johnson in the *Literary Magazine* of his *Free Enquiry into the Nature and Origin of Evil* (1757). Besides some poems he also published *The Objections to the Taxation of Our American Colonies* (1765), and *A View of the Internal Evidence of the Christian Religion* (1776), which was translated into several languages.

JEOPARDY, jĕp'ēr-dī, in law, a term referring originally to the hazards of trial by battle, but now a legal term for the peril incurred in a criminal process when a defendant has been regularly charged with a crime before a competent tribunal. According to the United States Constitution (5th Amendment), no person shall be twice put in jeopardy of life or limb for the same offense. Jeopardy is construed by most authorities as beginning when a person has been put on trial and a jury has been impaneled and sworn to try him; if he is acquitted or convicted by them, he is not liable to stand trial a second time. In case of a mistrial or failure of the jury to agree, however, a new trial may be held.

JEPHSON, jĕf's'n, Robert, Irish playwright: b. Ireland, 1736; d. Blackrock, near Dublin, May 31, 1803. He served in the British Army and, on retiring with the rank of captain about 1763, lived for a time in England, where he became acquainted with David Garrick, Oliver Goldsmith, and Sir Joshua Reynolds. Returning to Dublin about 1767, he began to write for the stage. He was the author of *Braganza* (1775) and other tragedies, including *The Law of Lombardy* (1779), *The Count of Narbonne* (1781), and *Conspiracy* (1796).

JEPHTHAH, jĕf'thā, one of the judges of Israel. A son of Gilead, he was driven from home by his brothers and took refuge in the land of Tob; but when the Ammonites made war on Israel, he returned at the appeal of the elders to lead the defense of his country. This he did successfully, first taking a vow that he would make a burnt offering of whatever came to meet him from his house if he returned victorious. He was met by his daughter, who was accordingly sacrificed two months later and for whom thereafter the women of Israel observed a four-day period of lamentation annually. His story is told in Judges 11:12-7.

JEPSON, jěp's'n, Edgar, English novelist: b. London, Nov. 28, 1863; d. April 11, 1938. Educated at Oxford, he published *Sibyl Falcon* (1895); *The Passion for Romance* (1896); *The Keepers of the People* (1898); *On the Edge of the Empire* (1900); *The Horned Shepherd* (1904); *The Triumphs of Tinker* (1905); *Arsène Lupin* (1908); *The Man Who Came Back* (1915); *A Prince in Petrograd* (1921); *The Smuggled Masterpiece* (1923); *The Buried Rubies* (1925); *Memories of a Victorian* (1933); *Lucy and The Dark Gods* (1936).

JEQUITINHONHA, zhě-kě-tě-nyó'nyá, or **RIO GRANDE DO BELMONTE**, river, Brazil, located in the eastern coast country. It rises in the Serra do Espinhaço in the state of Minas Gerais, and flows in a northeasterly direction through the state of Bahia, emptying into the Atlantic Ocean near Belmonte, about 200 miles south of Salvador (Bahia). The river is about 500 miles long and, in the upper three quarters of its course, the current is swift. At Salto Grande, about 100 miles from the coast, is a cataract, considered one of the grandest in South America. The river is navigable for about 60 miles from the coast.

JERABEK, yě'r'zhā-běk, František, Czech dramatist: b. Sobotka, Jan. 25, 1836; d. Prague, March 31, 1893. He was educated at Leitmeritz and at Prague, and afterward engaged in teaching, journalism, and the writing of plays. He edited *Pokrok* and was at different times a member of the Bohemian Diet and the Austrian Reichsrat. He was author of a history of the beginnings of romantic poetry, *Stará doba romantického básnictví* (1884). His dramas deal with social problems and include several based upon historical facts. Among them are *Hana* (1858); *Služebník svého pána* (*Faithful Servant of His Master*, 1870; Ger. trans., 1872); and *Závist* (1885).

JERAHMEEL, jě-rā'mě-ěl, the name of a tribe friendly with David when he was in exile in Ziklag. Their founder is supposed to have been the brother of Caleb, the intimate of Joshua. The tribe is supposed to have penetrated Israel quite thoroughly and it is T. K. Cheyne's theory that many corruptions of the Old Testament text came from them.

JERASH, jŭ'rōsh (ancient GERASA, jě'r'ā-sā), town, Jordan, 20 miles north of Amman and a like distance east of the Jordan. In 83 B.C. it was captured by Alexander Jannaeus, and was rebuilt by the Romans in 65 B.C. In the reign of Vespasian it was taken and burned by Lucius Annus. It was once the seat of a Christian bishop, but soon sank into decay. The ruins of the old city are extensive, many fine columns and walls attesting its former splendor.

JERBOA, jě-rbō'ā, a common name including several genera of small jumping rodents, chiefly nocturnal, of the family Dipodidae found in parts of North Africa, Asia and southeastern Europe, characterized by greatly elongated hind legs and a long tail.

The word jerboa is derived from the Arabic name for the Egyptian form *Dipus* or *Jaculus aegyptius*, which ranges from northern Arabia to Algeria. It is a small animal which walks on

the toes of the hind feet, but which, when hurried, progresses at great speed by long leaps. A striking anatomical adaptation to the jumping habit is seen in the modification of the hind feet. The first and fifth toes have been lost and the metatarsal bones of the remaining three are greatly elongated and fused into a single bone. The very small forelegs are held so closely against the chest that they are hardly noticeable, and the animal is sometimes called the "two-legged mouse." The generic name *Dipus* signifies two feet. The three-toed Egyptian jerboa inhabits arid, sandy or pebbly deserts where vegetation is extremely sparse and where its predominantly

Jerboa (Egyptian).

fawn color renders it very inconspicuous. It is a gregarious animal and a number of individuals excavate their labyrinthine burrows in close proximity. The burrow may have several entrances. The jerboa spends much of the day in its home but comes out before sunset to forage for food, chiefly vegetable, though insects also are eaten. This species remains active throughout the year but some of its more northerly relatives, the five-toed jerboas, e.g. *Allactaga* (*Alactaga*) and *Euchoreutes*, of Central Asia, may hibernate for as long as five or six months. In these forms the hind feet retain the first and fifth toes though they are markedly reduced in size. The kangaroo rat (q.v.) and the jumping mouse of North America resemble the jerboas remarkably in their adaptations, but the likenesses represent only evolutionary parallelisms.

JERDAN, William, Scottish journalist: b. Kelso, Roxburghshire, April 16, 1782; d. Bushey Heath, Hertfordshire, July 11, 1869. He engaged in journalism in London in 1806, was present in the lobby of the House of Commons when Spencer Perceval was shot, May 11, 1812, and was the first to seize the assassin. He became editor of the Tory organ, the *Sun*, in 1813, and was complimented in high quarters for the freshness of his foreign news. He introduced, too, the then uncommon feature of almost daily literary articles in his columns. In 1817 he became connected with the *Literary Gazette* as editor and part owner, acquiring sole ownership in 1842, and until 1850 he edited and directed the periodical with exceptional ability. He was closely associated with many prominent writers of his time. His personal fortunes were impaired, through the Whitehead Bank failure of 1808 and the panic of 1826, and the dishonesty of a friend to whom he had entrusted investments finally ruined him financially. His friends subscribed a testimonial of more than £900 and in 1853 he was granted a pension of £100 from the civil list. Among his writings the most valuable are *Autobiography*, 4 vols. (London 1852-1853), and *Men I Have Known* (1866).

JEREMIAH. A great Judæan prophet. He seems to have been born at Anathoth, the modern Anat, three miles north of Jerusalem, c. 650 B.C., and belonged to a priestly family residing there. His father Hilkiah has been identified with the discoverer of the law (2 Kings xxii, 28) by Clement of Alexandria, Pseudo-Jerome (c. 800), Joseph Kimchi, Paul of Burgos, Abarbanel and a number of other interpreters; and V. Bohlen supposed that father and son collaborated in the production of the code promulgated in 620 B.C. This identification was rejected by Lyrannus, Calvin, Junius, Piscator and others, because he is not described as the high-priest; Castro, Sanctius, Ghisler, Sebastian Schmidt, Carpozov, Calmet, Venema, Blayney and most recent exegetes have assumed that he was a descendant of Abiathar, the priest deposed by Solomon and relegated to Anathoth (1 Kings ii, 26), and Ryssel thinks the opposition of Jeremiah to the priesthood in Jerusalem was a continuation of the rivalry between the sons of Eli and the Zadokites. It is possible, however, that in the course of four centuries members of other priestly families had moved into the town so conveniently near the capital. Jeremiah had an uncle by the name of Shallum, and a cousin named Hanamel. From Jer. xvi, 1 it may be inferred that he never married. He probably began his prophetic ministry in 625 B.C. When he heard the divine voice calling him to be a prophet to his people, he was first reluctant because of his youth, but was reassured by a vision of an almond tree the name of which suggested that Yahwe would watch over his oracles to bring them to early fulfilment, and forced to speak by a vision of a seething caldron whose smoke was blown from the north, indicating the direction whence the evil would break forth. Until recent times it was generally supposed that the enemy whose advance into Judah Jeremiah expected was the Chaldean. Allusions to the Scythian invasion described by Herodotus (i, 105) by his contemporary Zephaniah were suspected by Pezron ('*Essai sur les prophètes*, 1693), Hermann v. der Hardt ('*In Iobum*, 1728) and F. C. Cramer ('*Scythische Denkmäler in Palästina*, 1777). Volney ('*Recherches nouvelles*, 1814) and Eichhorn (1819) identified Jeremiah's northern enemy with the Scythians, and this opinion has been adopted by the majority of critics and historians. But the older view has been maintained, not only by Kueper, Hävernick, Neumann, Tholuck, Nägelsbach, Keil, Vigouroux, Trochon, Schneedorfer, Knabenbauer and Myrberg, but also by Graf, Reuss, 1814) and Eichhorn (1819) identified Jeremiah himself and many of his hearers looked upon Yahwe's oracles of doom as conditional, so that if the conduct of the people warranted it, he would repent him of the evil he had spoken (xxvi, 17-19). With their ignorance of the secret treaties in the chancelleries of the allied nations their narrow escape from the Scythians who naturally spared Assyrian territory must have seemed to them more marvelous than it does to us. An increased fear of Yahwe and gratitude toward him, in consequence of his deliverance, may have prepared the way for the reform of 620. Some scholars have supposed that Jere-

miah went about preaching in the interest of the centralization of the cult in Jerusalem, and was persecuted by his townsmen because of his advocacy of the Deuteronomic Code. His attitude toward the temple, the sacrificial system, and the written law renders this improbable. It is significant that the prophetess Huldah, and not Jeremiah, was consulted after the discovery of the law-book. If his declaration that "the false pen of the scribes has wrought falsely" (viii, 8) referred to some other code then being prepared in priestly circles, he would have laid himself open to serious misapprehension, since those who said "the law of Yahwe is with us" undoubtedly had in mind the Deuteronomic Code that had been discovered and officially adopted (2 Kings xxii, 8; xxiii, 3). To the covenant of Yahwe, involving obedience to his commandments when he led his people out of Egypt, he sincerely answered Amen (xi, 5); but he was convinced that on that day Yahwe had not spoken concerning burnt-offerings and sacrifices (vii, 22). If the people of Anathoth conspired to put him to death (xi, 19), it was because he had rebuked them for worshipping other divinities, among them probably the goddess Anath. He may at this time have removed to Jerusalem. Practically nothing is known of his life during the next fifteen years. It is strange that the battle of Megiddo and its tragic outcome have left no echo in his extant prophecies. Like Isaiah, he was strongly opposed to any alliance with Egypt; but neither does he seem to have favored a pro-Assyrian policy (ii, 18). His silence may indicate disapproval of Josiah's course, whether it was dictated by loyalty as a vassal or ambition for additional territory as a reward for service. The Chronicler charges Josiah with having disregarded the warning of a pagan oracle not to interfere in a quarrel that was not his (2 Chron. xxxv, 21ff); and even if the story was invented to account for the fate of a good king, it nevertheless reflects a position that may well have been Jeremiah's. He ascribes to the prophet an elegy (vs. 26) which is lost and can scarcely be thought to be genuine. The Assyrian empire fell in 606, and the eyes of Jeremiah turned once more to the north to discover what Yahwe's purpose was. It was probably his unshaken faith in the oracles Yahwe had given him to utter that made it certain to his mind that the real evil would not come from the south (Egypt), but from the north. Nebuchadnezzar's march through Mesopotamia, his victory over Necho at Carchemish in 605, and his descent to the border of Egypt revealed to Jeremiah that it was not Media, into whose power Assyria proper had fallen, but Chaldaea, that was to be the scourge in Yahwe's hand to bring his people to a genuine reformation or to utter ruin. The moral condition of Judah and the character of Jehoiakim rendered the need of such a visitation obvious. It may have been when the defeat of Necho's arms had driven the people with renewed zeal to the Yahwe-cult in the temple that Jeremiah appeared with an oracle predicting the destruction of the great sanctuary in whose inviolability they believed (vii, 1ff).

In 605 Baruch is said to have written in a roll from the mouth of Jeremiah all the words

that Yahwe had spoken to him. The reason for this procedure was probably not that Jeremiah was unacquainted with the art of writing, as Buttenwieser thinks, or as a man of letters found it convenient to dictate to his private secretary from a note-book kept by him for many years, as is generally supposed, but rather, as Stade has pointed out, that he was an inspired oracle-giver whose utterances in a state of ecstasy might be written down by another. The new word of Yahwe contained, no doubt, the substance of many an oracle in the past, but the burden of its message was that the enemy from the north, long ago announced by Yahwe, now distinctly named as the king of Babylon, would come and destroy the land and its inhabitants (xxxvi, 29). When the roll was the following year cut up and burned by Jehoiakim, Jeremiah hid himself, but continued to denounce the king, e.g., for his failure to pay his workmen, and to predict for him an evil death. Nor did he think that Yahwe would help Jehoiachin, who was actually deported in 597. In the time of Zedekiah (597-586), he strenuously opposed the Egyptian party which advocated independence, and finally persuaded the king to open rebellion against Nebuchadnezzar. Another prophet, Hananiah, announced in the name of Yahwe that Jehoiachin and the exiles would return in two years; Jeremiah declared that the exile would last 70 years, and is said to have threatened Hananiah with death within a year. In 587, when Nebuchadnezzar temporarily raised the siege of Jerusalem, Zedekiah requested the prophet to consult Yahwe, and received the advice to surrender. At this time his indignation was aroused by the reduction to slavery again of freedmen emancipated at the approach of the Chaldeans. As he counseled desertion to the enemy, and by his speeches "weakened the hands of the men of war," he was imprisoned, and an attempt was apparently made to put him to death. When the city was captured he was allowed to remain in Palestine with his people. How long he survived the fall of Jerusalem is not known. After the murder of Gedaliah he is said to have been forced to accompany a number of fugitives into Egypt, and to have predicted at Daphnæ the conquest of Egypt by Nebuchadnezzar, the massacre or deportation of its people, the burning of its temples and the destruction of all the Jews in Migdol, Daphnæ, Memphis and Upper Egypt. The Elephantine papyri, discovered in 1904, have revealed the fact that there was a Jewish military colony on the island opposite Syene, having a temple of its own in 526 and continuing its existence throughout the 5th century. It probably was brought into the country by Psammetichus I. This colony was certainly not destroyed by Nebuchadnezzar. We possess no evidence of a conquest of Egypt by this king. The account of Nesu Hor, governor of Syene, was once supposed to allude to it, but it is now generally recognized that it refers to a rebellion of Libyan, Greek and Syrian garrisons in the cataract district. A badly mutilated cuneiform inscription from the 37th year of Nebuchadnezzar mentions a conflict with a king of Egypt of whose name only the syllable *su* is legible. Wiedemann and others thought that the original text must have

told of a raid into Egypt. But Maspero, *'Histoire ancienne'* (1899) and Breasted, *'History of Egypt'* (1905) seem to be right in maintaining that no inference can be drawn except the dispatch by Amasis of naval and land forces to meet the Chaldeans and a probable loss of Syrian territory. We now know that the colony at Elephantine was not annihilated or carried away by Nebuchadnezzar, and that it continued to worship other gods besides Yahwe in a temple which was not destroyed even by Cambyses, but ruined by the priests of Chnub from Syene in 411. It may have been broken up when Egypt recovered its independence in 404; and it is not improbable that a later Palestinian writer, knowing that there had been exiles in various parts of Egypt in the time of Jeremiah, but as ignorant in regard to the history of the Jews of Elephantine as the modern world was until 1904, supposed that the earlier colonies had been destroyed by Nebuchadnezzar, and put upon the lips of the prophet oracles announcing their doom. Some interpreters who, like Duhm, are strongly convinced that as a whole these oracles cannot have come from Jeremiah, nevertheless assume a small genuine nucleus. If they are right, Jeremiah's latest prognostications were no more destined to a literal fulfilment than some of the earlier ones. Most students recognize to-day that his greatness as a prophet does not depend upon the accuracy with which he was able to foretell future events. History does not record when, where and in what manner he died. According to a legend preserved by Tertullian, Jerome, Epiphanius and Isidore of Pelusium, he was stoned to death by his people in Daphnæ, while others relate that he was brought from Egypt to Babylon by Nebuchadnezzar or returned with Baruch to Palestine. In 2 Macc. ii, 4ff, he is said to have hidden the tabernacle, the ark and the altar of incense in Mount Nebo, and in 2 Macc. xv, 12ff he appears to Judas Maccabæus, presenting him with a sword. Numerous other stories have been collected by Neumann (*'Jeremias von Anathoth,'* 1856) and Ginzburg (*'Jewish Encyclopædia,'* 1904).

The estimate of Jeremiah is necessarily affected by the evidential value assigned to the various parts of the book that bears his name. Renan considered him as a fanatic filled with hatred of the human race; but this judgment was based upon oracles against foreign nations which probably are not his. The opinion of Maurice Vernes that a prophet who gave his people the counsel to surrender is a historically impossible character arises from a failure to recognize the highest type of patriotism, and the tendency of religious genius to subordinate all considerations of state to the demands of the divinity. Certain charges of cowardice, disingenuousness, partisanship and personal animosity are in a large measure based on stories which are perhaps too unquestioningly accepted as in every detail accurate. His physical courage may not have been always equal to his spiritual boldness; he may not have been altogether free from vindictiveness, and Bennett wisely warns against picturing Hananiah and the Egyptian party as absolutely black, Jeremiah and the Chaldean party as absolutely white. His strong sense of being in the right made him firm as a wall when the occasion de-

manded it, and also made the patriotic ardor of his opponents seem like treason against Yahwe. The popular conception of him as the "weeping prophet" is largely derived from Lamentations. There is no mistaking, however, his prevailing sadness and his tenderness of heart. The idea that he foretold a new covenant, the restoration of the monarchy, and a boundless material prosperity is based on oracles that probably were not uttered by him. It was given to this prophet to see more clearly than his predecessors how independent real religion and true morality are of the ceremonies of a temple cult, the external authority of a written law, and the shifting fortunes of political society, to enter fresh fields of spiritual experience and to open new paths of personal piety.

NATHANIEL SCHMIDT,
Late Professor Emeritus of Semitic Languages
and Literatures, Cornell University.

JEREMIAH, Book of. One of the canonical books of the Old Testament. In the Hebrew Bible it once occupied the first position among the later prophets. A tradition preserved in 'Baba bathra,' 14b, 15a, gives the following order of these prophets: Jeremiah, Ezekiel, Isaiah and The Twelve. Vitringa suggested that Jeremiah was made to follow the books of Kings, because these were also ascribed to the prophet. Some modern scholars have thought that Isaiah was put in the third place because it contains many late additions; but these were not recognized as such, and the whole book was clearly assigned to the age of Hezekiah. The Babylonian Talmud explains the order by declaring that "the book of Kings ends in desolation, Jeremiah is all desolation, Ezekiel begins with desolation and ends with consolation, and Isaiah is all consolation." ('Baba bathra,' 14b). A manner of reasoning that would thus account for an existing order is not unlikely to have influenced the original arrangement, since the principle of placing

words of comfort after words of reproof is characteristic of editorial activity not only in the larger volumes but also in the smaller collections that were gathered together to form them. But as late as the 1st century A.D. each book seems to have been written on a separate roll (Luke iv, 17), and in enumerating them the order apparently varied as is seen in the Greek Bible and its daughter-versions where Isaiah precedes Jeremiah and Ezekiel and even Daniel is still counted among the prophets.

The Hebrew text found in our extant manuscripts presents substantially, so far as the consonants are concerned, the book as it was officially recognized in the Palestinian synagogues in the 2d century A.D., while the vocalization exhibits the tradition prevalent in the 7th. The translations into Syriac, into Greek by Aquila, Symmachus and Theodotion, and into Latin by Jerome, as well as the Aramaic Targum, testify in the main to this type. On the other hand, the earliest Greek translation, from which the Old Latin, Coptic, Ethiopic, Armenian, Georgian, Slavonic and Syro-Hexaplaric versions were made, seems to bear witness to a Hebrew text considerably shorter and in part differently arranged. Passages of some length, such as xvii, 1-4, xxvii, 19-22, xxix, 16-20, xxxiii, 14-26, xxxix, 4-13 and lii, 28-30, and others are not represented in it, and numerous duplicated utterances, single verses and words are lacking. It has been estimated that the Greek version is about one-eighth shorter than the Hebrew text. The prophecies against foreign nations, xlii-li, are placed in the middle of the volume between xxv, 13 and xxv, 15, and the order of the nations is different. These facts have been explained in various ways. The substantial accuracy of the masoretic text has been defended and the translator himself or later copyists charged with wilful alterations, omissions and blunders by Jerome, Grabe, Spohn, Kueper, Hävernick, Wichelhaus, Nägelsbach, Graf, Keil, Frankl, Vatke, Reuss, Orelli, Payne Smith, Kühl, Strack, Kaulen, Trochon, Schneedorfer and Cornely. That the Greek version actually represents a briefer and more original Hebrew text has been the opinion of J. D. Michaelis, Eichhorn, Dahler, Movers, De Wette, Hitzig, Bleek, Neteler, Scholz, Workman, Streane, Stade, Schwally, Coste, Cheyne, Giesebrecht, Schmidt, Duham, Baudissin, Erbt, Thackeray, Gautier, Gigot, Cornill, Peake, Sellin and Moore. Some Catholic scholars have not improperly compared the additional material in the Hebrew text with the additions to Daniel and Esther in the Greek text. In both instances we have probably to deal with interpolations and expansions already extant in the language of the original, preserved in one case by the Hebrew and the later versions, in the other by early as well as late Greek translations, but not in the Hebrew or Aramaic. The question has been raised whether there was only one Greek version of Jeremiah before the days of Aquila, Symmachus and Theodotion. Not only Justin but also Josephus and some of the New Testament writers seem to have used a translation more in accord with the masoretic text than that presented by the great uncials. It is almost certain that the author of Rev. xviii, 20, knew and imitated Jer. i, 48, and that Matt. xxvii, 32

betrays an acquaintance with Jer. x, 7, 10. Probably Theodotion made his translation on the basis of a version already extant in the 1st century A.D. The theory of an Egyptian and a Palestinian recension, advocated by Michaelis, Eichhorn, Movers and others, has now been generally abandoned, and recent critics simply assume that we possess in the Old Greek and the Hebrew two phases, both of them relatively late, of the development of the same text.

These conclusions have naturally strengthened the suspicion of other additions to the original made before the first translation appeared. David Kimchi, Abrabanel, Luther, Calvin, Grotius and Huet considered the statement "Thus far are the words of Jeremiah" in li, 64, as showing that no part of lii was written by the prophet, and Richard Simon inferred that Jeremiah was not the only author of the book. It is generally held to-day that this chapter was either copied from 2 Kings xxv or from a source also used by the author of this work. The prophecy against Babylon, l-li, has been regarded as coming from a later hand by Eichhorn, v. Coelln, Gramberg, Maurer, Knobel, Ewald, S. Davidson, Rowland Williams, Kuenen, Herzfeld, Budde, Cheyne, Reuss, König, Driver, Kautzsch, Strack, Vatke, Wildeboer, A. B. Davidson, Schmidt, Duhm, Erbt, Baudissin, Bruston, Cornill, Bennett, Gigot, Findley, Peake, Moore, Fowler, Sellin and Creelman. Its genuineness has been defended by Kueper, Umbreit, Hävernicks, Bleek, Riehm, Nägelsbach, Keil, Graf, Trochon, Kaulen, Knabenbauer, Cornely, Myrberg and Orelli. Movers, De Wette, Hitzig, Scholz and others have assumed a small Jeremianic nucleus, but the evidence seems to be strongly against this assumption. Eichhorn also expressed grave doubts as to the prophecies against foreign nations in xlvii-xlix, and they have been assigned to a later period by Vatke, Stade, Schwally, Wellhausen, Smend, Budde, Schmidt, Duhm and Marti. Many scholars, like Hupfeld, Kuenen, Rowland Williams, Cheyne, Giesebrecht, Bleeker, A. B. Davidson, Cornill, Driver and Peake, have attempted to vindicate for Jeremiah some part, greater or smaller, in the composition of these chapters, while others have sought to maintain that they are altogether his, but there is a growing impression of an irreconcilable conflict between the spirit animating them and the tone and tenor of the universally recognized utterances of Jeremiah. A sense of this contrast seems to have been felt in early times when the promises of restoration were added, xlv, 26, xlviii, 47, xlix, 6, and xlix 39 which were still absent (probably also in xlix, 39) in the copy the first translator used.

Movers, De Wette and Hitzig noticed in xxx-xxxi a strong affinity to Isaiah xl-lxvi, and suggested that the author of the latter had edited and interpolated the former. Hupfeld ('*Einleitung in das Alte Testament*,' 1859; MS. in the writer's possession) suspected the two chapters of being altogether spurious "because of their close kinship to Pseudo-Isaiah"; Vatke, Stade, Smend, Schmidt and Hölcher reached the same conclusion, partly for other reasons, and Duhm and Cheyne rejected most of this work, including xxxi, 31-34, which is looked upon by many others as the Jeremianic

kernel. The Aramaic verse, x, 11, was supposed by Houbigant and Venema to have been added by a later hand; the secondary character of the whole section, x, 1-16, has since then been recognized by many; and the same applies to iii, 16-18, xii, 14-17, xvii, 19-27, and other passages. A number of minor poems, psalm-fragments and elegies were marked by Stade ('*Geschichte Israels*,' 1889) as interpolations. Some of them have been claimed for Jeremiah by Duhm on metrical grounds. Seeing that these "confessions" have been widely used in the characterization of Jeremiah's inner life, a more searching examination of them is greatly needed. As to the historic parts, Hupfeld considered xl, 2-xlii, 6, as a later insertion, and A. B. Davidson declared xlii, 7-22, "on account of its rather debased style and other peculiarities" to be "a free construction from the hand of the historian." This sketch has been much admired for its life-likeness, and in its original form may have revealed more of the narrator's art, though this is not considered by all critics as in itself vouching for its accuracy. Pierson pointed out many apparent inconsistencies and improbabilities in the various narratives. Several interpreters have suggested that the account of the prophet's journeys to the Euphrates (xiii) is an allegory or dramatization of an oracle. Schmidt (1900) looked upon xxxv as having a similar origin, its purpose being to explain the elevation of some Rechabites into a position in the lower clerus, and questioned the age and strictly historical character of some of the other stories. In many instances Duhm (1901) independently reached similar conclusions, and they were in the main approved by Kieser. The effect of the discovery of the Elephantine papyri on this line of investigation has been discussed in the preceding article.

Already Origen and Jerome observed the lack of orderly arrangement in the book. The absence of any chronological or logical sequence seems to preclude the idea of a single author or an intelligent and painstaking editor. The superscriptions assign xxi to the reign of Zedekiah, xxv to that of Jehoiakim, xxxii and xxxiv to that of Zedekiah, xxxv and xxxvi to that of Jehoiakim, xxxvii-xxxix to that of Zedekiah, and xlv to that of Jehoiakim. Even the shorter text contains numerous duplicates. From i, 3 Grotius inferred that xl-li once formed a separate book. Spinoza assumed that the prophecies are scraps collected without arrangement from different historians, and pointed to a problem in the relations of xxi and xxxviii that has not yet been satisfactorily solved. Eichhorn (1777) supposed that as late as in the time of Josephus ('*Antiquities*,' x, 79) there were two distinct books of Jeremiah, viz., (1) i-xxiv and xlv-li and (2) xxv-xlv. The passage in Josephus is obscure, and another in Sifre debe Rab seems to refer to the book of Jeremiah and Lamentations. Thomas Paine ('*The Age of Reason*,' 1798) added to Spinoza's difficulties and concluded that the book is "a medley of detached and unauthenticated anecdotes." Bertholdt (1816) assumed that there were three collections, viz., (1) i-xxiv, (2) xxv, xlv-li and (3) xxvi-xlv. De Wette and others called attention to the uncertain and sometimes even un-Hebraic character

JEREMIAH

of the many subheadings. Aside from the prophecies against foreign nations, Ewald counted 23 such headings and regarded them as marking divisions of the book. Schmidt (1900) considered them, like the titles in Isaiah and the Psalms, as clues to the smaller collections, often indicated also by additions at the end. Thackeray (1903) reached the conclusion that i-xxiv and the prophecies against Elam, Egypt and Babylon once formed a book that was first translated into Greek, the prophecies against the lesser nations and the rest of the volume forming another which was subsequently rendered into Greek by the same hand that translated the first part of Baruch. In the light of these investigations the larger collections from which the book was formed appear to have been (1) i-xx; (2) xxi-xxiv; (3) xxv, 1-13, xlv-l, xxv, 15-38; (4) xxvi-xxix; (5) xxx-xxxiii; (6) xxxiv-xxxix; (7) xl-xlv, and the appendix lii. Of these (1) was no doubt the earliest, itself composed of several smaller collections, but united into a book of which i, 1f. was the superscription, ascribing it to the 13th year of Josiah. When (2) was added the title was probably supplemented with i, 3. There were apparently two collections of oracles against foreign nations, viz., (1) xlix, 34-39, xlv, 1-li, with its prologue, xxv, 1-13, and (2) xlvii, xlix, 1-33, xlviii, with its epilogue xxv, 15-38, of which the former was attached to the book first translated, while the latter, once circulating separately, was made the beginning of another large volume. In (4) xxvii-xxix by peculiarities of spelling that cannot have been arbitrarily limited by the copyist of the whole book to this section shows a separate origin; in (5) xxx-xxxii is referred to as a book; and in (7) xlv is clearly an appendix. Before the end of the 2d century B.C. the entire work, including lii, was available in Greek, while probably in the next century all the oracles against foreign nations were placed in some standard codex toward the close and in a somewhat different order between xlv and lii, and many more words were added in various parts. Even if this conception of the growth of the book, in some respects analogous to that now generally held in regard to the book of Isaiah, is accepted, the problem remains how genuine Jeremican oracles and trustworthy accounts of the prophet's life found their way into these collections. It is supposed by many scholars that Baruch's roll (xxxvi, 1 ff.) can be reconstructed by selecting those passages in the present book that may be considered as earlier than the 4th year of Jehoiakim, removing from them later accretions, and arranging them in a probable chronological order. But that roll, read three times in a day, cannot have been very extensive, and obviously had a special purpose. The only words that we know to have been in it (xxxvi, 29), and to which Jehoiakim strenuously objected, are not found anywhere in the sections that can be considered. Dahler and Herbst, therefore, maintained that it is in vain to look in the earlier chapters for the particular message of Baruch's roll. Grätz and Cheyne thought of xxv as containing its substance, a chapter now regarded by many as secondary; and Schmidt also considered it impossible to discover its precise contents. But as on this occasion the inspired utterance was

taken down by Baruch, it is reasonable to suppose that on other occasions this friend or other disciples committed to writing oracles that fell from the prophet's lips. The existence of such reports, afterward expanded by many words like unto them, would account for the lack of any chronological or topical arrangement. It has been thought that a sketch of the prophet's official career was written by Baruch. The manner in which he is mentioned in xxxvi, xliii and xlv and his reputed authorship of other books have made this conjecture appear quite natural. It is altogether likely that Baruch wrote down some words of the prophet even after 605-604, and not impossible that some communications coming from him formed the nucleus of the historical sketch that existed in later times and was used by the compilers. But there is no claim or suggestion of either in the book itself. Some scholars have found a hint of it in xlv, the scribe adding to his work a rebuke and a promise that no one but himself could have known. Cornill has ingeniously suggested that the great thing he sought for himself was the deliverance of Judah from the doom announced in the roll. From Jeremiah's standpoint that was not possible except through the conversion of Jehoiakim and his people to the policy of non-resistance and subjection to the Chaldeans. But why should he not seek this, what other purpose can Jeremiah have had in sending him with the roll, and how could this be described as a selfish design? Giesebrecht, Duhm and Erb reject the date given and place the incident after the destruction of Jerusalem, without making it more intelligible. Reuss questioned it, and Schwally regarded it as spurious. It is natural that a private oracle, designed to account for Baruch's escape, should have been placed at the end of the 7th collection, just as a similar oracle (xxix, 15-18) was placed at the end of the 6th. While it is, therefore, impossible to affirm dogmatically, what is at best only a theory, that certain parts of the present book have been copied from Baruch's roll and others taken from a biography written by him, it is wholly probable that we owe to him and such as he the preservation of some of the oracles uttered by Jeremiah, in 625 when the Scythian came down from the north and later in the reign of Josiah, as well as in the days of Jehoiakim, Jehoiachin and Zedekiah, and also of some facts in regard to his career, sufficient to give us a relatively clear idea of this prophet's message and character.

Jerome described the style of Jeremiah as rustic and inferior to Isaiah's. Lowth observed in some parts of the book the parallelism characteristic, as he saw, of Hebrew poetry. Blayney printed the text so as to bring out this feature, and it has been accepted by most modern interpreters. Thus a line was drawn between the parts written in an easily flowing prose and those having a poetic form. More recently it has been seen that a certain regular recurrence of stressed syllables, consequently a metre, also characterizes, not only such books as Job, Proverbs and Psalms and the poems interspersed in the historic records, but also the oracles of the prophets given in an exalted style. This has been applied to Jeremiah by Müller and Sievers, and more in detail by

Duhm, Cornill and Giesebrecht. A metre that without a question was used predominantly by Jeremiah has been regarded by Duhm as a criterion of genuineness. To some extent this is no doubt legitimate. But when it is considered how readily such a poetic form lends itself to imitation and how easily later scribes may have concealed it by innocent changes and additions, this test must be handled with great delicacy. The temptation to conjectural emendation on purely metrical grounds is strong, but the ancient witnesses to the text always have a first claim to consideration. Yet even this recent study of the prophet as a poet has tended to bring out more fully the force and beauty as well as the grandeur and significance of his oracles. Like the book of Isaiah that of Jeremiah is to modern scholarship a thesaurus of things old and new. Here, also, the great prophet who has given his name to the volume stands out pre-eminent, unrivaled in spiritual insight and power by those whose voices have become blended with his. Just as the seer who was called to meet the needs of his time by speaking comfortably to the heart of Zion, though the influence of his ideas has been very great, by no means has outstripped in power the mighty son of Amoz, so Jeremiah, as we are beginning to see him, is more truly a prophet to the nations than any seer pouring out his cup of fury on the pagan peoples or prognosticating for Judah a new régime of material prosperity, inspiring loyalty to king and law-book. It is doubtful whether without Jeremiah's teaching the idea of a new covenant could have been suggested, which showed its tendency when the Zadokite covenanters emigrated to Damascus, and its real strength when early Christianity went forth to establish a different type of religious communion. But the man himself who strove to free religion from the fetters of ceremonialism and the bondage to nationalism and put it on a foundation that could not be shaken by the fall of temples and of thrones, is likely to be remembered with honor when the pomp of empire and the savagery of war and the middle walls of national partition shall have passed away and given place to the nobler life of man's maturity.

Bibliography.—Commentaries by Origen, Ephraem, Theodoret, Jerome (only i-xxxii), Rhabanus Maurus, Thomas Wallensis, Nicolaus Lyranus, Joseph ben Simeon Kara, Ibn Ezra, Rashi, David Kimchi, Abrabanel, Solomon ben Melek, Zwingli, Oecolampadius, Bugenhagen, Calvin, Strigel, Vatablus, Capella, Sa, Figueiro, Broughton, Polanus, Piscator, Castro, Sanctius, Maldonat, Ghisler, Cornelius a Lapide, Grotius, Malvenda, Hülsemann, Sebastian Schmidt, Altling, Lowth, Calmet, Clericus, Venema, Blayney, Dathe, Rosenmüller, Dahler, Maurer, Hitzig, Ewald, Henderson, Umbreit, Graf, Neumann, Nägelsbach, Le Hir, R. Williams, Payne Smith, Keil, Scholz, Trochon, Plumptre, Cheyne, Schneedorfer, Giesebrecht, Ball and Bennett, Myrberg, Knabenbauer, Duhm, Cornill, Driver, Orelli, Peake. Introductions by Sixtus Senensis, Richard Simon, Carpzov, Eichhorn, Jahn, Augusti, Bertholdt, Horne, De Wette, Hävernick, Herbst-Welte, Glaire, Keil, Davidson, Hupfeld, Bleek, Fürst, Kuenen, Kaulen, Strack, Cornill, Driven, Wildeboer, Baudissin, Mann, Bennett-Adeney, Budde,

NATHANIEL SCHMIDT,
Late Professor Emeritus of Semitic Languages
and Literatures, Cornell University.

JEREMIAH, Lamentations of. A canonical book of the Old Testament. In the Greek Bible and its daughter versions, as well as in the Syriac and the Latin Vulgate, it is designated as the 'Lamentations of Jeremiah,' and it is also described in the Babylonian Talmud as 'Qinoth,' or 'Lamentations'; but in earlier times it was only referred to as 'Ekaḥ,' 'How!' and this has remained its title in the

Hebrew Bible. In the versions it follows the book of Jeremiah, while the tradition preserved in 'Baba bathra' 14b assigned it a position among the miscellaneous writings, or hagiographa, between Canticles and Daniel; when the group of five rolls was formed, it was generally placed between Ruth and Ecclesiastes. Since it was originally anonymous, as it has continued to be in the Hebrew, and the practice grew up of reading it on the 9th of Ab, the anniversary of the capture of Jerusalem by Nebuchadnezzar, it was kept separate in the Palestinian synagogue and not connected with the book of Jeremiah, and consequently could in course of time be united with other rolls also more or less regularly read in public on certain fast and feast days. There is no very marked difference between the masoretic text and the ancient versions, though these are often of considerable value in establishing the original. Only the late Aramaic Targum shows a strong tendency to expansion, not always in good taste. Origen apparently did not have before him the translations of Aquila and Theodotion, though there can be no doubt that this book was also rendered by them, and some readings of Aquila have indeed been recorded in manuscripts (cp. Field, 'Origenis Hexapla,' 1875).

That these lamentations are written in a poetic form is too obvious not to have been observed at all times; but the precise character of this form has only gradually been discerned. The fact that four of the five chapters employ the device of an acrostic invited comparison with the alphabetic psalms, and the peculiar circumstance that ii, iii and iv exhibit in one respect a different order of the letters, Pe preceding Ayin (P before O), was as puzzling to Jerome and Lyranus as to us. It can scarcely be due to a scribal error, as it is thrice repeated, or to forgetfulness on the part of the poet, as he set out deliberately to follow the alphabet, or to an esoteric motive so carefully hidden as to be of no didactic value, or to a different order in Babylonian Aramaic preferred by the Chaldean government, as Grotius thought. At a time when the letters had not yet been used for numerical purposes, a transposition of the two letters may have been in vogue in certain circles, since it seems to be found also in Ps. ix-x, and possibly in Ps. xxxiv. In i and ii each verse consists of three members, and the verses begin severally with the successive letters of the alphabet; in iii the verses consist of single members, and three verses in succession begin with the same letter, the chapter having thus 66 verses; in iv each verse has two members only, and v is not alphabetical, but has 22 verses. Maldonat (1611) found a prevalence of 12 syllables to the stichos, but also verses of 16 and 14. Lowth recognized an unusual poetic structure and supposed the verse to be dodecasyllabic; and more recently Bickell has also spoken of the dodecasyllabic metre. De Wette observed that each member of the verse has a caesura corresponding both with the accent and with the sense; Keil noticed that this caesura divides the verse into two unequal parts; Ley discerned that the second is shorter than the first, and designated this form as elegiac pentameter; Giesemann called it endecasyllabic verse, with the arsis after the third

syllable. Budde described most clearly the peculiar Qinoth metre: the verse may consist of one or more members, but each is divided by a caesura into two unequal parts, the second being shorter than the first. There is no doubt that this "limping metre" was frequently used in funeral dirges sung by "cunning women" at the wake of the dead, but it is not employed in David's elegy, and does not seem to have been reserved originally for elegiac poetry. It is the death-wail of Jerusalem, represented as a widowed and disgraced princess, that is heard in i, ii and iv; iii appears to be a poetic monologue of Israel, represented as a man, rather than an elegy, and v is not so much an elegy as a prayer, and is not in the elegiac metre, but has a peculiar assonance or rhyme, the same vowel or syllable being repeated.

In the Hebrew Bible neither title nor text contains any claim or direct indication of authorship. But the Greek version begins "after Israel was taken captive and Jerusalem laid waste, Jeremiah sat down and wept, and sang this elegy over Jerusalem." This was somewhat expanded in the Latin Vulgate; and the superscription in the Targum runs, "Jeremiah the prophet and chief priest said thus." The Babylonian Talmud also declares that Jeremiah wrote 'Lamentations.' It is interesting to observe that Bonaventura, Lyranus, Sanchez, Castro, Bellarmin, Lucas and Cornelius a Lapide attributed no canonical value to the introductions in the Greek and Latin texts. In 2 Chronicles xxxv, 25 Jeremiah is said to have sung an elegy over Josiah, according to custom chanted by singing men and women, and preserved in written form among the 'Lamentations.' It is by no means certain that the author referred to our present collection; nor would an interpretation of the extant threnodies as a funeral dirge over Josiah command much weight either by virtue of age, being centuries later than the prophet's time, or intrinsic probability. The decision rests wholly upon internal evidence. It was very natural to think of Jeremiah, the prophet who foretold and witnessed the destruction of temple, capital and state, as lamenting the fall of Zion; there was an unmistakable similarity to his style in some passages; he was a man of poetic temperament, and the peculiar metre had occasionally been employed by other prophets. Those who assumed that Jeremiah was the author assigned as the date of composition either 608, immediately after the death of Josiah, or 605, when Baruch's roll was written, or 586, in the months between the capture and destruction of Jerusalem, or the time between 586 and 570. The first view was maintained by Josephus, Jerome, Rhabanus Maurus, Bonaventura, Vatablus, Junius, Maldonat, Figueiro, Tarnovius, Calovius, Michaelis and Dathe; the second was suggested by Rashi, but rejected by Ibn Ezra; the third or fourth has been adopted by Theodoret, Procopius, Olympiodorus, Ghisler, Calmet, Blayney, Henderson, De Wette, Gerlach, Orelli, Keil, Bleek, Kaulen, Knabenbauer, Kay, Hermann von der Hardt in 1712 declared that he could not believe that Jeremiah, with his experience, had written a lamentation so diffuse and composed in such a literary fashion, but on account of the differences of style thought of Daniel, his three companions and Jehoiachin as the authors. The theory of a Jere-

mianic authorship was also abandoned by Augusti (1806), an anonymous writer in *Tübingsche Quartalschrift* (1819), Kalkar, Bunsen, who thought of Baruch as author, Ewald, Nöldeke, Kuenen, Schrader, Nägelsbach, Vatke, Wellhausen, Cornill, Löhr, Budde, Cheyne, Driver, Strack, Selbie, and many others.

They have urged important divergencies from the peculiarities of Jeremiah in language, style, and thought, and especially in the attitude toward the monarchy, the Egyptian alliance, the priesthood, and the temple cult. Thackeray called attention to the fact that Lamentations was not translated into Greek by either of the two men to whom we owe the version of the Prophecies. Thenius regarded ii and iv as coming from the prophet's pen, the remaining chapters as later; Fries thought that i-iii were Jeremianic, iv-v Maccabaeian. There is a tendency at present toward ascribing ii and iv to the same author and to the latter part of the Persian period, i and v to different authors at the end of this period, and iii to a poet living in the 3d century.

Reuss justly observed that the profound impression these lamentations make on the reader is due to the nature of the subject rather than to any literary qualities shown in its treatment. The interest that always attaches itself to misfortune excites our sympathy in the highest degree, and we can but admire the touching personification of Jerusalem as a widow seated by the wayside, reminding of the *Capta Judea* figured as a woman in mourning on the Titus arch, or of the people as a man of sorrows, recalling the suffering servant of Yahwe in the anonymous additions to Isaiah. This impression is somewhat weakened by the numerous repetitions, the monotonous length, the lack of logical development, and the restraints imposed by a mechanical form. It is probable that the elegies were produced for liturgical purposes in connection with the commemoration of the great calamity.

Bibliography.—Commentaries by Ephrem, Theodoret, Olympiodorus, Rhabanus, Lyranus, Bonaventura, Hugh of St. Victor, Rashi, Ibn Ezra, Kimchi, Tanchum ben Joseph, Menahem ben Shelbo, Tobia ben Eliezer, Calvin, Oecolampadius, Bugenhagen, Petrus Martyr, Sanctius, Maldonat, Ghisler, Tarnovius, Grotius, Calovius, Cornelius a Lapide, Calmet, Blayney, Herder, Rosenmüller, Maurer, Dathe, Ewald, Henderson, Kalkar, Thenius, Keil, Nägelsbach, Gerlach, Payne Smith, Streane, Plumptre, Cheyne, Oetli, Löhr, Budde, Minocchi, and Peake.

A., "Lamentations, Book of," in *A Dictionary of the Bible*, ed. by James Hastings, vol. 3 (New York 1900); Fowler, Henry Thatcher, *A History of the Literature of Ancient Israel* (New York 1912).

NATHANIEL SCHMIDT,

Late Professor Emeritus of Semitic Languages and Literatures, Cornell University.

JEREMIE, zhā-rā-mé', seaport, Haiti, on the Gulf of Gonaives. It lies on the northwest coast of Tiburon Peninsula, 120 miles west of Port-au-Prince. Jérémie has considerable local importance as a fishing center and the shipping point for a region producing coffee, cacao, sugarcane, hides, and such tropical fruits as bananas and mangoes. It has an airfield and is connected by road with Cayes (Les Cayes or Aux Cayes) and Port-au-Prince. Pop. (1950) 11,138.

JERER, jě-rěr' (also TUG JERER), river, Ethiopia. It rises in the mountains of northern Harar near Jijiga and flows intermittently south-

eastward past Warroh and Daggah Bur (Dagah-bur), entering the Fafan (Tug Fafan) after a course of about 180 miles. The Jerer and Fafan water the Ogaden, a semiarid plateau in Harar, 1,500 to 3,000 feet high, inhabited by Somali nomads who follow their herds of sheep, goats, and camels from place to place in search of pasture.

JERES DEL MARQUESADO, hā-rās' thēl mār-kā-sā'thō, town, Spain, in the Province of Granada. It lies on the northern slopes of the Sierra Nevada, eight miles south-southwest of Guadix. The surrounding country produces grains, chestnuts, and livestock. There are copper deposits nearby. Jeres del Marquesado has a parish church in Mudejar style. Pop. (1940) 2,672.

JEREZ, hā-rāth' (formerly XERES, in full JEREZ DE LA FRONTERA, hā-rāth' thā lā frōn-tā'rā, that is Jerez of the Frontier), city, Spain, in Cádiz Province, 13 miles northeast of Cádiz. It lies near the Guadalete River, on the Seville-Cádiz railroad. Jerez, the commercial center of a rich agricultural region, is a handsome city surrounded by vast vineyards, which supply grapes for the famous sherry wine produced here—"sherry" being a corruption of the city's name. Brandies are also made and the city manufactures bottles and barrels for the wine trade. Besides grapes, the surrounding country produces cereals, olives, vegetables, citrus fruits, and livestock.

The older buildings in Jerez include the Alcazar, surviving from the Moorish period but rebuilt by the Christians, the 15th century Church of Santiago, and the Gothic Church of San Miguel began in the 15th century, both largely restored or added to. The main sights of interest are the great bodegas, or wine cellars.

In ancient times Jerez was a Roman colony. It was taken by the Moors in 711 and after changing hands several times was reconquered in 1264 by Alfonso X of Castile and León. For more than two centuries thereafter it was a fortress city near the frontier with the Moors of Granada, whence its full name. Pop. (1940) 65,166.

JEREZ DE LOS CABALLEROS, hā-rāth thā lōs kā-vā-lyā'rōs (meaning Jerez of the Knights), commune, Spain, in Badajoz Province, 37 miles south-southeast of Badajoz. It lies 12 miles east of the Portuguese frontier on hills overlooking the river Ardila, a tributary of the Guadiana. Jerez de los Caballeros is an agricultural trade and processing center. Leading products are olive oil, meats, distilled liquors, cork, and wood products. There are iron and tungsten mines and marble quarries in the vicinity.

The town has some remnants of the Moorish occupation, but its usually accepted date of founding is 1229, when Alfonso IX of León captured the site from the Moors and founded the present town. It was enlarged by his son, Ferdinand III of Castile and León, who in 1232 presented it to the Knights Templar, whence the latter part of its name. Pop. (1940) 12,486.

JERICA, hā'rē-kā, town, Spain, in the Province of Castellón de la Plana, situated in an agricultural region 30 miles west southwest of Castellón de la Plana. The surrounding country

produces olives, wine grapes, and fruits. Burlap is manufactured. Jérica has the remains of medieval walls and a castle in ruins. Pop. (1940) 2,013.

JERICHAU, yĭ'rĕk-kou, Jens Adolph, Danish sculptor: b. Assens, April 7, 1816; d. Copenhagen, July 25, 1883. After studying at Copenhagen and under Albert Thorvaldsen at Rome, his first notable production was a frieze in the royal palace of Christiansborg near Copenhagen, its subject being the marriage of Alexander the Great and Roxana. Since 1849 he was professor at the Academy in Copenhagen. Among his works are the heroic group *Hercules and Hebe*, *Penelope*, *Adam and Eve after the Fall*, and a *Christ*.

His wife ELISABETH BAUMANN (1819-1881) was a genre painter of distinction, and their son HARALD ADOLF NIKOLAI JERICHAU (1851-1878) became a landscape painter.

JERICHO, jĕr'i-kō (Arabic ERIHA, ħ-rĕ'hā), village, Palestine, in the subdistrict of Jericho about 5 miles north of the Dead Sea and 14 miles east-northeast of Jerusalem. Altitude 820 feet below sea level. In past times several different cities of the same name have flourished and declined. About 1½ miles north of the modern village is a large mound known as Tell es Sultan in which excavations under Carl Watzinger (1907-1908) and John Garstang (1929-1936) revealed traces of a neolithic community of the 5th millennium B.C. and three cities from the bronze age (3000 to 1200 B.C.). The third of these was the Canaanite city captured by Joshua and destroyed about 1400 B.C. (Joshua 16). It was subsequently rebuilt by Hiel the Bethelite (I Kings 16).

After passing into various hands, Jericho was acquired by Herod the Great who built a new town south of the old site and provided a hippodrome, amphitheater, and palace. This city was destroyed by the Arabs and Persians and another Jericho was built by the Crusaders on the site where it now stands. With the departure of the Europeans, its importance declined until recently.

The modern village is on the road from Jerusalem to Amman in an agricultural area made fertile by "Elisha's Fountain," a powerful spring located on the west side of Tell es Sultan. Often visited by tourists, it has two hotels, a Greek and a Latin church, and a Russian monastery. In 1950, excavations west of the village uncovered the remains of a Hellenic fortress from the 2d century B.C. as well as the site of the city built by Herod.

Jericho became part of the British Mandate of Palestine in 1920 and after the Israel-Arab War (1948-1949), it was incorporated into the Hashemite Kingdom of Jordan. Pop., village (1944 est.) 1,693; subdistrict (1950 est.) 5,000.

JERITZA, yĕ'rĕ-tsā, Maria (real name MARIE JEDLITZKA, yĕ'dīts-ka), operatic soprano: b. Brünn, Austria, Oct. 6, 1887. After an extensive musical training in several instruments and vocal instruction from Professor Auspitzer of Brünn, she made her debut in 1910 as Elsa in *Lohengrin* at Olmutz, Austria. For ten she was a member of the Vienna State and in 1921 joined the Metropolitan Opera company of New York, making her debut in Eric

Korngold's *Die Tote Stadt*. She soon became one of the most popular operatic singers in the United States. Her biography *Sunlight and Song* was published in 1924.

JERKED BEEF, beef cut into strips of about an inch thick, and dried in the sun.

JEROBOAM I, the first king of Israel, the northern kingdom, who reigned from 933 to 912 B.C. Having conspired against Solomon, he was obliged to escape to Egypt, where he remained until the monarch's death. He then returned to lead an insurrection against Rehoboam, which ended in the formation of the kingdom of Israel, composed of the 10 revolted tribes. These tribes worshiped at Bethel and Dan, instead of going to Jerusalem.

JEROBOAM II, king of Israel. He was the son of Joash. He reigned from about 782 B.C. to 741 B.C. His reign was evidently an active one, as he was a skilful warrior, and regained territory which had been captured by the king of Aram in previous reigns. It was during Jeroboam's time that Hosea and Amos announced their prophecies.

JEROME, jĕ-rōm' or jĕr'ōm, Saint (Latin EUSEBIUS HIERONYMUS), one of the four Doctors of the Church recognized as such during the Middle Ages: b. Stridon, between Styria and Hungary, about 340; d. Bethlehem, Sept. 30, 420. His parents educated him with care in literary studies and he read the Greek and Roman classics at Rome under the famous grammarian Donatus. He did not escape uncontaminated by the licentiousness of the capital; but soon became inclined to the Christian faith. The catacombs and tombs of the martyrs first excited his devotion. His travels on the Rhine and in Gaul made him acquainted with several Christian preachers, and he was eventually baptized.

After a long residence at Aquileia Jerome went in 373 to Antioch in Syria, where he passed through a spiritual crisis and renounced pagan learning, and in 374 retired to the deserts of Chalcis. There he spent four years as a hermit in the severest mortifications and laborious studies. He left his solitude again to be ordained priest at Antioch, but soon after went to Constantinople to enjoy the instruction of Gregory Nazianzus. In Rome, where he became literary secretary to Pope Damasus, he made his appearance as a teacher. His expositions of the Holy Scriptures found favor with the Roman ladies, and many placed themselves under his spiritual direction. Marcella and Paula, rich patricians, are celebrated for the learned and ingenious theological epistles he wrote them, and for their rare monastic piety. Paula accompanied him to Palestine in 386, where he founded a convent at Bethlehem; here he remained till his death.

Jerome's writings show his active participation in the controversies of his day, and his letters give a very vivid idea of the condition of society at Rome. They are full of satiric strictures on the corrupt clergy, and are often as biting as Juvenal or Martial. Many of them are profoundly touching and full of fervent piety; others are lampoons traversed with vehement invective with the spirit of Plautinian ribaldry. His Biblical labors are highly valuable; his Latin version of the Old Testament from the original language is a marvelous achievement, and it may be said

that ecclesiastical Latin originated with Jerome's Vulgate. His principal claim to the gratitude of the Church is that he was the founder of Latin monasticism.

JEROME, Jerome Klapka, English humorist: b. Walsall, May 2, 1859; d. Northampton, June 14, 1927. He was at first a clerk in a railway office, afterward actor, schoolmaster and journalist by turns. After many discouragements he succeeded in making a popular hit with his book, *On the Stage—and Off* (1888), largely autobiographical. His *Idle Thoughts of an Idle Fellow* (1889) and *Three Men in a Boat* (1889) made him famous in America as well as at home. He edited the *Idler* with Robert Barr (q.v.) (1892–1897); *Today* (1892–1897); and published several successful comedies: *Sunset* (1888); *New Lamps for Old* (1890); *Miss Hobbs* (1900), and others. He is also author of *John Ingerfield* (1894); *Sketches in Lavender* (1897); *Observations of Henry* (1901); *Paul Kelter* (1902); *Susan in Search of a Husband* (1906); *The Passing of the Third Floor Back* (1907), the stage adaptation of which was most successfully produced by Sir Johnston Forbes-Robertson; *They and I* (1909); *The Master of Mrs. Childers* (1911); *Esther Castways* (1913); *The Great Gamble* (1914); *Poor Little Thing* (1914); *The Street of the Blank Wall* (1916); *Malvina of Brittany* (1917); *Anthony John* (1923); *My Life and Times* (1926).

JEROME, William Travers, American lawyer and politician: b. New York City, April 18, 1859; d. there, Feb. 13, 1934. Graduated from the Columbia Law School in 1884, four years later he was appointed assistant district attorney, in which position he saw much of the political corruption prevailing in the city. He was active in the Municipal League which opposed Tammany and in 1894 he became manager of the campaign which resulted in the election of Mayor Strong. In the same year the mayor appointed him judge of the Court of Special Sessions.

A courageous reformer, he was active in the Fusion campaign against Tammany and after conducting an unprecedented exposure of illegal police protection, he was elected, in 1902, district attorney of New York County. Immediately after his election he established headquarters in the East Side of New York, in order to be within easy reach of the people who most needed his assistance; here, in his official capacity, he was remarkably effective in breaking down the system of protection of vice and the maladministration of justice. Elected district attorney again in 1905 on an independent ticket, he conducted the prosecutions of Harry K. Thaw for the murder of Stanford White and he was retained as counsel for the State of New York in the subsequent legal proceedings. During his second term his great popularity declined due to lack of sufficient prosecutions and in 1909 he retired and practiced law privately for the rest of his life.

JEROME, town, Arizona, in Yavapai County, 88 miles north of Phoenix, on a federal highway, and the Verde Tunnel and Smelter Railroad, connecting with the Santa Fe, at an altitude of 5,435 feet. Located on the side of Mingus Mountain this mining town clings to a 30-degree slope 2,000 feet above the Verde Valley floor. Early in 1953 mining operations ceased.

Jerome was developed after the discovery of copper in the 1870's and was incorporated in 1899. The population varies greatly with the fortunes of the copper industry. In 1929 the town had 15,000 inhabitants. Pop. (1950) 1,233.

JEROME, city, Idaho, seat of Jerome County, 14 miles north of Twin Falls on the Union Pacific Railroad and state and federal highways. Altitude 3,708 feet. Jerome is the trading center for an irrigated agricultural region producing alfalfa, truck, fruits, grain, poultry, and honey. Cattle, sheep and swine are also raised. Its chief manufactures include dairy products, flour, glucose, wood products, cinder blocks, machinery, and metal products.

Laid out in 1907, Jerome was incorporated in the following year. A mayor and council administer its government. Pop. (1950) 4,523.

JEROME OF PRAGUE, Bohemian religious reformer: b. Prague, about 1360; d. there, May 30, 1416. He was educated at the universities of Prague, Paris, Oxford, Cologne and Heidelberg; and was in faith and sufferings the companion of the famous John Huss, whom he excelled in learning and eloquence, and to whom he was inferior only in moderation and prudence. His reputation for learning was so great that he was employed by Ladislaus II of Poland to organize the University of Cracow; and Sigismund of Hungary caused Jerome to preach before him in Buda.

Jerome took a zealous part at Prague in the contest of his friend Huss against the authorities, and not infrequently proceeded to violence, causing the monks who opposed him to be arrested, and even had one thrown into the Moldau. He publicly burned in 1411 the bull of the crusade against Ladislaus of Naples and the papal indulgences.

When Huss was imprisoned in Constance Jerome hastened to his defense, but on his attempt to return to Prague the Duke of Sulzbach caused him to be arrested in Hirschau and carried in chains to Constance. After an imprisonment of half a year he consented on Sept. 11, 1415 to recant the heresies with which he and Huss were charged. But this recantation did not deliver him, and after languishing a year, he solemnly retracted his recantation. On May 30 he was burned at the command of the council and his ashes thrown into the Rhine.

JERROLD, jër'old, Douglas William, English dramatist and humorist: b. London, Jan. 3, 1803; d. Kilburn Priory, near London, June 8, 1857. He was a midshipman in the navy 1813–1815, and then quitting the service, was bound apprentice to a printer in London. By hard study he made himself master of Latin and Italian, besides acquiring an extensive knowledge of general literature, and at first attempted dramatic criticism. The bent of his genius, however, lay mainly in the direction of dramatic writing. Numberless pieces were produced by him before he was 20, but the first which won decided popularity was *Black-eyed Susan*, presented for 300 successive nights at the Surrey Theatre in 1829. Fortunes were made out of the play; but the author only got \$300 for it. Among Jerrold's subsequent dramas were *The Rent-day*; *Nell Gwynne*; *The Housekeeper*; *Prisoner of War*; *Bubbles of a Day* and *Time Works Wonders*,

the last named one of the most successful comedies on the English stage.

Jerrold founded and conducted successively the *Illuminated Magazine* and *Douglas Jerrold's Shilling Magazine*, was a member of the literary staff of *Punch*, and in 1852 became editor of *Lloyd's Weekly Newspaper*. To this he contributed *Mrs. Caudle's Curtain Lectures*; *Punch's Letters to his Son*; and *The Story of a Feather*. He wrote several novels, among which are *The Mad Mode of Money* and *Chronicles of Clovenook* (1846). A selection of his essays, edited by his grandson, Walter Jerrold, appeared in 1903.

JERROLD, William Blanchard, English journalist and miscellaneous writer, eldest son of Douglas Jerrold (q.v.): b. London, Dec. 23, 1826; d. there, March 10, 1884. He succeeded his father in 1857 as editor of *Lloyd's Weekly Newspaper*, and as such strongly espoused the cause of the North in the American Civil War. Some of his leading articles on this subject were, by instruction of the American authorities, placarded and displayed in New York. He was the author of a very successful farce, *Cool as a Cucumber* (1851), and other plays. He also wrote *Swedish Sketches* (1852); *Life and Remains of Douglas Jerrold* (1859), and *Life of Napoleon III*, his greatest work, which was completed in 4 vols. between 1874 and 1882.

JERSEY, island, the largest, most important and most southerly of the Channel Islands, lying in the English Channel 15 miles west of the Normandy coast of France and 18 miles southeast of Guernsey. It is 12 miles long and from four to seven miles wide, and has an area of 44.9 square miles. Rugged and precipitous in the north, the interior is mostly table-land and is well-wooded. The principal town is Saint Helier. Pop. (1945) 19,398. The island is famous for a breed of cattle. Fruit and potatoes are largely grown, and are exported in enormous quantities.

The island was part of the old Norman provinces brought with the Conquest to the Crown of England. The speech of the farming population is a *patois* Norman French, but English is spoken everywhere, while the use of modern French and English is a bilingual feature of the courts and states governing body. From 1940 to 1945 the island was occupied by the Germans in World War II. Pop. (1951) 57,296.

JERSEY CATTLE. See **CATTLE**.

JERSEY CITY, city, New Jersey, seat of Hudson County on the peninsula between the Hackensack and the Hudson River, opposite lower New York City, with 11 miles of water frontage. It is served by the Pennsylvania; Lehigh Valley; Erie; New York, Susquehanna and Western; Central of New Jersey; Philadelphia and Reading; and Baltimore and Ohio railroads and is connected with New York City by four ferries to downtown points; by the Hudson and Manhattan Railroad (1910), and two vehicular tunnels, the Holland (1927) and the Lincoln (1942). At the heart of the city (Journal Square) are terminals for buses and inter-urban lines running to New York City, Newark and other points. A belt line, supervised by the Port of New York Authority, distributes freight from the above-named railroads and the New York Central, and the Delaware, Lackawanna

and Western railroads. At Greenville and Harborside Cove daily reports are made on passing freight, and refrigerator cars are iced. U.S. Highway 1 follows Tonnele Avenue in part of the city, and then mounts the Pulaski Skyway (3.4 miles long and 154 feet high) to Newark, thus avoiding traffic congestion and crossing the Hackensack River, the city's western limit.

With an altitude of 169 feet in its residential section, Jersey City is an integral part of New York City's industrial and port area; is the terminus of railroads, and its docks on the Hudson River and Upper New York Bay serve a number of ocean passenger steamship lines, freighters, and coasting and river vessels.

Although Jersey City is an important industrial and shipping center with fine residences and apartment houses, many of its citizens commute daily to their employment in New York City. In 1812 Robert Lewis Fulton built and operated a steam ferry connection with New York. With the 20th century the city grew increasingly important through the construction of the above-named tube and tunnel links with New York City.

Among Jersey City's striking buildings are the County and City Medical Center's seven units, 10 to 23 stories. Landmarks of early Dutch settlement are: Old Bergen Church (1842; foundation stones from buildings of 1680 and 1773); the Van Wagenen House (in part built 1660); a statue, by Massey Rhind, of Peter Stuyvesant. On the western edge of the city, and bordering the Hackensack River, is Lincoln Park (287 acres) with sunken garden, fountain, playgrounds, and a huge statue of Lincoln (1929). The dozen other parks include: Hamilton, Mary Benson, and Montgomery, nearer the Hudson River. The Public Library (1901), opposite Van Vorst Park, has the Otto Goetzke Gem Collection, also collections of coins, apparel, and household furniture. The State Department of Labor office is located at Journal Square. Unusual features of the public school system are: the A. Harry Moore School for Crippled Children, and the Special Service Bureau (1931) dealing with juvenile delinquency without arrests. Also located here are a state normal school and St. Peter's College (1872), conducted by the Society of Jesus. Annual observances of importance in the life of the community are the Holy Name Society parade in October, and the Lincoln Association dinner in February.

Due to its advantageous geographical situation Jersey City early developed commercial importance. Pierre Lorillard's snuff was made here in 1760. In the 1830's carpet mills were making 2,500 yards a week; crucible steel was produced here as soon as in Pittsburgh or Cincinnati. Car wheels, flint glass, and pottery were made in large quantities before the Civil War. The Joseph Dixon Crucible Company, which made graphite and stove polish in Salem, Mass., in 1827, soon moved here and is now best known for the manufacture of lead pencils and graphite crucibles. Colgate soaps and perfumes, first made in New York in 1806, crossed the river in 1847. This industry is now centered in the huge Colgate-Palmolive-Peet plant. The Colgate clock (dial 50 feet in diameter) is one of the landmarks of the river front. Other factory products are: packed meats, cheese, macaroni, cans, cigarettes, antiseptics, cosmetics, patent medicines, boilers, steel, radios and television apparatus.

The first settlers of Jersey City were the Dutch. In 1630 Michael Pauw, Burgomaster of Amsterdam, Holland, bought a tract of land on the West Side of the Hudson River from the Indians, which now constitutes the Harsimus, Paulus Hook, Communipaw and Pavonia sections. He turned it over to the Dutch West India Company in 1634 when they erected the first two houses on the West Shore of the Hudson River.

In the early days there was much conflict with the Indians. After about an 8-year peace brought about by Peter Stuyvesant, war broke out again in 1654 and the Indians drove all whites from the Jersey shore. In 1658 Peter Stuyvesant bought the land a second time and reconciled the Indians.

In 1662 Bergen, then a large settlement, had a school, a church, and a thrice-a-week ferry to New Amsterdam (New York). Two years later Charles II of England confiscated Bergen, and deeded it to Sir George Carteret and Lord John Berkeley, Carteret becoming Governor of New Jersey. In 1673 the Dutch recaptured New York, but it was restored to the British in 1674 by treaty, and peace ensued until the outbreak of the Revolutionary War when the British made an attack on what is now Jersey City and captured Paulus Hook fort. In 1779 a surprise attack by Major (Light Horse Harry) Lee placed the fort again in the hands of the American colonists.

Before the Civil War, Jersey City was a station on the Underground Railroad when slaves were smuggled and hidden in Erie Canal boats. On the completion of a New York-Philadelphia highway (1764) the New York ferry became important and in 1804, land and ferry rights were sold to promoters, the Associates of the New Jersey Company. Until 1834 New York's claim up to the Jersey low-water line hindered pier building. In that year the boundary between the two states was set downstream, except that Staten Island was conceded to New York. Even after the City of Jersey was chartered in 1820 it was a part of the Bergen township, and the Associates still had special powers, which ceased with the separate charter of Jersey City in 1838.

The Morris Canal terminus was opened here in 1836; the canal, running to Phillipsburg, N. J., and Easton, Pa., on the Delaware River, had previously terminated at Newark. In Taylor's Hotel, on the river front, Jay Gould and his Erie Railroad associates escaped New York process servers in 1868. Many corporations of other states established offices in Jersey City in the 1870's. In 1873 the city benefited by the end of Perth Amboy's long monopoly of rail traffic between New York and Philadelphia via the Camden and Amboy Railroads. At this time politics were bitter and bad, and between 1900 and 1910 attempts at reform were made by mayors Mark Fagan and Otto Wittpenn.

The city became the seat of Hudson County on its organization in 1840 and annexed Van Vorst in 1851, Bergen and Hudson City in 1869, Greenville in 1873. It adopted a commission government in 1913, when Frank Hague became director of public safety. After 1916 he was repeatedly elected mayor, and became the state leader of the Democratic Party until 1949 when his political machine suffered a severe defeat. An outstanding feature of the Hague administration was the creation of the city's fine Medical

Center and special Bureau for Juvenile Delinquency. Hague forbade public meetings of strikers, and expelled from the cities those distributing what were considered improper handbills, or trying to hold meetings without authorization. After a long legal battle the courts finally affirmed the right to distribute leaflets, display placards, and hold meetings in public places. The plaza of Journal Square was named (1925) for the *Jersey Journal* (1867); the name was officially changed to Veterans Square when the paper criticised Hague; but the railroads kept the old name and it is now called Journal Square. The largest foreign elements have been Italian, Irish, Polish, and German. Pop. (1940) 301,173; (1950) 299,017.

JERSEY SHORE, borough, Pennsylvania, in Lycoming County; on the Susquehanna River, 13 miles west of Williamsport, on the Pennsylvania and the New York Central railroads and state and federal highways. Altitude 603 feet. Jersey Shore's industries include the manufacture of silk, shirts, hosiery, cable, machines, automobile parts, and television aerials. There are railroad shops here.

Settled in 1785, and founded by New Jersey colonists, Jersey Shore was incorporated in 1826. It has a mayor and council form of government. Pop. (1940) 5,432; (1950) 5,595.

JERSEYVILLE, city, Illinois, seat of Jersey County, 60 miles southwest of Springfield on the Chicago, Springfield, and St. Louis and the Alton railroads. Jerseyville is the marketing and shipping center of a fertile agricultural region, and is especially known for the quantity of apples grown in the vicinity. Other crops are grain and general farm produce, and there are large stock farms. Manufactures include flour, seed cleaners, shoes, concrete and limestone products.

The city was platted in 1834, incorporated in 1855, and received its city charter in 1897. It has a commission form of government. Pop. (1940) 4,809; (1950) 5,792.

JERUSALEM, *jê-rôô'sâ-lêm* (Arabic *EL QUDS* *ESH SHERIF*, *âl kööts'âsh shâ-rêf'*; ancient *HIEROSOLYMA*, *hî-êr-ô-sô'i'-mâ*), city, Palestine, situated on a rocky ridge in the Judaean Hills, 35 miles southeast of Tel Aviv and 35 miles from the Mediterranean Sea. Altitude 2,439 feet. It is a railroad terminus and is served by highways dating from ancient times, which converge on the city from the four cardinal points of the compass.

Jerusalem comprises the old walled city, which contains the holy sites of 3 faiths—Jewish, Moslem, and Christian, and the New City, which was begun in 1860 outside the walls and has outgrown the old one in both population and area. After the Israel-Arab War in 1948, the Old City, with a population of 25,183 (1944 est.) was held by the Arabs and incorporated into the Hashemite Kingdom of Jordan, while the New City (pop. 1950 est., 110,000) became the capital of Israel and Jerusalem's economic center. It manufactures food products, pharmaceuticals, leather and glass products, radios, and cigarettes, and other industries include printing, handicrafts, and metal-working.

Jerusalem was built on several hills. "This group of hills, now represented by a nearly level plateau, as the inner valleys have been filled up

with the accumulations of ages, forms an outlying spur of the mountains of Judea, and has a general direction of north and south. On the north side the ground is comparatively level; two valleys, on the west, south and east, encircle the site, and gradually getting deeper, unite near the Pool of Siloam, forming one valley which runs down to the Dead Sea." The modern city, much less extensive than the old in its best estate, is a rough quadrangle surrounded by a very irregular wall, built in the 16th century by Solyman I, on the lines of the Crusaders' fortifications. It has nominally eight gates, two on each side; the Jaffa and Abd-ul-Hamid on the west (the latter very recent), the Zion and Dung on the south, the Golden (closed up) and Saint Stephen's on the east, and the Damascus and Herod's on the north. The city is unevenly divided, by the main street running from the Damascus gate south to near the Zion gate, and that running east from the Jaffa gate to the Haram-esh-sherif, into four "quarters" in which the great religious divisions are segregated: the Mohammedan, much the largest, on the northeast, adjoining the original holy places; the Christian next, on the northwest, where is the Church of the Holy Sepulchre; the Armenian on the southwest; the Jewish on the southeast. The streets are crooked, narrow, ill-made, and dirty, and the city has few except historical attractions; the stream of tourists, however, has developed civilized conveniences such as hotels, banks, mercantile establishments, etc. Several Jewish colonies have been settled in the environs; and since 1858 a quarter has grown up outside the walls on the northwest, approached by the Jaffa Gate, and containing consulates, Christian churches, schools, charitable institutions, etc., but not more sanitary than the old. The city prior to British occupation in 1917 was the capital of an independent sanjak, subject to the government at Constantinople. It has an executive and a town council with representation of the great religious divisions. It is the seat of Roman Catholic, Greek Catholic and Armenian patriarchs; the smaller eastern churches have resident bishops; and till 1887 a joint Protestant bishopric was supported by England and Prussia, with alternate bishops, but on the death of the then incumbent Prussia withdrew from the arrangement, and England continued it alone. Pop. in 1939 about 129,800, made up of Mohammedans, Christians and approximately 79,000 Jews. In addition, there is a considerable floating population of pilgrims to the sacred sites.

The intense historical interest is centred on memorials of the time or localities of David and Solomon, and of the life and death of Christ. Of the former, the supreme interest is in the Haram-esh-Sherif, the site of the temple, and palace of Solomon and of the later temples. It is a walled area about 527x330 yards, with an elevated platform in the centre reached by steps; in the centre is the beautiful Kubbet es-Sakhra, or Dome of the Rock—a wooden octagon with sides of 66 feet 7 inches, decorated on the outside with marble and porcelain tiles, each of the four sides which face the cardinal points having a square gate surmounted by a vaulted arch. Just east of this is the Chain Dome, or David's Place of Judgment. Other domes of interest

are near; but the next most notable structure in the Haram is the mosque El Aksa, at the south end. Within it are also a beautiful 15th century fountain, a pulpit of the same date, a modern mosque called the Throne of Solomon, and the fortress of Antonia. Of the Christian monuments, the most noteworthy is the Church of the Holy Sepulchre, in the Christian quarter, originally built by Constantine the Great over the traditional site of the Crucifixion. (See HOLY SEPULCHRE). There is a rotunda, with a dome 65 feet in diameter, above a small Chapel of the Sepulchre; a number of church buildings, said to include the site of Golgotha or Calvary; and 22 chapels. The Via Dolorosa, along which Jesus is said to have carried the cross to Calvary, follows the present street Tarik Bab Sitti Maryam from Saint Stephen's Gate. Several modern churches and other institutions are also worth visiting; but the thronging Scriptural associations—besides those mentioned above, the Mount of Olives, the Pool of Bethesda, the Vale of Hinnom, etc.—overshadow all else.

Topography and History.—About a mile north of Jerusalem, the main north and south watershed ridge of Palestine turns to the west; while a spur called Olivet, having three pinnacles, runs first southeast one and one-half miles, and then south one and one-fourth miles. The space between the two is occupied by a plateau sloping southeastward, and separated on each side from the bounding ridges by a ravine 300 to 400 feet deep, with steep and often precipitous sides. The eastern ravine, separating it from Olivet, is the "brook" Kedron or Kidron (Cedron), which was always a dry bed; the western is the Wady el-Rabâhi (probably the vale of Hinnom), which after skirting it on the west, turns east along the southern scarp of the plateau and joins the Kedron. Through this plateau from north to south runs a broader and much less deep and precipitous valley, the Tyropœon ("cheese-makers' place") 100 to 150 feet deep, thus dividing it into two uneven sections: the east ridge is continuous, and its northern part was the first occupied; the western part, the "new city," is divided by a lateral branch of the Tyropœon into two summits, a north and a south, connected by a narrow saddle separating also Tyropœon from el-Rabâhi. The general height may be stated as about 2,500 feet; the eastern ridge is 2,440 feet at the north, and descends southward; the western north summit is 2,490 feet, south summit 2,520. The accumulation of the rubbish of 3,000 years, however, has greatly modified the contours of the hills and ravines, obliterating some minor ones altogether. The average depth over the rock levels is 30 to 40 feet, and in the valleys 70, in one case reaching 120.

This plateau, surrounded on three sides by steeply scarped bluffs and crested with hills, was a natural fortress; but it had two defects—it commanded nothing in particular, and its water-supply (one spring intermitting for hours or even a day or two, and that at the foot of a bluff) was very scanty. Probably at the first, as many times since, army after army marched around it, and left it untouched as of too little military significance. We first hear of it on the Tel el-Amarna tablets (about 1400 B.C.) when it is seemingly a little hill fort with a small gar-

rison, possibly with a village also, and the capital of the "land of Jerusalem," apparently a small territory along the watershed. The king, Abd-Khiba, is a vassal of the king of Egypt, and begging assistance against the Khabiri (Hebrews?). Later it is a minor "Jebusite" citadel: Hebron, Bethlehem, Bethel, Gibeah, Jericho, are all more important. But when David undertook to form a consolidated Hebrew kingdom, Jerusalem had the transcendent merit that it lay on the border between Judah and the northern tribes, not historically identified with either; it was also fairly on the central line of communication, and convenient for action against the Philistines and the desert tribes at once. He made terms with the Jebusites and occupied the hill-fort of Zion on Ophel, near the only available water-supply. Possibly a village grew up on the eastern slope of the hill; but it was small, for the whole levy of Palestine was but 30,000 men (2 Sam. vi, 1), and other places held the trade. Solomon greatly increased the size of the town, and built a stone temple for Yahweh and a great palace. Under Rehoboam the place was captured by Shishak of Egypt; under Amaziah by Jehoash, and its walls partly leveled. During the palmy times of the northern kingdom it was held of small account except by the Judahites: it was only one of many places of pilgrimage down to Hezekiah's time, and the northern prophets ignore it and speak of Bethel, Gilgal and Beersheba. With the fall of its northern neighbor, for the moment its importance and wealth increased; it became the one shrine which had never been defiled with the rites of the native religions, the centre of Jewish religious life, the one place where sacrifice might be offered. In the later days of the monarchy the town spread beyond the east ridge into the Tyropœon; a second town and a trading quarter grew up. For a long time after its destruction by Nebuchadnezzar in 586 the history is scant and dubious. It suffered heavily under the Persian Empire; under Artaxerxes Ochus the temple *may* have been destroyed. Alexander's sacrificing in the temple is mythical; and in 320, Appian says, Ptolemy Soter destroyed the city. Then there was a time of peace and prosperity, culminating in the high-priesthood of Simon II (219-199 B.C.); after a series of struggles between the Ptolemies and the Seleucids, in which the former took and garrisoned the place and the Jews helped drive out the garrison, the Seleucids obtained Palestine by treaty in 197. When Antiochus Epiphanes undertook to Hellenize Palestine in 169, he took the city, destroyed the walls, plundered the temple, and erected an altar to Zeus in place of that to Yahweh. Judas Macabæus rebuilt the temple and the walls; again razed by the Greeks, they were again rebuilt by Jonathan. Under the Hasmonæan dynasty it extended to the western ridge; there was a new palace and royal quarter of great splendor; the city became the metropolis of the Jewish world, and the one great pilgrim shrine. Then it became tributary to Rome, but at least still a kingdom governed by its own sovereigns; such it was when Jesus was born; but it shortly after became a province governed by a Roman procurator. The Roman system of repression and Jewish national feeling were brought sharply into conflict, aside from any actual mis-

government; and a grand national revolt took place, which in 66 A.D. gained possession of Jerusalem. Vespasian was appointed to repress it; and in 70 A.D. his son Titus, after one of the most frightful sieges in history, with unimaginable horrors, took it, burned the temple, and leveled the city to the ground. Josephus says the city's population was 1,000,000, and Tacitus (probably from Josephus) 600,000. Both are absurd, those of Josephus are Oriental in their exaggeration. From 30,000 to a maximum 45,000 may be estimated. It remained a ruin for many years. In 131 Hadrian visited the site and ordered the rebuilding of the city, apprehending a restoration of pagan worship, the Jews broke out in rebellion under Bar-Cochba; and Hadrian, not caring to set up a new centre of Jewish propaganda, made it a Roman colony called *Ælia Capitolina*, and forbade Jews to enter it on pain of death. Thence till the time of Constantine nothing is known of it; except as a Jewish shrine it was nothing. When the empire became Christian, Constantine's mother, Helena, induced him to cherish the seat of Christ's ministry and death; and he built the Church of the Holy Sepulchre. Pilgrims flocked to Jerusalem from all parts, and it became the shrine of Christendom. Captured by Khosru of Persia in 614, it was retaken by Heraclius in 628; but in 637 was taken by the Moslems under the caliph Omar. The line of Arabian caliphs of different dynasties was succeeded by the Seljuk Turks. The Christians were oppressed, the sacred places defiled; to crown all, the overland caravan trade was cut off. Jerusalem was taken by Godfrey of Bouillon in 1099, becoming the capital of a Christian monarchy. Saladin recaptured the city in 1187, and from then until the World War it remained in Mohammedan possession.

In December, 1917, it surrendered after a short siege to British troops under General Sir E. H. Allenby. Later it was made the capital of the Mandate of Palestine and this it remains today. The city has been on occasion the scene of considerable strife between Jews and Arabs since it came under the mandate. In 1929, for example, there was much rioting and bloodshed because the Jews claimed certain rights at the Wailing Wall (all that is left of the historic Jewish Temple) which, it was declared, the Arabs refused to give them. An appreciable increase of Jewish immigration to the city in recent years (some 7,000 arrived in 1929), the settlements by Jews on land belonging to the Jewish National Fund, the great activity of the Zionists, and the founding of the Hebrew University on Mount Scopus are events upon which the Arabs have not looked with kindly eyes. The new library building at Mount Scopus was inaugurated on 1 April 1925, and with its completion today it can house over 200,000 volumes, an evidence of the laudable ambitions of the Jews for the future growth of their great university.

JERUSALEM, Councils or Synods of, a number of councils held at Jerusalem after the meeting of the Apostles (Acts xv), of which

six are of prime importance. (1) The first ecclesiastical council, believed to have been held about 47 and mentioned in Acts xv, discussed the extent to which Judaic law should be followed in the Christian Church. The council gave three decisions: (a) abstinence from meats which had been offered to idols; (b) from blood and strangled things; (c) from fornication. (2) In 335 an attempt was made to heal the differences in the church at the time of the meeting of the bishops to consecrate the church of the Holy Sepulchre, and Arius was restored to fellowship and permitted to return to Alexandria. (3) In 349 Maximus, bishop of Jerusalem, and 60 other bishops met upon the return of Athanasius to Alexandria, rescinded the decree published against him and dispatched a synodal letter to the church in Alexandria. (4) In 399, held in response to an appeal from Theophilus of Alexandria to sustain the decree against the Origenists; the decree was confirmed and the resolution to hold no communion with those who denied the equality of the Father and the Son was passed. (5) In 553 the acts of the fifth Ecumenical Council of Constantinople were received by all the bishops of Palestine except Alexander of Abilene, who, being absent, was deposed. (6) In 1672 the most notable council was held, convened by Dositheus, patriarch of Jerusalem, with the object of eradicating Calvinism. It was attended by 53 prelates, six metropolitans and other officers and members of the church. It rejected unconditional predestination and justification by faith alone, and advocated the Roman Catholic doctrines of transubstantiation and of purgatory. Its decisions were the cause of considerable trouble in the Eastern church, charges of leanings toward Romanism being made, although the council had specifically pronounced against the Roman Catholic affirmation that the Holy Ghost proceeds from both Father and Son. The pronouncements of this council are regarded on the whole as one of the most important expressions of faith of the Eastern church.

JERUSALEM CHAMBER, a large hall in the deanery of Westminster, noted for its historical associations. It was built for Abbot Littleington, 1376-86. Henry IV died in it, 20 March 1413. It was the meeting place of the Westminster Assembly in 1643, also of the company of revisers of the New Testament of 1881. The Old Testament Company also met there part of the time. Before they were buried in Westminster Abbey, Addison (1719) and Congreve (1728) lay in state in the hall. The name of the hall was probably given because of the tapestries on the walls depicting scenes from Jerusalem.

JERUSALEM CHERRY, an ornamental house plant of the nightshade family, *solanum capsicastrum* and *solanum pseudo-capsicum*, of which the latter species is a native of Madeira. The plant attains a height of from one to three feet with oblanceolate leaves borne on short stems and small white flowers followed by bright red or yellow berries the size and appearance of cherries. It is readily propagated by either seed or cuttings. It is sometimes called "winter cherry," and its fruit is inedible.

JERUSALEM CREED, the confession of faith generally believed to have been taught by Saint Cyril of Jerusalem in his catechetical lec-

tures about 347 A.D., based upon the Nicene creed of 325 A.D. and amplified by Cyril upon his return from exile in 362 A.D. It reads: "I believe in one God, the Father Almighty, maker of heaven and earth, and of all things visible and invisible; and in one Lord Jesus Christ, the only begotten Son of God, begotten by the Father before all worlds, very God, by whom all things were made, who was incarnate and made man, crucified and buried, and the third day ascended into the heavens, and sat down at the right hand of the Father; and is coming to judge quick and dead. And in the Holy Ghost, the paraclete, who spake by the prophets; and in one baptism for the remission of sins; and in one holy catholic church; and resurrection of the flesh; and in life everlasting." It forms the basis of the creed adopted by the council of Constantinople, 381 A.D. Consult Schaff, Dr. P., 'The Creeds of Christendom' (3 vols., 1877); 'The Library of the Fathers' (Vol. II, Oxford translation, 1832); Riddle, 'Christian Antiquities'; Curtis, 'Creeds and Confessions' (1911).

JERUSALEM DELIVERED. In dealing with the 'Jerusalem Delivered' (1581), critics have the advantage of knowing from Tasso's dialogues and from his later version of the poem ('Jerusalem Regained,' 1593), the considerations which determined for the author its content and its form. In his critical theory "plot" and "ornament" are basic and distinct categories; while prominent before his mind were the successful examples of Ariosto, Boiardo and Pulci. These chivalric romances were loose agglomerations of episodes related but tenuously to a central theme. Tasso consciously strove to build a poem of the same kind that would conform however, as regards the category of plot, to the canons of Aristotle's 'Poetics' as modified by himself. It would have a unified theme to constitute a major interest. To this the episodic would be subject in the category of ornament. As an Italian of his time, Tasso conceived of religion, rather than patriotism as the subject of most lasting interest (the traditional motive of the ancient epic). But the imaginative tale, whether patriotic or religious, must, to convey its message to the reader, carry the conviction of historical narrative (doctrine of *verisimilitude*). Actual history does not leave room for the distinctive act of the poet: invention. He must select accordingly a subject which, recognized as history, will be but so vaguely known in detail that the fictitious will be accepted as true. The Turkish menace was the terror of Tasso's time; and one of the poetic commonplaces was to incite Christian Europe to a new Crusade. The subject of the holy wars thus imposed itself upon him for reasons of piety, present interest, and theoretical suitability. He chose the conquest of Jerusalem by Geoffrey of Bouillon (First Crusade, A.D. 1096-99); its epic motive was to be the triumph of the just man through God over the wiles of sin and the obstacles set by evil fortune.

The operation of Tasso's pious purpose and of his critical theory can be traced through the 'Jerusalem Delivered' in the parts that are worthless. The theme that gives his much sought logical unity is mechanical and unimaginative. His just man, Geoffrey, is a lifeless

JERUSALEM OAK—JERUSALEM PLANK ROAD

abstraction, his Divinity a dull magician working in roundabout ways to produce miracles not worth the trouble. The preoccupation of the moral purpose contributes some allegory that is shallow if geometrically logical. The episodes gain nothing from their dependence on the plot; while the theory of ornament as applied to style carries metaphor-making to extremes that have interest only historically as setting a fashion henceforth current in the most decadent period of Italian letters. So far as the 'Jerusalem Delivered' is a regular epic, it is dead. It lives only as a fantastic romance that gave free play to Tasso's supreme genius in the moods associated with the elegy and the idyll.

As the religious spirit overrides Tasso's biography so it overrides the strong passions of his soul. He felt intensely the beauty of life; he was deeply attached to the exterior world; he knew the inspirations of love, the allurements of sensuous pleasure. He never surmounted entirely the thought of death; rather he knows to the full what delusion means, the anguish of separation from loved objects and people, solitude, helplessness, despair. So he knows also the value of the Christian promise; and paying submissive tribute to the anthropomorphic aspects of dogma, he rises through faith to a vivid realization of true Christian experience. These are the elements of the lyric exaltation that has made some of his episodes immortal. In *Sophronia* he incarnates a mood of religious rapture indifferent to death and to worldly love, so completely does the martyr feel herself safe with God; whereas her lover, *Olindo*, snatches at the last consolations of life, rebelling in despair at the thought of what death makes forever impossible. Death and love are once more set in contrast in the death and conversion of *Clorinda*. Here is a violent sob of farewell accentuated by the bitterness of avoidable error—the great motive that romanticism has always played on to rouse extreme effects of pathos. But love struggles over the grave to console with the softening and sweetening hope in the Resurrection. *Clorinda's* mute benediction on *Tancred* is one of the most moving touches in all poetry. *Erminia's* flight to the Christian camp over a moonlit solitude is a complex experience of humility, surrender, devotion, expressing in words filled with beautiful Vergilian echoes, a suffocated lament for unrealizable yearnings. In the story of 'Armida' the idyllic sweetness, the sensuous suppressions of the 'Aminta' return, to suggest behind a graceful veil of modesty the fascination of sex allurements.

Tasso's orthodoxy in religion and in critical theory, his development of ingenuity in metaphor, his impeccable Petrarchism, his urbane preciousness, his skill in classic allusion, his elegant fancy, conquered the aristocratic circles of the next two centuries in Europe, when everyone ranked him as superior to Petrarch and Dante—this, in spite of a fatuous pedantic quarrel over the theory of the epic which embittered the poet's later years and lasted for several decades after his death. The Romantic movement of the 19th century, rejecting most of the critical tradition from which Tasso drew, justly relegated him to a more modest position in the literary hierarchy of

Italy. In virtue of his storytelling gift, the common people of all regions of that country have accorded to the *Jerusalem Delivered* a popularity, as a code book of rustic chivalry, second only to the legends of Roland and Charlemagne still so current in the South. The poem endures in literature as the best expression of the ideals and mental traits of the Italian Counter Reformation and as the greatest product of the preceptual aesthetics of the Renaissance. In the world of music it has achieved immortality as the basis of the opera *Armide*, by Christoph W. Gluck (q.v.).

ARTHUR LIVINGSTON.

JERUSALEM OAK. See GOOSEFOOT.

JERUSALEM PLANK ROAD, Engagement near. After the battle of Cold Harbor (q.v.), 1-3 June 1864, General Grant crossed to the south of James River, made unsuccessful assaults upon the Petersburg intrenchments, 15-18 June, and then determined to invest the city partially by a line of works toward the South Side Railroad, and by the evening of the 21st the Fifth corps rested its left on the Jerusalem Plank Road. The Second corps, followed by the Sixth, was moved across the road with the intention of seizing the Weldon Railroad at a point near Globe Tavern next day, and with the expectation of seizing also the South Side Railroad, and cutting Lee's communication with Lynchburg. At night the Sixth corps was in rear of the left of the Second. The orders for the 22d were that the Fifth corps should hold fast its position in front of the Confederate intrenchments, while the Second and Sixth swung to the right, and forward on its left, each division intrenching as it came into line. In the movement the corps commanders at first were directed to keep up connection, then they were ordered to move without regard to each other, each taking care of his own flanks. The Second and Sixth corps moved chiefly through densely wooded thickets; the Second on the right and near the Confederate works; the Sixth at right angles to the Second toward the Weldon Railroad. Gibbon's division of the Second corps had swung in on the left of the Fifth and intrenched, Mott's division was intrenching, and Barlow's division, on the left, was not yet in position, when the last named was attacked. Gen. A. P. Hill had been sent down the Weldon Railroad to oppose Meade's attempt upon it. He had the three divisions of Wilcox, Mahone and Bushrod Johnson. Leaving Wilcox to oppose the Sixth corps, which had not come up on the left of the Second, Hill, about 3 p.m., passed Mahone and Johnson through the opening between the two corps and struck Barlow in flank and rear, driving him back in confusion to the position from which he had advanced in the morning, and taking many prisoners. Mott's division, on Barlow's right, fell back precipitately, and then Hill struck Gibbon's left brigade in front, flank and rear, causing it to give way and abandon a battery of four guns. So sudden and unexpected was this attack upon Gibbon that the greater part of several regiments were captured with their colors. Gibbon made an unsuccessful effort to recover the lost portion of his line. Hill returned to his intrenchments, leaving some force on the railroad, and toward evening the Second corps was thrown forward; but it was

not until next morning that it occupied the ground from which it had been driven, the Sixth corps, forming on its left, thrown back facing the Weldon Railroad, and about a mile from it. The Union loss on the 22d, confined almost entirely to the Second corps, was nearly 2,000, of whom about 1,700 were prisoners. The Confederate loss is unknown. Consult 'War of Rebellion—Official Records' (Vol. XL, Washington 1889-1901); Humphreys, A. A., 'The Virginia Campaign of 1864-65' (New York 1883); Walker, F. A., 'History of the Second Army Corps' (New York 1886).

JERVIS, jēr'vis or jār'vis, John, EARL OF ST. VINCENT, British admiral: b. Meadford, Staffordshire, 9 Jan. 1735; d. 14 March 1823. He entered the navy 4 Jan. 1749, was promoted lieutenant 19 Feb. 1755, took part in the capture of Quebec, and in 1759 was appointed to the command of the sloop *Scorpion*. He became post-captain in 1760, and in 1769-72 he commanded the *Alarm*, stationed in Mediterranean waters. He was then put on half-pay and traveled extensively in Europe and European waters, making many valuable notes on naval affairs. During the American Revolution he commanded the 80-gun *Foudroyant*, participated in the battle of Ushant on 27 July 1778, in the relief of Gibraltar, and on 19 April 1782 he captured the French man-of-war *Pégase*, for which achievement he was made K.B. He was sent to Parliament for Launceston in 1783 and for Yarmouth in 1784. He became vice-admiral in 1793 and until 1795 commanded the naval operations against the French in the West Indies. He was appointed to the command of the Mediterranean fleet in 1795, receiving rank as admiral, and successfully maintained the blockade of Toulon. Upon the alliance of Spain and France and the occupation of Italy by the French he was obliged to withdraw his fleet to the Atlantic, and on 14 Feb. 1797 he engaged the Spanish fleet off Saint Vincent at heavy odds and completely routed it. For this victory he was granted his earldom and a pension of £3,000. In 1797, during the general mutinies at Spithead and Nore, his prompt measures and the high state of discipline in which he maintained his command were successful in keeping his ships free from the trouble. He was often bitterly criticized as a disciplinarian, his firmness extending to his officers' conduct as well as that of the sailors; but Lord Nelson, whose methods were wholly different, acknowledged the efficiency of Lord St. Vincent's measures and the necessity for them at the time. Nelson's victory at the battle of the Nile was largely due to the high discipline which St. Vincent had inaugurated. He resigned his command because of ill health in 1799 and upon return to duty in 1800 he took command of the Channel fleet, where he instituted his usual disciplinary methods to the great indignation of his officers and crews, but with salutary results so far as the efficiency of the fleet was concerned, as he was able to maintain the blockade of Brest for 121 days. He was First Lord of the Admiralty in 1801-03 and was fearlessly dictatorial in the institution of reforms at the dockyards, but was opposed by Pitt on the grounds that he failed to see the necessity of preparing the fleet for war. He refused the command of the Channel fleet under Pitt's ministry in 1803, assumed it after

Pitt's death in 1806, but asked to be relieved in 1807. The rank of admiral of the fleet was conferred upon him by George IV at the time of his coronation. Lord St. Vincent ranks high among the commanders of his 'time, through whom the supremacy of British naval power was established. The biographies by Tucker (2 vols., 1844) and Brenton (1838) are not considered authoritative in the best sense. Consult Laughton, 'From Howard to Nelson' (1899); Mahan, A. T., 'Types of Naval Heroes' (1901); Anson, 'Life of John Jervis, Admiral Lord St. Vincent' (1913).

JERVOIS, jēr'vis, SIR William Francis Drummond, British general and engineer: b. Cowes, Isle of Wight, 10 Sept. 1821; d. Bitterne, Hampshire, 16 Aug. 1897. He was educated at the Royal Military Academy at Woolwich and was commissioned second lieutenant in the Royal Engineers 19 March 1839. He was ordered to the Cape of Good Hope in 1841, where he remained on engineering duty and in active service against the Boers and Kaffirs until 1848. Returning to England he continued in the engineering service. He was appointed assistant inspector-general of fortifications at the War Office 7 April 1856, and in 1857 became in addition secretary to the defense committee. He prepared the plans for the defense of London in case of invasion during the period when war with France was threatened in 1857, and in 1859 drafted a report and recommendations for defenses calling for an appropriation of £7,000,000, which was granted by Parliament. He was appointed director of works for fortifications in 1862, and in 1863 made an official tour of inspection of the fortifications of Canada and Bermuda, also visiting those of eastern United States. He afterward inspected the progress of fortifications in all parts of the British Empire, and upon the completion of the work in 1874 it was found that he had carried out the plans submitted to Parliament and kept within the £7,460,000 appropriation by a margin of £40,000. He was governor of the Straits Settlements in 1875-77, of South Australia in 1877-82, retiring from military service with the rank of lieutenant-general 7 April 1882. He served as governor of New Zealand in 1882-89, when he returned to England with an enviable record for both ability and popularity. He served on the consultative committee on coast defense duties under Edward Stanhope in 1890. He was a member of the Royal Society, a knight commander of the Orders of Saint George and Saint Michael, and author of numerous valuable reports on problems of defense.

JESHURUN is a tender and affectionate poetical term applied to the people of Israel occurring four times in the Old Testament. It is variously interpreted. Kimchi says "Israel is so called as being just among the nations." Gesenius translates it as "a righteous little people."

JESI, yā'zē, or **IESI** (anc. *Æsis*), Italy, city and episcopal see of the Marches in the province of Ancona, on the River Esino, 17 miles by rail southwest of Ancona. Its walls date from mediæval times and are well-preserved. The cathedral of Saint Septimius was built in 308, and the Palazzo del Comune in 1487-1503. There is a library containing paintings by Lorenzo Lotto, and a castle built by

Baccio Pontelli in 1488. The town takes its name from the river, which from 250 B.C. to about 82 B.C. formed the boundary of Italy. The ancient town *Æsis* was a colony used by the Romans as a recruiting ground. It was the birthplace of Emperor Frederick II, as well as of the composer Giovanni Battista Pergolesi. Pop. commune, 24,777.

JESPERSEN, yēs'pēr-sēn, **Jens Otto Harry**, Danish philologist: b. Randers, 1860. He was educated at the University of Copenhagen where he became professor of English in 1893. He was associate editor of *Dania* in 1890-1903, and in 1906 he received the Volney prize of the French Institute. He lectured at Saint Louis in 1904 and at Columbia University and the University of California in 1909-10. His literary works chiefly discussing phonetics include 'The Articulation of Speech Sounds' (1889); 'Chausers Liv og Digtning' (1893); 'Fonetik Læren om Sproglyd' (1897-99); 'Sprogundervisning' (1901; Eng. trans., 1904); 'Growth and Structure of the English Language' (1905); 'Modern English Grammar' (1909); 'Lehrbuch der Phonetik' (1913); 'Philosophy of Grammar'; 'Language—its Nature, Development, and Origin'; 'International Language.' D. Denmark, 30 April 1943.

JESSAMY BRIDE, The, name given in compliment by Goldsmith to Mary Horneck, a relative of Reynolds and a member of a family with whom the author was on terms of intimacy. Miss Horneck was thought to be the object of affection on the part of Goldsmith. She became Mrs. Gwynn and afterward gave to Prior her recollections of the author. "Jessamy" is a poetic name for jasmine.

JESSE, jēs'sē, in the Bible stands at the head of the house of David, who was his son. While Saul was persecuting David he took refuge in the land of the Moabites, where Ruth the Moabitess, his grandmother, had lived. In the genealogy of Jesus Christ as given in the Gospels of Matthew and Luke he is mentioned as one of the ancestors, as Christ in the New Testament is hailed "Son of David." This fact has suggested some of the most interesting creations of mediæval art, and what is called a "Jesse window" is a stained glass church window in which Jesse is depicted as the root of a tree which bears as its fruit David and other heroes and saints of the Old Testament, with the infant Jesus in the arms of his mother on the highest branch.

JESSE, Edward, English author and naturalist: b. Hutton Cranswick, Yorkshire, 14 Jan. 1780; d. Brighton, 28 March 1868. He was secretary to Lord Dartmouth and was appointed successively to a clerkship in the woods and forestry office and deputy surveyor of the royal parks and palaces. His love for natural history was fostered by his residence in Richmond Park, and later in Bushey Park, and at Hampton, where he was connected with the restoration of the Hampton Court Palace. While not possessed of scientific training Jesse's powers of observation and facility in expressing himself gave a considerable popularity to his writings. Author of 'Gleanings in Natural History' (1832-35); 'An Angler's Rambles' (1836); 'Anecdotes of Dogs' (1846); 'Lectures on Natural History' (1863). He edited Izaak Walton's 'Compleat Angler'; Gilbert

White's 'Selborne'; and L. Ritchie's 'Windsor Castle.' He also wrote handbooks to Windsor, Hampton Court and other places of note.

JESSE, John Henaage, English historian, son of Edward Jesse (q.v.): b. 1815; d. London, 7 July 1874. He was educated at Eton and afterward became a clerk in the admiralty, where he served for many years. He early developed a taste for literature and while his initial attempts at verse and drama were of little moment his later work possesses considerable value as presenting the times of which he wrote from the social and anecdotal side of history. Author of 'Memoirs of the Court of England During the Reign of the Stuarts' (1840); 'George Selwyn and His Contemporaries' (1843; new ed., 1882); 'Memoirs of the Pretenders and their Adherents' (1845); 'Literary and Historical Memoirs of London' (1847); 'London and Its Celebrities' (1850); 'Memoirs of the Life and Reign of King George the Third' (1867); 'Memoirs of Celebrated Etonians' (1875), etc. A collected edition of his works was published (30 vols., London 1901).

JESSE, Richard Henry, American educator: b. Epping Forest, Lancaster County, Va., 1 March 1853. He was graduated from the University of Virginia in 1875. He studied at Leipzig in 1885. Inspected German schools in 1890. Studied at Munich, spring and summer semester, 1905; at Berlin, fall and winter semester, 1905-06; was dean of the academic department of the University of Louisiana from 1878 till its union with Tulane University in 1884, in which institution he was professor of Latin till 1891. From July 1891 to July 1908 he was president of the University of Missouri. From ill-health he resigned as university president and entered by invitation upon The Carnegie Foundation. He served as president of the Missouri State Teachers' Association, the Southern Association of Colleges and Secondary Schools, the National Association of State Universities and the Baptist Congress. In 1904 he was awarded a commemorative diploma and medal at the Saint Louis Exposition for his services to education. He is author of 'Missouri Literature' (1901), with E. A. Allen, and of papers in the transactions of various societies.

JESSEL, jēs'el, Sir George, English judge: b. London, 13 Feb. 1824; d. there, 21 March 1883. He was of Jewish parentage and was educated at University College, London, where he became a fellow in 1846. He was called to the bar at Lincoln's Inn in 1847, was called within the bar and became a bencher in 1865, and in 1868 he was elected to Parliament for Dover. He attracted Gladstone's favorable notice in 1869 by two sound speeches on the Bankruptcy Bill, and in 1871 he was appointed Solicitor-General. He succeeded Lord Romilly as Master of the Rolls in 1873, was sworn a privy councillor and resigned his seat in Parliament. The Judicature Act of 1881 made him president of the First Court of Appeal where he served the remainder of his life. He was notable as a judge for his wide learning, his quick, accurate judgments and the rapidity and thoroughness with which he cleared his calendar. He was the first Jew to take a share in the

executive government of England, to become a regular member of the Privy Council and to take a seat on the judicial bench of Great Britain. He was vice chancellor of the University of London from 1880, a trustee of the British Museum, and a fellow of the Royal Society.

JESSEL, George Albert, American vaudeville comedian and actor: b. New York City, April 3, 1898. Long a favorite in vaudeville and radio, Jessel and his "Hello, Momma" have become the byword for that particular type of humor which has slowly faded into oblivion—the rowdy, sentimental approach that plays fully on the audience's emotions.

Jessel began his stage career as a boy singer in a trio that included Walter Winchell, later touring with Eddie Cantor in a boys' chorus and appearing in 1914 in London as a soloist. He appeared in 1919 in the *Gaieties*, where he first introduced his telephone conversation pieces, and in 1925 he starred in the stage version of *Jazz Singer* (produced as the first "talkie film" two years later, starring Al Jolson). Jessel appeared in his first motion picture in 1926 and in 1928 appeared in *The War Song*, a sentimental play of which he was coauthor. In 1930 he appeared with Fanny Brice in the musical *Sweet and Low*.

During the 1930's he appeared at various nightclubs and theaters and on radio. His radio appeal was a good deal less than his stage appeal but he nevertheless appeared on his own programs as late as 1940. In 1936 he was in Hollywood as a producer and in 1942 he produced on Broadway the musical revue *Show Time*.

In 1943 he retired from the stage to produce and direct motion pictures for 20th Century Fox, making such pictures as *The Dolly Sisters* (1945); *Nightmare Alley* (1947); *Dancing in the Dark* (1949); *Golden Girl* (1951); and *Wait 'Til the Sun Shines Nellie* (1952). He has also written *So Help Me* (1943), an autobiography, and *Hello Momma* (1946), an account of his vaudeville experiences.

JESSELTON, jēs' 'l-tūn, town, British North Borneo, situated on the northeast coast of Borneo on a small inlet of the China Sea. It is the chief port of the colony and, since June 1947, has been the capital of British North Borneo and of the West Coast residency. It is the terminus of the coast railway running north from Brunei Bay and acts as a trading center for the agricultural and stock-raising district around it. It exports raw rubber and has rice mills and fisheries, most of its trade being carried on by the Chinese. The port was founded in 1899 and during World War II was severely damaged. Pop. (1951) 11,266.

JESSOPP, jēs'öp, Augustus, Anglican clergyman and author: b. Cheshunt, Dec. 20, 1823; d. Norwich, Feb. 12, 1914. He was educated at Cambridge and after taking orders in the Anglican Church was curate of Papworth St. Agnes, Cambridgeshire, 1848-1855; head master of Helston Grammar School, Cornwall, 1855-1859; was headmaster of King Edward VI's School, Norwich, 1859-1879, and from 1879 rector of Scarning, Norfolk. He was an authority on archaeological subjects, wrote largely on past and present village life in England, and contributed many articles to the *Dictionary of National Biography*. His works include *Arcady for Better for Worse*

(1887); *The Coming of the Friars* (1889); *Trials of a Country Parson* (1890); and *Studies by a Recluse* (1893).

JESSORE, jě-sōr' (formerly YASOHARA), district, Pakistan, in East Bengal, situated in the Ganges Delta, with an area of about 2,600 square miles, bounded on the west by West Bengal and on the east by the Madhumati River.

Its terrain is largely made up of alluvial plain, although it has extensive marshlands in the western part, accounting for a high malarial mortality. Rice, jute, tobacco, sugar cane, and wheat are raised on the fertile plains, and in the forest areas are found areca and date palms.

The capital and main industrial center is the city of Jessore (1941 pop. 18,410) with rice and oil seed mills and manufactures of celluloid and plastics. The only other manufacturing city of importance is Jhenida which has a large sugarcandy industry.

History.—The district was a part of the Mohammedan kingdom in the first half of the 16th century, and in 1576 was conquered by the Hindus. Under British rule, it was a Bengal province, 2,925 square miles in area with a population (1941) of 1,828,216, until, with its large Mohammedan population, it was incorporated into the province of East Bengal, Pakistan, in 1947, with about one-seventh of the former district going to West Bengal, Republic of India. Pop. (1951) 1,708,000.

JESSUP, jēs'üp, Henry Harris, American Presbyterian missionary and author: b. Montrose, Pa., April 19, 1832; d. Beirut, Lebanon, April 28, 1910. He was graduated at Yale in 1851, at the Union Theological Seminary in 1855, and was ordained in that year. He served as a missionary in Tripoli and Syria in 1856-1860, and from 1860 until his death was at Beirut. He was missionary editor of the Arabic journal *El-Neshrah*, and was professor of theology and homiletics in the Syrian Theological Seminary at Beirut. He was moderator of the General Assembly at Saratoga in 1879. He was author of *The Women of the Arabs* (1873); *Mohammedan Missionary Problem* (1879); *The Greek Church and Protestant Missions* (1891); *The Setting of the Crescent and the Rising of the Cross* (1898); *Fifty-three Years in Syria* (1910).

JESSUP, Philip Caryl, American jurist and public official: b. New York City, N. Y., Jan. 5, 1897. A graduate of Hamilton College, Clinton, N. Y. (1919), Jessup later attended Columbia University (M.A., 1924, and Ph.D., 1927) and Yale University (LL.B., 1924), and was admitted to the District of Columbia bar in 1925. He became lecturer on international law at Columbia in the latter year, and thereafter advanced to professor in 1935 and Hamilton Fish professor in 1946. During this period he also served as assistant solicitor, Department of State (1924-1925); assistant to Secretary of State Elihu Root at the Conference of Jurists on the Permanent Court of International Justice (1929); lecturer on international law at the Academy of International Law at The Hague (1929); legal adviser to the ambassador to Cuba (1930); visiting professor at Harvard Law School (1938-1939); and chairman of the Pacific Council, Institute of Pacific Relations (1938-1942).

In 1942-1944 he served as assistant director of the Naval School of Military Government and Education at Columbia University. In the meantime he was appointed division chairman in the State Department's Office of Foreign Relief, and assistant secretary general of the United Nations Relief and Rehabilitation Administration (1943), and served as assistant secretary general at the Bretton Woods Conference (1944). Thereafter, beginning with his appointment in 1945 as a member of the United States delegation to the San Francisco Conference, he represented the United States frequently in various United Nations posts.

He was appointed ambassador at large by President Harry S. Truman on Feb. 10, 1949, and in July of that year Secretary of State Dean Acheson announced that a full review of United States Far Eastern policy would be made under Jessup's direction. On March 29, 1950, he was named senior adviser to the secretary of state, and in the same month he was accused of pro-Communist leanings by Senator Joseph R. McCarthy of Wisconsin, although he was cleared by a Senate subcommittee in July. In October 1951, following his appointment as United States delegate to the United Nations General Assembly, his loyalty was again investigated by the Senate Subcommittee on Internal Security. Although a majority of the committee members reported no evidence of disloyalty, the committee voted against confirmation of his appointment, and the Senate adjourned without voting on it. He was given a recess appointment to the post by the president on Oct. 22, 1951, and resigned effective Jan. 19, 1953.

His works include *The United States and the World Court* (1929); *International Security* (1935); and *A Modern Law of Nations* (1948).

JESSUP, Walter Albert, American educator: b. Richmond, Indiana, Aug. 12, 1877; d. New York City, July 7, 1944. He received his B.A. in 1903 at Earlham College, Richmond, Ind., and his Ph.D. in 1911 at Columbia University, New York. He served as professor of education and dean of the School of Education at Indiana University (1911) and dean of the College of Education, Iowa State University (1912-1916). From 1916 until 1934 he was president of the State University of Iowa, resigning the latter year to accept the presidency of the Carnegie Foundation for the Advancement of Teaching. In 1941 he also became president of the Carnegie Corporation of New York, serving in this dual capacity until his death.

He served as a member of various educational survey boards attempting to revise antedated methods of education and was a stern opponent of the government's attempt to subsidize higher education. He maintained that it would lead to a regimentation of education.

JESTER, jēs'tēr, a professional "fool" or humorist, an entertainer such as were formerly employed by European monarchs and wealthy nobles. Originally the jester was a court minstrel whose duty it was to tell and sing of *gestes*, heroic deeds (Lat. *gesta*), but with the decline of minstrelsy the word *geste* changed in meaning and the *gestour* developed into a domestic buffoon (Fr. *bouffon*), a relater of witty stories. Jesters usually wore a motley dress and a cap surmounted with bells and asses' ears or a cock's

comb, hence the modern word "coxcomb," a showy fool or vain pretentious person. The emblem of the jester was the fool's bauble or *marotte*.

JESU DULCIS MEMORIA ('Jesu! the very thought of thee'), the first line of a poem dating from the 12th century. In the earliest manuscript it consists of 42 stanzas of four lines each with a single rhythmic scheme for each stanza. Twelve stanzas of this poem have been taken to form three hymns of the Office of the Holy Name in the Roman Breviary, namely, *Jesu dulcis memoria* (Vespers), *Jesu rex admirabilis* (Matins) and *Jesu decus angelicum* (Lauds). The *Dictionary of Hymnology* (1892) states that "this hymn has been (and there seems little reason to doubt, correctly) ascribed to St. Bernard and there are many parallels to it in his prose works, especially that on the Canticles. It has been variously dated 1130, 1140, or 1153, but as positive proof is lacking that it is unquestionably the work of St. Bernard, it is manifestly impossible to fix a date for its composition." Although Dom Prosper Louis Pascal Guéranger contends that there are "incontestable manuscripts" to prove that the three hymns of the Holy Name were written by a Benedictine abbess of the 14th century, he does not give the date and location of these manuscripts, and the existence of the 12th century manuscript seems to preclude that possibility. Eminent hymnologists, including Philip Schaff, Richard C. Trench, Francis A. March, and Samuel A. W. Duffield, seem to be unanimous in following the tradition of St. Bernard's authorship. The *Jesu dulcis memoria* has been translated into English many times, notably by Patrick Donahoe and by Edward Caswall.

HERBERT F. WRIGHT.

JESUIT ESTATES ACT or JESUITS' ESTATES ACT. This measure, passed by the legislature of Quebec in 1888, gave rise to an agitation which occupied public attention throughout all parts of Canada during the following year and for a time threatened to bring about a reconstruction of political parties. Under the French regime, which ended in 1760, the Jesuits had owned considerable landed estates at various points in the valley of the St. Lawrence—particularly at Quebec, Montreal, and Laprairie. After the conquest of Canada by the English the religious orders were permitted to retain the property which they held under grant from the French crown or by other legal title, with the exception of the Jesuits. This order had been banished from France, 1762, and was suppressed generally by the papal brief *Dominus ac Redemptor* (1773). Although Gen. Jeffrey Amherst brought influence to bear upon the government to secure for himself the estates of the Jesuits in Canada, his efforts proved unsuccessful. Despite personal pressure and the papal brief the "black robes" at Montreal and Quebec were not immediately molested by the British authorities, who refrained from taking over their property until the death of Father Casot, the last remaining member of the Society. This event occurred in 1800. Once possessed of the Jesuits' estates the crown had to determine what should be done with them, and after a certain amount of indecision it was decided that their income should be used for the support of education in the

province of Lower Canada. In vain the Roman Catholic bishops maintained the legality of their church's claim to the property. The government stood its ground and appropriated the revenues.

From having been originally assigned to Lower Canada, the Jesuits' estates passed at Confederation (1867) into the hands of the Province of Quebec. It was found, however, by the local government that their actual value was impaired by the ecclesiastical claims which stood against them. The bishop did not cease to protest against their retention by the state and the Jesuit order, revived under papal warrant, defended the justice of its own title. Had these lands been situated in a Protestant community the representations of bishops and Jesuits might have carried little weight, inasmuch as they could not be vindicated by an appeal to the courts, but where the mass of the population was Catholic the reiterated claims of the church had their effect upon the market. After Confederation the rent of the property decreased until it became almost negligible in comparison with the valuation, and when the government sought to effect a sale no purchaser could be found. In 1887 after the question had been put off by several preceding administrations, Honoré Mercier, a French Canadian Liberal of pronounced views, endeavored to effect a final settlement of it. Whatever the motives which actuated him, to criticize them would be to raise a matter of opinion. He introduced a bill which gave \$400,000 to the Roman Catholic Church as compensation for the property which the crown had seized in 1800. This sum was, for the moment, to constitute a special deposit which eventually should be distributed by the pope in return for a relinquishment of all claims to the Jesuits' estates that had been advanced by the bishops or by the Jesuits themselves. As a matter of fact, the pope divided the money among the Jesuits, the bishops, and Laval University, but in the meantime this recognition of his right to allot what were considered public funds among members of his own church drew forth cries of remonstrance from a large number of Protestants. A simultaneous grant of \$60,000 to Protestant schools in Quebec did not allay the feeling of hostility.

It should be observed that two distinct questions were raised by the agitation which proceeded from the Jesuits' Estates Act. The first had its root in the opposition of religious systems; the second was due to the federal character of the Canadian constitution. In 1888, Col. William E. O'Brien, a Protestant member of the House of Commons, proposed that the Dominion Parliament should disallow the action of the Quebec legislature in appealing to the pope and setting aside \$400,000 as a subsidy to Roman Catholic institutions. The debate which followed was marked by a series of able and aggressive speeches from all quarters of the House. The chief supporter of Colonel O'Brien's motion was Mr. D'Alton McCarthy, while against him were ranged the premier, Sir John Macdonald, and Sir Wilfrid Laurier, the leader of the opposition. On the one side an appeal was made to the alleged political misdeeds of the Jesuits throughout the whole course of their history and to their expulsion from the chief countries of the civilized world. On the other, it was maintained that the Dominion Parliament could not, without extreme danger, disallow provincial legislation and that

"the subject matter of this act was one of provincial concern, only having relation to a fiscal matter entirely within the control of the legislature of Quebec." The vote of 188 to 13, "the noble thirteen," against Colonel O'Brien's motion conveys but a faint idea of the public interest in this debate and in the issues which lay behind it. The fundamental claim of the extreme Protestant party was that recognition of papal authority and the encouragement of the Jesuits were direct blows at British freedom; while the leaders of both parties united to point out the constitutional dangers which would accompany disallowance.

Outside the House of Commons the agitation caused by the Jesuits' Estates Act led to the formation of an Equal Rights Party which was recruited from the ranks of the more pronounced Protestants with the ultimate object of suppressing all special privileges enjoyed by the Roman Catholics in Canada. It proved impossible, however, to break down existing political lines by giving central importance to an anti-Catholic movement. Despite many public meetings and an active campaign in the newspapers, the attack upon the Jesuits' Estates Act has left no lasting trace upon party organization in Canada, but it was not without influence in several directions, notably in the abolition of separate, namely, Catholic schools in the province of Manitoba.

CHARLES W. COLBY,
Formerly Professor of History, McGill University.

*Revised by: DR. GUSTAVE LANCTOT,
Former Dominion Archivist, Ottawa, Canada.*

JESUIT RELATIONS AND ALLIED DOCUMENTS. The, a series of 73 volumes on the travels and explorations of the Jesuit missionaries in New France (1610-1791), published in 1896-1901. The original French, Latin and Italian texts, with English translations and notes; illustrated by portraits, maps and facsimiles, have been edited by Reuben Gold Thwaites. The very great value of the work is that of original materials of the most interesting character for the history of North America from 1611, the date of the first landing of Jesuit missionaries on the shores of Nova Scotia. The reproduction of documents takes them in chronological order. The execution of the work by translators, editors, and printers (at Cleveland, Ohio) is in every way admirable; and its completion makes a monumental addition to American historical libraries.

JESUITS, members of a Catholic religious order founded in the 16th century and known as the Society of Jesus.

Foundation of the Society of Jesus.—The founder of the Society of Jesus was St. Ignatius Loyola (1491-1556), a Spaniard. His early life was spent as a man about town and as a soldier. While convalescing from a wound, he began to appreciate the aimlessness of his life when compared to the ideals discovered in his reading of the lives of Christ and His saints—the only books available to him in his enforced idleness. As a result he became filled with the desire of seeking both his own Christian perfection and that of his neighbors.

A large part of a year spent in intense prayer, self-discipline and acts of Christian charity brought him a wealth of spiritual experience. This knowledge he enucleated in a

book which was to be known as the *Book of the Spiritual Exercises*. It was intended to be a guide book, or field manual, for a spiritual director who wishes to enlist recruits for the cause of Christ and Christian holiness. Its use helps people to realize clearly the Christian philosophy of life, to get rid of the obstacles to the adoption of that life, to discover methods of prayer, and to develop an ardent personal love of Jesus Christ.

Ignatius began to offer his Exercises to all who were prepared to try them, and always with astonishing success. Indeed, when he was a student at the University of Paris his sincerity and enthusiasm influenced six fellow students not merely to make the Exercises, but to devote their lives thenceforth wholly to the service of Christ and to the spread of the principles embodied in the Exercises. After long deliberation and much prayer these young men consecrated their lives to poverty and chastity as religious virtues, and to a crusade to the Holy Land to convert the Saracens; or, if this latter task proved impracticable, to offer their services unconditionally to the pope. These decisions were eventually ratified by solemn promises to God during a Mass celebrated at a Montmartre chapel outside Paris on Aug. 15, 1534.

In this way the Society of Jesus began. Yet these six men with Ignatius did not intend at first to form a religious order. They thought their work would be hampered by the practices which were at that time regarded as part of normal religious life.

Their studies at Paris finished, they went to Venice to seek shipping for Jerusalem. The months of waiting for a boat were spent in a vigorous evangelization of Venice. At length, early in November 1537, they decided to visit Rome. Before they split up into groups for the journey (because by this time they had received additions to their number), they agreed they would say to enquirers that "they belonged to the Society of Jesus." In Rome they were soon busily engaged in spiritual and charitable works of all kinds, and, before long, Pope Paul III had persuaded them that they could undertake a spiritual crusade more useful to the church with Rome as their headquarters than with Jerusalem as their base of operations.

Papal encouragement caused the little group to believe that they could get official approval for a rule of life conformed to their unusual views. Thus it was that during the Lent of 1539 the group first seriously discussed the forming of a religious order. By June 24, 1539, they had thoroughly debated, prayed about, and agreed to a short document of their proposed institute. It was submitted to Pope Paul III and formally approved on Sept. 27, 1540. The following year (April 1541), the group elected Ignatius as their general superior. The Society of Jesus had now become one of the religious orders of the Catholic Church. These pioneer Jesuits also commissioned Ignatius and another of their colleagues to set about drawing up a detailed constitution for the Society.

Constitutions and Organization of the Society of Jesus.—These constitutions were revolutionary in their day. They did not encourage as a daily duty the solemn liturgical ceremonies which up to that time had been distinctive of religious life; they did not prescribe a religious dress different from ordinary clerical garb; nor

did they impose any regular penitential practices. The lengthy training of recruits, the concluding year of spiritual studies, and the vow of special obedience to the pope were also striking innovations. Not less notable, perhaps, was, and is, the practice of the members of the Society of refusing all ecclesiastical titles and honors, unless the reigning pontiff demands acceptance in an individual case.

The general superior of the Society is elected for life by a general congregation convened for that purpose, and made up of professed members chosen by their colleagues all over the world to represent them in Rome. The general superior has very ample powers. Nevertheless, only a general congregation, with papal approval, can alter the constitutions of the Society. The order is divided into provinces; and to each province the general superior nominates a provincial superior, usually for a period of from three to six years. Each province is made up of houses or colleges which are in the charge of local superiors, usually called rectors. All these superiors have small councils of advisors, but final decisions are the responsibility of the superiors alone.

Recruits to the society are divided into two classes: the scholastics, who are in, or are destined to receive, Holy Orders; and the brothers, who do not undertake academic studies but spend their lives caring for domestic affairs, as sacristans, refectorians, and so on.

Both the scholastics and the brothers have a two years' novitiate, followed by the taking of three simple, but perpetual, vows of poverty, chastity, and obedience. The scholastics usually spend from 12 to 15 or more years in studying humanities, philosophy, and divinity, and in acting as prefects and schoolmasters. Ordination to the priesthood occurs three quarters of the way through the divinity course. The period of training is rounded off by a year of ascetical and mystical theology and study of the Institute of the Society of Jesus,¹ and by the final vows. Those who have been outstanding divinity students make a solemn profession of four vows. This profession includes a special vow of obedience to the pope which is taken in no other religious order. The other members of the Society, whether priests or brothers, take the three simple vows of religion. Only the solemnly professed are eligible for membership in a general congregation and for certain offices, like that of a provincial superior.

Development of the Society of Jesus.—Calls for the help of the new apostles came to Ignatius from all sides. Soon members of the Society were to be found in many of the countries of Europe, and in the Portuguese possessions in the East.

Ignatius sent as many of the increasing number of his recruits as he could to be educated at the University of Paris. War between France and the Holy Roman Empire, however, caused the Spaniards among them to transfer to the University of Louvain. The development of the Society in France was also increasingly hindered by the Parlement of Paris and the Sorbonne from motives which included jealousy of the notable academic successes of the fathers of the Society and resentment at their growing influence at Paris.

The establishment of a Jesuit house at Co-

¹ The collection of documents on which the legal existence and government of the Society is based.

logne (1543) brought a stream of German recruits to the Society. The first ones were sent to Rome to get their initial training under Ignatius' eye. Spanish progress was the most unhindered and the most spectacular in the earliest days. The imperial ambassador at Rome strongly supported the new order, and the entry of the duke of Gandia (St. Francis Borgia, third general of the Society), helped to smooth all negotiations. Recruits and colleges multiplied in the Iberian Peninsula.

The growing number of Jesuit students compelled the Society to educate its own men; but soon other students began to attend the classes whose reputation grew rapidly. Before long, Ignatius was besieged with requests from many parts of Europe for Jesuit schools and colleges for the education of all comers.

For 50 years Ignatius and his successors and their assistants worked on a scheme of studies for these schools and colleges. They used as a basis the newly developed courses in humanistic studies at the University of Paris. The resulting program, the *Ratio Studiorum*, was so effective an instrument that the Jesuits were, by common consent, given the title of "the schoolmasters of Europe."

Ignatius saw the Society spread all over Italy with numerous houses and colleges. In Rome his sons took charge of the Church of Our Lady of the Wayside. They preached, catechised, heard confessions, cared for the sick and the poor, assisted persecuted Jews, and established hostels for repentant women. In February 1551, the Roman College (now known as the Gregorian University) was begun. Before two years had elapsed it had 300 students. The German College, begun by Ignatius in Rome with 24 non-Jesuit students who were to be prepared for the secular priesthood, became an increasingly powerful weapon in the Counter Reformation in the empire.

Fathers Diego Laynez and Alphonsus Salmeron played a very important part as papal theologians at the Council of Trent. But perhaps the two greatest of Ignatius' immediate disciples were St. Francis Xavier and St. Peter Canisius. Xavier performed well-nigh incredible labors in spreading Christianity from India to Japan; Canisius wore himself out in restoring virtue, zeal, and learning to the Reformation-crippled church in German-speaking lands.

At the time of Ignatius' death on July 31, 1556, there were more than 1,000 Jesuits, of whom 40 were solemnly professed. There were about 100 houses and colleges divided into 12 provinces: Italy, Sicily, Portugal, three in Spain (Aragon, Castile, and Andalusia), Upper and Lower Germany, France, India, Brazil, and Ethiopia; and his sons had already entered the Congo and China.

Middle Years of the Society's History.—

The story of the Society of Jesus during the next 217 years is also an important part of the history of Europe, and some of that story, insofar as it is contained in the archives of the Society, is not yet adequately told. Some topics of special interest in that history will be noted here.

There were three main types of Jesuit activity during those years: educational, the inculcation of deeper spiritual life, and the spread of the Gospel in non-Catholic lands. Jesuit schools and colleges multiplied all over Europe, setting,

indeed, such high standards of achievement that they were eventually supported by non-Catholic rulers. Secondly, the work of giving the Spiritual Exercises brought countless souls to the heights of Christian perfection. One of these was the Savoyard bishop, St. Francis de Sales. Thirdly, the Society conducted an immense foreign missionary effort, which was especially notable for the originality of its methods and for the intellectual eminence of the men engaged in it. But the paramount impression received when one peruses these missionary annals is that of the evident holiness of so many of the Jesuit missionaries. Nine hundred of them gave their lives for their faith and for their neighbors; and over 100 of them have been beatified or canonized by the church.

One group of missionary martyrs must be recalled here. They are the French fathers who labored so valiantly to convert the American Indians in the middle years of the 17th century. Despite cruelties of the most fiendish kind their courage and determination remained steadfast until death. Eight have been canonized, among them St. Isaac Jogues and St. John de Brébeuf. Three suffered and died at Auriesville, in the State of New York; five in the Huron country in Canada.

The English mission of the Society of Jesus began when Father Robert Persons and Father Edmund Campion entered England secretly in 1580. The severe laws in force against the practice of the Catholic religion, and against even the existence of Jesuits, made impossible any public work by the Society for more than 200 years. Nevertheless, increasing numbers of Englishmen joined in the heroic and dangerous work of preserving and advancing the faith, despite the pressure of the penal laws. Many English Jesuits were martyred. By 1623 there were 218 Englishmen in the Society, and the English Province was created. It soon undertook missionary work in the New World; and in 1634 Father Andrew White and Father John Greville (also known as Father John Altham) landed in southern Maryland with the pioneer settlers of the colony. The work of this Maryland mission was carried on until there were in 1831 enough American Jesuits to form a Maryland Province, the first United States province of the society.

Suppression of the Society.—Although the Latin countries, excepting France, were largely free from major secessions to Lutheranism and Calvinism, they were not thereby free from the religious nationalism of which Protestantism was the main expression. The antipapal Catholicism marked in France by the Pragmatic Sanction of Bourges in 1438 and the Four Gallican Articles of 1682, became a notable feature of the courts of the Bourbon monarchs and those of Habsburg-Lorraine. To this schismatical attitude the Society was vigorously and inflexibly opposed. The situation was made more complex by the diffusion of Jansenism in various guises in these countries. Its heretical principles were early discovered, and boldly and persistently exposed and challenged by the Jesuits, first in France and then in other countries. These various controversies were waged with increasing bitterness in the 17th and 18th centuries.

These preliminary attacks came to maturity with the development of the Enlightenment. This attitude of mind sought to emancipate men

from the trammels of institutional religion. Catholicism was the chief target, and the destruction of the work of the Jesuits the first objective. Their vow of obedience to the pope made them especially obnoxious.

In the middle of the 18th century the attacks on the Society became more thoroughly organized. The Bourbon monarchs successively expelled the Jesuits from their realms with great violence; and they combined to compel the popes to suppress the Society of Jesus throughout the world. But the popes, recognizing the Society as the great bulwark of papal power and realizing its innocence of the calumnies multiplied against it, long resisted the Bourbons' importunities. At length Pope Clement XIV yielded to the intense pressure brought to bear on him; and on July 21, 1773, he issued a brief suppressing the Society of Jesus throughout the Catholic Church. At last the Gallicans, the Jansenists, and the deists of the Enlightenment, in an uneasy union, could celebrate their victory, before the French Revolution shattered their plans. In another 16 years it came quietly but mercilessly, and the Bourbon power was irrevocably undermined. And so the way was prepared for the official restoration of the Society in 1814.

Restoration of the Society of Jesus.—The Society did not cease to exist in 1773. Pope Clement XIV's decree was not effective throughout the world as soon as it was promulgated in Rome. Instead the decree of suppression had to be published locally. Wherever there was no local promulgation, there the Society was not suppressed.

Two European monarchs forbade the publication of the decree of suppression in lands under their jurisdiction: Frederick II of Prussia, and Catherine II of Russia. Although the papal nuncio strenuously urged Catherine to suppress the Society in her dominions, she steadfastly refused, for she had no one else to staff the colleges of the Society.

After the suppression, the ex-Jesuits in Holy Orders became diocesan priests and continued with the work they were doing. In France, some of them formed a religious congregation to keep alive the ideals they cherished. As the years went by, the news of the continuing existence of the Society in White Russia brought joy and hope to ex-Jesuits all over the world. Eventually the downfall of the Bourbon monarchies enabled the pope to permit a piecemeal and clandestine restoration of the Society; first, by permitting ex-Jesuits to join the White Russian Province; and second, by allowing the erection of provinces with novitiates in various parts of the world. This gradual revival culminated in the full restoration of the society by the bull, *Sollicitudo omnium ecclesiarum*, promulgated in 1814 by Pius VII.

Reconstituted Society.—As a consequence of its 40 years' suppression the Society had to face long years of labor to rebuild its life and work. In some countries a few ex-Jesuits survived to renew their vows in the new Society.

In the United States, the abrogation of the anti-Catholic laws in the State of Maryland had enabled the ex-Jesuits in that state to establish the first Catholic college in the United States. This was "the Academy on the Potowmack," later to be known as Georgetown University, founded in 1789 by John Carroll, first Catholic bishop of Baltimore, himself an ex-Jesuit.

Throughout the Catholic world the rise of the new society was a slow and arduous business. Not merely had the spiritual and educational works of the Society to be resumed and reshaped to meet the needs of the changing times, but the recruits to the order had to be trained in the proper spirit of their Institute. This was no easy matter. Nor were these the only difficulties. The first third of the 19th century still saw among Catholics a strong Gallicanism, or Cisalpinism, which was resolutely hostile to any resuscitation of the Society and its works. Soon to be more formidable was that full blossoming of 18th century ideas called liberalism. This liberalism was intertwined in Latin countries with an anticlericalism which, as the century progressed, waxed mightily in France, Spain, Italy, and throughout the republics of South America.

True to the spirit of its founder, the Society of Jesus undertook a wholehearted offensive against this liberal anti-Catholicism, and the battle was excessively bitter. Though the Jesuits were obviously not alone in their struggle, yet they and their work were nearly always at the center of the attack. Indeed, the whole 19th century history of the Society is marked by expulsions of the Society from one country after another as liberal governments gained power. For example, during the period when Father Pierre-Jean Beckx was general superior (1853-1887), the Society was expelled from large parts of Italy in 1859 and 1860; from Venice in 1866; from Germany in 1872; from Rome in 1873; from France in 1880; and from Spain in 1854 and again in 1868. Yet the Society always returned to continue its double task of making perfect Christians out of its own members and out of their fellow citizens.

Society of Jesus in the United States.—The two outstanding developments of the Society of Jesus in the last hundred years have been the increasing attractiveness of its ideals to the young men of the United States, and its extraordinary achievement in foreign missions.

During the last 150 years the Society in the United States has grown from a group of 11 men in an isolated mission and one small college to 7,630 men, the largest national group of Jesuits in the world. The Maryland mission has grown into ten large provinces. Indeed, the rate of increase has been so rapid that more provinces are likely to be formed.

This growth has been phenomenal not only from the point of view of the United States, but also from the point of view of the Society as a whole. The over 7,600 United States Jesuits are well on the way to becoming the preponderating element among the 32,500 Jesuits in the world. No longer does continental Europe provide the majority of the Society's members. Now it is the turn of the English-speaking lands and South America to give increasing leadership, as well as enlarged support to the traditional services which the Society has been privileged to undertake at the behest of the popes.

The most prominent work of the Society of Jesus in the United States has undoubtedly been that of higher education. High schools, colleges, and universities built up and staffed by the Society are widely spread throughout the country.

In 1954 there were 41 high schools and 28 colleges and universities maintained by the Society in the United States. The numbers of stu-

dents for the same year were: high schools, 25,155; colleges and universities, 97,183.

This vast educational work of the Society in the United States can be matched, insofar as local conditions permit, in every part of the world where Jesuits are to be found.

But there is other work which may not at first sight be so noticeable, but which is at least equal in importance. This is the movement for closed spiritual retreats which are such a powerful means of sanctification. In many parts of the world more and more houses are being erected by the Society wherein men either singly or in groups may stay for a few days and undertake those Spiritual Exercises which have made the name of St. Ignatius Loyola so famous.

There is no opportunity here to describe the immense and almost worldwide intensification of spiritual life fostered by the Jesuit Sodalities of Our Lady, by the Apostleship of Prayer, and by the League of the Sacred Heart. The *Messenger of the Sacred Heart* is published independently in many languages in many countries, and copies of it are bought in hundreds of thousands. In 1945 the 69th separately edited *Messenger of the Sacred Heart* appeared, published in Lima, Peru.²

Foreign Missions of the Society.—It is not commonly realized that the Society of Jesus is the largest foreign missionary organization in the world, largest both by the number of members engaged in the work, and by the extent of the territories in which these missionaries are to be found. In 1953 more than 50 major mission areas were in the charge of the Society. A notable center is India where the Society has 10 missions and over 1,950 Jesuits. In 1954 there were 5,452 Jesuits at work in the mission fields. This means that the Society has more than one sixth of its members employed as missionaries.

The United States Jesuits bear their full share in this labor; but this is a recent development. In 1926, there were about 175 engaged in missionary work, chiefly in the Western Hemisphere; in 1953 there were well over 1,000 United States Jesuits in missions all over the globe and among 50 million people. Again, the educational work abroad of the United States Jesuits is notable: 1 university, 11 colleges, 26 high schools, and 4 seminaries. An important means of support for this work is a magazine, *Jesuit Missions*, published in New York. Similar Jesuit publications are to be found in other parts of the world.

One of the outstanding missionaries of the last century was Father Pierre Jean de Smet (q.v.) who labored indefatigably to spread the Gospel of Christ in the Midwest. In Chota Nagpur in India the labors of Father Constantine Lievens stand favorable comparison with any of the greatest missionaries that the church has known.

No survey, however, of the work of the modern Society should omit reference to its great influence on the leading minds of the Catholic Church by means of the great Roman centers of ecclesiastical higher education in the charge of the society. These are the Gregorian University and its affiliated schools, the Biblical Institute, the Institute for Oriental Studies and the Russian College. To these institutions come priests

from almost every diocese of the Catholic world to receive a thorough training in the various branches of the sacred sciences. The Gregorian University has regularly over 2,000 students; and its faculty is drawn from among the leading divines in all the provinces of the Society.

To the long list of philosophers and theologians, headed by St. Robert Bellarmine and Francisco Suarez, could be added lists of names of Jesuits who made notable contributions to other sciences: mathematicians like Christopher Clavius and Ruggiero Boscovich; paleographers and hagiographers like the Bollandists; explorers and geographers, like Jacques Marquette in the Mississippi Valley and Eusebius Kino in New Mexico, Arizona, and California. There have been astronomers, linguists and historians too numerous to mention. No knowledge or work which is seen to promote the greater glory of God comes amiss to the Society. Nor is it undertaken by its members without that zeal to achieve excellence which is the only attitude worthy of the enthusiastic knight of Christ. See also LOYOLA; SPIRITUAL EXERCISES.

ERIC McDERMOTT, S.J.,
Georgetown University, Washington, D.C.

JESUP, Morris Ketchum, American banker and philanthropist: b. Westport, Conn., June 21, 1830; d. New York, N. Y., Jan. 22, 1908. He was engaged in banking in New York 1852-1884, but retired from business in the latter year. In 1881 he became president of the New York City Mission and Tract Society, for which he subsequently erected the DeWitt Memorial Church in Rivington Street, in memory of Rev. T. DeWitt, his father-in-law. He was made president of the Five Points House of Industry in 1872; was a founder of the Young Men's Christian Association, of which he was president in 1872. He was also president of the American Museum of Natural History, 1881-1907, and of the New York Chamber of Commerce 1899-1907. To the American Museum he gave a collection of native woods valued at \$100,000; to the Woman's Hospital in New York city, \$100,000; and to Yale University and Williams College, also large sums. He gave large contributions to the various Peary Arctic expeditions. He endowed the Jesup North Pacific Expedition (q.v.), and gave liberal sums as well as much time and thought to the establishment of schools for the Negro population of the South.

JESUP NORTH PACIFIC EXPEDITION, The, an American organization for archaeological research, supported by Morris K. Jesup (q.v.) and conducted by the American Museum of Natural History (1897-1903). Under the direction of Harlan Ingersoll Smith (1872-1940), excavation was begun in the Thompson River district of British Columbia, and in successive years was continued farther eastward, and

² War and other factors have since reduced this number. A Hungarian-language edition, inaugurated in Canada in 1953, brings the present total of *Messengers* to 50.

also around Puget Sound, down the west coast of Washington, and in the Yakima Valley of Washington. Material evidence of a prehistoric civilization uncovered by this expedition included carved and sculptured implements and tools, shell ornaments, and wall paintings and sculptures.

JESUS, SON OF SIRACH. See ECCLESIASTICUS.

JESUS CHRIST (or **JESUS THE CHRIST**, the Anointed or Messiah: Gr. *Christos*; Heb. *Mashiakh*). Although Matthew (1:21) interprets the name (originally Joshua, that is *Yahweh is salvation*) and finds it specially appropriate for Jesus of Nazareth, it was a common one at the time. Josephus, the Jewish historian, refers to 19 different persons by that name. The proper name "Jesus," when referring to Jesus of Nazareth, was ordinarily supplemented by the title "Christ," even in early Christian usage. Paul sometimes reversed them and placed the title first: "Christ Jesus." The full term reflects one of the earliest stages of the Christian faith, for which Jesus was the promised Messiah of Jewish expectation, that is, the exalted, semidivine king of Israel in the glorious Age to Come.

Sources for His Life.—Our sources of information for his life and teaching are the four Gospels, written apparently between 65 and 125 A.D. (see BIBLE—*Growth of the New Testament Literature, Including Literary Criticism*). These are not biographies in either the ancient or the modern sense, but set forth the early Christian "proclamation of the message of salvation" in terms of the life, ministry, teaching, death, and resurrection of Jesus. But it is only upon the basis of the Gospels that any biographical account of the life of Jesus can be written. Earlier than the Gospels are the epistles of Paul; though containing almost no biographical material (Romans 1:3; I Corinthians 11:23-25, 15:3-7), they nevertheless presuppose the historical career of Jesus, his human character (II Corinthians 10:1 and I Corinthians 13, Paul's portrait of Jesus), and his unjust condemnation and crucifixion (I Corinthians 2:8; II Corinthians 13:4), as well as his resurrection, exaltation, and divine nature (Romans 8:34; Philippians 2:5-11). The apocryphal Gospels, the earliest of which come from the 2d century, are wholly fictitious, except for a few details that reflect the earlier "canonical" Gospels (consult M. R. James, *The Apocryphal New Testament*, 1924, where they are translated). So also are the *Agrapha* (q.v.), or unwritten sayings of Jesus, including the so-called *Logia Iesou* found in Egypt (see OXYRHYNCHUS). Many of them reflect the heresies of later centuries, which their authors tried to support by attributing such teachings to Jesus. A few non-Christian writers (Tacitus, Pliny the Younger, Suetonius, and one or two others) refer to the early Christians, and even to Christ, but give no details. The state of the sources is precisely what we should expect. The recollections of the earliest teachers and evangelists ("eyewitnesses and ministers of the word," Luke 1:1-4) were handed down orally, as was the custom in transmitting Jewish religious teaching; in the second and third generations, after the church had spread far afield in the Gentile world, where books were commonly used to set forth religious teaching, and where the living voice of tradition was less relied upon, the Gospels were written; later, when

the living tradition had been exhausted (that is, almost completely set forth in the Gospels), other compositions were undertaken, perhaps in good faith, but without adequate critical equipment.

Modern scholars recognize a difference in purpose and character between the first three (that is, synoptic) Gospels and the Fourth Gospel (John); they also recognize the existence of earlier sources underlying all four; some scholars (the "form critics") have even tried to reconstruct the original oral traditions in the form in which they circulated prior to the writing of any Gospel or even of any Gospel source. Accordingly, the modern student of the life of Jesus no longer seeks to combine or weave together all the narratives, discourses, and sayings of the Gospels into one continuous history; instead, he recognizes the development of tradition, and the editing of earlier material by later writers (especially of Mark by Matthew and Luke), and he studies the individual units of the older tradition as they existed, originally, in relative isolation, as parts of the preaching (*kerygma*) or teaching (*didachē*) of the early Christian apostles and evangelists. For him, the material does not lie on one flat dead-level; like all historical material, it is "weighted," and must be studied not only in relation to the life of Jesus, but also to the contemporary world, and especially to the needs and purposes of the early Christian communities in which it was preserved, handed down, compiled, and edited. Compared with traditional information about many other figures in ancient history, including Biblical history, the sources for the life of Jesus are definitely superior both in quantity and quality. Moreover, as modern theologians point out, neither the proclamation of the Christian message of salvation nor the religious value of the Christian teaching is dependent upon our possessing a fully detailed biography of Jesus.

Birth and Youth.—Although Mark 6:1 seems to imply that Jesus was born in Nazareth, and although his birth in Bethlehem was not generally known (compare John 7:40-52), Matthew 2:1 and Luke 2:4 agree in representing him as born in the city of David, which was the most appropriate birthplace for the Messiah. Luke's solution is that Jesus' parents lived in Nazareth, but went to Bethlehem at the time of the enrollment—or registration for the purposes of a census or of taxation, or both—under the Syrian governor, Quirinus, and it was then and there that Jesus was born. Unfortunately we do not know the date of this enrollment: it may have been around 6 B.C. Matthew states (2:1) and Luke implies (1:5) that Jesus was born under King Herod, who died 4 B.C. (The error in chronology, by which Jesus was born at a date "B.C.," goes back to the monk Dionysius Exiguus who lived early in the 6th century; his intention was, of course, to begin the Christian era with the birth of Christ.)

Matthew and Luke also agree that Jesus' birth was wholly supernatural, since (in the summary language of the later creed) he was "conceived by the Holy Spirit and born of the Virgin Mary." For Matthew (1:18-25) this was the fulfillment of a prophecy found in Isaiah 7:14 (that is, in the Greek version, not in the Hebrew original text: see BIBLE—*Manuscripts and Versions of the Old Testament*). In Luke the doctrine of the virgin birth of Jesus is expressed in the phrase "since I have no husband" (1:34; literally "since I know not a man"), which many scholars view

as an explanatory gloss added under the influence of the text of Matthew, and in a similar phrase (3:23, "as was supposed") which has been inserted into the genealogical table. Although the doctrine of the virgin birth does not rest exclusively upon such literary evidence as this, it is important to note that nowhere else in the New Testament is it clearly stated or implied.

The two infancy narratives (Luke 1-2 and Matthew 1-2) are quite divergent, and agree only upon the main points. It has been thought that Matthew reflects the point of view of Joseph, Luke that of Mary. In any event, devout imagination has been at work, and the reconstruction of the narrative of Jesus' birth and boyhood, especially in the Lucan idyll with its combined account of the birth and childhood of John the Baptist, is not only charming in its literary style but historically most probable. The earnest Jewish piety of Jesus' home, the character of his parents and especially of his mother, the deeply religious tone and outlook of the saintly people among whom he spent his earliest years (note especially the hymns in Luke 1-2), the rich Old Testament flavor of the very language used by Matthew and Luke—all this helps us to understand the profound religious development of the man Christ Jesus. From his very childhood he was aware of his relation to God, as involving on his part the unquestioning obedience and responsiveness of a child to his heavenly Father (Luke 2:39-52).

The village of Nazareth in Lower (or Southern) Galilee, where Jesus grew up, was located beside one of the great international highways of trade and travel. Here caravans of traders from Egypt and North Africa or from faraway Palmyra or Babylon or even India, military companies from Rome or Gaul, Cappadocia or Spain, could be seen making their way across the fertile Plain of Esdraelon. Off to the southeast rose the rounded hill of Tabor; to the west lay the blue Mediterranean with its coastal shipping and naval vessels; over the hills to the northeast, deep down in the valley of the Jordan River beside the Lake of Galilee (680 feet below sea level), lay the larger cities of Capernaum and Tiberias. Beyond, to the north and east, lay the territory of the heathen, and to the south that of the Samaritans. The word Galilee meant "the circle"—of the Gentiles—for it was surrounded by heathen cities and tribes (Matthew 4:15). It was natural that Jesus' deep piety, learned from his people and nurtured on the Holy Scriptures, and his complete personal consecration to the will of God, should be combined with an attitude of friendliness and sympathy for strangers, for the poor and outcast, the religiously neglected people of Galilee (the Galilean *am ha-arez*), and the masses of the surrounding heathen, whom many good Jews of the time despised as "outside the Covenant" and hopelessly lost in idolatry, superstition, and evil ways of life. Thus Galilee was the perfect setting for the life and ministry of the compassionate, friendly Jesus whom we know from the Gospels.

Ministry.—About the year 26 or 27 A.D. the Jewish people were startled by the voice of one more prophet like those of the Old Testament—John the son of Zachariah, whose message was a threat of impending judgment and a command to repent and be baptized before the arrival of the day of doom (Luke 3:1-20). John's message began where that of the prophet Malachi had left

off (Malachi 3-4); many persons thought John was the returning Elijah predicted by Malachi, whose coming was to precede the end of the age. Along with the multitudes, Jesus also journeyed to the wilderness and received John's baptism (Mark 1:9). This step, followed at once by the profound spiritual experience of his prophetic calling and designation or appointment as Son of God (Mark 1:10-11; compare Romans 1:4), and then by the ordeal in the wilderness where his implicit obedience and utter trust in God were put to the severest test (Matthew 4:1-11), marked the beginning of his public ministry. Returning to Galilee after John's imprisonment, he now began his brief career of preaching, teaching, exorcism, and healing (Mark 1:14f.).

The main subject of his public message was the Kingdom of God, the perfect Reign of God which was about to come upon the earth. Whereas John had proclaimed the terrors of the Lord, in describing the approaching judgment, Jesus announced the gracious and merciful act of God in bringing His Reign to pass. Jesus' mission was to win men to prepare for the coming of God's Kingdom, so that they might share in it when it came. He taught his disciples to pray daily for its coming (Matthew 6:9-13), and to fit themselves for membership in it by prayer, forgiveness of injuries, love of enemies, and by following a way of life which consisted in imitation of the character of God (Matthew 5:3-16, 43-48). The Sermon on the Mount (Matthew 5-7) also expounds Jesus' attitude toward the Mosaic Law, which he did not intend to discard or abrogate but to complete and "fulfill" (5:17-20) by both deepening its motivation and widening its application. The chief motive which he stressed was love (as in Luke 10:25-37), not only of friends, family, and neighbors, but of strangers, and even of enemies. The true servant of God must not only obey the Law in its literal sense, but must go beyond it in a higher obedience—not only making good his sworn promises, but speaking the truth even without an oath; not only refusing to resist personal insult and injury, let alone retaliate, but overcoming all resentment; not only being strict and discreet in behavior toward his neighbor's wife, but avoiding even the unguarded look; not only innocent of the overt act of murder, but refusing even to call names or revile or despise his neighbor (Matthew 5:21-48). True observance of the spirit of the Law and likewise the genuine practice of piety (of the Pharisaic type) equally rule out ostentation as a deadly kind of hypocrisy or playing at religion (Matthew 6:1-24). Above all, the man who really trusts God will not be filled with anxiety and care (6:25-34), and his sincerity will keep him humble in his relations with his fellows (7:1-12). It is easy to lapse into a perfunctory practice of religion; true religion is under a much more rigid and more thorough-going demand, and has a far more secure foundation than the routine piety of the professionally religious (7:13-27).

There are certain modern theories which tend to reduce the severity of Jesus' "heroic" ethics, for it is thought that his teaching is impracticable or impossible to observe. One is that it was only an interim ethics, required during the brief interval between the difficult present state of the world and the glorious future when God's will was expected to prevail everywhere. Another theory is that Jesus purposely set the goal too high for men to reach by proclaiming "the pure

will of God" without any concessions to weak human nature; his purpose was to force men to admit their sinfulness and recognize their total dependence upon divine mercy and grace. But the chief defect in both theories is that Jesus nowhere suggests either idea, that similar "heroic" ethics were to be found in the Jewish apocalyptic books and elsewhere, and that most Christians have always assumed that Jesus' teachings were meant to be observed, with the result that many have achieved sainthood by the help of divine grace. That Jesus' teachings were addressed to people who lived at a dangerous time in an occupied country or under the pressure of increasing local tyranny is perfectly clear. Nevertheless his strongest appeal is not to avoid conflict with the authorities (Matthew 5:22, 25f., 38-42), but to be like God, the Father in heaven (5:43-48); not to fear the coming Judgment (7:21-23), but to love and trust in God (6:25-33, 7:7-12).

Miracles.—The deepest impression we gain from the Gospels is that Jesus not only taught a new way of God (Mark 12:14; compare John 3:2), as a prophet, teacher, and revealer of the truth, but himself lived by these standards, so truly that later disciples could even refer to Jesus himself as "the Way" (compare John 14:6; Hebrews 10:20). He purposely devoted himself to the poor, neglected, and often despised common people (Mark 2:17, 6:34; Matthew 10:6, 15:24). He gathered a company of disciples to whom were given the Kingdom (Luke 12:32) and its secrets (Mark 4:11). His ministry of healing and exorcism was exercised among the poor peasantry and villagers of Galilee, rather than among the well-to-do hierarchy in Jerusalem, or the rich landowners of Judea. He even ministered on occasion to Samaritans and Gentiles (Luke 9:52, 17:16; Mark 7:26; Matthew 8:5-13). His miracles were chiefly those of healing (Mark 1:29-31, 40-44, 2:1-12, 3:1-5) and exorcism (Mark 1:21-28, 32-34, 39), in both of which activities he saw the evidence of the defeat of Satan and the advance of the Kingdom of God (Mark 3:23-27). His own interpretation of his mighty works was simply, "If it is by the finger of God that I cast out demons, then the Kingdom of God has come upon you" (Luke 11:20; Matthew 12:28).

The presupposition of this saying—and of many others—is that God's Kingdom must "come" and thus take the place of (or crowd out) the reign of evil in this world. The view that sickness, suffering, chronic disease (especially mental), and even death were due to the presence and activity of evil spirits (or demons) was widespread in the ancient world. God had created the heavens and the earth and had pronounced them good (Genesis 1:31), but sin had entered and corrupted them, and the evil spirits had now gained a firm and increasing control. This is the view found in such writings as I Enoch, the Testaments of the Twelve Patriarchs, and other Jewish apocalypses. See *BIBLE—Growth of the Old Testament Literature* (The Pseudepigrapha). Thus, in spite of the fact that God's Kingdom (or Reign or Rule) is everlasting (Psalm 145:13), it must nevertheless "come" here in this world. The consequences of its coming would be the suppression of the revolt of human sinfulness, together with the evil activities of the wicked spirits—the end of suffering, death, and disaster, and the full establishment once more of God's complete sovereignty. Jesus viewed his own min-

istry of healing and exorcism in the light of this view of God's coming Reign. The Kingdom was already on its way; God's Reign was already in process of realization; his own ministry and also that of his disciples (Mark 6:7; Luke 10:9, 17-20, 23f.; Matthew 11:2-6, 12:29) proved that the powers of darkness were now in flight.

It is impossible to rule out all of the miracle stories in the Gospels as later accretions to the narrative. It is true, some of these stories show a more advanced stage of development in oral tradition than others—some are far more circumstantial and detailed, and contain side references to later issues; but as a whole they reflect the same character in the one who performed them, and are his only sign of authority or power. A sign was requested by his contemporaries, the scribes and Pharisees who opposed him; but the only sign he gave was himself, his disciples, and his ministry among the poor (Mark 8:12; Luke 11:29f.).

Much of Jesus' teaching was delivered in the synagogues, where any qualified layman could be chosen to expound the Scripture as read at the Sabbath service. After a time his followers became so many that he taught in the open country, on the hillsides or beside the Lake of Galilee. His usual method of teaching was largely by parable or illustration; the Gospels are full of these illustrative stories, the point of which is usually some phase of the coming, or the nature, or the preparation requisite for entrance into the Kingdom of God. (The view in Mark 4:11-12 is thought to be influenced by early church teaching; in Matthew 13:13 and probably in the underlying Aramaic, the purpose was clearly that of every teacher who uses illustrations, parables, or anecdotes, i.e. to enable the hearer to understand better.) After a time he withdrew to the northeast, perhaps under political or ecclesiastical pressure, and here took place the famous confession of Peter, namely Peter's acknowledgement of faith in Jesus as Messiah (Mark 8:27-30), followed by the Transfiguration, which is usually interpreted as an anticipation of his glorified state following the Resurrection, if not as a resurrection appearance which has been shifted back into the period of his earthly ministry (Mark 9:2-9). It is sometimes said that Jesus invited or encouraged Peter's confession of faith, or at least welcomed it. This view is based on Matthew 16:17, which is followed by Jesus' pronouncement of a blessing upon the apostle, and the promise of the building of the church upon Peter, or his faith, or the revelation just given through him. The passage is found only in the later Gospel of Matthew. The older account in Mark is very different. Here Jesus bids the disciples to say nothing about him to anyone; he foretells his own sufferings, death, and Resurrection, and announces that his disciples must likewise be prepared to die (Mark 8:30-38). From Mark, taken alone, one would gather that Peter's belief in Jesus' Messiahship was inadequate—the figure of the suffering Son of Man is substituted for that of the King Messiah in the coming Golden Age.

Opposition to His Ministry.—It is difficult to account for the opposition to Jesus, which finally led to his death. Some have assumed, following the indications in the Gospel of John, that he alienated the religious leaders of Judaism by his supernatural claims; but the representation in John is late, and theological, and full of anti-

Jewish polemic, reflecting the strained relations between Church and Synagogue around 100 A.D. and later. Moreover, the three earlier Gospels offer no such explanation. Instead, it was apparently Jesus' interference with the routine activities of the professional religious leaders, the scribal teachers and their Pharisaic lay followers (Mark 3:22-27), and especially his interference with the settled routine and established abuses in the temple (Mark 11:15-18), that led to the crisis. His incisive criticisms of the scribal traditions (Mark 7:1-23), his fresh reinterpretation of the law (Matthew 5, as above; Mark 10:2-11, 12:18-37), his independent attitude toward the religious teachers themselves (Mark 12:38-40 and Matthew 23:1-39, though the criticisms contain also reflections of later conditions), and finally his open challenge to the priestly hierarchy who were responsible for conditions in the temple—all these were factors in moving the authorities to take action against him and denounce him to Pilate, the Roman governor.

After some months of retirement in northern or northeastern Palestine, Jesus returned incognito to Galilee (Mark 9:30), and continued his ministry among the poor. It is thought that the feeding of the multitude (told in two versions, Mark 6:30-44 and 8:1-10) was not so much a provision of food for the hungry as it was an eschatological sacrament, like a Highland Covenanters' Communion held in some lonely glen, or a Huguenot Lord's Supper in the Cévennes, the purpose of which was to bind together Jesus' followers in view of the impending evil time which was to precede the Last Judgment and the full establishment of the Reign of God. But as he journeyed southward after this event, he was accompanied by the same great crowds as before; and at the triumphal entry (Mark 11:1-10) he was hailed by the populace—or perhaps by his own enthusiastic disciples—as the coming Messiah. The demonstration is described in "royalist" language—although John (12:16; compare 2:22) states that its real meaning was understood only after the Resurrection. His entry into the city was followed at once by his cleansing of the temple (Matthew 21:1-17; Mark separates the two events), in which he spoke with the authority of a prophet and demanded that the divinely established "house of prayer for all peoples" (Isaiah 56:7) should not be made a bazaar or a money-changers' office, even though it was for the convenience of the worshipers, and that no one should casually profane the sacred place by carrying burdens through it (Mark 11:16). The temple authorities hotly resented this interference with their established routine, and engaged him in a series of controversies (Mark 11:27—12:34; compare the earlier series of controversies in 2:1—3:6). In the end it was the Jerusalem hierarchy and the officers of the Roman army of occupation who put Jesus to death, not the Galilean scribes and Pharisees or the ordinary priests living here and there throughout the country; certainly it was not the common people who loved and honored him enthusiastically but were powerless to defend him in the crisis. Above all, it was not the Jewish people as a whole who rejected Jesus and were responsible for his death. The earliest Christians, including the apostles and other leaders of the church, were Jews. "Antisemitism," which existed before Christianity, has twisted the evidence and represented the Jewish people as responsible.

The Gospel of Mark (the earliest of the four).

is written with great dramatic power. It represents the clouds gathering about Jesus, almost from the beginning of his ministry, and also shows him aware of the fate which awaited him in Jerusalem (Mark 8:31, 9:31, 10:32-34, 14:8, 17). Many modern scholars question the detailed predictions of his death, but the probability that he was aware of the prospect of rejection and suffering seems inescapable. The whole point of the story of the Last Supper, as told in Mark, Luke, and Matthew, is that Jesus is about to die (Mark 14:22-25 and parallels), and thus to "enter into his glory" (Luke 24:26). The rite was intended (among other things) to bind Jesus and his disciples together in the face of the impending crisis (Mark 14:25).

Death.—The Passion narrative (Mark 14—15 and parallels) is difficult to harmonize with what we know of Jewish legal procedure in the 1st century (see *SANHEDRIN*). The probability is that Jesus was seized by a group of servants or slaves of the high priest and taken to the high priest's house where a junto of the Jerusalem hierarchy was gathered for the purpose of examining Jesus and framing a suitable charge upon which he could be accused before the Roman governor. (The supreme Jewish council, the Sanhedrin, no longer possessed the authority to execute condemned prisoners.) After many efforts, including the charge that he had attempted (or at least threatened) to destroy the temple, the high priest asked Jesus if he claimed to be the Messiah (Mark 14:53-61; contrast John 18:19, which is far less dramatic). The question was an unfair one, and Jesus could not reply with a simple affirmation or denial. He undoubtedly looked upon himself as God's Messenger, His agent and representative in the final act of setting up the divine Kingdom. His mission had been to "do the works of God" (John 9:4), to reveal God and His will more perfectly to His people, to extend the realm of the divine mercy, and to roll back the powers of darkness and evil (Matthew 10:1, 8, 11:4-5, 12:28). But this was something quite different from the ordinary conception of the role of the Messiah, something vastly more, not less, than the Reign of the Lord's Anointed over a redeemed and exalted Israel. And so his answer pointed away from the office of earthly King Messiah to that of the glorious, transcendent Son of Man (Mark 14:62; compare Matthew 25:31-46), whom God would send on the clouds of heaven to judge mankind at the last day. But this was enough for his ecclesiastical accusers, and in the morning he was denounced before Pilate—not as one more messianic claimant, or as a fanatic who thought himself the predestined Son of Man, but as an active revolutionist and disturber of the peace (Luke 23:1-5) who had stirred up insurrection all over Galilee and Judea and had interfered with the collection of the tribute due to Rome. It was on these false grounds that Pilate, after repeated but half-hearted attempts to enforce justice and release Jesus, finally yielded to the clamor of the mob—which had been stirred up, not by Jesus' old enemies the scribes, but by the Jerusalem priests (Mark 15:10-11)—and ordered him to be crucified. It is obvious that responsibility for the death of Jesus belongs to the Roman procurator, not to the Jewish people, though a small but influential group of the temple hierarchy undoubtedly were guilty of influencing the governor and subjecting him to every possible pressure (John 19:12-16).

The story of the Crucifixion is told in detail in all four Gospels, and is presupposed throughout the whole New Testament. It was a long, slow, agonizing mode of death, chiefly as a result of the drying up of the body, exposed to the heat and the open air. Jesus' death came unusually soon (Mark 15:33-39, 42-45; John 19:33), in contrast to that of the two robbers (probably revolutionists, as Josephus and others used the term). Some persons lingered for days upon the Cross; but by three in the afternoon Jesus had died. Many scholars attribute his speedy death to the sufferings he had already endured throughout the preceding night; others to the intense emotional and mental strain he endured. To the last he had refused to accept the merciful anodyne a kind soldier offered him—sour wine mixed with myrrh (Mark 15:23; charitable women in Jerusalem, it is said, provided this drink for the condemned). To the last he had "loved his own" (John 13:1); the prayer, "Father, forgive them, for they know not what they do" (Luke 23:34), has been called "the sublimest words that ever fell from human lips" (Thomas Carlyle). The cry of dereliction, "My God, my God, why hast thou forsaken me?" (Mark 15:34), has often been misinterpreted, as if Jesus finally died in despair, convinced that God had deserted him, and that his dream of the Kingdom of God and of his own mission was unfounded. But the words are a quotation from a psalm (Psalm 22:1) which emphasizes the utter trust in God of a Jewish saint, even amid torture and torment like that which Jesus was enduring; and it is impossible to believe either that Jesus did not share such faith, or that the early Christians could have told the incident as evidence of God's real abandonment of His Son.

Resurrection.—The climax of the life of Jesus, as related in all the Gospels and presupposed throughout the New Testament, is not his death on the cross but his Resurrection. The earliest evidence is found in I Corinthians 15:3-8 (c.55 A.D.), where Paul lists the appearances of the risen Christ, including the appearance to himself (compare Acts 9:1-9). Paul's language is clearly that of supernatural vision (the verb for "appeared" is a technical term in the Old Testament and elsewhere); in all his epistles he represents Christ as risen from death and exalted to a new and heavenly plane—not merely resuscitated and returned to the conditions of earthly life. "Christ being raised from the dead will never die again; death no longer has dominion over him" (Romans 6:9). "If then you have been raised with Christ, seek the things that are above, where Christ is" (Colossians 3:1). Paul never refers to the story of the empty tomb (Mark 16:1-8 and parallels); the story was doubtless circulated after the time of Paul (Mark was probably written about 68 A.D.). Elsewhere (Luke 24:13-31; John 20:19-29) it is assumed that Jesus' "Resurrection body" is supernatural and incorruptible. Hence it is untrue to the New Testament to describe Jesus' Resurrection in terms simply of reanimation or restoration from death, like that of Lazarus (John 12:1-11) or the daughter of Jairus (Mark 5:35-43) or the widow's son at Nain (Luke 7:11-17) or the Old Testament worthies restored to life by touching the body of a prophet (II Kings 4:32-37, 13:20-21). Here was something new and different, the foretaste, indeed the beginning, according to the earliest disciples, of the New Age, the life of the world to come, Christ the "first fruits of those who have

fallen asleep" (I Corinthians 15:20) and are now "raised to newness of life," a new transcendent kind of life in the "spiritual body."

The Meaning of His Life.—The once-popular notion that the church's faith in Jesus as the Incarnate Son of God, the Revealer of God and the Redeemer of men, is based either upon his miracles, recounted in all the gospels, or upon his overwhelming claims, set forth in the Gospel of John, is a view not supported by the New Testament. None of the epistles lay any stress upon Jesus' mighty works, though they contain references to his earthly life and all of them presuppose it. Paul lays no emphasis whatever upon either the miracles or the claims of Christ; instead, the basis of Christian faith, for Paul, is invariably the character of Christ and his Resurrection, the one, the manifestation in human life of the divine self-giving love of God's true Servant and Son, who humbled himself and became obedient, even to death—even to death upon a cross; the other, the consequence of this act, when God "highly exalted him" and gave him the name (Lord) which is "above every name" (Philippians 2:5-11). The human character of Jesus is by no means lost amid the divine splendor of his glorification. The one who is to judge mankind is the very one who once lived as man upon earth, and died upon the Cross (Romans 8:34), an idea very similar to that in Luke 12:8. As the church made clear when it repudiated Gnosticism (see BIBLIE—*Canon of the New Testament*), the human and historical life, death, and Resurrection of Jesus is the indispensable, inalienable foundation of the specifically Christian faith, namely the faith in God's self-revelation in Christ (compare II Corinthians 5:19). The later theological conception of Christ presupposed his completely human nature, even though he was at the same time divine. The Council of Chalcedon (451 A.D.) defined him as "truly God" and "perfectly man." Still later, the doctrines of Atonement and the eucharist took for granted his complete and perfect humanity. Such modern theories as the "Christ myth" are rejected by all the scientific historians.

JESUS CHRIST IN ART. See **CHRIST IN ART.**

JESUS COLLEGE, Cambridge, England, founded by John Alcock, bishop of Ely, in 1496. It has 16 foundation fellowships, open without restriction to all the king's subjects. Five were of the original foundation and the others have been added by subsequent benefactors. Six of the fellows are required to be in orders. The mastership and one fellowship are in the absolute appointment of the bishop of Ely. To the other fellowships on a vacancy the master and fellows nominate two candidates, one of whom is elected by the bishop. There are numerous scholarships. It was founded on the site of the Benedictine nunnery of St. Radigund, and its buildings, some of them dating from the 12th century, are of great interest.

JESUS COLLEGE, Oxford, England, founded by Queen Elizabeth in 1571 on the petition of Dr. Hugh Price, treasurer of St. David's, Wales, who left lands for the maintenance of a principal, eight fellows and eight scholars. It was intended to be the Welsh college and a number of the scholarships are (unless in default of suitable candidates) restricted to natives of the principality. A fellowship founded by Charles I for natives of Guernsey and Jersey has been converted into two scholarships for natives of these islands or persons educated at Elizabeth College, Guernsey, or Victoria College, Jersey. This was the first college founded under the Protestant regime.

JESUS ISLAND (French *Île Jésus*), Canada, island in the St. Lawrence River, west of Montreal Island. It constitutes Laval County, Quebec Province. Its chief town is Sainte Rose. Area, 84 square miles; pop. (1941) 21,631.

JET, jèt, a mineral, which is found in compact masses so hard and solid as to be susceptible of being turned on a lathe and manufactured into ornamental articles. It has been worked for centuries in Whitby, England. It is found in thin laminations, which subsequently thicken out to two or three inches in the upper lias strata in that neighborhood; a lower bed, from which the best quality is obtained, has a thickness of 20 feet and is known as jet rock. Jet is supposed to have been worked in England as far back as the time of the Romans. Jet rosaries and crosses were common in the Abbey of Whitby when it was a resort of pilgrims. The jet manufactures of Whitby fell away about the time of Queen Elizabeth and were revived in 1800. It is also manufactured at Scarborough, England.

JET PROPULSION. As the name implies, jet propulsion is propulsion by means of a jet. A more accurate nomenclature would be reaction propulsion, since it is actually the reaction to the jet that produces motion.

Reaction propulsion occurs in nature in the squid, a marine creature that propels itself away from enemies by emitting spurts of liquid from an orifice in its body. The basic principle of such propulsion can be applied to any kind of vehicle to produce motion through any medium such as air, water or even solid earth. However practical considerations of efficiency and

cost generally have limited the application of jet propulsion to aircraft of various types. That is the region of use that will be discussed here.

The simplest example of jet propulsion is furnished by an inflated toy balloon. As long as the neck is held closed, the internal pressures are equal in all directions (Pascal's Principle). When the neck is released, there occurs an unbalance of the internal pressures because of the discharge of air. This unbalance produces a force which causes motion of the balloon in a direction opposite to that of the discharge at the neck.

It is important to note that the thrust of jet propulsion is produced and used inside the system. Once the jet is discharged, it is of no further use in producing thrust. It does not, as erroneously believed, push against the atmosphere to produce a thrust. In fact, the lower the atmospheric pressure existing outside the jet, the more efficiently the jet will operate, because it does not have to work against the atmosphere.

To produce jet propulsion, a mass of fluid must be accelerated through an engine and discharged at high velocity through a suitable nozzle. In the process, the fluid experiences an increase in its momentum (the product of mass times velocity); this change in momentum produces a force. This phenomenon was recognized by Sir Isaac Newton, who stated in his second law of motion that force is equal to the rate-of-change of momentum. His third law, which states that action and reaction are equal and opposite, recognizes the fact that a forward thrust is produced by a rearward discharge.

The jet discharge is produced by a source of heat within the engine in two basic ways. First, it may be the products of combustion from a violent chemical reaction of fuel and oxidizer fed in liquid or solid form to a combustion chamber. The best example of this is the rocket motor; a further discussion of this is to be found in a separate article. Second, the jet may be the products of combustion plus additional air resulting from burning a fuel in the presence of a moving airstream.

The desire for increased speeds for aircraft has been the stimulus for the development of jet propulsion. Conventional propellers become less efficient as airplane speeds increase; between 400 and 500 miles per hour, the propeller begins to lose ground rapidly as a means of propulsion and the jet engine takes over.

It should be noted that the propeller is truly a jet-propulsion device. It accelerates a mass of air in a rearward direction and thus produces forward thrust. However, engineering usage has segregated the propeller from the "pure" jet engines, and it is not considered further here.

Jet propulsion for aircraft can be accomplished with one of four basic types of engines: rocket, ramjet, pulsejet (or intermittent jet), and the gas turbine adopted for jet propulsion (commonly known as the turbojet). The majority of all aircraft used the last-named method; only special-purpose aircraft for flight research, or guided missiles, have made any extensive use of the other three types of engines.

History.—The first recorded demonstration of jet propulsion was in the aeolipile of Hero, the Alexandrian philosopher, in the earliest days of the Christian era. The aeolipile was a hollow sphere with two ejection nozzles parallel to the surface and on opposite sides of the sphere.

Steam under pressure was fed to the sphere through one of two hollow pillars which supported it; the sphere was free to rotate about the supports. The steam escaped through the nozzles, producing a jet reaction which revolved the sphere.

Rockets as fireworks and weapons of war were known to the Chinese centuries ago. The sporadic use of rockets as artillery provided the only continuity in the use of jet propulsion between the times of Hero and the Chinese, and the period before World War II.

In between there were many designs for jet-propelled vehicles and for experimental engines. One early suggestion was that of Giovanni Branca, an Italian engineer who devised a rudimentary steam turbine in 1629. The first patent of record for a gas turbine was taken out by John Barber, an Englishman, in 1791. In a work written by Willem Jakob Gravesande to explain Isaac Newton's philosophies as expressed in his *Principia*, a jet-propelled carriage was shown to illustrate the idea of action and reaction. This unusual vehicle has been often attributed erroneously to Newton as his design.

In 1926, a British scientist, Dr. A. A. Griffith, of the Royal Aeronautical Establishment, prepared a paper, *The Aerodynamic Theory of Turbine Design*. This pioneer work indicated that the gas turbine was feasible as a means of aircraft propulsion. Ten years passed before funds were appropriated to build an axial-flow compressor as suggested by Griffith.

Meantime, a British flight cadet, later Air Commodore Sir Frank Whittle, discussed the possibilities of both gas turbines and jet propulsion in his 1928 thesis, *Future Developments in Aircraft Design*. Eighteen months later he combined the two concepts in an idea for the application of the gas turbine to jet propulsion. He applied for his first patent in January 1930; it defined a gas turbine with a centrifugal compressor as a source of a high-velocity jet for propulsion. The British Air Ministry declined to develop his ideas. After serving as a flight instructor and experimental test pilot, Whittle was sent to Peterhouse at Cambridge University by the Royal Air Force on the basis of his excellent record. He continued work on his engines during three years at Cambridge; additional work was done on his designs at Rugby. With private financial assistance, Whittle helped organize the firm of Power Jets, Ltd. in March 1936, and three months later the firm placed an order for the manufacture of an engine to Whittle's specifications with the British Thomson-Houston Company. This engine, the world's first gas turbine for jet propulsion, was tested successfully in April 1937.

In Germany, work had begun in 1936 at the firm of Ernst Heinkel under the direction of Hans-Joachim Fabst von Ohain. By 1938, the German Air Ministry had asked all the German engine firms to begin the development of jet engines. The first engine to be built from this program was the Heinkel HeS-3b. This engine was installed in a special Heinkel aircraft, the He 178. On Aug. 27, 1939, Erich Wahrsitz flew the He 178 in the world's first flight of an aircraft propelled by a gas turbine for jet propulsion. (The world's first flight in a man-carrying, jet-propelled aircraft was made in Germany on Sept. 30, 1929. The airplane was a modified glider powered by Opel rockets.)

In Italy, the Caproni-Campini C.C.2, a highly inefficient but truly jet-propelled airplane, is reputed to have made its first flight about one year after the Heinkel flight in Germany, but no records exist to confirm that. The first recorded flight of the Italian craft occurred when it was flown from Milan to Rome in 1941 for delivery to the Italian experimental airfield at Guidonia.

The British Air Ministry contracted with Power Jets, Ltd. for a flight engine in 1938, to be installed in an experimental Gloster aircraft, the E.28/39. The same year, an experimental turbine-compressor designed along the lines suggested in 1926 by Griffith, was developed at the Royal Aircraft Establishment. The first turbo-jet-powered flight in Britain was made by the late Flight Lieut. P. E. G. Sayer in the E.28/39 on May 15, 1941. Powerplant was the Whittle W.1 engine. Sayer was later killed flying a conventional aircraft.

Two months later, Gen. Henry Harley Arnold, then commanding the United States Army Air Force, initiated a special arrangement between the British and American governments for the shipment of a British turbojet to the United States. The W.1X, which was the forerunner of the W.1 engine and a complete set of drawings for the advanced W.2B turbojet were flown to the United States in September 1941. A small group of Power Jets engineers also went. The data were turned over to the General Electric Company; within six months, an adaptation of the British unit was in production at the General Electric plant at Lynn, Mass. Bell Aircraft Corporation was given an order to build an airplane designed around two of the British-developed turbojets; the first flight of the Bell XP-59 was made in October 1942 with Bell's chief test pilot Robert M. Stanley at the controls.

The stimulus of war speeded jet developments on both sides, but it was not until 1944 that the first operational military aircraft were powered by the new engines. Again the Germans were first; their Messerschmitt Me 262 twin-jet fighters saw action against United States Army Air Force bomber formations early in 1944. Later that year the British activated squadrons of Gloster Meteor fighters, also a twin-jet design powered by Rolls-Royce Welland engines (developed by R-R from the W.2B design). The Meteors destroyed a number of German V-1 guided missiles, but never saw action against enemy fighters.

No American jet-propelled aircraft were in action, although a few Lockheed P-80s were in service before the end of World War II. Their engine was a single General Electric unit designated the I-40, designed for 4,000 pounds of thrust under sea-level static conditions.

After the end of World War II, jet development again advanced rapidly. The British stopped all development of piston engines in favor of concentrating on the gas turbine. Special research aircraft were built in the United States, England, France, and Russia to explore the new realms of flight speeds and altitudes made possible by the new principle of jet propulsion.

By May 1952, the world's first commercial airline service was started by the British Overseas Airways Corporation, with de Havilland Comets, a four-jet transport powered by de Havilland Ghost engines.

First extensive use of jet-propelled aircraft

for military purposes occurred in the Korean police action by the United Nations Forces in 1950. Both sides made extensive use of their first-line fighters powered by the latest jet engines.

In the fall of 1953, the world's speed record was captured and lost in a series of highspeed flights made by military jet-propelled aircraft. Fastest of these was the speed of 754.98 miles per hour, set by Lieut. Col. F. K. Everest, USAF, flying a single-engined North American F-100 fighter. In December 1953, the same type of airplane set an unofficial mark of 1.38 times the speed of sound at a high altitude, the fastest mark set by any aircraft powered by a gas-turbine jet. (In the jet age, flight speeds are often defined in terms of Mach number, which is the ratio of the airplane speed to the speed of sound: 763 miles per hour at sea level, and about 660 miles per hour at altitudes above 35,332 feet). An unofficial speed record of Mach 2.5, about 1,650 miles per hour, was set by Maj. Charles Yeager, USAF in the Bell X-1A rocket-powered experimental research aircraft on Dec. 16, 1953.

Engine Design.—The cycle of operation in a gas turbine for jet propulsion involves only three basic parts: a compression system, combustion system and an exhaust system. Air is taken into the engine and passed through one or more stages of compression. The high-pressure air then passes to a combustion chamber where it is mixed and burned with a fuel, generally a hydrocarbon such as gasoline or kerosene. The burning is a continuous process; it adds tremendous available energy to the moving airstream. The exhaust system functions to make that energy available in a useful form. The air from the combustion chamber impinges on the blades of a turbine which is mechanically connected with the compressor by a long shaft. The turbine absorbs enough energy from the hot gases to drive the compressor; residual energy is used to drive the exhaust out of the nozzle to produce the characteristic thrust of the jet engine.

There are two fundamentally different types of compressors which can be used in a jet engine, and they have given their names to the class of engine. A centrifugal engine uses a centrifugal-flow compressor which admits air near the center of the wheel and compresses it by flinging it outward from the center by centrifugal force. An axial-flow engine passes the air from one stage of whirling blades to another, parallel to the axis of the compressor. In practice, the number of stages of compression will vary from a minimum of about five to eighteen.

Most early engines were developed around the centrifugal compressor because of experience with the type and because it was easier to manufacture. After the end of World War II, the axial-flow engine dominated the field; the change to that type was because of the inherently higher efficiency of axial compression, which reflects in decreased fuel consumption.

There are some special applications of the basic gas turbine for jet propulsion which are of interest. In the turboprop engine, the energy remaining in the gas stream is used to drive a propeller of conventional design. The turbopan engine, sometimes called a ducted fan or bypass engine, consists of a short-bladed propeller or fan operating within a cylindrical cowl and driven by the energy in the exhaust of an other-

wise-conventional turbojet. This fan accelerates some additional air which bypasses the combustion chambers and mixes with the hot exhaust at the nozzle. The chief advantage of the turbopan engine is economy of operation.

In the application of jet propulsion engines to certain types of aircraft, such as transports, a special problem arises because of the engine's tendency to continue to produce considerable thrust after fuel has been cut off. In conventional transports powered by reciprocating engines driving propellers, the propellers are put into reverse pitch to act as additional brakes for the airplane. By changing the blade angles of the propellers to negative values and then speeding up the engine, a "negative" or reverse thrust is produced in a rearward direction, which helps to slow the airplane.

An analogous procedure is not yet available for the jet engine. Instead, attempts have been made to divert the flow from the exhaust jet to a forward direction to produce reverse thrust. One disadvantage has been the mechanical complexity of the scoops or similar devices used to provide the reverse thrust. The design of such scoops is difficult; they must be rugged enough to withstand the hot blast, and must not cause extra drag when in the normal, "off" position.

There are means for augmenting the thrust of a turbojet engine without increasing its size or otherwise changing the design. The injection of fluids such as water, or a water-methanol mix, at the compressor increases the effective mass flow through the engine, and the thrust in proportion. Because of the large amount of excess air available in the exhaust, it is also feasible to burn additional fuel in the exhaust stream. This is called afterburning, or reheat, and in practice can increase the thrust of the engine up to fifty per cent. Both water injection and afterburning are considered emergency procedures for short-time use only.

Turbojet engines are normally rated by the thrust, measured in pounds, that they produce at sea level on a standard day under static conditions. It is frequently stated that one pound of thrust is the equivalent of one horsepower at a flight speed of 375 miles per hour; this is only a mathematical equality. It is not possible to give a horsepower equivalent for a jet thrust without also defining a particular flight speed.

Early turbojet engines produced thrust on the order of 1,000 pounds; in 1954, engines which produced 10,000 pounds thrust without afterburning were in quantity production, and experimental engines with test-stand thrusts up to 18,000 pounds had been developed.

Turbojet thrust is not constant over the range of flight speeds. Up to velocities of 200 or 300 miles per hour, the thrust decreases with speed, because of the entering momentum of the airstream. As the airplane accelerates, the pressure of the air at the inlet increases because of the ramming action at the inlet. This ram pressure contributes to the overall pressure rise of the air through the engine, and shows up as increases in thrust with speed. The contribution of pressure rise outweighs the loss attributable to the inlet momentum.

Engine thrust decreases with altitude for a constant flight speed, because of the reduced density of the airstream. Engine efficiency increases with altitude because of the greater temperature difference across the engine and the

JET PROPULSION

Fig. 1. The Pratt & Whitney Aircraft J57 turbojet engine which has been used in a wide variety of aircraft built for the United States Air Force and the Navy. Classified as a "two-spool" engine, the J57 uses a compressor section split into a low-pressure and a high-pressure stage. Thrust rating of the J57 is approximately 10,000 pounds for the early models in the series.

JET PROPULSION

Above: Fig. 3. The General Electric Company J47 turbojet, shown here in a cutaway drawing which reveals the internal makeup of the engine, has seen application in many military aircraft. Rated in the 6,000-pound thrust category, the J47 powered the North American Sabre series made famous in the Korean police action by USAF pilots.

Right: Fig. 2. A Pratt & Whitney Aircraft J57 turbojet with afterburner. The afterburner, which comprises the left half in the power plant picture at right, is an extension of the engine exhaust tailpipe. Additional fuel is sprayed into the afterburner and burns in the hot exhaust gases, providing additional thrust which may almost double the engine power at high speeds.

greater pressure difference through the compressor.

The axial-flow engine has been refined further by what is called the "twin-spool" design. Two separate stages of compression are used, driven by two turbines. The first compressor is a low-pressure stage, and is driven by the second turbine. The second compressor is the high-pressure stage and is driven by the first turbine. The advantages claimed for the type are that pressure ratios can be made higher, and fuel consumptions made lower. The first production engine of this type was the Pratt & Whitney Aircraft J-57, an engine rated at about 10,000 pounds sea level static thrust. A typical modern engine, the J-57 is about 155 inches long and 39 inches in diameter. It weighs about 4,200 pounds. Maximum thrust with afterburner is slightly in excess of 15,000 pounds. Fuel consumption at maximum static thrust is 0.78 pounds of fuel per pound of thrust per hour; for 10,000 pounds thrust, this corresponds to about 7,800 pounds of fuel per hour, or about 1,300 gallons of gasoline. An automobile could be driven for about 19,500 miles with that much gasoline; in an hour's time, a J-57-powered airplane could go about 800 miles.

Fig. 1 shows a side view of the J-57. The thermocouple harness is an assembly of instrumentation for giving the pilot or test engineer the temperatures at any desired point in the engine. The anti-windmilling brake is a device to stop the rotors when the fuel is shut off and the engine stopped. Normally, jet engines rotate at very high speed, and since there is little internal resistance, they continue to turn for a while after the engine has been shut down by turning off fuel and ignition. A brake is desirable to stop the rotor, which would otherwise continue to pump air through the engine, possibly damaging it by picking up foreign matter from the ground, or endangering ground personnel who might get near the engine inlet.

Fig. 2 shows the J-57 engine with the afterburner attached. The afterburner (at left) begins at the left-hand support of the lifted engine. The afterburner nozzle (extreme left) is adjustable by means of the band of hydraulic cylinders which can be seen just ahead of the afterburner nozzle.

Fig. 3 is a cutaway drawing showing the interior details of the General Electric J-47, a typical axial-flow engine. This turbojet was produced in large quantity and powered the North American F-86 Sabre, the Boeing B-47 Stratojet and many other United States Air Force airplanes.

Air enters the J-47 through the annular inlet between the accessory section and the air guide. An inlet screen acts as protection against pebbles or other foreign objects that might be picked up in ground running; these screens can be electrically heated in some engines to prevent ice from forming in the inlets during flight through icing conditions. The air then passes through 12 stages of compression; the length of each compressor blade gets smaller as the air moves toward the rear of the engine. This is because the air takes up less space as it is compressed. Between each set of rotating blades on the compressor wheel are stator blades fixed to the split compressor casing.

The high-pressure air is collected in a section at the rear frame and enters the combustion section. There are eight combustor cans, each with

a perforated inner liner and an outer shell which contains cooling air to keep the metal from deforming or failing under the very high temperature loads.

The heated air rushes out the rear of the combustion cans and into the nozzle diaphragm which serves to direct the hot gas flow so that it impinges on the turbine buckets at the most efficient angle. The gases spin the turbine and are exhausted through the nozzle at the rear of the engine.

Turbine and compressor are connected mechanically by a long shaft supported in four places by bearings. The accessories such as starter and drives for electrical power for instruments are housed in a section at the front of the engine, commonly called a "bullet" because of its shape.

Engines in the J-47 series were rated at better than 5,800 pounds thrust under sea level static conditions, and weighed about 2,500 pounds.

A variety of 20 different turbojet engines were in production in the United States during 1954, with thrusts varying from 1,000 pounds to about 15,000 pounds. Approximately the same number were in production in Great Britain.

Ramjet.—The increase of thrust due to increased ram-pressure rise at high speeds suggests the concept of an engine without a mechanical compressor, or a turbine to drive it. In such an engine, compression is accomplished solely through aerodynamic forces produced by flight speeds.

This kind of engine is called a ramjet (formerly, athodyd, for aero-thermodynamic duct); it was proposed as early as 1909 by the French engineer René Lorin.

Entering air is compressed aerodynamically by the proper shaping of the inlet; fuel is added to the air and burned. The resultant exhaust is discharged through a nozzle. Mechanically, this is a simple engine because it basically lacks moving parts; however, it is much more sensitive to its flight conditions than a turbojet engine. Its fuel consumption is higher than a turbojet, but it is more efficient for extreme speeds in the earth's atmosphere. Because of its dependence on compression generated by aerodynamic forces, it will not function below a flight speed on the order of several hundred miles per hour, and must be launched to this speed by an auxiliary engine, generally a booster rocket.

Applications of the ramjet engine have been confined to missiles and to a series of man-carrying test aircraft and military prototypes built by the French engineer René Leduc.

Pulsejet.—Basically similar to a ramjet in that it has no moving parts or mechanical compressor, the pulsejet uses intake valves shaped like the reeds in a harmonica. These valves open and shut by differences in pressure to admit air to the intermittent combustion process. Valve action is controlled primarily by resonance, the same sound phenomenon that makes an organ pipe emit a tone.

This engine can be produced cheaply, although the valves have a short life and need frequent replacement. First application of this type of engine was in the German V-1 (Vergeltungswaffe Eins) buzz-bomb, a guided missile which became operational against the English Channel ports and other British targets in the summer of 1944.

Future of the Turbojet.—From a scientific

curiosity, the turbojet engine has grown to be a prime mover for military and some commercial aircraft where speed is the primary consideration. With proven ability to propel airplanes faster than the speed of sound at high altitudes, the turbojet appears to be a satisfactory powerplant to velocities as high as 1,300 miles per hour, or approximately twice the speed of sound at high altitude.

Above those speeds, jet engines such as the ramjet and the rocket begin to be feasible; the increased cost of operation attached to these types is more than balanced by their unique abilities to produce high speeds and thrust.

The overall advantage of the turbojet is that it produces a very high thrust for a relatively light weight within small envelope dimensions. These characteristics make it the powerplant for military aircraft of many types, where the ability to extend striking power at great speed is the foremost consideration. For those reasons, the turbojet has found increasing favor with military aircraft designers; it powers the majority of all fighters, bombers, attack and interceptor aircraft, as well as several types of guided missiles.

The current achievements of supersonic speeds reached by combat-ready aircraft powered by turbojets point to even higher speeds in the near future. Aeronautical engineers believe that jet-propelled military aircraft will be operating at speeds twice that of sound in a few years.

Commercial air transportation using jet-propelled airplanes has provided enough experience to show that much of the future traffic in the air, whether military or civil, will be carried in airplanes powered by gas turbines, probably turbojets.

Other forms of transportation are not compatible with jet propulsion as described here. Experimental vehicles of several types, including boats and automobiles, have been built, but have not been greatly successful. This is because the jet engine is a highspeed engine, and its efficiency is very low at low speeds. Furthermore, the fuel consumption associated with such inefficient use of the engine becomes too great for any economical operation. There is little evidence that there will ever be jet-propelled trains, automobiles, trucks or boats.

There will be, and in fact, are, such vehicles powered by a gas turbine, adapted much like the turboprop engine, to expend its powers through gears and a mechanical linkage, instead of through a highspeed jet of exhaust gas.

Turbojet engines have been used to drive wind tunnels by the ejector principle. The high-velocity blast from the engines induces additional air to flow along with it, and provides both the volume and speed of air necessary to test high-speed models. This is the only current non-flight use of the engines where any kind of efficient operation has been shown.

The replacement of the combustion section by a nuclear reactor as a heat source appears to be feasible in theoretical analyses of jet engines. In this application, there are many special problems posed by the reactor, such as shielding personnel from dangerous radiation emitted by the reactor itself, and by the air heated by its passage through the reactor. Such an engine would be massive, at the current state of the art, but it would be capable of keeping an aircraft in the air for a period limited only by

human endurance. Fuel consumption would be negligible.

DAVID A. ANDERTON,
Engineering Editor, "Aviation Week."

JETSAM, jět'sām, merchandise lost at sea either through being thrown overboard in the act of "jettison" (q.v.), or through the sinking of the ship. The term differs from "flotsam," goods which float after being thrown overboard; and from "lignan," when they are sunk but secured to a cork or buoy to permit future recovery. Goods lost in this way come under the law of average and their value may be recovered by the owner.

JETTE, zhě-tā', **SIR Louis Amable**, Canadian editor, jurist and statesman: b. L'Assomption, Province of Quebec, Canada, Jan. 15, 1836; d. Quebec, May 5, 1920. He was educated at L'Assomption College and was called to the bar in 1857. He engaged in the practice of law at Montreal and also in journalism, becoming editor of *L'Ordre*, at Montreal. He was elected to the House of Commons for Montreal (East) in 1872-1878. He became professor of civil law in Laval University in 1878 and in that year was appointed judge of the Superior Court of Quebec. In 1898-1908 he was lieutenant-governor of Quebec. In 1901 he was knighted. A member of the Alaskan Boundary Commission in 1903, he was one of the commissioners who dissented from the award of the tribunal. In 1909-1911 he was chief justice of the Court of King's Bench, Quebec.

JETTIES, jět'iz, are dikes at the mouth of a river or across a harbor bar to increase the riverine or tidal current by narrowing the channel and thus scour out a deeper bed, to accommodate navigation. Single jetties are solely at the mouths of rivers with strong currents, to deflect these to one side of its natural channel, but in most rivers and in all harbors they are double, forming an entire artificial channel. Briefly, the physical principles are: The power of water to transport solid matter varies as the square of its velocity, so that increasing the strength of current two-fifths will about double its sand-carrying capacity; the velocity increases with increase of slope and decrease of friction; the slope is increased by narrowing the channel, since it forces flood waters inside or outside to rise higher at the entrance, and the friction decreases as the width of the channel increases; and if a channel of a given depth and width passes a given quantity of water, then a narrower channel involves either a permanently greater height of water if the bed were rigid, or the scouring of the bed to a depth which, multiplied by the new width, will produce an equal cross-section with the old. The increased slope and the correspondent velocity vanish as the water cuts a deeper basin; but the velocity due to lessened friction does not, nor do the deepened channel, the greater discharge through it and the greater tidal fluctuation due to the larger basin. The channel is scoured along until the deepening sea establishes an equilibrium of action.

The system is not new. A number of important European rivers were jettied in the middle 18th century. In the United States a very great number have been constructed, both for rivers and harbors; the greatest of all are the jetties at the mouth of the

Mississippi, and as the general principles are alike in all, these may be briefly described.

The Mississippi discharges its waters to the gulf not by one channel, but in the main by three, running through "passes" 12 to 17 miles long from the delta land to the sea and widely divergent. The largest is the Southwest Pass; next the easternmost, Pass à l'Outre, with two branches. In the middle is the smallest, South Pass, 600 to 800 feet wide, and taking not over a 10th the total discharge, with a shoal at its head only 15 feet deep, and a bar at its mouth only 8 feet; so that, with 30 feet of water through the delta, it was unserviceable for deep-water navigation. Capt. James B. Eads offered to build jetties to deepen the bar at Southwest Pass from its then 13 to 28 feet; but Congress preferred South Pass as cheaper and simpler, needing work only at the head and foot. Work was begun in June 1875 and within nine months the water was 13 feet on the bar; by 1879 it was 29 feet; it is now over 30.

The west side of the pass had silted up into land 4,000 feet farther out than the east, so that the west side of the two parallel dikes built out to 30 feet depth in the Gulf was about 7,800 feet, while the east was 11,800. First piles were driven in two rows 1,000 feet apart (the piles 12 feet apart) to mark the lines of the projected jetty-walls. Then mattresses were built, of willow branches, or young willows 15 feet long, cut with the leaves on, laid in four courses, each crosswise to the next and fastened together at top and bottom by pine planking $2\frac{1}{2}$ inches thick, doweled with hickory pins; this compressed the willows to a thickness of about 2 feet and their brush-ends projected 3 or 4 feet. These mattresses were 100 feet long; for the bottom course they were made 50 feet wide, but steadily narrowed for each of the four courses at first needed to bring them to the surface of the water, the top one being 20 feet wide. Wider ones were used in deep water. These were built on shore, on ways as for launching boats; towed by tugs to the places indicated by the line of piles and sunk by loading one or two tons of stone on top. Once down, they speedily filled with sediment and became solid. At the sea end foundations of mattresses 200 to 300 feet broad were laid. For two or three years these stone-laden mattresses gradually sunk in the soft bottom and new ones were added at the top to bring the surface even. The willows not imbedded in sediment were riveted with stone. Where exposed to storms, they were considerably sloped and more thoroughly riveted. The sea ends were afterward capped with concrete blocks. The jetties have undergone considerable repairs since then, but have essentially done their work of making the river navigable for large vessels.

One of the difficulties was this: If obstacles were placed in the way of a free flow of water, the river would by so much at least desert this pass and run through the others; so that their heads had to be closed up to a sufficient extent to prevent this. Plans for improving the Southwest Pass in like manner were submitted by United States army engineers. Construction was begun toward the end of 1903 and completed five years later at a cost of about \$2,625,000. The east jetty was extended for 3,000 feet and the west for 3,750 feet in 1909-12. The final depth gained is 35 feet.

At the mouth of the Brazos, west of Galveston, Tex., an ingenious plan was adopted for avoiding interference in the work by flood-tides: A long trestle was built out to deep water above high tide, the mattresses hung under it by ropes and the stone dropped on them from above to sink them. Instead of being launched from shore and towed, they were carried on a portable railway running on top of the trestle and let down.

The Columbia River jetty is the most conspicuous example of the single instead of the double dike. It is $42\frac{3}{4}$ miles in length, the longest in the world. The bar at the mouth of the river, ever shifting and sometimes not over 12 feet deep, had half spoiled this superb river for navigation, and was greatly dreaded. But the river has a mean high-water discharge of 60,000 cubic feet per second, a mean tidal ebb of 1,000,000, with tides of 6.2 feet; and in 1884 a single curved line of brush mattresses with rubble-stone copings was begun, completed in 1894, to turn the current away from spreading itself on both sides and scour out the channel on one. This was finished in 1894 with a channel 30 feet deep and made the river a highway of the heaviest ocean commerce, with lines to all Pacific lands. The improvement was not permanent and in 1902 the channel was only 21 feet in depth. In 1903 a north jetty $2\frac{1}{2}$ miles long was projected, together with a $2\frac{1}{2}$ mile addition to the south jetty. These additions were completed in 1913.

Others are too numerous for more than brief mention. At Yaquina Bay, Ore., 115 miles south of the Columbia—an estuary 20 miles long discharging into the sea through a narrow, tortuous, shifting channel, and over a sand-bar with 7 feet of water—parallel jetties about half a mile long, one of rubble-stone on a rock bed, one of brush and stone on a sand bed, have doubled the depth of water and made the channel calculable. At Galveston, the single jetty was a relative failure, it needing a double one to converge the tides; and in 1896 the government completed it, with sides of 35,000 and 25,000 feet, costing over \$8,000,000, and furnishing 27 feet of water between the island and the mainland. Other notable ones are at the mouth of Saint John's River, Florida, beginning at the sides of the river-mouth and converging to 1,000 feet apart at the crest of the bar. Charleston's double one has sides of 15,000 feet each.

JETTISON, the throwing overboard of goods constituting a ship's cargo in order to lighten the load of a ship in distress, to save her from foundering, float her when stranded, or permit her to escape from an enemy. In such cases the loss to the individual owner is compensated by a general contribution levied

under the rule of general average upon the owners of the remaining cargo, freight, and ship, for whose benefit the merchandise was sacrificed.

JEUMONT, zhù-môn, commune, France, located in northern France in the Department of the Nord, on the Sambre River 6 miles east-northeast of Maubege. It is a customs station on the Franco-Belgian border. Important industries are glassworks and manufacturing of electric cables. Pop. (1946) 6,008.

JEUNESSE DOREE, zhù-nés' dô-râ', in French history, the name given to a band of counterrevolutionists active against the Jacobins after the fall of Robespierre and the end of the Reign of Terror in 1794. They first became prominent in the following year, during the last months of the National Convention, and continued their royalist activities under the Directory. Its members were youthful scions of aristocratic families. The name and its English translation, "gilded youth," have been used as a designation for wealthy young idlers.

JEVER, yā'fūr, town, Germany, located in the state of Lower Saxony in the northwestern part of the country, 10 miles west-northwest of Wilhelmshaven. It is a rail junction and its industries include woolen milling, brewing, and meat processing. The surrounding area raises livestock and dairy products, and Jever is a trading center for these products. Pop. (1946) 10,342.

JEVONS, jěv'ünz, (Herbert) Stanley, English economist: b. Oct. 8, 1875; d. London, England, June 28, 1955. Son of William Stanley Jevons (q.v.), he was educated at University College, London, and Trinity College, Cambridge University. From 1902 to 1904 he lectured on mineralogy and geology at the University of Sydney, Australia. After a year of travel in China, Japan, and North America, he returned to England. He was professor of political science and economics in the University College of South Wales and Monmouthshire, Cardiff, Wales, from 1905 to 1911. During the period from 1911 to 1914 he studied housing reform. From 1914 to 1923 he was professor of economics at the University of Allahabad, India, and from 1916 to 1922 was editor of the *Indian Journal of Economics*. In 1923 he became professor of economics at the University of Rangoon, Burma, continuing until 1930. From 1932 to 1937 he was on the council of the Royal Statistical Society. During World War II he was chairman in 1943-1945 of the Bombing Restriction Committee. He served from 1952 to 1954 as treasurer of the Anglo-Ethiopian Society, becoming in 1954 editor of that organization's *Proceedings*.

Among his publications are *Essays on Economics* (1905); *The British Coal Trade* (1915); *Money, Banking, and Exchange in India* (1922); and *Economic Equality in the Co-operative Commonwealth* (1933). He also has written many articles on mineralogy, economics, politics, housing reform, and edited some of his father's works.

JEVONS, William Stanley, English economist and logician: b. Liverpool, England, Sept. 1, 1835; d. by drowning, near Hastings, Aug. 13, 1882. His studies at University College, London, began in 1851, but family financial troubles led to his withdrawal from college in 1853. In 1859

he resumed his formal education, and in June 1862 he passed the master of arts examination of the University of London. He was assayer of the mint in Sydney, Australia, from 1854 to 1859. In 1863 he became a tutor at Owens College, Manchester, England, and in 1865 lecturer in logic and political economy at the same institution. In the following year he was made professor of those subjects and of mental and moral philosophy. From 1876 to 1880 he was professor of political economy at University College.

The writings of Jevons fall into three groups: those on practical economics; those in which he developed his system of logic; and those in which he explained his economic theories. In the first group is *A Serious Fall in the Value of Gold* (1863). Two years later Jevons published *The Coal Question*, a book which led to establishment of a government commission for studying England's coal reserves. These studies, filled with compilations and analyses of statistics, are particularly characteristic of his early work. Other studies in applied economics include *Money and the Mechanism of Exchange* (1875), *Primer on Political Economy* (1878), and the posthumous *Investigations in Currency and Finance* (1884). The last contains Jevons' sunspot theory, relating period of economic crisis to the phenomenon of spots on the sun. His original statements have been too broadly interpreted and misunderstood, as he merely pointed out the close correspondence between sunspot activity and the onset of economic crisis.

Jevons' exposition of his theory of logic began with *Pure Logic* (1864). This work owed much to the combination of mathematics and logic worked out by George Boole (1815-1864). A logical machine constructed by Jevons was exhibited in 1866. This device was built to illustrate his ideas about the mechanical bases of reasoning. *The Substitution of Similars* (1869), *Elementary Lessons in Logic* (1870), and *Principles of Science* (1874) are other important works of Jevons on logic. In all his work in this field, Jevons employed his knowledge of natural science, using specific illustrations of physical phenomena to help explain his abstract ideas.

As a theoretician, Jevons occupies an important place in English economics as the formulator in his country of the theory of marginal utility, notably in *Theory of Political Economy* (1871). Drawing on Jeremy Bentham for his concept of degrees of utility, Jevons freed English economic thought from the domination of John Stuart Mill, particularly in the realm of value determination. He used mathematics to establish the relationship between value and utility. The marginal utility doctrine was simultaneously formulated by other thinkers in different countries, and it had been anticipated in Germany by Herman Heinrich Gossen (1810-1858), but Jevons reached his conclusions independently and unaware of this other work. See also *ECONOMICS—Marginal Utility School*.

JEW OF MALTA, The. Christopher Marlowe's *Jew of Malta* is memorable for at least three reasons. It was the most popular play of its period, if not the most popular English play up to that time. So far as is known, the plot was entirely original. Its chief character Barabas is the English prototype of a series of popular English characters, of which Shylock, Volpone and Sir Giles Overreach of Philip Massinger's *A New*

Way to Pay Old Debts (1632), are noteworthy.

As Marlowe proceeded in the handling of plot he laid aside that "alchemy of eloquence" upon which he had depended. The main situation of *The Jew of Malta* arises still from a vaunting spirit. Barabas in his opening soliloquy shows "infinite riches in a little room" to be his ambition. But the ambition is so crowded in the action that it is difficult to distinguish it from the blood lust so popular in the plays of the day.

The play was probably produced about 1589, the part of the Jew being taken by Edward Alleyn. It is first mentioned in Philip Henslowe's diary in 1592, and was not printed until 1633, when it was given to the world in an edition by Thomas Heywood. As the play comes down to us it reveals very hurried composition. The first two acts are as precise as is the following play *Edward II*. Thereafter the action becomes confused and crowded. Action follows action with little regard for motive and sequence. Barabas outlives a dozen deaths. More strangely still this portion lacks the magic of Marlowe's line. And yet there is no doubt that this second portion gave the play its popularity. Two characters stand out to appear again in the plays of later writers, Barabas, villain beyond nature, and Abigail, his daughter, who by her virtues shames the house that reared her.

THOMAS H. DICKINSON.

JEWEL, jōō'ēl, John, English bishop: b. Buden, Devonshire, England, May 24, 1522; d. Monkton Fairleigh, near Laycock, Wiltshire, Sept. 23, 1571. He was educated at Merton and Corpus Christi colleges, Oxford, and was elected a fellow of Corpus Christi in 1542. He was greatly influenced by the teachings of John Parkhurst, later bishop of Norwich, and he was a follower of Peter Martyr who was professor of divinity at Oxford from 1547 to 1553. Jewel is known to have been a licensed preacher in 1551, and he had made a considerable reputation as a teacher. Upon the accession of Mary I in 1553 all those suspected of Protestant leanings were weeded out of Oxford, and Jewel was deprived of his fellowship. He made his way to the Continent, reaching Frankfurt in 1555. He was associated with Richard Coxe in his controversy with John Knox and later joined Peter Martyr in Strasbourg, with him visiting Zurich in 1556 and soon after Padua.

Returning to England on the accession of Elizabeth I in 1558, Jewel was one of the Protestant clergymen selected as a disputant at the Westminster conference with the Romanists in 1559. He was consecrated bishop of Salisbury on Jan. 21, 1560, and soon became prominent as official spokesman for the Protestant Church as it was being reconstituted under Elizabeth. His *Apologia pro Ecclesia Anglicana* (1562) was quickly accepted as the definitive statement on England's religious position and was the basis upon which all later debate of the subject was built. Jewel engaged in a famous controversy concerning the case of the Church of England as against that of Rome, first with Henry Cole and later with the more formidable Thomas Harding (1516-1572). Harding, who had fled to the Continent when Elizabeth became queen, made his initial attack on Jewel in 1564 with his reply to a sermon preached by Jewel four years previously. Before Harding saw Jewel's rebuttal he published in 1565 another attack, this time on the *Apologia*,

to which Jewel also replied. The exchange over various points continued until 1567, Jewel's writing being very methodical and dealing with Harding's arguments point by point. His works have no literary style because of this preciseness, but they were persuasive and their tone helped mould the thinking of Anglican theologians of later times. The collected writings of Jewel were prepared under the direction of Richard Bancroft, archbishop of Canterbury, and published in 1609.

JEWEL CAVE NATIONAL MONUMENT, South Dakota, located in Custer County about 14 miles west of the town of Custer in the Black Hills in the southwestern part of the state and covering an area of approximately two miles. The monument consists of a series of underground caverns and passages lined with calcite crystals. The cave was made a national monument in 1908.

JEWELL, jōō'ēl, Marshall, American industrialist and politician: b. Winchester, N. H., Oct. 20, 1825; d. Hartford, Conn., Feb. 10, 1883. From 1847 to 1850 he was in the telegraphy business. On Jan. 1, 1850, he became a partner in the leather-belt business of his father in Hartford, Conn. His duties with the firm took him on extensive travels through the United States and Europe. He entered politics in 1867, but was not successful in his campaigns for public office until 1869 when he was elected on the Republican ticket as governor of Connecticut. He was elected again to this office in 1871 and 1872. In 1873 he was appointed by President Ulysses S. Grant as United States minister to Russia. From 1874 to 1876 he was postmaster general of the United States. He was chairman of the Republican National Committee at the time of his death.

JEWELL, Theodore Frelinghuysen, American naval officer: b. Georgetown, D.C., Aug. 5, 1844; d. Washington, D.C., July 26, 1932. He graduated from the United States Naval Academy in 1864, but he had already been called to active duty because of the Civil War. On Nov. 28, 1861, he was appointed an acting midshipman, and in June and July 1863 he was in command of a naval battery of field howitzers in defense of Washington. In 1866 he was commissioned ensign, thereafter serving on various foreign stations. In 1889 he became president of the Naval War College, Newport, R. I., and from 1890 to 1893 he commanded the naval torpedo station at the same place. From 1893 to 1896 he was in command of the naval gun factory at the navy yard in Washington, D.C. During the Spanish-American War he was in command of the United States cruiser *Minneapolis* in the West Indies and later of the cruiser *Brooklyn* in the Philippine Islands. He served as a member of the Naval Examining Board, and in 1904 was commander in chief of the European Squadron, having been promoted to rear admiral the same year. He retired on Nov. 22, 1904. Jewell was the author of numerous technical papers, particularly dealing with naval ordnance.

JEWELRY. Jewelry making is an art, almost as old as the history of man. The earliest objects known to have been intended as personal ornaments were made of stone, bone, or shell, and date back to the Stone Age. Needles and fibulae served useful purposes in fastening clothing, whereas beads and pendants were intended for

adornment or as charms, to protect the wearer from mysterious powers; in later times the material as well as the form of amulets was often considered efficacious. Thus the joy of personal embellishment, superstition, and practical considerations were closely linked in the making of jewelry.

Among the first gold objects worn as ornaments are those from the Tigris and Euphrates valley, made about 2500 B.C., and found in Sumerian tombs of Ur. They reveal a variety of skillfully applied techniques, including casting, engraving, *repoussé* filigree, and granulation. Mesopotamian cylinder seals, made of semiprecious stones or glazed pottery from about 3200 B.C. on, are of particular interest, since they are the ancestors of classical Greek and Roman engraved gems, which had an almost uninterrupted continuance to modern days. Bronze ornaments with animal motifs, forming pins, bracelets, and useful implements, including the well-known horse-trappings from Luristan in western Iran, were made during the 1st century B.C., often inlaid with lapis lazuli and turquoises.

By far the most complete record of jewelry survives from ancient Egypt because of the dry climate and the elaborate burial customs of the earliest Egyptians. Beads and amulets made of shell, faience, ivory, lapis lazuli, or colored glass existed from earliest times. During the Middle Kingdom (2154-1570 B.C.) came goldwork frequently inlaid with flat semiprecious stones or glass pastes, and forming necklaces, bracelets, anklets, belts, rings, and earrings.

The island of Crete, having had contact with Egypt as well as with the Near East, was first in developing a civilization in Europe which encouraged the fashion for elaborate gold jewelry and engraved seals. The designs were commonly drawn from the animal world, in naturalistic or heraldic style. After the destruction of the Mycenaean cities by invading Dorians in the 12th century B.C., the Greek mainland led in the formation of the Geometric period, when bronze fibulae and other jewels were in use. Yet early Greek taste seems to have been slow in adopting the fashion for much jewelry, whereas in Italy at this period, from the end of the 8th B.C. century on, the Etruscans produced goldwork of almost unsurpassed splendor and technical perfection, distinctive by the excellence of its filigree and granulated work. The term *granulation* refers to the minute gold pellets attached to the flat or curving surface of the jewel, in an arrangement which forms the basic design of the decoration.

Ancient Greece.—The 5th and 4th centuries B.C. represent the period of highest achievements in all fields of Greek art, including that of personal ornaments. Jewelry was frequently fashioned in the shape of miniature figures, birds, or animals, which formed pendants or pendant earrings. Naturalistic flowers and foliage, made of thinly beaten gold foil, were predominant motifs for diadems of such exquisite frailty that they seem to tremble in perpetual motion at the slightest touch of air.

During the Hellenistic period, Greek jewelry continued in the classical tradition. The brilliant effects of color, derived from precious stones, occasionally tended to substitute for excellence in workmanship, and bold relief took the place of the fine filigree and plaitwork of earlier days. Hellenistic cameos were carved in relief and hence were not suitable for sealing, as were earlier

intaglios. These cameos introduced portraiture to glyptic art and were frequently inspired by contemporary sculpture and coins, which they occasionally reproduced.

Rome.—In Rome, meanwhile, the art of jewelry making concentrated increasingly upon the setting of semiprecious stones, selected for their intensity of color. These were shaped *en cabochon*, which is oval, following the natural shape of the stone. Roman cameos of the early empire reveal remarkable qualities and originality of conception. They include a series of large-scale gems, carved of shell, sardonyx, onyx, or agates, exposing to full advantage, and as part of the design, the various strata of the stone. Mythological and imperial figure subjects prevail, and portraits of members of the imperial family are some of the finest productions. These cameos were often copied in later times, particularly during the Italian Renaissance and the early 18th century, but never excelled.

The art of enameling was not unknown to the Romans. They used colored glass powders, predominantly opaque red and white, to fill scooped-out cavities on bronze ornaments which firing combined permanently. Enamel-decorated fibulae, brooches, buckles, and trappings have been found all over Europe, wherever the Roman imperial army advanced and conquered.

Medieval.—During the migration period (2d century A.D.—ca. 11th century) the crafts of the metalworker and jeweler were far in advance of arts which had to be practiced on a larger scale. This was a typical feature of nomadic tribes, who carried their precious belongings with them. They brought to western Europe a variety of bronze and gold ornaments, sometimes of enigmatic design, varying from tribe to tribe. Such brooches and fibulae, therefore, show much diversity; they are usually inlaid in flat garnets, almandines, or glass pastes; they frequently display some zoomorphic abstractions of geometrical character, or they adopt bird shape. The most splendid examples of this style, as it became modified in western Europe, were enclosed in the tomb of Childeric I, king of the Franks (d. 481); they are now at the Bibliothèque Nationale at Paris. Other examples were found in the great burial ship of Sutton Hoo in Suffolk, England, discovered in 1939. Coins and other evidence combine in establishing a date between A.D. 650 and 670. A different type of jewelry, typical of Celtic and Gaulish tribes, are electrum and gold torques of twisted design, particularly from regions where late Celtic art survived partial Romanization of the country, as it did in Britain and Ireland, north of the Roman wall. These torques were clasped around neck or arms by means of flattened ends which hook into each other.

In Ireland the pagan Celtic tradition lived on longer than elsewhere and was still prevalent when the country had accepted the Christian faith. Among the most characteristic types of jewelry from Ireland is the penannular brooch with long pin, and the most famous example thereof is the *Tara Brooch* at the National Museum in Dublin. Made during the 8th century, this brooch reveals a medley of different techniques applied to a body cast by the *cire-perdue* process (wax casting). It is patterned all over with interlacing geometrical designs and birds' heads finials, not unlike those found upon the pages of Irish illuminated manuscripts. Niello, filigree work, and granulation are combined, as they often are on related Anglo-

Saxon work. Thus, granulation, combined with cloisonné enamel and filigree, is also found on the famous *Alfred Jewel*, made during the lifetime of the king (d. 901) whose name it bears. The jewel, now at the Ashmolean Museum at Oxford, displays a half-figure in cloisonné, protected by a thick slab of rock crystal, mounted in gold with granulation and an inscription around the edges. Anglo-Saxon disk brooches provide additional evidence that the originally Byzantine technique of cloisonné enamel was fully known and frequently practiced in England during that period.

Since the establishment of Christianity had put an end to the custom of burying valuable belongings with the dead, direct knowledge of early medieval jewelry is often confined to that represented on monumental effigies and to the few objects preserved by chance, or in the sanctuary of church treasures. Many examples of jeweled votive offerings are preserved, and it appears that ecclesiastical work influenced personal jewelry and helped to establish a new style. The deliberate return to the classical past that inspired Carolingian and Ottonian art was most easily achieved in goldwork and brought the contradic-

scribed with a sentimental message, revealing that they were tokens of love and friendship. Others had religious legends, thus combining decorative, practical, and devotional elements.

Finger rings, worn since earliest times, also often combined decorative elements with a significance as tokens of love and friendship; they may have served religious or superstitious purposes or been badges of office. Moreover, they may have been engraved with the owner's crest or initials and been used for sealing.

Ornamental rings set with a precious or semi-precious stone outnumbered all other kinds and have done so since Greek and Roman times. The use of niello and granular work was prevalent in Anglo-Saxon rings, whereas Frankish rings were more often engraved with a monogram and hence intended for sealing. But there are other examples with flat-cut garnets or glass pastes, set within wheel-shaped partitions. In post-Carolingian times, stones were either held by means of four claws, or they were placed in high box settings, a fashion which encouraged the practice of placing colored foils beneath inferior gems, in order to intensify and enhance their appearance.

During Gothic times (from the late 12th through the 15th century) rounded cabochons in plain settings maintained their previous popularity. But as the technique of gem cutting advanced, stones tended to become smaller and of a more regular shape. Rectangular gems were often set in grooved quatrefoils, whereas pointed stones were chosen to form the bezels of stirrup rings, which derived their name from the shape of the hoop. Posy rings were those inscribed with a message of love or friendship, amidst flowers and leaves. The legends, at the inside or outside of the shank, were mostly in French, although these rings were made simultaneously in France and England during the 14th and 15th centuries. This may be a result of the close contact between both countries during the period of the Hundred Years' War. Silver or gold rings with clasped hands, referred to as *fede* rings, were also popular and continued to be so to recent times, particularly in Ireland.

Signet rings have been used continuously since the classical period. The bezel was set either with a stone intaglio, late Greek, Roman, or contemporary, or was engraved with a device upon metal ground. In Italy, during the 15th century, the combination of an engraved stone with surrounding legend inscribed in the gold or silver setting, was not infrequent. The belief that the inherent magical properties of certain stones were enhanced when engraved with the appropriate symbols was prevalent during the Middle Ages, and many engraved rings were therefore worn for their magic or prophylactic qualities as well as for personal adornment or for use as seals. See also AMULETS.

The very large rings of gilt bronze, known as pontifical rings, were worn by bishops and other ecclesiastics over their gloves at ceremonial occasions. These rings were usually set with a rectangular foiled stone, flanked by pontifical arms on each shoulder.

Another kind of religious jewelry in base metal were the pilgrim signs, stamped out of pewter with pictures of venerated saints or their shrines, the objective of pilgrimage. These badges, many of which were discovered in the river Thames, England, were worn in the hat or

The Alfred jewel.

tions of the transitional migration period style to an end. This revival included the ancient art of gem cutting, an art of which the rock crystal at the British Museum, with the story of Susanna, carved during the reign (954-986) of King Lothair of France, is a splendid example.

The workshops of goldsmiths were then located in or near monasteries or within the precincts of cathedrals; as a result the ecclesiastical tradition soon enriched the secular. The finest jewels were made to adorn statues of the Virgin and other saints, rather than for personal uses. Hence it is that the treasure of Empress Gisela, who lived during the mid-11th century, is wholly exceptional. This treasure, found at Mainz, contains necklaces, earrings, and brooches, including a circular one in the shape of an eagle, inspired by earlier bird-shaped jewels, but rendered in a new composite style of heraldic qualities. The inclusion of antique cameos or intaglios in medieval jewelry, religious or secular, was widespread. They were frequently surrounded by rows of threaded pearls, held in position by means of gold loops.

Among the popular types of personal jewels were ring-shaped clasps and brooches, often in-

cap, a custom derived from pilgrims to the Holy Land.

Another type of religious jewelry, symbolizing the need for divine protection, were miniature statuettes of patron saints, worn around the neck or as belt pendants. Silver and gilt silver were frequently used for casting these small figures, among which the Virgin, St. Sebastian and St. Christopher took first place. A similar desire for protection was also expressed in the wearing of small reliquaries, enclosing some objects intended to confirm the bond between the wearer and his patron saint. These reliquaries were usually of rounded shape and had flat hinged covers; they were engraved with pictures of saints, surrounded by naturalistic Gothic foliage.

Superstitions and the darker forces of magic were evoked in prophylactic jewels, made of strange materials to which protective powers were ascribed. There were pendants and rings with fossilized teeth of sharks, with toadstones, or with pieces of the unicorn's horn, actually that of the narwhal, to guard against such calamities as dropsy and poisoning. Occasionally cabalistic signs or legends intensified the protective virtues ascribed to these jewels.

Other types of late medieval jewelry included heraldic badges and chains of office and, among the most delightful and original creations, the enameled gold jewels worn at the court of Burgundy. These jewels, made about and after 1400, were frequently in the shape of a wreath of jeweled foliage, with a preference for strawberry leaves, enclosing white enameled figures in fashionable, contemporary costumes; or else tame animals in white or spotted enamel were recumbent within similar enclosures. Almost invariably there were clusters of pearls and sapphires on these jewels, or on connecting links of necklaces, reminding one of the triple significance of precious stones: as things of beauty, of intrinsic value, and of inherent magical virtues. Among the chief representatives of this charming type of jewelry are a brooch with lovers surrounded by strawberry leaves, at the Kunsthistorisches Museum in Vienna, a sequence of jewels at the treasury of the cathedral in Essen, Germany, and a necklace at the Cleveland Museum of Art.

The use of jewels as a form of currency is proved by many lists of royal treasures; these were often pawned, broken up, and melted down in later years. The inventories of the dukes of Burgundy and of the kings of France abound in descriptions of such jewels as are known to survive in isolated examples only.

Renaissance.—Late medieval jewelry was closely linked to architecture, and Gothic pinnacles and arches were frequently adopted by the goldsmith. This predominant influence, however, did not continue during the early Renaissance, when the art of jewelry became increasingly more dependent upon the art of painting. But when a basic architectural structure remained desirable, as often was the case with Renaissance pendants, classical columns and pediments superseded Gothic crockets and acanthus-leaf decoration. The new link established between the Renaissance goldsmith and painter shifted the aspect of contemporary jewelry towards pictorial concepts. The workshop of the goldsmith, no longer housed in monasteries, became the meeting place and training school of many painters, including Antonio Pollaiuolo (1429–1498), Andrea del Verrocchio (1435–1488), Sandro Botticelli (1444?–1510),

Albrecht Dürer (1471–1528) and Hans Holbein the Younger (1497?–1543), and a fruitful exchange of ideas and techniques resulted. Gradually the change of design in jewelry was followed by a change of subject matter, and classical themes, executed in minute sculpture, determined the iconography of Renaissance badges and pendants. The pleasurable pursuits of Greek gods on earth were frequently represented, and figures of Diana and her hounds, or of the Three Graces, outnumbered by far the statuettes of saints which had enjoyed preference during the Middle Ages. Well-known painters and engravers supplied jewelry designs and pattern books which circulated from workshop to workshop. As a result of this practice, which leveled national characteristics in favor of generally accepted standards of fashion, it is often exceedingly difficult to determine the country of origin of Renaissance jewels.

Among the most prominent painters who designed jewelry was Hans Holbein the Younger, active during the first half of the 16th century, in Germany, Switzerland, and England. His drawings, engravings and portrait paintings, depicting courtiers and members of fashionable society adorned with jewels, greatly influenced contemporary goldsmithery. These Holbein jewels were reproduced in many countries, wherever the designs of the master were known and admired. Holbein's strapwork ornament, intended for and frequently executed in black enamel on gold, was inspired by Hispano-Moresque metalwork, which had reached central Europe through the gateway of Venice. Similar designs in black and white recur in contemporary embroidery. Holbein's caryatids and small figures in the nude reveal Italian influence, whereas half-figures of ladies, supporting precious stones at the center of a pendant, originated in France and Burgundy, where this motif was frequently adopted during the 15th century.

One of the most characteristic creations of the period was the hat badge or *enseigne*, as it was then called, a jewel derived from the medieval pilgrim sign. The great variety of badges, usually of enamel and gold, can be studied in paintings by Bartolommeo Veneto (fl. 1502–1530) of Italy, François Clouet (1510?–1572) of France, and again in many portrait paintings by Hans Holbein the Younger, who designed similar badges for his patrons. No other jewel seems to express the personality of the wearer so aptly, through an individual choice of subject matter. Humanist interests, based upon classical education, account for the noticeable preference for antique cameos, mounted in contemporary setting, with loops provided for attachment to the beret. Mythological scenes, often remarkable for the large number of small figures involved, show incidents from the happy lives and adventures of Greek gods. Religious subjects are rare, except for figures of a patron saint, whose protection the wearer evoked.

Greek and Roman cameos were also mounted in rings and pendants. These gems formed the only actual link with antiquity, for classical jewelry was practically unknown during the Renaissance. Occasionally antique cameo heads were combined with contemporary jeweled busts or figures. This liking for contrasting effects may also have suggested the use of baroque pearls as bodies of birds, animals, and sea monsters, suspended from delicate chains for use as pendants.

The multiplication of designs by means of engravings, and the increased availability of gems

and diamonds during the Renaissance period combined to establish the new style in jewelry. Methods of production were described by Benvenuto Cellini (1500–1571), with whose name many of the Renaissance jewels have been associated, in his treatise on the goldsmith's craft. The new fashion spread to France and to southern Germany, where Augsburg, Nürnberg, and Munich became centers of production. Local painter-engravers competed in designing highly original jewelry. Erasmus Hornick (fl. 1550) of Nürnberg engraved pendants in the shape of dragons and sea horses. Hans Muelich (Mielich, 1516–1573) of Munich designed and painted elaborate architectural pendants as background for allegorical representations, figures of Virtues and of Greek Mythology. Virgil Solis (1514–1562) of Strasbourg added diversity to established conceptions of goldsmithery in a versatility of objects and designs matched only after the turn of the century by Théodore de Bry (1528–1598) of Frankfurt.

In France, meanwhile, the so-called *maîtres ornementistes* were at work. They included Étienne Delaune (1518?–1595), engraver of countless variations of Renaissance jewels, locket, watchbacks, and pendants composed of enameled arabesques in *champlevé* technique, interspersed by terminal figures, birds and animals, upon a ground of pierced scrollwork. His designs were faithfully copied by jewelers, and many examples fashioned after his engravings are extant in private and public collections. Designs by Jacques Androuet Du Cerceau show the architect's predilection for structural composition, scrollwork, cartouches, and caryatid figures. Similar caryatids also appear on the shoulders of rings, their decoration no longer being confined to the bezel, but extending around the hoop. Jan (or Hans Baptist) Collaert (1540–1628) of Antwerp, and Pierre Woeiriot (Voiriot, c.1531–1589), whose engravings were published at Lyons, promoted the fashion for sea monsters and dragons with figures riding on their backs, jeweled, enameled, and hung with pendant pearls.

At the end of the 16th century a more classical type of pendant with fewer figures, of greater symmetry, and of a new lightness of design was engraved by Daniel Mignot (fl. 1590), a Huguenot working at Augsburg, and by Paul Birckenhultz, whose engravings first appeared at Frankfurt in 1617, one year later than those by Mignot. Thus continued the fashion for vividly colored jeweled pendants, constructed of different openwork planes, held together by minute bolts and nuts. Variations of this type, of heavier character and a more pronounced color scheme, prevailed in Hungary and also in Spain. Jewels in the shape of a ship, the full sails outlined by rows of seed pearls, were typical of Venice and the surrounding regions of the Adriatic coast; they were of a kind which continued almost to modern times, particularly in peasant jewelry. Religious ornaments, less prominent though never absent, included crucifixes, crosses, and small reliquaries, intended for wear around the neck, amulets and miniatures on gold foil, enclosed behind rock crystal, a type most characteristic for Italy and Spain during the second half of the 16th century.

While the Renaissance pendant, in all its magnificence, undoubtedly was the most representative jewel of the period, other types, often matching the jeweled outfit, were worn with it. There were necklaces and chains, earrings, buttons, bracelets, and belt-pendants. The latter included

miniature prayer books in jeweled bindings (girdle books), pomanders, or containers for spices and scent, opening in compartments like slices of an apple, toothpicks, whistles, and various kinds of charms, some of these carved of a piece of coral. Necklaces were frequently of extravagant length, designed in sections, interspersed by pearls and precious stones, and joined by enameled links. Some chains were enameled in vivid colors; others concentrated on black to enhance the purity of shiny pearls. Many jewels were sewn on to costumes, or they were worn in the hair, as seen in contemporary portrait paintings.

In England, where the medieval tradition lasted late in all the crafts, ending only with the Reformation, Renaissance jewelry was not produced before the middle of the 16th century. The influence of Hans Holbein on contemporary goldsmithery added new variety and new kinds of jewels to the traditional ones. Typical of this period were lockets containing a miniature, mounted in enameled gold and surrounded by a wreath of square, table-cut rubies, garnets, or diamonds. Pendants set with Roman or contemporary cameos in similar settings became fashionable, and several portraits of Queen Eliza-

The Phoenix jewel.

beth, carved in onyx or agate, have been preserved. Chains of office and badges with emblems or armorial devices in jeweled mounts enjoyed great popularity, some modeled on contemporary medals and presenting tokens of royal favor. The *Phoenix Jewel*, at the British Museum, cut from the gold medal of 1574, shows the likeness of Elizabeth I, enclosed in a wreath of Tudor roses. Her portrait also appears on a number of Armada jewels, popularly known as "Danger Averted" medals, depicting the Ark in low relief, and bordered by jewels in enameled settings of great originality. Another jewel, typical of the Elizabethan scene, was the signet ring. Frequently the entire ring was made of gold or silver, or else the bezel was set with an engraved crystal over foil, colored so as to show the device in its proper tinctures. A historic ring of this kind is the signet of Mary, Queen of Scots, at the British Museum.

During the early Stuart period, floral motifs gained in popularity. The dainty enameled chains, found at Cheapside in London, exhibited at the British and the London museums, give an excellent illustration of this new style, produced at a period when England's finest garden poems were

composed. Daisies, marigolds, and other soft-petaled blossoms, enameled in white and in pastel shades, reveal a new lightness of touch and texture and a delicacy of design which is entirely novel and no longer harks back to the ideals of a past age.

French jewelry of the later Renaissance, following the well-known and widespread designs by Étienne Delaulne and others, usually preserved a certain classic restraint. Spanish goldwork of the period ran riot in an exuberance of color, supported by a lavish display of precious stones. The original dependence upon Italian design earlier in the century diminished, and gradually a new national style of Spanish jewelry and goldwork evolved.

Jewelry of the latter half of the 16th century was marked by the rise in importance of the gem, as compared with the metal setting, with special emphasis upon diamonds. This was most obvious in Spain at a period of the country's history when the riches of the New World increased its prosperity and filled the coffers of the royal family. Towards the end of the century, as the supply of gem stones steadily increased, Spanish jewelry tended to display an almost ostentatious profusion of stones, which from then on took the place of enameled figure subjects.

Seventeenth Century.—With the invention of the rose diamond cut in the Netherlands shortly after 1640, the entire character of jewelry began to change, again most notably in Spain. Jewels of gold openwork were studded all over with rose-cut diamonds, combining with the gold setting in producing a striking effect of almost voluptuous profusion. Unrelieved by touches of color, previously provided by enamel but now restricted to white, and with all architectural motifs and cartouches replaced by flower and foliage designs, Spanish jewelry assumed a highly individual character, generous in conception, and with a passion for sparkling diamonds.

In other European countries silver rather than gold was chosen for the setting of diamonds; being colorless, silver detracted less from the effectiveness of the stone, which was now exploited to fullest advantage. The rose diamond cut, with its 24, or occasionally even 36 facets, meant a great advance over the medieval pyramid-shaped stone which could serve for engraving and incising, and over the Renaissance table-cut stone which gave the diamond a flat, mirrorlike surface; and yet, the rose cut may still seem dull when compared to the brilliant cut, invented by the Venetian Vincenzo Peruzzi about or after 1700. While the rose cut meant the all-over faceting of diamonds, a method by which their fire was increased through additional reflection of light, the brilliant cut, with up to 58 facets, was applied to deeper stones, ending in points at front and back, and thus reflecting yet more light than the flat rose diamond.

From this period, the first half of the 17th century, also stemmed the tendency of setting jewels and rings with a number of smaller stones, instead of a single large gem. This development, consistent with the change of taste brought about by French engravers, gave the jeweler greater freedom of design; stones were placed close together, eclipsing their settings, and figure work, in consequence, went entirely out of fashion. Among the most fruitful and versatile French engravers to promote this new style was Gilles Légaré, whose pattern books ap-

peared in Paris in 1663. Simultaneously a fresh impetus to the art of enameling was experienced in France and in other European countries as the fashion for elaborate watchcases created a sudden demand for their decoration. This new fashion extended over the ornamentation of miniature cases and lockets and even affected the reverse of jeweled settings of all kinds. Naturalistically conceived bouquets of flowers, centering around the tulip, formed the motif of decoration, painted in vivid colors upon a ground of white. The fashion for the tulip, often referred to as tulipomania, originated in Holland about 1640, whence it spread rapidly all over Europe, making itself felt in many branches of art: painting, furniture, and metalwork.

Another enamel technique, practiced in 17th century France, was *émail en résille*; it was short-lived because of the extreme skill required of the goldsmith. It involved a combination of glass and translucent enamel, the latter within linings of thin gold foil, stressing the basic design. Strapwork of Moresque origin, after designs published in France by the 17th century engraver, Valentin Sezenius, is well known from watchbacks, lockets, and belts.

A few types of jewelry, previously known but then of lesser importance, became firmly established. The 17th century aigrette was a jewel worn in the hair or cap, supporting a feather, or imitating it in form. Mourning jewels, made during the Renaissance, continued to have a special appeal for the baroque man. Rings with coffins and skeletons, pendants with skulls and crossed bones, surrounded by mottoes referring to the brevity of life and the certainty of death, struck a more personal note. Inscribed in black enamel with name and dates, they commemorated the death of a relative or friend. Portrait miniatures of the defunct were occasionally included, particularly in lockets, and the custom of adding a lock of hair, often plaited around the hoop of a ring, was widely followed. Necklaces and pendants studded with diamonds and pearls emphasized graduated bow-shaped ornaments, and were tied by ribbons around the neck. The girandole was a clasp or pendant of alternating ribbon and bow design in openwork, containing a large center stone, surrounded by smaller ones and terminating in three pendant pearls.

Eighteenth Century.—The "Séigné" bow, of 18th century origin, was usually hung with a cross and intervening links, in openwork. Matching earrings and bracelets completed the outfit or parure.

For those who could not afford real diamonds there was paste jewelry, made in imitation of diamonds, and most effective when worn by candlelight. French paste is often referred to as strass jewelry, after Joseph Strasser, a Viennese who lived in Paris, and who in 1810 invented an improved method of faceting glass and of adding colored foils beneath tinted stones, to increase their intensity.

About the middle of the 18th century, the trend towards lighter designs became more pronounced, and with it returned a new delight in color. Diamonds, surrounded by emeralds, rubies, garnets, topazes, and amethysts, were combined in the featuring of naturalistic sprays of flowers and bouquets tied with bowknotted ribbons. Eighteenth century rings, composed of a medley of colored stones, each representing a flower, are known as *giardinetti*. Their open-

work settings are usually of silver, although the hoop may be of gold. Another type of colorful jewels, created at the end of the century in England, was that in which the first letter of the name of each stone in proper sequence spelled the word "regard," starting with a ruby and ending with a diamond. They represented tokens of love or friendship.

Floral sprays and rings continued to be made during the 19th century. While there were little changes of design, the technique of setting precious stones underwent certain changes. Until the end of the 18th century, all stones were enclosed in collets or boxes, backed by silver or tinted metal foil to intensify their color. During the 19th century, however, settings were left open at the back and stones were held in position by means of claws. More light could thus surround the stone, though the possibility of improving the color by means of metal foils was at once excluded. Therefore most stones used in open settings were superior in quality to those previously enclosed in box settings. During the 19th century, silver still held preference over gold in the setting of diamonds, though it was often lined with a thin layer of gold. These settings were so generally adopted everywhere that, with the exception of peasant jewelry, they are decisive factors in the dating of traditional types of personal ornaments.

Among the new types of jewelry, many of them machine-made since the latter half of the 18th century, were chatelaines of silver, gilt metal, and pinchbeck. This alloy of copper and zinc was named after the inventor, Christopher Pinchbeck (1670?-1732), a watchmaker, active in London about the middle of the 18th century. Chatelaines were worn from the belt, to support watches, watchkeys, seals, thimble cases, writing tablets, and other utensils. Fob seals, worn on chains or ribbons, were made of gold, silver, or pinchbeck, set with a carnelian or other semiprecious stone carved in intaglio. Occasionally seals as well as signet rings were made with a revolving stone for sealing on both sides, a device which may be traced back to the Egyptian scarab ring of ancient times. There also existed an inexpensive, mass-produced kind of intaglio, called a "tassie," after James Tassie (1735-1799), a Scot who settled in London in 1766. He invented a process of casting replicas of intaglios in glass pastes, for use in rings or seals. Another material which one has come to associate with inexpensive late 18th century jewelry is marcasite, crystallized iron pyrites, faceted in the manner of precious stones, intended to suggest diamonds. Cut steel, porcelain, and Wedgwood ware all enjoyed periods of great popularity as substitutes for real gems. Hair jewelry, mentioned earlier, was associated with mourning and almost entirely confined to English-speaking countries. Towards 1770, a new design of mourning rings, in keeping with the sentimentalism of the time, made its appearance. The hoop was of plain gold, the bezel of marquise, that is lozenge-shaped, set with a crystal covering plaited hair and the initials of the bemoaned. Other rings enclosed a miniature, painted in black and sepia upon ivory, depicting a weeping figure standing beside an urn or funeral monument, overshadowed by a willow tree. Name, age, and date of the deceased were usually inscribed at the back of the bezel.

Nineteenth and Twentieth Centuries.—The classical revival of Napoleonic times, and the

growing knowledge of Greek and Roman gold-work through excavations, promoted a Neo-Greek style in art and fashion, frequently referred to in France as Empire. The lunette-shaped diadems, worn by Empress Josephine and the ladies of her court, were inspired by classical designs. In great vogue were stone and shell cameos carved with mythological subjects, portraits, or idealized heads imbued with 19th century sentimentality. Most cameos were made by means of mechanical tools and as production increased, the inevitable consequence was a decline in standards of execution and design. Naples was the center of this flourishing industry, whereas Venice was the place of origin of small mosaics, reproducing Roman ruins, mounted in gold or gilt metal, as adornment of brooches, earrings and link bracelets. Occasionally floral sprays or miniature replicas of well-known antique mosaics were featured in larger brooches. A similar type of jewelry, equally fashionable during the early 19th century, was set with medallions of painted enamel. Most of these enamels originated at Geneva, where the watch industry had stimulated the art of enameling by creating a constant demand for enameled watchbacks and cases. These Swiss enamels frequently depicted figures in local costumes, viewed against a background of mountain chains. Later in the century jet jewelry became fashionable, particularly in England during the widowhood of Queen Victoria, when the wearing of black lockets, chains, and earrings seemed to become a generally accepted habit among older ladies.

Other Victorian jewelry reveals the eclecticism which was so marked a feature of the period. There are Gothic and Romantic motifs, Indian and North African designs, and lastly copies made from objects discovered in the course of excavations. Outstanding among those 19th century jewelers, who were almost exclusively inspired by ancient designs, was a small group of Italian craftsmen who produced work of the highest quality and technical perfection. Leading among these was Fortunato Pio Castellani (1793-1865), a Roman jeweler, who rediscovered the Etruscan secret of granulation, that is, the applying of minute grains of gold to a gold base. He also excelled in the ancient technique of filigree. Castellani's jewels, moreover, were archaeologically accurate, a fact quite in contrast with the sentimental revival and interpretation of bygone styles during the Victorian era. Another Italian jeweler, Carlo Giuliano (c.1814-1880), with his two sons, emigrated from Naples to London, where he established a prosperous jewelry business. Giuliano's designs in gold openwork featured enamel of quiet hues, interspersed with pearls and precious stones. His jewels were conservative, the finer points of superb workmanship balanced by unflinching excellence of taste. Most of Giuliano's jewels were marked with initials, a practice also followed by Castellani and his firm.

Before the turn of the century, Karl Gustavovich (Peter Carl) Fabergé (1846-1920), Russian court jeweler, produced enameled ornaments of great distinction, though his designs were somewhat eclectic, being based upon traditional Renaissance concepts. His own individual genius revealed itself more clearly in his jeweled Easter eggs and in carvings of semiprecious stones featuring floral sprays, animals and, occasionally, figurines of Russian peasants, enhanced by jeweled and enameled mounts.

In France, René Lalique (1860–1945) interpreted the *Art Nouveau* style in jewelry of great originality. He produced realistically conceived flowers, birds, and butterflies with wings covered by opalescent or transparent enamel, veined with gold, and heightened by pearls. Contemporary designers and jewelers have lately become so closely associated with well-established firms that their names and individuality are frequently obscured. Modern jewelry ranges from realistic to abstract designs, displaying brilliants and baguettes (bar-shaped gems), besides a medley of precious and semiprecious stones gathered from all corners of the world.

Peasant jewelry, though of small intrinsic value, is of considerable interest, since it reproduces contemporary styles in cheaper materials, or continues those of a previous age, no longer in fashion. Low-grade gold, combined with glass pastes and semiprecious stones, is frequently used. Filigree work is characteristic of Mediterranean countries, whereas enamel is rarely applied.

The Orient.—Gold jewelry produced in other continents than Europe, though only briefly mentioned, is of great interest. Ancient China excelled in metal inlay and gold filigree work, particularly during the T'ang (618–906) and Sung (960–1279) dynasties. Phoenix-shaped hair ornaments were then worn by the empress, the bird's tail feathers studded with pearls and precious stones, uncut but polished, as were the cabochon stones of medieval Europe. Cloisonné enamel, in contrast to Byzantium and to western Europe, was less frequently applied to gold. Jade commanded growing importance in later jewelry from China, though pearls, tourmalines, and other stones also abounded. Traditional designs featured dragons, the animals associated with the emperor, or bats, symbolic of long life.

Indian jewelry, worn by men and women at ceremonial occasions, included heavy gold and silver bracelets, usually embossed, and ending in dragons' heads. There were also silver belts, anklets, chains and pendants, gold amulets, necklaces, and earrings, frequently with animal or floral decoration, executed in enamel, a technique for which Jaipur was famous. Indian jewelry was studded with pearls, rubies, jargons and other stones; diamonds were usually flat-cut and of irregular shape. In Persia filigree had prominence, besides colorful enamel depicting flowers, similar to those painted in Persian miniatures.

Africa and America.—On the African Gold Coast, the Ashanti are known for gold ornaments, which include birds, toads, and animals, worn as rings, pendants, or amulets. From the Ivory Coast come gold masks, highly stylized, of attenuated oval outlines, and with prominently arched brows. These masks are made of heavy gold, in contrast to the gold masks of ancient Peru, found in tombs dating back as far as A.D. 800–1000, which are made of thinly beaten gold foil. Pre-Colombian gold amulets of the Quimbaya culture take bird shape, whereas anthropomorphic figures, worn as charms, are featured in Panama. The Aztecs of Mexico often combined gold with carved jade, a practice which they may have learned from the Chinese. These African and American jewels exercised a strong influence elsewhere, as they became more widely known, and contributed much in rendering modern jewelry design more versatile and colorful. JEWELRY TRADE, The. The making of jewelry is one of the oldest trades of which the American historian can find record, for while the manufacture of such articles of adornment occupied a position of little commercial importance until several years after the settlement of this country by the colonists, the fact remains that jewelry was made by the native Indians many years before the first European set foot upon American soil.

Prim and precise as the Puritans are supposed to have been, it is a mistake to imagine that they were too primitive in their opinions to appreciate the advantages of a little jewelry in the adornment of their persons. Both the Dutch and the English brought such ornaments with them to the new world, and one's personal attire was considered incomplete without the buckles, brooches and rings which were in vogue at that time. As the natural result gold and silver smithing was one of the first industries to be established in the colonies, and every large town had its smiths who produced the most popular articles of jewelry, as well as certain kinds of trinkets for the Indians, medals, snuffboxes, etc.

One of the most important products of the early silversmith's art was the making of elaborate boxes from rare woods, or, sometimes, shell, inlaid with gold or silver. Snuffboxes were manufactured in this way, while other boxes were made to contain the parchments which conferred the freedom of the city upon distinguished guests. Sometimes these boxes were made entirely of silver and were lined with gold. Occasionally the metal was gold, studded with precious stones. It was such a box as this in which the people of New York presented the "freedom" to Alexander Hamilton, after his elaborate defense of the liberties of the press in New York, in 1784; while similar boxes were later conferred upon Lafayette, Washington and General Scott. The making of such boxes and other ornamental insignia conferred upon distinguished men represents but one of the branches of the art of the smith, for there were so many demands made upon the craft that its ranks were constantly extending. In 1788, when the adoption of the Federal Constitution was celebrated in Philadelphia, there were no less than 35 goldsmiths and jewelers in the procession, while, more than 20 years before, it had been the profuse display of jewelry, silverware, etc., in the homes of the prominent New Yorkers that had incited Charles Townshend (1725–1767) to introduce the historic

bill known as the "Stamp Act," which was undoubtedly the entering wedge in the struggle which finally separated the colonists and the crown. At this period in the history of the nation the colonies that could boast of the richest inhabitants, and which could, therefore, afford to spend the greatest amount of money for jewelry and other articles of personal adornment, were South Carolina, Virginia, Maryland, New York, Pennsylvania, and Massachusetts.

When compared to the facilities afforded to jewelers at the present day the tools of the old-time silversmiths were crude enough. The only noticeable difference between them and those used by workers in other metals was in their size, a factor which fitted them for finer work. The extreme tenuity and the lack of brittleness of gold and silver gave room for the exhibition of great ingenuity on the part of the artist who aspired to forget the ordinary patterns in the creation of more fanciful designs, while the attainment of the polished, or burnished, surface made a more tender treatment imperative. In the beginning of the century the art of frosting gold like that of satin-fining silver, was unknown. Gold and silver both came from the workshop with a glittering surface, and such ornamental and decorative work as may then have been attempted was either crude enameling, applied work or engraving. Later, of course, came all the new processes by means of which the precious metals have been used conjointly with other metals, or with wood, mother-of-pearl, glass, porcelain pearls and gems.

In those days everybody who engaged in the industry of jewelry-making learned his trade so thoroughly and in such an old-fashioned manner that it was impossible to draw the close distinctions between the several different but associated occupations that are so clearly drawn today. At that time, to say that a man was a "jeweler" indicated that he was a goldsmith and silversmith, a watchmaker and clockmaker and a maker of fine mechanical instruments, for each of these branches involved a knowledge of the others. At the same time the trade was thoroughly a mechanical one, and any attempt to realize a higher ideal in the making of jewelry and other ornaments was most unusual. Instead of "wasting his time" over such inventions the artisan devoted all the hours of labor to such work as might be assigned to him, even dividing his time and skill between his own and kindred trades. To a similar degree the seller of such goods was more frequently a workman than a dealer. While a merchant in the strict sense of the word, he was usually a person who could take his place at the bench if necessity required, and who owed his success as a salesman to his knowledge of the various kinds of metal and fancy work for the adornment of the person. Gradually, as the demand for such goods increased, the more progressive of these merchants began to manufacture the simple articles which they sold, although it was some time before this branch of the industry had extended beyond the making of spoons, forks, rings and similar small pieces.

The first American manufactory of jewels is said to have been that established in Newark, N. J., in 1790, by E. Hinsdale, who died 20 years later, and was succeeded by his partner Mr. Taylor. The New York of 1820 could boast of but two manufacturing jewelers, G. F. Downing and a Frenchman by the name of La Guerre.

The revolutionary hero, Paul Revere (1735-1818) was originally trained as a goldsmith and silversmith, and he practiced his art in Boston before the Revolution. The *Knoxville Gazette* of Oct. 20, 1792 contains the advertisement of a local goldsmith and jeweler who declares that he also makes rifles in the neatest and most approved fashion.

From the earliest days in the history of the jewelry trade, Providence, R. I., has been one of the great centers of this industry. It was shortly after the close of the Revolutionary War that Messrs. Sanders and Pitman and Cyril Dodge began to make silverware in that city. As early as 1805 there were no less than four establishments located there. They were operated by Nehemiah Dodge, John C. Jenckes, Ezekiel Burr, and Pitman and Dorrance, and their product, to make which they employed about 30 men, included silver spoons, gold beads and the simplest designs in finger rings. A few years later some of these manufacturers began to turn their attention to cheap jewelry in which silver and other alloys were used with a small fraction of gold. These included many small articles like breast pins, earrings, key rings, sleeve buttons, etc., as well as some large articles which were plated by the hammering process. The first jewelry establishment at Attleboro, Mass., a town which has continued to hold a prominent place in the trade, was opened about 1805, while the establishment of the business in Newark, N. J., by the firm of Hinsdale and Taylor dates from about the same time. Philadelphia also became identified with the early jewelry interests. The firm of Bailey and Company was one of the first manufacturers in that city, and its trade with the West and South soon became so extensive that the concern became known as one of the most prosperous in the business.

Maiden Lane, New York, did not become the center of the American jewelry trade until about 1830. The demand for jewelry inspired new ideas in manufacture, and, as much of the desire for novelties originated in New York, that city naturally became the market for the introduction of such products. In the *New York Mercantile Register* for 1848-1849, one may find the advertisements of the following houses, which were then prominent manufacturers of jewelry, watches and silverware: Ball, Tompkins and Black (late Marquand and Company), 247 Broadway; Allcock and Allen, 341 Broadway; Gale and Hayden, 116 Fulton Street; Tiffany, Young and Ellis, founded in 1837, Charles L. Tiffany, founder, the forerunner of Tiffany & Co., 271 Broadway; Wood and Hughes, 142 Fulton Street; Samuel W. Benedict, 5 Wall Street; George C. Allen, 51 Wall Street; Squire and Brother, 92 Fulton Street and 182 Bowery. Some of these houses have since gone out of existence; only one now retains its original name.

Although great advances have been made in every branch of American art there is no particular in which it is more pronounced than in the metal work which is so conspicuous a part of the art of the gold and silver smiths, and the fact that the American product is now regarded as superior to that of any other country of the world is not only due to our knowledge of the art in itself, but is largely the result of our wider knowledge of the articles into whose manufacture good taste enters. Today the designers employed by the great gold and silver smiths of

America are not only men of refinement and liberal education, but they are so truly artists, in the best sense of the word, that they could, if required, draw or model from life, or paint in oils or water-colors. It is largely due to the efforts of such men that so much advance has been made in the making of ornamental gold and silver ware during the past half century, a progress which is indicated by our exhibitions of such articles as loving-cups, vases and presentation pieces.

The discovery of gold in California, in 1848, naturally gave a great impetus to the manufacturing jewelry industry, for it gave assurance of an ample supply of metal needed for all purposes without the cost of importation, and if, at that time, we were lacking in knowledge as to the various forms in which the art of the smiths had been developed, it needed but such expositions as those at London and Paris to perfect our education in that respect. With such secrets revealed to us, however, it took but a comparatively short time for us to acquire the inventions in machinery and tools necessary to the reduction of the cost of production, and it is largely due to our success along these lines that we have been able to lead the nations of the world in this branch of the fine arts.

The process of electrometallurgy was introduced about 1860, and since that time all kinds of goods in which plating has been employed have been made by this method, the centers of production being located chiefly throughout Connecticut, although there are other large plants at Newark, N. J., and Providence, R. I. Speaking from a strictly commercial point of view it is almost impossible to overestimate the value of this process, for it has brought within the reach of people of limited means an attractive line of tableware and other articles of utility that are now deemed indispensable in every household. If not as artistic and as highly finished as solid silverware they are extremely serviceable and there can be no question but that the better grades of such goods possess considerable artistic merit. In fact, for a time at least, the silver-plated ware encroached upon the province of solid silver, but during more recent years the low valuation of silver bullion, and the mechanical inventions which have further reduced the cost of production, have tended to reverse the tables.

The production of watches is so closely related to the jewelry trade that some reference must be made to it in any review of that industry. It was but a comparatively short time ago that all watches were imported, whereas today we have progressed so far it is only some very small watches for ladies' use and some particularly complicated chronographs that are now obtained in Europe. All others are made in this country, the industry being largely centered in New Jersey, Massachusetts and Illinois. In its consumption of diamonds and other precious stones America will also compare favorably with other nations, New York being the largest market for such gems in the world. Although it was but a few years ago that the art of diamond cutting and polishing was established in the United States, our wise tariff regulations have given such an impetus to this branch of the trade that some of the most expert cutters from the Netherlands have now located in this country.

So far as statistics go we have but little material concerning the early history of the jewelry

industry. We know that, in 1812, the value of the Providence product was but \$100,000, and that, as late as 1860, the returns from all parts of the country were small as compared to those of the present day. In that year, for example, the jewelers and watchmakers of Philadelphia produced but \$691,430 worth; the silverware manufacturers, \$516,000 worth, and the makers of watchcases and chains, \$1,714,800. The production of gold chains and jewelry at New York was \$2,497,761; of gold watchcases, \$337,690, and of silverware, \$1,250,695. In Newark, the total product was \$1,341,000, while Providence produced \$2,251,382 in jewelry and \$490,000 in silverware. The following statistics from the *Census of Manufactures* for the year 1937 show the importance of the jewelry and silverware industries in that year, although both had shown a decrease during the years of the financial depression:

	Jewelry	¹ Silverware
Establishments	974	136
Employees	20,368	11,361
Wages paid	\$23,272,000	\$13,789,000
Cost of materials	43,915,000	22,610,000
Value of products	96,601,000	56,733,000
Value added by manufacture	52,685,000	34,063,000

¹ Plated ware is included with manufactures from sterling silver in the census figures for 1937.

During World War II when platinum was not available to the jewelry trade, because of being a strategic metal, palladium was used in its place. This latter metal is approximately one half as heavy as platinum and is, therefore, particularly useful in the manufacture of earrings. Following the war there was a return to the use of platinum in the jewelry trade, although palladium is still used for some items.

There has been an increase in the use of gold-plated and gold-filled articles, especially in costume jewelry. Advances in wartime metallurgy resulted in the development of several inexpensive alloys, which have also found wide use in the manufacture of costume jewelry. The yellow of gold and the whiteness of platinum and palladium have been imitated by these base metal alloys.

Czechoslovakia has resumed again its role as the leading supplier of colorless imitation stones. Made of glass, these imitation stones are generally given a foil backing which lends a "sparkle" and "fire" that the glass alone does not have. When mounted in clips, pins, bracelets and earrings, the items are sold as "Rhinstone" jewelry. The inexpensiveness of these foreign importations is due to the fact that the glass stones, regardless of size, are molded to shape. By this method, mass production is possible.

Many technical advances in the plastic field have resulted in an influx of inexpensive jewelry made wholly or in part of plastic materials. One of the greatest uses of plastics is in the manufacture of beads which can be made in a wide variety of colors. Lucite, bakelite, and casein are three of the well-known types of commercial plastics used by the costume jewelry manufacturers.

The most successful excursion into the costume jewelry field following the war has been in the manufacture of imitation pearls. The number of individual imitation pearls produced in a single year has assumed astronomical proportions. One United States supplier in 1949 alone turned out over 5 billion plastic cores for making imitation pearls. Imitation pearls are normally

First step in making bracelet of ancient Roman design is to cut outline in strip of sterling silver. Scallops along edges will form shell motifs. Cuttings are salvaged for future use.

Lines of shell design are cut with gravers (knob-handled tools). Cuts are fine, light at first, and are made progressively deeper. Slender tools at right are files for modeling lines.

Below right: Finished bracelet conveys feeling of heavy richness. is lighter than it looks. Stones are lapis lazuli.

'Post-Dispatch' pictures from Black Star

of two types—those made entirely of plastic; or those using a glass core. The glass beads, in turn, are of two kinds; hollow, or solid. Plastic beads must be coated with an iridescent lacquer to give them a pearly "look." Glass beads are usually dipped in pearl essence.

The basis of pearl essence is an organic substance called guanine, the crystals of which are derived from fish scales. These scales are only obtained from certain species of herring-like fish, such as the bleak or alewife. To produce pearl essence it is necessary to combine guanine (50 per cent) with a solution of nitrocellulose (35 per cent) and amyl acetate (15 per cent). An estimate of the number of pounds of pearl essence used by imitation pearl manufacturers over a ten-year period is given as follows:

1939	— 10,000 pounds
1940	— 10,000
1941	— 10,000
1942	— 15,000
1943	— 15,000
1944	— 15,000
1945	— 15,000
1946	— 15,000
1947	— 18,000
1948	— 20,000

An interesting postwar development was the method devised to coat photographic lenses with a microscopically thin layer of fluoride. It was then found possible to transform a colorless, imitation stone into one possessing vivid iridescence, and some of these stones have been used by costume jewelry manufacturers.

Concentrated X-ray irradiation and even cyclotron bombardment have been used in an effort to improve or change the color of genuine stones. In some cases the color transformation is permanent; in others, it is not. For instance, diamonds bombarded by cyclotron irradiation will, in a matter of seconds, turn a brownish-green. The discoloration, however, has been found to be only skin deep and repolishing, or the application of moderate heat, usually returns the gem to its natural colorless, or faintly colored, state
TIFFANY & Co.

JEWETT, Charles Coffin, American librarian: b. Lebanon, Me., Aug. 12, 1816; d. Braintree, Mass., Jan. 9, 1868. He was graduated at Brown University in 1835 and from the Andover Theological Seminary in 1840. He was librarian at Andover while studying there and prepared a catalogue of the library. He was appointed librarian at Brown University in 1841 and professor of modern languages there in 1843. He was librarian of the Smithsonian Institute at Washington in 1848-1858, and thereafter until his death was superintendent of the Boston Library. His work in rearranging and cataloguing the library at Brown University attracted wide attention, the merits of his system being recognized in Europe as well as in the United States; and he established in the new library at Boston one of the first library card catalogues. His work was largely pioneer in modern library method and his system has served as a model in both United States and Canada. His writings on the subject of library economy are of importance. Author of *Facts and Considerations Relative to Duties on Books* (1846); *On the Construction of Catalogues of Libraries and their Publication by Means of Separate Stereotyped Titles, with Rules and Examples* (1852); *Notices of Public Libraries of the United States* (1854).

JEWETT, Sarah Orne, American novelist and writer of short stories: b. South Berwick, Me., Sept. 3, 1849; d. there June 24, 1909. She was educated at Berwick Academy and became a contributor to the *Atlantic Monthly* in 1869, in which periodical the larger part of her work appeared. Her usual theme was the New England character seen from its most attractive side, its gentler aspects given greater prominence and its harsher ones not unduly emphasized. Her works include *Deephaven* (1877); *A Country Doctor* (1884); *The Story of the Normans*, an historical work (1887); *Tales of New England* (1890); *The Country of the Pointed Firs* (1896); and many other novels and short stories.

Consult her *Letters*, edited by A. Fields (Boston 1911), and Matthiessen, F. O., *Sarah Orne Jewett* (Cambridge, Mass., 1929).

JEWETT CITY, Conn., borough in the town of Griswold, New London County; alt. 120 feet; 9m N.E. of Norwich; on the New Haven Railroad. A manufacturing center, it has rayon and cotton textile mills. Pop. (1950) 3,702.

JEWFISH, a huge Californian game fish (*Stereolepis gigas*) of the sea bass family (Serranidae). It has a single dorsal fin, the soft part of which is shorter than the spinous portion, and is brown with black blotches and becomes much darker with age. Among the dense growth of kelp in moderately deep water along the coast of southern California the jewfish finds a congenial home. Belonging to a family of game fishes, and reaching a weight of 300 to 500 pounds, it has long been a favorite object of sport for ambitious anglers.

Two other fishes of the same family but more closely related to the groupers are known as the Florida or black jewfish (*Garrupa nigrita*) and the spotted jewfish (*Promicrops, puitatus*). The former ranges from Florida to Brazil, and the latter widely through the warm parts of both Atlantic and Pacific oceans. The black jewfish, not especially gamy, is distinguished from the Californian jewfish by its greater robustness, strong canine teeth and rounded caudal fin.

Consult Jordan, David Starr and Evermann, B. W., *American Food and Game Fishes* (New York 1903); Holder, F., *Big Game Fishes of the United States* (New York 1903).

JEWISH CALENDAR. The Jews date their era from the Creation, which according to their tradition was 3760-3761 years before the Christian era. The Jewish year is a lunar year and consists of 12 months with an additional one for leap year. The months have alternately 29 and 30 days, the 1st and 30th days being called New-moon. Each cycle of 19 years has 7 leap years, the 3d, 6th, 8th, 11th, 14th, 17th and 19th. The spring months are called Nisan (in which the Passover is celebrated), Iyar, Sivan; summer includes Tammuz, Ab, Elul; autumn, Tishri, Heshvan, Kislev; and winter Tebeth, Shebat, Adar, with 2d Adar for leap year. The civil year began with the month of Nisan; the religious with Tishri. Rules for the computation of the calendar were issued, after various methods had been employed in earlier centuries, by Hillel II (330-365). The date usually assigned by Jewish writers to the year when Hillel fixed the calendar is 670 of the Seleucid era, or 4119 A.M., or 359 of the Christian era.

JEWISH HISTORY AND SOCIETY.

This symposium, intended to constitute a balanced account of events and movements in Jewish history, of concepts and institutions in Jewish religion, of the historical interrelation between Jewish religion and society, and of the sociological structures in the main Jewish communities, is divided into 23 sections which appear below. Additional and related material may be found in separate articles on HEBREW LANGUAGE AND LITERATURE; HEBREW MUSIC; ISRAEL; and PALESTINE.

Ancient and Medieval Times

1. History: From Traditional Beginnings to the French Revolution
2. Judaism
3. Origins of Israel
4. Kings and Prophets
5. Expansion of Judaism
6. World of the Talmud
7. Within the Ghetto Walls

Modern Period

8. History: Jews of Europe from the 18th Century to World War II
9. Hasidism
10. Emancipation
11. Haskalah
12. Religious and Philosophical Movements
13. Yiddish Language and Literature
14. Nationalism
15. Anti-Semitism
16. Zionism
17. Jews in Modern Palestine

Sociological Survey

18. Ethnic Status of the Jewish Group
19. Religious Traditions and Customs
20. Education
21. Community Organization and Social Welfare
22. Social and Economic Developments in the 19th and 20th Centuries
23. Jews in the United States

1. HISTORY: FROM TRADITIONAL BEGINNINGS TO THE FRENCH REVOLUTION. The Biblical Era.—The history of the Jews begins with half legendary figures in the twilight of Ur of the Chaldees. It passes from family, clan, and tribe, to nation and people, through nearly every civilized land of the Western World. It deals with violent changes in fortune: security in a Holy Land of promise, and dispersion through all the continents; supreme ethical guidance and stifling superstition; the dignity of achievement and the degradation of exploitation and exclusion. But through it all runs one compelling force, which neither the centuries nor the slings of fate could weaken—the powerful sense of a unique destiny felt by every generation of Jews. Early Biblical writers expressed this sense of destiny through the concept of a “chosen people.” The prophets expanded it to mean living on the highest level, a “choosing people,” whose very sorrows were a chastening influence. The rabbis crystallized it into an austere discipline. The great modern sages and teachers thought of it as a mission to spearhead the fulfillment of universal peace and brotherhood.

But from the wilderness of Sinai to the courts of the Temple where Isaiah served; from the academies of Babylon to the golden cities of medieval Spain; from the schools of Vilna to the mountain retreats of the mystical Baal Shem-Tob; and from the patriarchs of Genesis to the modern Einstein and Brandeis, representative Jews have always lived under the influence of this historic sense. They would not think of themselves as individuals; they were part of a stream of historic consciousness. As a people, they were an instrument of God's will to fashion a world where

men would live with clean hands and a pure heart.

This strong sense of destiny explains why a people, few in numbers and scattered through every nook and cranny of the world, with nearly every man's hand against them, still managed to survive, and to justify their physical survival by a record of creativity which would be astonishing for great nations anchored to soil and security.

Age of Fable.—The Biblical narrative begins the history of the Hebrews in the Tigris-Euphrates valley with three divinely inspired patriarchs, Abraham, Isaac, and Jacob, to whom God promised descendants destined to become a blessing to mankind. In this narrative, tradition was perhaps dimly reaching back to the days of the great migrations of Semitic tribes into the alluring reaches of the Fertile Crescent skirting the vast Arabian desert. At some stage in the wanderings of these tribes, certain gifted characters may have impressed themselves so strongly on the memory of the people, through benevolence, wisdom, or courage, that later chroniclers wove about their names the legends continuously cherished by those who love the Bible. At any rate, the patriarchs are traditionally the progenitors of the Hebrew people.

The descendants, or as the Biblical narrative puts it, “the children of Israel,” increased in numbers in the course of their wanderings. At some point, perhaps as early as the 16th century B.C., there must have been a settlement in Egypt. There is no historic evidence to corroborate this, but every tradition points to a long sojourn along the Nile; a quiet pastoral life, in which the Hebrews multiplied greatly, gaining wealth, and some even rising to highest estate.

Suddenly conditions changed. “A Pharaoh arose who knew not Joseph.” There was apparently a sharp anti-Asiatic reaction which reached out against all aliens in the land. There was actual oppression and reduction to serfdom. Folklore develops many details of the galling servitude of a free people who “toiled in mortar and brick and in all manner of service in the field.” The oppression probably lasted until the decline of the 19th Egyptian dynasty, sometime in the 13th century B.C. During the distress and the confusion of invasion from without and civil war within, it may be that the Hebrew serfs broke their bondage and returned to the wilderness that bore them.

The memory of the Egyptian episode was never permitted to become dim. The Hebrews prefaced many of their later laws, significantly, with the phrases “Remember your bondage in Egypt”; “Once you ate the bread of affliction.” The Egyptian episode left a permanent mark. It influenced all future social thinking about the rights of the weak, the underprivileged, and the dispossessed.

Moses.—The hero of the emancipation, and the real father of the Hebrew people, was the 13th century Moses, of whom Heinrich Heine has declared that he makes Sinai seem puny by his grandeur.

The Biblical narrative portrays Moses in the dual role of leader and priest-prophet, creating the nation out of scattered tribes; the promulgator of the Hebrew religion and its laws. It goes into admiring detail about his romantic origins, his life in the Pharaoh's palace, his vengeance upon the Egyptian who was abusing a Hebrew serf, his flight into the desert, and his divine call

to return and free his people. It describes his long, miracle-studded negotiations with Pharaoh, his spectacular adventures in the Exodus from Egypt, his brilliant leadership in the desert, and the climactic episode of the promulgation of God's law at the foot of Sinai.

Though these stories may be almost entirely a compote of legend and lovable fantasy, the historic impact of Moses cannot be overestimated. What his people believed about him was infinitely more important than what actually happened to him as a person. The Moses of tradition is one of the most influential personalities in Jewish history, and one of the spiritual titans in the religious development of the West.

Settlement in Palestine.—For many years the Hebrews lived in the desert as typical nomadic groups, loosely bound together by common traditions and a common faith. Their settlement in Palestine, traditionally ascribed to the 12th century B.C., was not the result of a quick military conquest. It was apparently a slow, filtering-in process, wave by wave, tribe by tribe, over a long period of time. The land-hungry nomads came, fought for a foothold, fell back, returned, conquered a piece here and a piece there, intermarried, and settled down. For many generations, however, they could count on no security.

The story of this tumultuous period is to be found in the books of Joshua and Judges, where the long and desperate wars are described as battles by local Hebrew chieftains against successive tribal enemies. The struggle was prolonged because the Hebrews were not really a solidly united military force. Sometimes a few tribes co-operated, as in the battle against Sisera, in the time of the prophet Deborah; but such union was only temporary. Inevitably, each little group relapsed into its own petty concerns. It was not until the all-encompassing danger of the Philistines compelled union for survival, that a more permanent cohesion was achieved, and a new era began for the Hebrew people on the soil of Palestine.

Creation of the Monarchy.—The Philistines, probably a non-Semitic people hailing from Crete and the Greek islands, had been moving into the coastlands of Palestine all through the early 12th century. Meeting only feeble resistance, they edged further and further inland until they held half of Palestine.

Cities like Gaza, "the outpost of Africa, the door to Asia," began to dominate the life of the country. The Philistines soon were crowding out some of the Hebrew tribes. The Biblical tales of Samson and Delilah, the wars of Ephraim and Manasseh, the capture of the Ark of Yahweh, all point up the overwhelming menace that the Philistines had become. This danger ultimately united the Hebrews. It called up a powerful young farmer, Saul, who led the Hebrews in successful resistance and saved Palestine.

Saul and David.—Out of the Philistine crisis came the first Hebrew monarchy, whose rise and fall is detailed in the books of Samuel and Kings. Saul became the first king, midway in the 11th century B.C. The term king is misleading, however, if it is interpreted as royalty with the trappings of a national state. Saul was really a glorified judge, a kind of Biblical Cincinnatus who was primarily a coordinator of national need in a time when marauding enemies were always near. These enemies were often defeated but never completely vanquished.

Saul's successor, the redoubtable David, who became king in 1013, really established the Hebrew state and made it a Mediterranean power. He finally cleared the frontiers, pushing them back until they touched the mountains in the north and the desert in the south. He created Jerusalem as a national capital, and, by bringing back the captured Holy Ark, made Jerusalem also the center of religious devotion. David's personality was so dynamic, his achievements so versatile (the Psalms are attributed to his lyrical genius), that his name became a touchstone of national pride. The legends that grew up about him ultimately included the prophecy that even the Messiah himself would some day spring from the house of the peerless king.

End of the First Hebrew State.—The brief Hebrew monarchy reached its highest point under Solomon, David's son, who became king in 973 B.C. As the father had expanded the physical boundaries of the land, Solomon expanded its cultural boundaries. He built substantial cities, reached for important markets, and established cordial relations with many prosperous surrounding states. He built an imposing Temple which, long after it had been destroyed, remained for the dispersed generations a symbol of the majesty of God.

Unfortunately, Solomon was not too discreet about the taxes that were required for all of the cosmopolitan innovations of his reign. He forgot that he was dealing with a simple agricultural people who did not understand palaces, finery, and harems. His son, Rehoboam, had even less understanding of the undercurrents of resentment that were developing. The result was a violent revolt of the northern tribes in 933 B.C., and the splitting of the Hebrew state into two kingdoms.

The rupture, never to be healed, ended the 70-year-old monarchy's brief period of influential political existence. Powerful states were growing up, to the east and west, whose imperialism could not have been resisted even had there been complete unity. Divided into two minuscule sections, torn by internal dynastic feuds, both kingdoms moved fast toward oblivion. The northern kingdom of Israel lasted about two centuries (until 722 B.C.), and its history was one of continuous strife. The southern kingdom of Judah survived a little longer (until 586 B.C.), and then it fell to the onrushing Babylonians.

Under the Ancient Empires.—*Babylonian Exile.*—The Assyrians, who conquered the northern kingdom of Israel, exiled 30,000 of its inhabitants and resettled the territory with captives from other lands. The exiles were quickly assimilated by their new environment and disappeared from history as an organic entity.

The Babylonians, who conquered the southern kingdom of Judah, also resorted to transplantation. But these men of Judah, the most vital and articulate elements of the land, carried with them a strong sense of nationalism. They refused to disappear. In exile, their prophets, notably Ezekiel, taught them that they were heirs of a great tradition, that they had a unique destiny to fulfill, and that the dry bones in the valley would some day again be infused with the breath of life. The exiles met regularly, ostensibly for prayer and for the continuation of religious practices, which could no longer be centered in the Temple. Their meetings served even more, however, to strengthen their will to live. The meeting places, which served as community gathering

points, developed into the synagogue, an institution which became permanent. It was to accompany the Jews in whatever parts of the globe they were destined to live.

Return to Palestine.—The prophets had insisted that there was no permanence in empires, however solidly grounded. A day came, late in the 6th century B.C., when Babylon's might drained out; and the dynasty, whose very breath had roused terror, began to totter. A new star was rising, the kingdom of Persia. In 539 B.C., the last Babylonian king, Belshazzar, was slain at one of the fantastic midnight orgies for which he was famous. Proud Babylon went down "to the lowest pit like the corpse that is trodden under foot" (Isaiah 14:19). The conquering Persian king, Cyrus, apparently in 538, granted permission to certain Jewish exiles to return to Palestine and to rebuild their devastated Temple. A small group of stalwarts took advantage of the offer and joined the loyal remnant that had remained in Palestine all through the years of the locust.

Reconstruction was a painful process. The land was difficult; living standards were a severe trial even to the most unswerving idealists. Many a pioneer decided to return to the easier comforts of Babylon. It took the constant exhortations of the prophets Haggai and Zachariah to keep up flagging enthusiasm. But at last, in 516, a full 20 years after the edict of Cyrus, a new Temple was dedicated. It was destined to stand for 500 years, and though humble and unadorned, it became the center for renewed worship and renewed national zeal.

Life in Palestine during the next two centuries was rather primitive. The country could not recover its earlier prosperity and was continually wracked by the wars of the competing empires surrounding it. It was in this period that the foundations were laid for a new Judaism, Pharisaic Judaism.

The Torah, essence of Jewish law, developed out of the travail of this transition period. Liberal spirits sometimes chafed because the burning words and lofty principles of the prophets were now encased in routine laws and binding customs. Abstractions alone, however, could not influence daily living, and discipline was as important as inspiration. The Torah put into concrete form the religious idealism of the prophets. It created a clear set of principles by which to live—principles which helped to link up Jews scattered in all parts of the world, when common land and a common language were no longer present as cohesive elements.

Greek Domination.—Late in the 4th century B.C., the known world came under the domination of Alexander the Great. So long as Alexander lived, the empire which he conquered was tightly held. In 323 B.C., Alexander died. He had trained no successor to follow him, and his generals fought among themselves for all the spoils they could garner. Little Palestine shared the fate of other strategically placed territory, and for 50 years was a pawn in the imperial struggles. Josephus compares Judah in this period with a ship in a storm, smitten on either side by waves. Finally, in 198, the Seleucid dynasty won control of Palestine and, for the moment, the Jews forgot the threat from the Ptolemies of Egypt.

There were other, more serious, fears, however. The Greek conquerors had brought with them alluring pagan practices which were under-

mining loyalty to the austere practices of Jewish religious life. The young people especially, carried away by Greek sports and Greek fashions, were soon imitating Greek religious paganism and Greek morals. This process of assimilation might have ultimately swallowed up Jewish life, succeeding where force had always failed, if a stupid king, Antiochus Epiphanes, had not come to power in 175 B.C. Impatient with the stiff-neckedness of the Jewish leaders, he issued an edict prohibiting, on pain of death, further observance of Jewish practices, and compelling loyalty to the pagan abominations which he substituted.

Persecution bred a new spirit and reunited the quarreling factions among the Jews. Revolt flared and the tiny Jewish community, led by the valiant and resourceful Hasmonaean family, pitted itself against the might and power of the Greek legions. The Jews, as so often in their history, drew strength from their sense of destiny. God would not let them die. "Horns grew upon the lambs," the book of Enoch eloquently says. Antiochus was overwhelmed with military problems in many other parts of his empire. The constant harrying of his troops by the Jews wore them down. In 142, Simon, the last of the Hasmonaean brothers, won remission from tribute, and was recognized as the high priest and leader of Judah. Once again the little Jewish state was independent.

The first years of independence were prosperous and vital. Simon, the ablest of the Hasmonaean, was an admirable reconstruction leader (he refused to call himself king). He cleared the soil of remaining enemy garrisons, completed trade treaties with surrounding states and, for the first time in Jewish history, struck Jewish coins.

Unfortunately, Simon's successors were not cast in his heroic mold. They were limited in vision and more concerned with personal power and fortune than with the welfare of the state. The people lived simply and with discipline, their Pharisee leaders developing those rich Jewish traditions which fundamentally influenced all subsequent Jewish religious life. The rulers, however, succumbed to intrigue, and the political and diplomatic history of the state reproduced the worst evils of the surrounding Oriental despotisms.

During a period of internal dynastic squabbling, one of the claimants for power appealed to Pompey of Rome to intervene and he complied with alacrity. In 63 B.C., Pompey's legions cut their way into the Judean capital. Palestine became a Roman province, though nominally a puppet Jewish dynasty survived.

House of Herod.—The Jews were now embroiled in all the internal quarrels of Rome. Each time power was transferred to a new military pretender—Pompey, Caesar, Antony, Cassius, Octavian, Crassus—Palestine paid in plunder or in tribute for the insensate feuds.

During the turmoil, the house of Herod supplanted the Hasmonaean dynasty. Herod was half Jewish, half Idumaean, and a complete pagan in outlook. His obtuseness was clear when he offered sacrifices of thanksgiving to Jupiter for having been made king of the Jews. Hence, his attempts to win over his new subjects failed completely. He tried to please them with physical improvements, lavishly built cities, favorable trade treaties, and reduced taxation. He even rebuilt the Temple. His efforts, however, were met

with sullen hatred and scorn. He became more and more embittered and suspicious, and the end of his reign was made hideous by wholesale executions which included his lovely Hasmonaeen wife and children.

End of the Second Commonwealth.—The political details of the next century need little emphasis. They were the usual pathetic combination of tyranny and oppression, with each Roman governor worse than his predecessor. The last few, by their rapacity, helped turn even moderate people into revolutionaries.

In 66 A.D., a great national rebellion broke out. There was no hope for its success against the most powerful armies of the ancient world, but it took four bloody years to reduce the fanatical garrisons of Palestine. It required months to take Jerusalem and the Temple. Of those who survived, thousands were transported to fight wild beasts in the amphitheaters of Caesarea and Antioch, or to slave to death in the mines of Sinai. Titus, the conqueror, built a magnificent arch in Rome, and the hardiest and handsomest of the rebels were reserved to grace the triumphal procession. The arch, with reliefs of the candlesticks and holy vessels of the Temple, still stands.

Even after the Temple fell, sporadic resistance continued in Palestine. One fortress, Masada, resisted for three years and, before it fell, the defenders slew each other so as not to be taken prisoner. At length, quiet was restored and the surviving remnants adjusted themselves to their peasant fate. For a generation, Palestine remained a petty province, almost forgotten by the Roman conqueror.

In 115 A.D., however, when Rome was troubled by widespread revolts in many parts of Asia and Asia Minor, the Jews, led by the teacher, Akiba, and the intrepid soldier, Bar Cocheba (Bar Kokba), rose with other rebel peoples. Trajan, and later his successor, Hadrian, determined to end the threat of future uprisings. The rebels were mercilessly put to the sword and the country was reduced to a shambles. The very name of Judah was discarded, and the province which had given the Roman legions so much aggravation was renamed Syria Palestina. Jews were forbidden, on pain of death, ever again to set foot in Jerusalem. Only on the ninth of Ab, the traditional anniversary of the destruction of the Temple, could Jews pay for the right to weep on the site of the old sanctuary. For centuries thereafter they "bought their tears," weeping over lost glories of the past; yet they never abandoned the hope that some day, in God's own way, a restoration would come and the Holy Land would once again rise from the ruins, rebuilt by Jewish hands.

Miracle of Survival.—The destruction of Jewish national life did not, miraculously, destroy the Jewish people. They lived on to play impressive roles in every age, in every land. History presents no parallel for the phenomenon. Many peoples have survived the destruction of their political independence—the Poles, the Irish, the Serbs, and others who have lived to see the rebirth of hopes never fully lost. But these peoples were never torn from their soil; however bitter the oppressions they bore, they remained united, and drew courage to go on from every site and every grave linked to the past.

The Jews, on the other hand, were almost completely dispersed. For all the centuries following the destruction of their state in Palestine

they had no common land, and, in time, no common language. Yet, they remained a people. Their secret lay in a common religious faith and an unshaken belief in their indestructibility. In the thousand years that followed the destruction of the state and the Temple, the Jews converted memories and traditions into what Heinrich Heine has brilliantly termed a "portable fatherland."

Alexandrian Era.—Long before an evil fate befell the Jewish settlers of Palestine there were far-flung Jewish settlements in every corner of the world. They were to be found in the Mesopotamian Valley, in northern Syria, in the Greek islands, and in Rome itself. The most influential Jewish community outside of Palestine was in Egypt.

The Jewish philosopher, Philo, estimated that nearly a quarter of a million Jews were scattered up and down the Nile in his own day, at the beginning of the Christian era. In Alexandria, which boasted of a population of a million, two of its five sections were almost exclusively Jewish. Here Jews rose to high estate and lived happy, thriving lives. They were profoundly influenced by the civilization of the Mediterranean world. Greek became their common speech, Greek ideas and customs permeated their lives. But they retained the essentials of the Jewish heritage even though its transmission now came through Greek language and format.

This is the period of the Septuagint, the translation of the Scriptures into Greek. This is the period of Philo-Judaeus, the most creative representative of the synthesis of Hebrew and Hellenic culture. Jewish life was vigorous enough to win converts. Many sensitive Greeks, repelled by the decay of pagan ideas and practices, were drawn to Judaism, if not officially, at least as firm admirers. The converts, referred to in the New Testament as "God-fearing Greeks," were welcomed by the Jewish communities and freely admitted to the services of the synagogue. It was among those whose spirits were leavened by Jewish concepts that the early Christians made their first converts.

The Babylonian Center.—Babylon had never ceased to be an important center since the 6th century B.C., when the kingdom of Judah had been destroyed by Nebuchadnezzar. Augmented by exiles and colonists, the population kept increasing, until a compact community of many hundreds of thousands had grown up. The story of the Jews in this area is a 1,500-year-old saga, one of the most fecund in the fateful Jewish adventure.

The opulent cities of Nehardea, Nisibis, and Mahoza, on the grand canal, as well as Pumbedita and Sura in the interior, became shining names lighting the darkness that shrouded Jews everywhere else. The Jews of Babylon were among the wealthiest caravan merchants and the most skilled artisans. In the countryside, they were successful as farmers, cattle breeders, and landowners. They formed a virtually autonomous unit, and their head, known as the *resh galutha* (prince of captivity), or exilarch, was accorded almost royal honors.

Inevitably, in such a background, the intellectual life of the Jews flourished. There were famous schools and academies in Babylon which became the center of the Jewish world, supplanting the schools of Palestine. This was the period when the Talmud was created, that vast com-

pendium of post-Biblical Jewish learning, which was the product of the genius of hundreds of scholars, mainly Babylonians.

There was a brief setback during the turbulent days of the Moslem conquests which began in the 7th century A.D. Islam emerged from the wastes of Arabia determined to take over the world. The countries of Asia Minor fell during Mohammed's lifetime and within a few years after his death. Babylon itself was conquered in 637, and a few years later all of the once magnificent Persian empire was in Moslem hands. By the end of the 7th century, the haunting cry of the muezzin, calling the faithful to prayer, was heard from minarets throughout North Africa and nearly all of western Asia.

The new conquerors, after the first impetuous sweep, were tolerant and did not compel their subjects to abandon their religious faith. There were restrictions for non-Moslems in politics and social life; but, within a century after Mohammed, most of these restrictions, too, had become dead letters. Jews continued to live undisturbed, and the period from the 8th century until the close of the 11th was a kind of golden age, unprecedented for peace, freedom, and creative achievement. The climax was reached in the time of Saadia, one of the great Jewish scholars, who dominated the intellectual life of the 10th century. Saadia not only profoundly influenced Jewish religious thinking, but he also laid the groundwork for some of the best work of St. Thomas Aquinas and other Catholic philosophers.

After Saadia's day, the decline started. The Turks had begun to make inroads in Asia and they had none of the benevolence of the earlier rulers. Jewish opportunity was first cut down by the turbulence of frequent wars, and then by the harshness of the conquerors' demands. The exilarchate foundered after seven centuries of glory. Hai, the last of the Gaonic leaders, was imprisoned by the ruling caliph and, in 1040, executed. The schools gradually closed, and a new center of Jewish life, in faraway Spain, beckoned. As the Babylonian scholars moved to the other end of the Mediterranean, the lights went out one by one, ending one of the most richly rewarding periods in Jewish history.

Rise and Fall of Jewish Life in Spain.—When most of the provinces of Spain adopted Christianity in the 6th century, there were already substantial Jewish settlements in the land. Some of these settlements went back to pre-Roman days. Unhappily, however, Christianity was often badly interpreted by the rulers, and wherever the Cross was triumphant, it meant repression for the Jews. The culmination of a century of violent persecution came under Egica (r. 687-701), who confiscated the possessions of the Jews, reduced them to the status of slaves, and prohibited the practice of their faith. It was inevitable that the Arab conquests of 711 and the years that followed, should be greeted with enthusiasm by the Jews, for the emergence of Moslem power meant new hope.

The Moslems held Spain for nearly seven centuries. It was an enlightened domination, marked by material prosperity and cultural and scientific brilliance. It proved to be a blessed era for the ever-increasing Jewish population, which entered very fully into the life of the country. Many of the Jews became landowners and financiers; others, prominent physicians and statesmen. They took advantage of the excep-

tional cultural opportunities, and made important contributions to medieval civilization by serving as the intermediaries between Arab and Christian learning.

The happy union of Hebrew and Moslem culture produced a renaissance in literature, philosophy, science, and religion. Even architecture flourished; some of the most beautiful churches of Spain today once served as synagogues and received the prayers of a proud and well-established Jewish community.

A few great names may be taken as symbolic of Jewish achievement during these seven happy centuries. Hasdai ibn-Shaprut, a 10th century statesman, served the court of the famous caliph, Abd-ar-Rahman, as physician and interpreter. Ultimately he became grand vizier, vitally influencing international policy. Samuel ibn-Nagdela, an 11th century diplomat, became the leading counselor for King Habus and his successor, King Badis. Solomon ibn-Gabirol and Judah Halevi, the two outstanding poets and religious writers in medieval Jewish history, were developed in 11th century Spain. Maimonides, whose writings illuminated the 12th century, was the most influential philosopher in Jewish history.

By the 14th century, however, the sands of good fortune were running out. The Spanish peninsula was being gradually reclaimed by Christian arms. Each new Christian kingdom that emerged meant, for Moors and Jews alike, an end to the policy of benevolence. The turning point came in 1391, when riots broke out in Seville. The Jewish quarters were burned and several thousand Jews slaughtered. These riots spread like a plague to every large city in Spain, bringing great suffering to all Jews.

Until 1391, those Jews who turned to Christianity were welcomed with open arms, and, after the riots, whole communities went to the baptismal font to escape death. Obviously their Christianity was only a façade, and most of the converts remained loyal to Judaism, practicing their ancestral faith in secret. Protected by baptism, they rose to the highest positions in commerce and in the professions, in the universities, and even in the church. They became known as *marranos* (probably "the damned" or "the swine"), and roused blazing hatred in the hearts of their Christian neighbors; for old Christians sensed the truth that the majority of the converts were still Jews at heart.

The denouement came soon. The church now began to take steps against the *marranos* and against all who could be proved heretics at heart. A new wave of persecution spread through the land, and *marranos* who were discovered received little consideration. The fires of the stake, the *auto-da-fé*, lit up all Christian Spain. No new Christian was safe. Bonuses were offered to those who betrayed secret relapses, and a premium was placed on the most hideous forms of treachery.

In 1483, Torquemada, one of the great fanatics of history, was made chief inquisitor. He determined to root out marranism and, while he was about it, to be forever rid of all Jews. He finally persuaded King Ferdinand to sign an edict expelling the Jews from the land, giving them four months to leave Spain. In August 1492 the mournful exodus began. At least 150,000 Jews (some estimates go as high as 500,000), the backbone of Spanish commercial and intellectual life, were driven out.

The proudest and securest Jewish community in Europe was thus beggared. A few thousand went to North Africa. A few thousand settled precariously in Italian cities. About one hundred thousand found temporary shelter in Portugal, but, after a few years, were expelled from there too. Some found refuge in Poland and some in Turkey, the only major countries that, at this time, opened their doors to the refugees.

There was no hope for the majority, however. For years after the Spanish expulsion, wretched families were found in every corner of the world, still seeking a place of refuge. The most horrifying part of the expulsion was the fact that few voices were raised in protest. The enlightened elements of Europe did not condemn Spain. Indeed, in 1496, Pope Alexander VI bestowed upon Ferdinand and Isabella the title of "Catholic" sovereigns, enumerating among their services the expulsion of the Jews.

Darkness in Medieval Europe.—It was really not to be expected that the states of Europe express horror at the Spanish action. In France, in England, in the several hundred states of the Holy Roman Empire, life for the Jews had, since the 11th century, been a long series of indignities and brutalities, culminating in wholesale massacres and expulsions.

Open season on the Jews of Europe began in earnest with the First Crusade of 1096. Many of the pilgrims seeking to wrest Palestine and the Holy Sepulcher from the Moslems were devoutly religious people, ready to make every sacrifice for the glory of the Cross. Many of the Crusaders, however, were riffraff, outcasts, and criminals, who smelled out opportunities for pillage and plunder.

The Jews who lived in the Rhenish Valley soon felt the presence of the Crusaders. The orgies began in Lorraine, and for years thereafter, wherever the Crusaders went, they left a trail of plundered homes and broken lives. After the First Crusade came the second, and the third, and the fourth, all through the bloody 12th century. Whatever else they signified, the Crusades marked the end of settled Jewish community life in Europe. They ushered in the Jewish caricature who skulked through Europe until the 18th century, the pariah, with bent back, hunted look, and obsequious manner.

The church now stepped in further to point up this degraded status. Pope Innocent III, in 1215, decreed that all Jews were to wear a distinctive garment, or a special badge, to set them apart from other men. The distinguishing mark invited ridicule and insult, and the Jew could no longer walk in the open unmolested; he sought out the byways and the darkness. Other churchmen began to attack Jewish writings, the last citadel of Jewish pride and courage. In 1239, Pope Gregory IX denounced the Talmud as a distortion of the Bible and a blasphemy on God and Jesus. He ordered all copies of the Talmud to be seized and burned, and his example was emulated in every part of Europe.

When the Black Death swept out of Asia in the 14th century, penetrating every hamlet of the Western World and destroying nearly a fourth of the population, the rumor spread that the devilish Jews had caused it all. The Jews, suffering grievously from the plague themselves, since they usually lived in the vilest parts of the towns, were now subjected to the worst outbreaks in their history. The massacres spread

from one end of Europe to the other. Hundreds of communities were destroyed by flame and sword. Already, in 1290, England had expelled its Jews. France followed in 1306; again in 1322 when a few thousand had drifted back; and finally in 1394. Most of the duchies of Germany continued the well-established tradition, first confiscating all Jewish possessions.

Four hundred years had now passed since the nightmare began. Hounded by successions of Crusaders, by the restrictions of the church councils, the hatred of churchmen and Jew-baiters, the Black Death and the libels which it engendered, Jewish life at the opening of the 15th century, was a hopeless, broken thing. There was little left for the Jews but to turn to their Bibles and prayer books, scanning the tear-stained pages for the consolation which the living world denied them.

Yet, in all the desert of horror, there were a few blessed oases. Turkey opened its doors, gladly welcoming refugees from Spain, Portugal, and the duchies of Germany. Soon Constantinople was host to the largest Jewish settlement in Europe. Poland, too, under easy-going princes, extended hospitality to the harried Jews of Germany. Another new center of Jewish life began, as the Jewish population in Poland increased in the years between 1501 and 1648 from 50,000 to 1,500,000. The disunity of medieval Italy made it possible for many thousands of Jewish exiles to settle in the more liberal provinces which did not share the bigotry of the rest of Europe. Late in the 16th century a new refuge opened unexpectedly in the gallant little Dutch republic which, after long travail, had won its independence from Catholic Spain. England, too, joined the narrow roster of hospitable states when Oliver Cromwell, in 1657, consented to Jewish resettlement.

At the threshold of modern history, then, just before the French Revolution, the main Jewish settlements were in Poland, in the far-flung Turkish possessions of Asia, and in southeastern Europe. There were smaller settlements in Italy, Holland, and a few provinces of the old Holy Roman Empire.

The Jews were mainly confined to ghettos, restricted in economic and social life. Existence was precarious even in the lands of modest hospitality. Nowhere did the Jews enjoy the blessings of citizenship. Whatever happiness they found was in their internal social and religious organization. They had a long way to go, even when political emancipation finally came, before they could bridge the gap that would make them full Europeans.

2. JUDAISM. Historical Monotheism.—

The connection between the fate of the Jews as a people and that of Judaism as a religion and way of life is not necessarily one of direct correlation. Developments favorable to individual Jews have frequently proved detrimental to Jewish group life, and consequently to Judaism. The period of emancipation itself, from the late 18th century on, raised the economic and social status of millions of Jews by removing legal disabilities and special burdens. But this was also attended by the destruction of Jewish self-government and by a partial disintegration of traditional religious and cultural patterns.

For the Jews, as such, their religio-cultural heritage is vital because they have lacked those other basic elements of group life—territory, state, and language. Next to the ties of common descent, it is primarily this heritage that makes Jews Jewish; particularly when they affirm Judaism with their conscious and voluntary allegiance, rather than accepting it as sheer accident of birth. Thus, in the interrelation between Jews and Judaism, the interplay between the social and religious forces appears to be of controlling significance.

The Jewish religion has been from the beginning a historical religion, in permanent contrast to all natural religions. The historical element was so predominant in the religious ideas of the Jewish people that historical, or historico-ethical monotheism may be regarded as their essential contribution to the history of human creeds. History is the dominant sanction for their most fundamental ideas; the concepts of Messianism, the "chosen people," the Covenant with God, and the Torah. God created the world at a certain time; later He created man; still later He selected Israel as his nation of priests, and so forth.

In most Jewish religious institutions, rituals, and doctrines, the historical reinterpretation of old customs is obvious. Judaism believed not only in the golden age of the first days of mankind, but also in the more enduring age of uninterrupted peace finally to be attained through human achievement guided by the will of God. This belief tended to make of the Jewish religion an essentially optimistic creed. For Judaism, the full realization of the great aims of religion will not come through the processes of political victory and conquest, or the vicissitudes of power; but rather through the progression of human achievements and frustrations, both apparent and hidden, guided by the inscrutable will of God. The concept of man's role as a mere instrument of an Almighty Power to achieve the ultimate and decisive victory over nature—this is the core of historical Judaism.

With this outlook, Judaism has sometimes been called a this-worldly religion. This is true insofar as Judaism's central emphasis is upon the

destinies of mankind, and, within mankind, of the Jewish people, in this world. Judaism cared comparatively little about death. Both early and later Judaism, however, continuously emphasized a firm belief in the survival of the group, and in the eternal life of the Jewish people down to, and beyond, the Messianic age. With the emphasis on history went an affirmation of life as it realizes itself through history.

The main stream of Jewish law sanctified daily pursuits performed in the spirit of service to the family or nation. This gospel is far from the acceptance of things as they are. On the contrary, in the great conflict between history and nature, man is gradually to overcome nature. Jewish law often demands this struggle of man against both external nature and undisciplined human nature. Out of this struggle humanity emerges. Thus, morality becomes man's chief means of realizing the aims of history. In this sense the historical monotheism of Judaism is also ethical monotheism, but only in this sense. A monotheism that is primarily ethical would appeal to the individual on the basis of his own ethical good; whereas Judaism stresses the general aims of the Jewish people (and, in a way, of mankind) to be realized in some unknown future by unknown miraculous means. This failure to relate the moral life of the individual to the ultimate and unknowable goal is intelligible only from the viewpoint of a historical monotheism. To this day, orthodox Jewish ethics has remained in its essence national rather than individual.

Here lies the root of the law's supreme power over the individual. Its great aims transcend the individual. It has underlying motives which may remain hidden to him. The individual may, like Maimonides and others, try to rationalize the law, but must not change it in the least. True, there were not lacking in Jewish history men who dared to question the very foundations of the system, but the main current proceeded unperturbed in the bed carved out for it by history.

This spiritual servitude, however, was never intended to be a forcible subjection. Compliance with the law was a matter of spontaneous, indeed, enthusiastic affirmation. The affirmative "fear of the Lord," one of the cornerstones of Old Testament piety, found its highest expression not merely in repentance, but in the sinner's complete, voluntary return, in his unequivocal retracing of his steps toward a reunion with God. Voluntary moral conduct in accordance with the divine law, as an act of self-assertion, is combined with wholehearted self-resignation as an instrument of God's will. This is the essence of ancient Jewish ethics.

Concept of the Nation.—We can now understand the deeper meaning of the concept of a "chosen people" in Israel's religion. Not only is the nation the chief vehicle of history itself, but for this conquest of nature by history a selected group of men is indispensable. If these chosen few retain their individual life independent of one another, then religion remains an individual, not a group phenomenon. This would prevent it from ever becoming the religion of mankind, the largest of groups.

A group religion, therefore, needs a selected body of men; this is the core of the idea of a "chosen people." Hence, this insistence upon a nation chosen for the special purpose of living the

hard life of an exemplar. In this sense the Jews had to be Jews "contrary to all men" to quote Paul (1 Thess. 2:15). At the same time, they were being Jews, for all men.

The nation overshadowed the individual in other respects as well. What really matters in the Jewish religion is not the immortality of the individual Jew but of the Jewish people. Even when later Judaism adopted the belief in the immortality of the soul and the resurrection, the central point remained the eternal life of the nation; hence, the extraordinary attachment to life manifested by orthodox Jews. Life on earth, the care of the sick and the poor, the duty of marriage and increase in family are stressed, so that the race and the people may be maintained. Because this religion was detached from nature, it had to be divorced from every kind of concreteness; from imagery which tends to focus worship in a certain place or glorifies the local sanctuary or territory. According to tradition, the Jewish religion existed for a time with no sanctuary at all; then, in the days of Moses and the judges, with a migrating sanctuary; until, after centuries, the Jewish kings built the central Temple in Jerusalem.

The Temple was supreme in Jewish life only for a brief period. All the sanctuaries found a substitute, even more detached from any particular locality, in the synagogue which could be erected wherever Jews happened to live. It was in the synagogue that Judaism finally evolved that form of religious gathering most in accord with its own spirit. The synagogue is an institution of the deepest significance in the history of religious worship; together with its daughters, the church and the mosque, it has been among the most important vehicles of history's progress against nature.

The peculiar history of the Jewish people corresponds to their particular position within the framework of the Jewish religion. Jewish history presents a remarkable interplay between the history of one nation and that of many. Under the same circumstances many peoples would doubtlessly have perished. That the Jews survived is largely due to the fact that they were prepared for their subsequent destinies by their own early history. For a very short time the Jews had a state or states of their own. Gradually the nation emancipated itself from state and territory. As the Jewish religion developed away from any particular locality, the Jewish people also detached themselves more and more from the soil. Common descent and common destiny and culture, including religion, became the uniting forces.

This development away from the soil has often been attended by tragedy. After 15 and more centuries of sojourn in a country, the Jews can be regarded as strangers to its soil, even by peoples who settled there long after them. The Jews several times succeeded in creating their own territory. This was done in Canaan and in the new self-governing state after the Babylonian Exile. During the two millennia of the Diaspora, the quasi-political aspirations of the people never ceased to be a living force. The very failures of all the Messianic movements were nothing but the continuous reaffirmations of that yearning for the return to the soil. In the 20th century, the Jewish people were engaged in the great venture of reconstructing a national home in Palestine.

In the long history of the Diaspora, this half-conscious wish of the people to become again rooted in a territory and state found repeated expression in substitutes for both territory and state. Throughout the ages the Jewish community partly replaced the missing state, whether in Jewish quarters in ancient Alexandria, or under the caliphate in North Africa, or in medieval and modern Europe. This persistence in living as Jews has often amazed and antagonized non-Jews. Jews have often been advised to give up their stubborn resistance to the "normal" ways of life, mingle with the nations, and thus simplify a perplexing situation. Indeed, in almost every generation, Jewish individuals and minor groups have become assimilated. Apart from the powerful non-Jewish opposition to assimilation, however, a simultaneous mass conversion of the Jews, even if feasible, would lead clearly to the immediate formation of a group continuing to live the segregated "unnatural" life of present-day Jewry, without the common religious heritage.

The life of the Jews has also led to their characteristic polarity in action and thought. The necessity, through two millennia, of cultivating at least two languages, one for daily routine and synagogue prayer, and one for business correspondence and literary pursuits, demonstrated to every Jewish youth the abnormality of his national existence. An additional factor was the gradual elimination of the Jews from the soil of medieval Europe and their forced concentration within the rising commercial activities of the Western World.

The greater the discrepancy between theory and reality, the more tragic became the inner conflicts in the Jewish personality. The steady equanimity and cheerfulness of the ghetto days (hidden to the uninitiated behind a drab and gloomy appearance), vanished in the modern period. Gone, for the most part, was the enthusiastic belief of the Enlightenment that the pursuit of happiness would proceed untrammelled if only a few political obstacles were removed. As a Jew and as a European, the emancipated Jew suffered doubly from the shattering of his hopes. Messianic expectations, attached to the new era of freedom and equality in the early period of the emancipation, had to be toned down in the face of ever-new complications. The tiny but solid bridge of the ghetto having broken down, a chasm between Jewry's exalted mission and sordid reality opened, abysmal and terrifying. Some Jews lost their balance, but many, steeped in their cultural and ethnic heritage, searched for new paths on which to continue their history's march.

3. ORIGINS OF ISRAEL. Primitives in an Advanced Civilization.—The period of Israel's origins may be divided into three successive phases: the period of the patriarchs, dealing with the appearance of the first Hebrew groups in Palestine, some of whom penetrated down into Egypt; the Mosaic period, covering the Exodus from Egypt and the migration through the desert under Moses; and the period of the final conquest of Canaan and settlement under the judges. This period of origins covered at least the whole

second half of the second millennium B.C. In it, we first learn of Israel, not emerging from any primitive environment, but as nomadic and semi-nomadic tribes, drifting gradually into already civilized countries. Most of these tribes belonged to the Hebrew group of the Semites, the Habiru. Transplanted into this advanced milieu, they burgeoned into a civilized nation much more rapidly than would have been the case had they relied solely on their inner growth.

Before their arrival in Palestine, some of these Habiru had apparently established a connection with the mature civilization of Babylonia. Others had been under the domination of Egypt for a long while. Even before the arrival of these Hebrews, Palestine itself had been the battleground of many races and ideas. Babylonian, Egyptian, and Hittite influences had been, and continued to be, powerful. The development of ancient Phoenicia, an extension of ancient Canaan, brought the country into contact with a colonial empire reaching through the whole Mediterranean region.

The Exodus from Egypt, the most momentous of the early events, was part of a great commotion among the peoples of the Near East. Shortly thereafter the appearance of the Philistines on the west coast of Palestine diverted the energies of the Canaanite population. This created a temporary condition favorable to the expansion of the Hebrews along the eastern and southern frontiers. Whatever chronology we adopt, and whatever historical truth we ascribe to the earlier legends of the patriarchs, the Exodus, and the settlement, one thing appears certain: Between the period of assaults on the Canaanite city-states and the final conquest during the period of the judges, many centuries elapsed. During this epoch some of the nomads settled and learned more advanced ways of life from the local population, while others lingered on the border as seminomadic cattle raisers.

Ethnic Unity.—Israel's nation and creed were born during these turbulent centuries. How these diverse tribes from different parts of the country, settling at different periods, were able to retain a memory of their unity and continue to feel themselves members of one nation, remains one of history's great enigmas. Not even the fact of foreign pressure fully explains how they were finally united under a single monarch. It is, moreover, not known that the successors of Moses encountered any serious difficulty in convincing the tribes which had been in Palestine before them that Yahweh, the God brought by the newcomers, was the very God worshipped by their own ancestors.

In the end, all Israel came to believe that it had participated in the Exodus. One reason for this remarkable sense of solidarity may be found in the general political situation. Their hold on captured settlements being rather precarious, the first Hebrew tribes welcomed the assistance of brotherly frontier tribes, while the newcomers readily conciliated the settled members of their own stock in order more successfully to attack other tribes. In any case, in this formative period the Israelites who had remained in Palestine were outnumbered by the "seven" Canaanite peoples. The tribes that had gone to Egypt had obviously been a scant minority in the midst of the powerful Egyptian nation. Nevertheless, after migrating through the desert, these tribes retained the memory of their previous dwelling in

Palestine and of their ancestral relation with the Palestinian Hebrews, whom they were now to join.

Here we already encounter the special genius of Israel's religion, the bent it received for all future time. Neither the territory of Palestine, nor the desert, nor Egypt was regarded as significant. What was important to these tribes was their memory of unity, their consciousness of a common history apart from that of other peoples. To this group of migrating tribes, loosely organized by a sense of relationship, and a sense of a common past and a common destiny, Moses had to submit the early formulation of Israel's religion. The Hebrew tribes, however, were not entirely unprepared for such an experience. They had been anything but typical Bedouins, even during their desert migrations. However alien and oppressed in Egypt, they had led a "civilized" life. During their lengthy sojourn in a fertile oasis, they lived more as an agricultural community than as wandering herdsmen. Thus evolved the imposing religious concept which, transcending the needs of migrating herdsmen and future farmers and townsmen, affirmed the eternal behind the transitory, the essential beyond the accidental.

Nevertheless, to regard the Mosaic conception of God as a radical break with the previous tribal religious history of the Hebrews would be an error. Moses built upon ethnic principles of the clan society. God himself was, in a sense, related to the Hebrew clan or clans as a kind of god-parent. Moses built upon this relation of God to the people as a whole. Of course, Moses conceived this parenthood in the moral sense only. In a patriarchal society, God's parenthood appeared more and more in the light of fatherhood. Moses had before him the example of the patriarchs in the worship of a single God. The early Semites had the idea of one original "maker" of all things, one supreme "El." Though this primitive monotheism was far removed from the advanced monotheism of Moses and the prophets, it may well have served as a starting point from which, under favorable circumstances, a much higher form could and did develop.

The Mosaic Conception of God.—The God of Moses was anything but a morally indifferent natural entity. The chief task facing the Hebrews was immediate action—motion forward, struggle, the storming of Canaan. God, as one might expect, became a God of action, a God who had led His people out of Egypt, guiding them to safety through the desert to the ultimate conquest of the promised land. That this Hebrew God was not divided up into many functional deities, that He remained a single God, was due to the combined influences of a weighty tradition, of the singular needs of the day, and of Moses' creative personality.

In Moses' time, the supreme God of the patriarchs had become an urgent necessity for the unification of all tribes. Conscious of the demands of tradition and the hour, Moses had also a vision of the future. He linked God in an inseparable way with the fate of Israel in history. His is not only the God who created the world and who continuously supports life, but one who realizes Himself in past, present, and future through the process of history, the history of this world and of man's place in it. Israel, in this conception, occupies the central position within mankind.

In contrast to the Babylonian mythology, the creation of the world and the development of man play a smaller part in early Biblical narratives than do subsequent human destinies. This general history of man serves as a background for a still more significant history of Israel. Thus, through the effort of Moses, the creation was displaced by the Exodus as the leitmotif of all ancient Hebrew literature and theology. Such a God, related to human life past and present, must be affiliated with man. He can and should be worshiped. Whatever man does, concerns God; consequently, moral behavior is essential.

Additional sanction was given the relationship between this God and the people of Israel by the idea of the Covenant—a covenant with a God, the terms read, who of His free will and for His own purposes had miraculously redeemed them from Egypt, and who would now expect complete loyalty. To serve other gods became a grave offense against the Covenant. The desertion of one god for another had never before been a religious crime. The Covenant thus made the first appeal for whole hearted devotion, for relentless sacrifice of life to religious conviction. It was the first urge to religious martyrdom in history.

Plastic representation of this God was taboo; too definite concreteness might tend to localize the deity. Later, not even the combined efforts of the kings and priests in Jerusalem to associate the divine presence with the Temple on Zion succeeded, until the destruction of the Temple itself. Israel's God was dissociated from Israel's soil. Thus Moses, by personal experiences and still more by his people's experiences, was led to formulate his historical monotheism, centering chiefly on Israel. Subsequent vicissitudes of the people induced other men, whose personal equipment was equally rich, to restate that historical monotheism with a much greater emphasis on its universal aspect.

4. KINGS AND PROPHETS. The establishment of a monarchy in ancient Israel followed a national catastrophe and was part of a great national revival in which the Israelites submerged their tribal differences for the sake of the common cause. Under the pressure of enemies, and led by such men as Samuel, Saul, and David, they merged into a united nation profoundly conscious of its ethnic-religious oneness. Yahwism had remained a vital social force despite its corruptions; and its priests and seers could still supply the needed leadership. There followed the development of a uniform monarchy constantly growing in power, territorially and internally.

The monarchy started in the 11th century B.C. as a peaceful autocracy with all the corresponding drawbacks; particularly, burdening taxes and compulsory labor. For a time it seemed that Israel might fall in line with the general practices of the ancient Orient, becoming eventually an imperialistic, ambitious, worldly nation. Such a state of affairs could not fail to affect religious life. Traditional Mosaic religion was threatened by a high tide of political power and economic prosperity. State interests now appeared to transcend all others. Even David's selection of

Jerusalem as the royal capital was entirely a political move to counteract centrifugal tribal tendencies. The building of a temple as the central national sanctuary would logically have followed, but David realized that to associate divine worship permanently with a particular place was to abandon Mosaic tradition.

However, by the time Solomon came to the throne in 973, monarchy and state had become strong enough to silence all opposition. The Temple was built in Jerusalem; the territorial principle had won. The Temple, however, never exerted such influence on national history as after its destruction, when it had become merely a memory and an ideal.

After Solomon's death, great changes occurred. For centuries thereafter Israel had a hard, uphill fight for independence. From the middle of the 8th century B.C., Israel and Judah, irresistibly drawn into a whirlpool of western Asiatic affairs, were impotent to direct their own destiny. Concurrently with a general economic decline, there went on a steady process of social differentiation. Some of the rich grew richer at the expense of their fellows. Each catastrophic, national and international, directly affected the peasant. Foreign invasions, earthquakes, alternating droughts and floods, or, worst of all, agricultural plagues such as the locust, repeatedly destroyed the accumulated fruits of years of labor. The poor farmer sooner or later lost his land, and a small group of rich landowners accumulated large estates.

Isaiah's passionate exclamation, "Woe unto them that join house to house, that lay field to field, till there be no room and ye be made to dwell alone in the midst of the land," shows how clearly intellectual leaders saw the system's inherent dangers. The force of tradition helped to increase social unrest, since there lingered on a realization that in the period of the conquest the country had been divided into equal family shares. Land had never been a simple commodity in Israel. Money, although not yet in coined form, became a dominant factor. Economically exhausted, the country must have suffered a severe capital shortage.

The poorer peasants were often permanently ruined by their debts. Israelitic law gave the creditors the right to exact payment in the form of prolonged involuntary servitude, after which many debtors could only join the increasing mass of landless workers. Nor were the conditions of industry and commerce good. Moreover, the partial urbanization of both the Israelitic and Judean population intensified deep social antagonisms. The political conflicts arising from the clash of interests and traditions added to the social instability.

In ordinary years there was no direct democracy; the people were represented by "elders," for the most part members of the leading families. This autocracy of elders was itself split into groups. The royal power was insufficient to maintain an equilibrium among all these forces and the powers of the state were much too poorly defined. Might often replaced right. In legal theory there were no class distinctions in Israel, no special privileges; in fact, however, the exercise of rights in the lower strata was often curtailed by the superior power of the upper classes.

Religion and Law.—This abnormal social situation inevitably found its religious correlative:

for in ancient Israel, national and religious life were closely interwoven. Kings and great landowners wanted to adapt religion to changing social and political needs, even to the point of surrendering some of the fundamentals of the traditional faith. Other groups appeared as the national guardians of the Mosaic tradition; while there also emerged various independent movements directed against the established order. From among those who most fervently sought solution of these ills now arose the free religious preachers, the new *nebiim*. It was no accident that a few of them reached pinnacles of religious thought as lofty as any known to men.

Through the efforts of the prophets, Yahwism took deeper root, and in the course of time everyone declared himself a worshiper of the one God of Israel. Practically all the kings of Israel and Judah had a deep reverence for the *nebiim*, even when these men of God bore ill tidings. The Mosaic law gradually developed, nourished by the vital common law which had grown up in Palestine during two millennia. It was influenced also by common Oriental—especially Babylonian—legal concepts and mores, and by the highly complex social situation. Mosaic law became a large collection of representative cases from which judges could draw analogies and deduce specific conclusions.

The administration of justice lay mostly in the hands of the local elders, the lay representatives of the people; but their voice was certainly not that of the king or the higher judges in Jerusalem or Samaria. Through their findings they steadily added to the mass of legal precedents. Law never came to be a purely secular matter, for ritualistic laws were an integral part of the legal structure. A relatively large educated class, backed by the dissatisfied masses, did not hesitate to criticize the overemphasis upon the fulfillment of the ritualistic commandments. The masses and their prophet-leaders wished to see the law expanded to mitigate prevalent social evils. Under their combined influence there arose that unique system of laws incorporated in Deuteronomy.

Jerusalem became more and more the center of all Judean public life and lent increasing pre-eminence to the Temple of Solomon. Necessarily, conflict developed between this central sanctuary and the many local holy places. The more the popular religion of ancient Israel gave way to the monotheism of the prophets, the easier it became to argue that one God must be worshiped only in this one place.

Prophecy and Social Revolution.—Out of this social unrest emerged revolutionary leaders whose denunciation of the existing order has left a strong imprint upon the career of mankind. Some of them belonged to the oppressed classes; others, like Isaiah and Zephaniah, were of the aristocracy or, like Jeremiah, belonged to a financially independent family of provincial priests. All castigated "false" and venial prophets.

Before sympathetic mass audiences on the streets and in the temples, the prophets cried out against social wrongs, the oppression of the poor, the exploitation of free labor, the expropriation of small landholders, and the political, administrative, and judicial system which sanctioned these crimes. They gradually began to write down their preachments, "the earliest known pamphlet literature of immediate political actuality," to use Weber's phrasing. These preachers

regarded themselves primarily as religious teachers rather than social reformers. Their view was that social life is part of religious life, that social crimes became religious sins. The lamentable social situation must be an abomination to God: therefore the Israelites shall not resign themselves to existing economic conditions but shall raise the banner of justice. All members of the "chosen nation" are parties on an equal basis to the Covenant concluded with God.

Social justice came to be regarded as one of the basic essentials of the religion of Israel. For the first time the validity of the Covenant was seen to be conditional. Since the existing order clearly involved a breach of the contract on Israel's part, God's wrath must be aroused. He must wish to punish His recreant people; if necessary, through the instrumentality of a foreign enemy. Punishment always appeared to the prophets to be impending, and finally they saw it come in a succession of national catastrophes which included military defeat, exile, and dispersion.

Nationality Religion, and State.—Following these disasters, a wholly new conception of nationality arose. Nationality became separate from state. No longer was settlement on the soil of Palestine, or life under a Jewish government, essential to Judaism. Even in the dispersion, far from their own country and under a foreign monarch, Jews remained Jews ethnically.

Of course, this dismemberment of the Jewish nation was regarded as an anomaly, and the exiles hoped it would be temporary. But rational hopes of return must have appeared foolish in view of the world situation. The belief spread that no military conquest, no ordinary victory can avail; it is by a miracle that God will open a new age, an age of eternal peace between man and man, and even in nature; an age in which the Jewish people will again be gathered to the Holy Land.

Thus was proclaimed a religious concept destined to have great influence on succeeding generations. As long as they continue to worship God in their hearts, Jews are Jews, though detached from the soil and unable to worship in a temple. Their God is also the God of each country where they happen to live. Israel's defeat itself proves the power rather than the impotence of Israel's God as the God of all mankind. Israel is still the "chosen nation"; chosen, however, not for the imperialistic aim of glory through political conquest, but for the inscrutable reasons of history.

The singular synthesis of universalism and nationalism in the prophetic religion involves no inner contradiction. The prophets saw states disappear. They saw state power in Israel and Judah used by dominant classes as a means of oppressing the masses. They saw myriads of Jews remaining Jews in foreign lands. They drew the conclusion that there is a unity more indefeasible than that of state or territory.

They had also seen in their own country, and in the successive empires over them, many different ethnic groups living together in comparative peace, retaining their respective identities for a long time. It was natural then to assume that, with the final disappearance of all states and the establishment of universal peace, there would prevail the same conditions, in the ethnic sense, on a much larger scale. Such a reconciliation could take place all the more easily after the

miraculous advent of the Messiah foretold by the prophets. The Messianic hope thus became a cornerstone of prophecy. Some prophets never referred to the end of days; it is the glorification of bygone days which fills their writings. Thus, the glorified past, plus the prospect of an exalted future, was to serve as a psychological buoy for a drowning people who refused to die. All conflicts will find their final solution. Under the direct rule of one God revered by all mankind, there will take place a complete reconciliation of all social classes, of the urban, rural, and nomadic populations, of the Jewish nationality and its state, of the Jews and all other nations.

Thus, in days of great suffering and, in a profound sense, out of them, was born the idea of a Jewish people beyond state and territory, a divine instrument in man's overcoming of nature through a supernatural process in the course of history.

5. EXPANSION OF JUDAISM. The Crucial Test.—The destruction of the first Temple and the loss of national independence in 586 B.C. provided the first decisive test of the vitality of these ideas of a Jewish people beyond state and territory. Would the Jews remain Jews even in exile? Could a nationality exist without state or territory? Could Jewish religion preserve its distinctive feature, that subtle amalgam of universalism and nationalism? The unusual developments of the next century or two gave the answers to these questions.

The deportations, life during the Exile, the partial restorations under Zerubbabel and Ezra-Nehemiah, and the change in the status of the Jews under Persia, both within and outside of Palestine, created unprecedented situations. Again there arose able leaders, such as Ezekiel and Deutero-Isaiah, to make a new intellectual advance in explaining new perplexities. In Babylonia proper, the danger of assimilation and complete extinction of the Jewish nationality was sharper than elsewhere in the dispersion. None the less, Jewish survival owes itself, paradoxically enough, not to those who remained at home but to the nationalistic vitality of those living so precariously in exile.

Taken as a whole, the people may be said to have stood well the test of survival. The religion of the prophets had become a tremendous social force, and, coupled with a living ethnic organism, not only influenced Jewish society in its turn, but in fact saved it from threatened extinction. In order to achieve this end it had to stress certain elements with a vehemence previously unknown.

The Jewish minority groups in Babylonia, and apparently also in Egypt, recovered from the shock of the loss of national independence and the miseries of deportation with amazing rapidity. While adjusting themselves to the new environments, often achieving wealth and influence, they retained their national and religious identity. New leaders arose. Instead of denouncing a social structure no longer their own, instead of preaching comfort to a people most of whom no longer were suffering individual distress, they evolved a whole new system of law and theology. A transcendent and holy God, they taught, had

selected the people of Israel as His holy nation, for reasons known only to Him. Through a life of holiness and, if necessary, of great suffering, this people will continue to make known the name of God until the end of days, when all nations shall recognize their error and worship this one God. In the meantime, Israel must keep aloof from these other nations, in order not to be contaminated by their errors and their unholy life. The life thus demanded is necessarily artificial and contrary to nature in many ways. Therefore, the Jew has to live, if necessary, in defiance of nature.

When Babylonian Jewry, through Zerubbabel, Ezra, and Nehemiah, accomplished the feat of founding the little theocratic state in Palestine, it builded better than it knew. In this way alone, it saved itself, as well as Jewry at large, from threatened extinction. Egypt with its heterogeneous Jewish groups, those Palestinians who had held fast to the resuscitated popular religion, and even Babylonian Jewry, long the most steadfast, could hardly have survived in separation from one another. The far-flung settlements in other lands were even more exposed to disintegrating forces. Palestine, however, by becoming the recognized center for all Jewish communities, profoundly altered the situation.

Geographical Expansion and Proselytism.

—The settlement in Palestine, from Zerubbabel down to the first Maccabees, had been restricted to some 1,200 square miles in the environs of Jerusalem. These boundaries were extended during the first century of the Maccabean reign, to include practically all of Palestine and Transjordan. The pressure of desert Arabs and the first Roman invaders under Pompey ended Jewish domination of many districts along the coast and east of the Jordan. Nevertheless, rapid progress was made in the process of assimilating the varied elements in those territories which remained Jewish.

The considerable kingdom over which Herod reigned had a vast Jewish majority. The principal cities along the coast and in Transjordan, however, remained more or less self-governing Hellenistic municipalities. The country as a whole was, by that time, thoroughly Judaized. The province of Galilee was fully Jewish in the first half of the 1st century. Palestine, before the destruction of the Temple, had a population of about 2,500,000, including about 300,000 Greeks and Samaritans. A similar expansion took place in the countries of the dispersion. The Jewish settlements of Babylonia and Egypt continued to grow from generation to generation. Syria was densely populated by Jews. Many reached the Hellenized coastal cities of Asia Minor.

Apart from these four largest centers of Diaspora Jewry, masses of Jews lived in Cyrenaica, the European Balkans, and on the islands of the eastern Mediterranean. Jewish settlements of the 1st century extended from Italy to Carthage in the west, and Mesopotamia and Babylonia in the east; from upper Egypt in the south, to Crimea and the Sea of Azov in the north. There were other settlements in Armenia, Persia, Arabia, Abyssinia, Mauretania-Morocco, Spain, and possibly in France. In the concentrated Jewish settlement extending from Persia to Rome and from upper Egypt to the Black Sea, the number of Jews must have been conspicuously large. In all probability Syria, Egypt, Babylonia, and Asia Minor each harbored a Jewish population of

1,000,000 or more. A figure of 6,944,000 for the total Jewish population under Roman rule is not impossible, nor even improbable. On this basis we must assume that over 4,000,000 Jews lived within the boundaries of the Roman Empire outside of Palestine. There must have been at least 1,000,000 more in Babylonia and other countries of the dispersion not subject to Roman rule. A Jewish world population of some 8,000,000 is fully within the range of probability.

Diaspora Jewry in the 1st century far outnumbered that of all Palestine. It is possible that the Jews of Alexandria accounted for 200,000 out of a total population of 500,000—a larger Jewish community than in Jerusalem itself. Every tenth Roman was a Jew, and the empire east of Italy consisted almost 20 per cent of Jews, which meant that every fifth "Hellenistic" inhabitant of the eastern Mediterranean world was a Jew.

The reasons for this unusual phenomenon were the natural increase of a highly prolific race and gains through proselytism; while losses through apostasy remained comparatively slight. The complex forces operating to bring about a steady distribution of the Jewish masses were the expatriation of numerous captives; the forced deportations of entire groups; voluntary emigration from congested areas in Palestine; and the existing system of splendid roads and maritime communications.

Although there were no professional missionaries, uninterrupted religious propaganda seems to have gone on throughout the dispersion. The extensive travels of Jewish merchants, which were a steadily increasing factor in international commerce, helped familiarize distant peoples with the main tenets of Judaism. Barriers formerly separating many peoples had been torn down by the spread of Hellenism, which had corroded all traditional beliefs and modes of life. For a while the expansive force of Hellenism operated effectively in the religious field, but soon the Orient reasserted itself in creedal and ritual elements. Thus began an era of one of the most remarkable fusions of religious beliefs in history.

Judaism appealed strongly to a generation whose craving for the supernatural was coupled with the desire for a rational understanding of life and a satisfactory system of moral rules. What Judaism brought to a religiously-minded Hellenist, says Wilhelm Bousset, "was faith and revealed truth, a certainty without the eternal contradictions and the personal doubts of schools, it was religion. At the same time it was an impregnable community, much more vigorous than the fluctuating conventicles of the philosophic schools and at least just as important and powerful as the other greatly revered Oriental mystery religions."

Economic and social forces added momentum to purely religious propaganda. The far-flung Diaspora with its complex contacts, the solidarity of the Jewish people, the protection extended by its communal organization, the support of its charitable institutions—all these contributed to counterbalance whatever minor disabilities were then connected with being a Jew. Poverty-stricken masses were frequently better off as Jews, enjoying the benefits of both municipal and Jewish relief. The practical application of the religious duty of loving-kindness and almsgiving, coupled with the generally democratic trends within Pharisaic Judaism, doubtlessly enhanced

the effectiveness of the Jewish mission within the urban proletariat. Even wealthy merchants might find it profitable to join a widespread creed which offered them brotherly reception wherever a community of their coreligionists existed.

Hellenistic Jewish literature soon became the most effective vehicle of propaganda. The Hellenistic apologists of Judaism refrained from a direct attack on specific gods or customs. They preferred to speak generally of the weakness of idolatry and heathen mores, while dwelling at length on the superiority of Judaism. The finest specimen of that literature is Josephus' *Against Apion*. Reciprocally, the Jewish religion was deeply affected by these developments. Palestinian leaders, then and later, differed widely in their attitude toward proselytism. Divergences between the social philosophy of the Sadducees and Pharisees deeply affected their respective positions as to the principles and methods of religious propaganda. The proselyte was expected to divest himself of all former racial and ethnic characteristics and gradually to become ethnically a Jew. Philo described the proselytes as "men who have left their country, and their friends and their relations for the sake of virtue and holiness." A proselyte was not, however, regarded socially as a full-fledged Jew before the second or third generation.

The Palestinian Center.—Though the Jews in the Diaspora outnumbered those in the homeland, Palestine remained the focus of all Jewish life as such. Even in the period before the Maccabees, the self-governing theocracy of Jerusalem had begun to reinterpret the whole system of Jewish religion. This was essential to its application to life in the Diaspora.

It was primarily Palestinian Jewry, both in its gain and loss of national independence, which made Jewish history. The Temple of Jerusalem was regarded by all Jews as the "navel" of their world, and regular pilgrimages were made to it from all countries. The Passover holiday, by virtue of its national significance, attracted the vast majority of pilgrims. A unifying bond of equal importance was the annual half-shekel paid by every Jew as a temple tax. This was collected by local Jewish authorities throughout the world and sent to Palestine.

The political position of Palestine in the Mediterranean world was enhanced by her "colonies." On the other hand, the Diaspora was indebted to Palestine for extensive moral and political backing. Economic and political interrelations between Palestine and the Diaspora Jews, however, were overshadowed by the religious and cultural influences exerted by the Holy City upon all Jewish life, both in and outside Palestine. In the last two centuries of the Temple's existence the religious leadership of Jerusalem was unchallenged. Palestinian authority in matters of calendar and festivals (including the newly introduced feasts of Purim and Hanukkah) was uncontested. The Scriptures were adopted by Diaspora Jewry at the dictation of Palestine; books composed in the motherland were speedily canonized and translated. Jewish communities abroad frequently addressed legal inquiries to Palestinian authorities.

Pharisaism spread beyond the confines of geographic boundaries. Hillel of Babylonia, Nahum of Media, Saul of Tarsus, all felt its impact. Hillel became the principal leader of the movement, Nahum one of its representatives at a cru-

cial historical moment, and Saul its greatest enemy. For Palestine Jewry the Diaspora always remained the galut, the exile. Thus, for a time, world Jewry, unconscious of danger, smoothly followed the lead of the Palestinian group.

Jewish Theocracy.—Josephus had to create a new word to describe the Jewish form of government—theocracy. At first it was a theocracy on a democratic basis, then it became a monarchical theocracy. Finally, under the domination of Rome, its monarchical, aristocratic, and democratic constituents clashed. The rapid conquest of the various provinces by the early Maccabean rulers had affected the social status of their population. Galilee, the most fertile region in the country, was the scene of sharp social conflicts. The Judean aristocracy, partly dominating the country from Jerusalem, looked with contempt on the masses converted to Judaism only a short while before. These conflicts were accentuated by the fact that many important towns which had been in the hands of the Greeks after Pompey's invasion, regained municipal self-government under the direct sovereignty of Rome. In these cities, though situated on Palestinian soil, the Jews lived only on sufferance.

The Pharisaic scribes, the main exponents of the national-religious ideology, thus faced a situation much changed since the days of the prophets. Territorially unattached, wherever they happened to be they could teach and adjudicate matters in the name of the Torah. Also they succeeded in maintaining financial independence by refusing to accept monetary reward for their teaching and by choosing a trade, often simple manual labor, as a source of livelihood. Unlike the ancient leaders of Israel, however, they could not direct denunciations against the dominant Jewish class. Those most responsible for existing evil conditions could not, since they were foreigners, be accused of breaking their covenant with God.

The Pharisees neither could nor needed to appeal to the people in the name of the great principle of justice. Their opponents and the foreign oppressor alike claimed to agree with them on the transcending importance of this principle. What mattered now were details, cases of concrete application or disregard of the great ethical principles. The scribes could refer to an elaborate and binding set of laws easily applicable to every particular occurrence. Thus, legalistic accusations took the place of inspired denunciation.

Ethnic Pharisaism versus Nationalist Sadduceism.—Conflict developed between the two principal religious sects, the Sadducees and Pharisees. The Sadducees were undoubtedly as patriotic as the Pharisees, but their patriotism was permeated with Hellenism. Belonging, for the most part, to the upper classes of priests and landowners, the Sadducees had undergone a degree of assimilation before the anti-Hellenistic reaction set in. Not until the foreign hand struck at the roots of Judaism and threatened extinction, did they awaken. In the Hellenistic empires, as later in Rome, the state was the paramount life principle; religion and nationality were recognized only in so far as they were instruments of the state. The new vast empires, embracing so many dissimilar ethnic components, emphasized even more strongly the supremacy of state over nationality. The Sadducean leaders unconsciously adopted this principle. They became the leaders

of the anti-Syrian revolt and the subsequent reconstruction. They fought the Syrian state on its own ground, erecting against it the power of the Judean state, to whose glory ethnic purity might readily be sacrificed.

The Pharisees, intellectual leaders of the vast middle class, had been much less affected by Greek influence and refused to abandon that signal achievement of previous Jewish history: the emancipation of nationality from state. To them, this independence of religious and ethnic individuality constituted the very basis of Jewish life. When the new rulers exalted the state above all else, the Pharisees denounced them as enemies of Jerusalem.

As long as the Jewish state remained powerful and expansive, the Sadducees retained their hold over the country. After the conquest of the country by Pompey, they lost power steadily. The Pharisees, however, did not resent foreign domination so long as it did not interfere with their inner ways of life. Consistently they regarded the state as an instrument of evil wherever it subverted or overshadowed the interests of religion and nationality, and in this attitude showed themselves heirs of the prophets.

Out of this contrast between the state-approving Sadducees and the state-denying Pharisees arose sharp conflicts of purely religious convictions. The Sadducees, wealthy, educated, and newly awakened patriots, were inclined to over-emphasize the rigid application of Jewish law. The Pharisees, representing the living ethnic body, could appropriately insist upon the validity of the oral law, a legal evolution of customs and convictions in the national life. To the Sadducees, life appeared confined to a personal existence, lived here and now. The Pharisees, linking individual life with the great processes of history, combined the concept of immortality of the soul with bodily resurrection. The idea of another world gained strength continually. It represented the best solution of the contradictory aspirations of nation and individual.

The wide gap between Sadducees and Pharisees appeared also in their views of existing religious institutions. There was a strong mutual attraction between the state-affirming Sadducees and a priesthood centered in a territorial symbol, the sanctuary. The Pharisees encouraged institutions essentially ethnic in character. They did not reject the Temple, its sacrifices, nor even the priestly class, but they tried to make popular institutions of them. They introduced a popular festival, the water procession. They enlarged on the popular aspects of the Passover sacrifice and the duty of making pilgrimages to Palestine. They declared that the priests were merely the representatives of the people, and they glorified and elaborated the Sabbath.

The idea of the synagogue now took definite shape. The foundations laid during the Exile were enlarged and deepened, and upon them a structure was erected which rivaled and soon replaced the Temple in significance. The other cornerstone became the Torah, in the double meaning of "institution and faith." Thus were planted the seeds of a popular educational system, broader and more effective than any other in the ancient world.

6. WORLD OF THE TALMUD. "In no one region of the vast Roman Empire," says Herman Dessau, "did the population become, after a century of uninterrupted reign of the Caesars, so little reconciled with the Roman domination, as in Judea." The most spectacular event in this dramatic sequence was the war of 66-70 A.D., with its somber finale: the destruction of the Temple in Jerusalem. This was the beginning rather than the end of a long-enduring conflict, and its effects far transcended the loss of a central sanctuary.

The rise of Christianity and its separation from Judaism, as well as the destruction of the second Temple which greatly facilitated this separation, checked the great expansion of the Jewish people. Judaism suffered a sudden reverse just as it seemed to be nearing the goal of its history—the reconciliation of its national and universalist ideologies, through a process of inner and outer growth as an ethno-religious unity beyond the boundaries of state and territory. Within the enormous body of Jews there had arisen many currents, sometimes assuming the pronounced form of sectarian movements, but generally drifting imperceptibly within the main stream. The breakup then had been but a question of time. As long as Palestine was a Jewish country, as long as a third or even less of the people lived its own protected life, the break was delayed. But when new developments in the outside world brought about the suppression of the Jewish state, the disruptive forces were bound to prevail.

When Jerusalem fell, the Palestino-Babylonian nucleus of the Jewish people was so unified and Judaism was so integrated a system of action and belief that the need to make a new start did not involve them in vital transformation. Unlike the first Exile, the new Diaspora necessitated adjustments of detail, but not the remodeling of the whole life of the nation on unforeseen patterns. But instead of constantly putting out new feelers and entering into ever-new combinations with the outside world, Judaism recoiled within itself.

The daughter religion, Christianity, inherited along with the expansiveness of the Judaism of the Second Commonwealth, its increasingly variegated sectarian currents. Talmudic Judaism, on the other hand, soon to be unified and consolidated, eliminated all organized "heresies" from the life of the people for centuries to come. From the standpoint of Diaspora Jewry, the disappearance of the distant sanctuary brought about little change in established modes of life. The events of the year 70 did not mark even a new era on the calendar. Pious Jews in Palestine continued to pay tithes and other dues to the priests just as when the sanctuary was intact. For a while, to be sure, the people could not reconcile themselves to the final loss of national independence. Messianic hopes surged ever higher. The bloody suppression of the Bar Cochaba revolt, however, had a sobering effect. The steady advance of the Christ-cult in the Graeco-Roman world was equally ominous. The rabbis of the succeeding generations, consequently regarded as a duty the mitigation of belief in the immediate appearance of the redeemer.

Beginnings of Medievalism.—By the 2d century, Christian tradition concerning Jesus and the apostles was rewritten in an increasingly anti-Jewish spirit, while Judaism became more

antagonistic to Christianity. Jewish leaders regarded it as their duty to instill in their own people all knowledge necessary for resisting propagandists of other creeds. External and internal forces united to reduce the missionary and to increase the nationalist ingredients in the life and thought of the Jewish people.

This gradual alienation of the Jews from the outside world, and their increasing concentration upon a segregated inner life, were greatly enhanced by general developments both in the Roman and Persian empires. While disparate races and religious groups were increasingly developing into homogeneous nations, the Jews remained more conspicuously than ever outside this movement. On the other hand, the individualism of the Hellenistic and early Roman empires began to give way to a universalist, authoritative social structure, under a despotic government foreshadowing feudalism. Within the semifeudal systems, the Jewish people, clinging to their identity and maintaining their own quasi-democratic communal structure, constituted a unique group.

New economic developments greatly facilitated the process of Jewish consolidation. Uniformity became so general in Jewish economic pursuit that the great masses of Jewry began to be concentrated within a single class. The profound social antagonism which had permeated Jewish society before the fall of Jerusalem had nurtured an intensive revolutionary spirit that bred many new movements. That antagonism had now given place to increasing solidarity.

The cumulative effect of anti-Jewish forces seriously endangered the existence of the whole people (also of the individual Jew, as such), and a common economic front to combat them became necessary. Before the battle for national survival, the internal class struggle receded. Outside of Palestine and Babylonia, the opposition, first of the heathen Greeks and then of the Christians, as well as that of the Persians, put the entire Jewish group on the defensive.

Records of Jewish agriculture become fewer as time goes on. Urban Jewry could effectively resist the accumulated hatred of gentile neighbors, but scattered settlements of Jewish peasantry were more exposed. In this period of outspoken anti-Jewish legislative and administrative policy, the Jews no longer received much protection from the central government. Age-old forces, operating to commercialize the Jews, gained in strength through the intensive migratory movements, through discriminatory legislation, and the growing cohesion of the Jewish communities.

Jewish Decline and Dispersion.—The center of gravity of Jewish life gradually moved from Palestine to Babylonia, where the Jewish population made steady progress economically and culturally. Between the two communities there gradually arose a certain rivalry, but the rise of Babylonia to a leading position could not be checked. With the conclusion of the Mishnah by Judah the Patriarch, an instrument was created whereby the Babylonian study of Jewish law was to win greater independence. For two or three generations, Babylonian students migrated to Palestine to satisfy their thirst for knowledge from the living source of tradition. Gradually, however, the influence of local traditions, many reaching back to the exilic age, became more marked. The anarchy prevailing in the Roman Empire during the second half of the 3d century and

even more, the growing intolerance of the Christian world, decided the struggle in favor of Babylonia. Biological and economic developments also contributed to the decline of Palestine.

As a whole, the Jewish population must have decreased considerably in the six centuries preceding the rise of Islam. The severe losses from wars and from the Christian mission were intensified by the adverse biological and economic factors. At the same time, the geographic basis of the Jewish people was steadily widening. Not only the provinces east of Italy, but the whole Roman Empire was now dotted with Jewish settlements, and there were mass migrations to the Orient. For the first time, Judaism became a "world religion" geographically, while in each particular country it was, more intensely than ever before, the "national religion" of a struggling minority.

Talmudic Institutions.—Marriage and the Family.—The regenerative forces of the Jewish people were greatly enhanced by the institution of Jewish marriage. The whole life of the Jew, including his sexual instincts, was subjected to the rigid supervision of religion. Social factors, such as the increasing concentration of the Jewish masses within the lower middle class, stimulated the exercise of sexual self-control.

Far from condemning, with Paul, the sexual appetites as an evil in itself, the rabbis effectively fought all forms of licentiousness. Marriage for them was a necessary social institution. As the foundation of ethnic life, it was specially vital for Judaism. The Talmudic legislators neither elevated marriage to the position of a sacrament, nor did they regard it as a mere contract in civil law. Rigid morality was demanded in married life. The recognized principle of Talmudic law was that a man might marry as many wives as he could support. As a matter of fact, however, from the days of the first Exile on, records concerning actual polygamous families are exceedingly slight. Numerous prophetic passages presuppose a monogamous society to all intents and purposes, despite the absence of legal enforcement.

Influence of Talmudic Legislation on Jewish Economy.—The rabbis constantly tried to maintain a kind of interclass equilibrium. They did not denounce riches as some early Christians did, but they emphasized the merely relative value of great fortunes. Their persistent accentuation of the Jews' collective economic responsibility made their system of public welfare highly effective.

While there was much poverty among the Jews, the community took more or less adequate care of the needy through its numerous charitable institutions. Apart from charity, the Talmudic sages stressed the value of labor; economic pursuits, as such, were increasingly glorified. With the strengthening of feudal tendencies in the Roman and Persian empires, the social control exercised by the rabbis also increased. Their farsighted policy, based on centuries of experience, was largely dictated by a consciousness of dangers inherent in the people's growing commercialization. Many rabbis viewed with anxiety the abandonment of the ancestral agricultural pursuits in favor of the quicker and easier profits to be realized in commerce. This conservative attitude also found expression in the recurrent advice that a child should be instructed in the father's profession.

The hereditary exercise of a craft, common during the First and Second Commonwealths, was consciously stimulated by rabbinical teachings, as was the formation of artisans guilds for mutual protection and support. From the 3d century on, general tendencies, both in Rome and in Persia, immensely favored this development. Where possible, Jews arranged their own professional guilds, whose medieval character was emphasized by the evolution of customs and trade observances peculiar to each branch of industry and commerce, and fully acknowledged by Talmudic legislation. The rabbis actively participated in regulating business affairs. They adopted incisive enactments concerning commissions and schedules of rates and fares. Under the guidance of the rabbis, the community as a whole arrogated to itself the rights of price regulation and wage mediation between employer and employee.

There went on, reciprocally, a constant adaptation of Talmudic law to changing economic conditions. The economic legislation of the Talmud presents a variegated and rich picture. It is an extraordinary combination of more or less liberal laws, emanating from semicapitalistic Palestine in the 1st century, as well as laws devised to regulate the life of the semif feudal 4th century Jewish society of Palestine and Babylonia. By a process of constant adaptation, contradictory elements were reconciled and integrated in a unique set of legal maxims. Equipped with such a law, the Jewish people could carry on its struggle for existence with success in civilizations of either type. Hence the great influence of the Jew and his law on the caliphate and, after the 11th century, on Europe.

Down to the 18th century, Talmudic law represented a progressive factor, frequently enabling the Jew to perform pioneering services in the various countries of settlement. Only with the development of modern capitalism after the Industrial Revolution, did the more primitive Talmudic patterns become a hindrance to Jews in the metropolitan centers of an industrial civilization. At that time, powerful anti-Talmudic movements tried to liberate the Jewish capitalist and industrial worker from the shackles of this "obsolete" civil law.

Jewish Self-Government.—Whether under Roman or Persian domination, the Jews lived primarily as Jews, and only secondarily as imperial subjects. Despite the increasing administrative centralization in both realms, the basic units—municipalities, districts, and provinces—retained, in general, a large degree of self-government. For the Jews it was a matter of national life or death.

Under the impact of the denunciation of Judaism by the Christian Fathers, the Roman imperial government began to impose restrictions upon Jewish self-government. To check Jewish expansion in hitherto free regions, the Christian emperors prohibited the erection of new synagogues. Rabbinic legislation, however, helped maintain the uncontested sway of the Jewish courts over Jewish litigants. The judicial authority of the exilarch and the heads of the academies was fully acknowledged by the Persian government. Gradually, exilarchic authority shrank, because of the rise of the rabbinate to power rather than because of external influences.

While Babylonian Jewry was ruled by central

authorities, the Jewish community of the Roman Empire underwent a steady process of decentralization. The decline of the Palestinian center was no less responsible for this decentralization than the gradual dissolution of the empire itself into its provincial constituents. To be sure, until 425 A.D., there was a patriarch in Palestine whose authority in legal matters was upheld by the rabbis, even against the Babylonian exilarchs. In practice, however, the individual Jewish community became increasingly independent, controlling the administration of justice, tax collection, and charity. In short, Judaism and Christianity evolved in diametrically opposed directions: Jewish autonomous life became ever more decentralized in favor of the basic unit, the community; Christian communal life tended to develop an increasingly rigid hierarchical system under the supreme authority of the bishop of Rome.

The life of each Jewish community was basically democratic. Everywhere a governing body, evidently elective, seems to have exercised all rights in the name of the whole community. Two other communal institutions penetrated even more deeply into the core of Jewish life: the school and the synagogue.

The System of Talmudic Education.—Long before the Talmudic era, the foundations of an extensive educational system were laid by the Pharisees, who built on antecedents going back to the schools of wisdom and priestly training of ancient Israel. A program of primary and secondary education had been well formulated by the Pharisaic teachers of independent Judea. After the destruction of the Temple, the rabbis intensified their efforts to develop an efficient school system. Problems of pedagogy were widely discussed in the Talmud, and the majority of rabbis gave preference to intensive studies within a limited range.

The Talmudic insistence on adult education was characteristic. As long as he lives, every Jew must set aside for daily study as much time as he can possibly afford. Rabbi Joshua ben Hananiah outlined his well-known curriculum: At five a boy should be taught the Bible, at 10 the oral law, at 15 he should be guided toward his own interpretation of these traditional sources. This threefold division of study should be maintained throughout life. In Palestine and Babylonia, great teachers often delivered public discourses for business men and farmers. The Babylonian rabbis set aside early morning hours for the instruction of those engaged during the day in earning a living. A semiannual gathering enabled men of various walks of life, residing in distant parts of the country, to devote about a month to concentrated study under the experienced guidance of the greatest rabbis of the generation.

To learning, Talmudic Judaism attached unique social recognition. Learning opened the road to the highest prestige in public and private life, and many leading rabbis of the age rose from the lowest strata, winning uncontested leadership in social as well as intellectual life. That "the rabbis are called kings" was almost proverbial. A teacher was frequently addressed as Abba (father); a scholar always had precedence in the synagogue, in social gatherings, and even in court proceedings. In the period of the Talmud, Jewish learning penetrated deeply into the masses in a day when extreme illiter-

acy was widespread in the Mediterranean world.

The Synagogue.—With the elimination of the Temple, the synagogue assumed a position in the Jewish cult more central than it had held even in the Pharisaic age in the Diaspora. A standardized order of prayers was developed, new prayers added, the hours of services fixed, and other details regulated. But even here, public instruction seems to have been the primary concern. Many synagogues were used as elementary schools during most of the day, and divine service itself had as many educational as devotional aspects.

The public reading of portions of the Torah in a triennial or annual cycle, with interpreting sermons, represented intellectual rather than purely cultic exercises. This merging of the house of prayer and the house of learning was emphasized in later generations—a union which increasingly took the place of political forms for the Jewish people. No matter how many scrolls of law were seized or burned, the Jewish congregation continued to worship God in the prescribed fashion. In a word, the synagogue focalized in itself the whole communal life of Jewry, becoming the culminating expression of Jewish autonomy.

Talmudic Law.—Out of this autonomous life of Palestinian and Babylonian Jewry separated from that of the surrounding population by many religious, cultural, social, and even economic peculiarities, evolved the grandiose monument of ancient Judaism, the Talmud. Ranking almost as high as the Bible and claiming to represent, in its essentials, another form of revelation (the oral law), the Talmud influenced the subsequent history of the Jewish people perhaps even more than the Scriptures themselves.

The Talmud is not a book; it is a whole literature, the hoarded intellectual labor of centuries. Reflecting the fullness of life, it necessarily contains as many contradictions as life itself. He who seeks can find in it whatever he wishes. The Talmud has not only been a fecund source of inspiration for Jews through almost two millennia, but it has supplied weapons for enemies as well as for apologists. The logical categories employed by the Talmudic thinkers, their outlook on life, and the conditions of their age, differ from modern conceptions so deeply that much therein must appear incongruous and almost absurd to an outsider. Only one who has spent a lifetime exploring the Talmud, whose mind has been gradually molded to think in Talmudic idioms, is qualified to lift statements from the Talmud with impunity.

The Talmud is primarily law; the legendary (haggadic) part should not be elevated to a position of prominence in the perspective of Talmudic doctrine. The pre-eminence of law had its profound justification. Reacting tacitly to tendencies of Hellenistic Jews, and of Paul in particular, Talmudic Judaism insisted upon the rigid application of traditional law as the paramount national principle. Christianity claimed that the law had been abrogated by the advent of the Messiah, that the Jewish nationality had died to give birth to the new universal religion. All the more did the Jewish people withdraw under "the yoke of the law," whose burden they did not regard as too heavy.

The Jews retained their own customs and observances not alone in religious and cultic matters. The Talmud reveals amazing independence

even in purely secular and economic questions. This independence of Jewish civil law from the dominant legal systems in both empires was enhanced by the complete autonomy of Jewish legislation in such domains as marriage and religious observances in synagogue and at home. Frequently it affected even ordinary civil relations. The essence of Talmudic jurisprudence was that it encompassed the whole of life. It regulated almost every detail of daily routine. Law-consciousness pervaded the performance of such simple functions as eating breakfast. The prescribed washings before and after meals, the numerous benedictions, often amounting to whole prayers, converted each meal into a kind of religious function.

Talmudic law is, however, not dominated by pure ritualism. Much more attention seems to be paid to social and economic than to purely ritualistic theory and practice. Out of a total of 2,920 folio pages in the Babylonian Talmud, almost one half (1,302) belong to two divisions primarily devoted to civil and marriage laws. More than 785 pages are assigned to benedictions and the observance of holidays in synagogue and home. In other words, the laws concerning economic, family, and communal life constitute the bulk of the Babylonian Talmud. This is not merely a statistical coincidence; it is part of the this-worldly orientation of Judaism and its ambitious attempt to link each step in man's life to the infinite.

Since the days of early Christianity, the legalism of the Jewish religion has often been denounced. But whatever the practical abuses, the theory of equality between ritual and moral law was by no means detrimental to the latter. Both were made intrinsic parts of a religious system whose primary concern was human action. Once actions were performed as prescribed, Judaism laid great stress upon the intention behind each action. It preached that "not theoretical belief is what really matters but actual deeds," and even above the spontaneous good deed was placed the deed performed in fulfillment of a commandment. Hence the elevation of the idea of inner repentance to a supreme position in Jewish theology. The Pharisees had insisted upon this moral element, in addition to the actual performance of a rite, as a prerequisite without which no sin against God could be forgiven.

The chief characteristic of Talmudic theology is that, while rich and colorful in its infinite variety of detail, it contributed relatively little to the fundamentals of Judaism. All the essentials had been laid down by the Pharisaic scribes with an astounding finality, and Talmudic Jewry adhered to them with unswerving fidelity. But the unparalleled law-consciousness pervading Jewish life at every step, the Jew's great self-control in matters of sex, his increasingly anomalous economic status, and his abnormal political and segregated social life in autonomous communities, all bred an extreme and dangerous intellectualization of Jewish life. Yet, however artificial and contrary to nature this was, artificiality was the logical expression of the existing social forces. It was also the most effective means of preserving Jews and Judaism.

The intellectual leaders of Jewry saw their main task as the erection of a "fence around the Torah" by minute elaboration of its laws. They saw this also as building a fence around the people of Israel against all storms from

without. Thus, the Talmud became the main expression of a great crisis in the history of Jewish society and religion.

7. WITHIN THE GHETTO WALLS.

The 13th century was one of great transformations in European life. It witnessed the decisive transfer of the Jewish center from Islam to Christendom. Not the Byzantine Empire but the young and vigorous civilizations of the West now offered the Jewish people opportunity for their characteristic evolution.

Medieval Jewry: Economic and Political Status.—The decline in the status of the Jews during the age of the Crusades was clearly reflected in the constant shrinking of their economic basis. The prominent position they had occupied in international commerce in the days of the caliphate and the Carolingian monarchy was theirs no longer. The alienation of the Jews from the soil proceeded rapidly. The great expulsions put an end to Jewish participation in agricultural endeavors in western and central Europe. The Jews' share in industrial enterprises also declined from century to century during the Middle Ages.

In the earlier Middle Ages, "Jew" had become, even in legal terminology, a synonym for merchant. From the 12th century on, we find it increasingly identified with usurer. Church legislation, laying increasing stress upon the canonical prohibition of usury, fostered Jewish moneylending. As late as the 12th century the clergy had been the most important group of moneylenders in many European countries. Even later, many Christians, with money to lend on interest, evaded the prohibition by subterfuge. But the Jews, being able to engage in this business openly and with legal protection, had the advantage over all competitors. Jewish usury served as a sort of tax-collecting agency for the weak medieval state. Minting and the exchange of money were connected with moneylending. In the early Middle Ages the Jews performed truly pioneering services in this field. When Jews succeeded in accumulating wealth, however, the feudal princes usually appropriated their fortunes.

In ordinary years the taxes paid by Jews far exceeded their ratio in the population; in years of stress, taxation became almost expropriatory. Property taxes, sometimes as high as 33 per cent, were the most common means of speedily extracting large amounts of cash from the Jews. Fines of all kinds were imposed on entire Jewish communities to punish transgressions of a single member, or sometimes without any reason at all. It has been estimated that in the 12th century, English Jewry, constituting one quarter of one per cent of the population, furnished fully eight per cent of the total income of the treasury. Similar conditions prevailed throughout medieval Europe. Under these circumstances, the economic life of the Jews in northern Europe became more and more uniform. They were largely moneylenders, or business, ecclesiastical, or domestic employees of such, or else dependent on charity.

Economic developments helped to shape the political destinies of the people. The more limited their function in society became, the more restricted were their numbers and their rights. The course of political development in western

Christendom reinforced the corporate separation of the Jews. The primitive conquerors of western Germany, France, and England imposed their own legal conceptions upon these former Roman provinces. Foreigners, as such, had no rights whatever, so long as they had no special protection from the local chieftain.

This "law of aliens" had a special effect on the status of Jews in the early Middle Ages. Even later, a survival of that law made the king heir to all estates of foreigners dying in the land, regardless of whether or not they had legal heirs. Only special protection from the king enabled Jews and other aliens to avoid these disabilities. This relationship between the king and the Jews contributed to the development of Jewish "serfdom." In all Christian countries, Jews, though they retained freedom of movement, gradually came to be regarded as serfs of the kings in public law. Revolutionary forces, directed against the existing form of government or individual monarch, often struck at the Jews as the nearest and most defenseless representatives of the ruling power. Social uprisings of the peasantry often engulfed entire Jewish communities. On political as well as economic grounds, the burghers tried either to eliminate the Jews or to wrest control over them from the kings. In western Europe, expulsion furnished the final solution.

Alliance with the state was accepted by the Jewish people with great reluctance. They regarded it as a necessary evil, a castigation inflicted upon them by God, and clung tenaciously to the theoretical sovereignty of their own authorities, tolerating the laws of the various kings only insofar as these did not conflict with the essentials of their own law.

Jews constituted a body apart, not only politically, legally, and economically; they were, in addition, a distinct religious and ethnic group. Their foreignness was obvious in all countries. So strange and mysterious did the life of the Jews appear to the surrounding Christian populations that the most incredible tales and accusations could circulate about them. Behind all popular misapprehensions loomed the conviction that "the Jew has no fixed domicile. . . he is condemned to perpetual wandering." It was in medieval Europe that he became the "Wandering Jew."

Anti-Semitism had existed in one guise or another wherever Jews lived in dispersion; but only in medieval Europe did persecution follow in such quick succession, assume such universal character, or have such lasting effects. Non-tolerance of Jews became, for centuries, a cornerstone in the religious policy of leading European nations.

Many complex forces were operative to bring about acts of intolerance and the mass psychology that went with them. Religious discrepancy was in itself a supreme offense. Economic factors, such as the competitive appetites of the Christian burghers, played a significant role. Sometimes the subjected masses revolted not against the Jews as such, but against special and privileged groups in general, including the Jews.

Interwoven with all the underlying religious and economic conflicts there was another force at work—the growing nationalism of the European countries. This movement affected Jews most vitally. In a state composed of many nationalities, the foreignness of the Jews naturally appeared less objectionable. Examples of early

medieval states of such multiple nationality were: Moslem Spain from the 8th to the 10th centuries, as well as Christian Spain in the 13th; the Carolingian Empire; early Angevin England; Poland; and Turkey. The more ethnically homogeneous these states grew, the less favorable became the position of the Jews. When a state achieved complete homogeneity there usually came the climax: a decree of banishment. The early national states of Spain, France, and Lombardy in the 7th century tolerated the Jews no more than the newly centralized national states of England in 1290, of France in the 14th century, and of Spain and Portugal late in the 15th century. Medieval Italy and Germany, on the other hand, broken up into many sovereign or semisovereign states, presented more variegated pictures of both tolerance and intolerance.

Judeo-Christian Relations.—It would be a mistake, however, to believe that hatred was the constant keynote of Judeo-Christian relations. Compared with the almost incessant wars which ravaged Europe in the late Middle Ages and early modern times, the pogroms—even of those tragic three centuries from 1096 to 1391—were but sporadic outbreaks. Normal relations between Jews and Christians were generally amicable, or, at worst, characterized by mild mutual suspicion. Social, economic, and even intellectual relations were so intimate, particularly in the Mediterranean countries, that, for centuries, church and state tried in vain to check what they regarded as overfriendly intercourse militating against their segregation policy. Wherever Jews lived for a long period, their association with gentiles was such that the local tongue became theirs and was carried by them to other lands when they left. Ladino and Yiddish indicate how far-reaching the intercourse must have been between the Jewish and gentile populations in medieval Spain and Germany.

The internationalism of the Western Church helped to shape the destinies of the medieval Jew. Jews were to be tolerated by the church until all mankind had been converted to Christianity and the Jewish testimony was no longer needed. On the other hand, religious tolerance must not extend to physical maintenance beyond a low level. The Catholic Church had its full share, both in creating the adversities and in making possible the survival of Jewry in Christian lands. In the growing exclusion of the Jews from Christian society, in the increasing legal and economic disabilities, in the ever-deepening animosity and ill will between the two groups, the church's teachings were the most decisive single factor. But the exception in favor of the Jews, established by the church itself, greatly outweighed the influences of segregation. Had it not been for the Catholic Church, the Jews would not have survived the Middle Ages in Christian Europe.

Paradoxically, the anti-Jewish animus of the church became most effective in that domain of European life to which eventually the church itself fell a victim: European nationalism. Nascent Western nationalism succeeded in eliminating the Jews from most European countries. About 1550 there were no Jews lawfully resident in England, France, the Netherlands, Spain, Portugal, the Scandinavian countries, or Muscovy. All Jewry in Christian lands was concentrated in Poland, a country of multiple nationality, and in certain more heterogeneous regions of Germany and Italy. The total number of Jews was rapidly de-

lining to the lowest level in the history of the Diaspora.

This decline was wholly due to conversions, some voluntary, some forcible. Faced by pogroms and expulsions, many Jews joined the dominant religion, while others moved on in search of a new, temporary asylum. Nevertheless, the widespread belief that Jewish life in medieval Europe consisted of an uninterrupted series of migrations and sufferings, of disabilities and degradation, is a misconception. The Middle Ages were neither in themselves the dark ages they were once thought to have been, nor were they as dark for the Jews in comparison with the rest of the population. The real clue to an understanding of the perplexing situation of the Jews is to be found in the physical and spiritual structure of the medieval Jewish community within the larger frame of medieval Christendom.

Structure of the Medieval Jewish Community.—The medieval segregation of Jews produced a compact, self-regulating Jewish community. The life of each Jew was thoroughly governed by Jewish law. His actions were carefully supervised by his fellows, particularly by the leaders of the community. His interests, religious and intellectual, as well as social and economic, were centered in the communal life. Developments in the outside world, therefore, affected him comparatively little. Thus, the Jewish will to survive by clinging to the traditional mode of communal existence, coupled with the medieval corporate organization of society, facilitated the independent inner Jewish development. These two lines of evolution built up together a cultural and political body with all the characteristics of a powerful state within a state.

Territorial segregation in a ghetto was only one element of this largely self-sufficient life. Whether in a technical ghetto—in which all Jews were forced to live, with gentiles excluded—or in a ghetto which was merely a Jewish quarter growing up freely, the separation was complete enough to make Jewish life an independent entity. Many other methods of separation were taken over from the ancient world and from Islam. Badges to distinguish Jews from non-Jews, and separate baths to prevent intimacy, were Byzantine and Moslem heritages improved upon by Western legislators. Unlike the ghetto, the badge was deeply resented by the Jews. They combated, with all the means at their command, this mark of degradation, which made of every Jew a target of attack and greatly hampered economic activity. As time went on, however, reluctant practice became second nature.

Ghetto Law.—Within the material or legal ghetto walls the Jewish community reigned supreme. The law of the land affected Jews mainly in respect to their relations with the outside world. Usually, where only Jews were involved, Jewish law alone prevailed. Most countries recognized the validity of Jewish law and the jurisdiction of the Jewish court, not only in civil litigations but even in minor criminal matters.

The extent of judicial autonomy varied in the different branches of judicature. The supremacy of the state was most pronounced in public law. This was a domain in which Jewish law had never reached the same degree of finality as in civil law, and where the necessity of adaptation to the varying systems of government retarded its development. There the Jews acknowledged the state's sovereignty. At the other extreme was the

fully autonomous, strictly religious law. Having decided to tolerate the Jews, the medieval world generally left them unhampered to work out methods for their own salvation. The legislation of the various states was mainly concerned with devising means of adjudicating quarrels arising between Jews and Christians. Through most medieval legislation runs the fundamental intention of extending to the Jews treatment as impartial and fair as possible. On the whole, however, it was the Jewish court which seriously affected the ordinary flow of ghetto life.

Ghetto Social Institutions.—The intellectual and social life of the country was of still less importance in the everyday life of the Jew than the general law. Despite the complex social relations with non-Jews, the primary concern of every Jewish parent was to give his child a Jewish education. Educational facilities, whether for children or adults, occupied a central position in the Jewish community. The Jewish educational level in the Middle Ages was usually far superior to that of most of their gentile neighbors. For a long time, almost all Jewish youths received a type of education roughly similar to that of the Christian clergy, until the church extended its educational facilities to lay pupils.

The Jewish people developed an efficient system of meeting general and individual emergencies through charitable institutions. These were under rigid communal supervision, even when they were, in part, privately maintained. The increasing lack of security compelled all Jews to view charity as a sort of social insurance. The idea of mutual responsibility, moreover, was deeply rooted in the religious conviction that "Jews are responsible for one another." Charity was not only based on voluntary individual contributions, but a special tithe was expected to be set aside by every Jew for charitable purposes. The modern conflict between private charity and state social insurance was partly obviated by the establishment of semiprivate charitable organizations.

The community played an important role even in Jewish economic life. Its right (well established in the Talmudic period) to intervene in private enterprises, was strengthened by the general economic regimentation during the Middle Ages. As far as Jews were concerned, the whole market police, the supervision over weights and measures, the fixing of maximum prices, and the demarcation of the rights of producers and consumers, were largely in the hands of the Jewish leaders. Above all, the Jewish community was the chief tax-collecting agency for itself and for the state. The state was thus deeply interested in the power of the community over its members and tried to strengthen it by legislative measures.

To all these functions must be added the religious role of the community. Religion in general spread through all walks of life, public and private. The supervision of morals was an integral function of the community. The synagogue, in addition to being a house of worship, was the center of all Jewish social and communal life. Here was voiced the force of public opinion, so overwhelming in a small group restricted to a narrow street and aware of the minutest details of one another's affairs. Every Jew regarded himself as responsible for the sins of all, and consequently as called upon to act; the wronged could legally appeal to public opinion.

In the last instance, the Jewish community

had a peremptory means of enforcing its will: excommunication (*herem*). Few men, no matter how wealthy or well educated, could withstand the mere threat of an anathema. As a rule, the community and its court obtained unconditional surrender by applying the various degrees of excommunication. Effectiveness was greatest where wise moderation prevailed, and where the synodal regulation, demanding full cooperation of the rabbi and the lay leaders in the issuance of bans, was adhered to strictly.

Rabbinic Social Philosophy.—The heightened sense of social responsibility of the Jews in the ghetto arose from the basic need of a struggling minority for solidarity, and from the fundamental egalitarianism of the ghetto community. The Jewish group recognized the superiority of communal over individual rights to an even greater extent than did medieval Christendom. This served as a justification for innumerable regulations affecting economic enterprise. Talmudic ordinances against immoral commercial transactions were elaborated in great detail. Fair play between creditor and debtor, employer and employee, was emphasized even more sharply. Under the impact of medievalism the rabbis limited competition rigidly.

The basic insecurity of Jewish existence militated against a purely static conception of life. The dissatisfaction of medieval Jewry with existing conditions naturally stimulated a desire for change. The nature of the Jewish religion, with its crucial Messianic doctrine oriented forward rather than toward the past, steadily nourished the hope for a better future. Life was cherished as a supreme value in itself. Jewish law had practically wiped out capital punishment. Suicide was greatly discouraged. The care of a sick person was regarded as one of the highest duties of a Jew. Individual tenacity of life was, after all, the best guarantee for the survival of the people. Judaism did not regard poverty as desirable in itself. Neither was medieval Judaism affected by the celibate tendencies of the church. Marriage was, however, only a means to an end, and emphasis upon procreation was a natural complement to an ethnic religion based upon the preservation of the people. Within the family, while the supremacy of the father was uncontested, the position of the woman was little short of enviable, as compared with that of her Christian contemporary. She was the equal partner of her husband and often the responsible manager of business and household.

Stressing the entirety of human relations, rabbinic theory thus sought to achieve equilibrium between classes and groups, as well as between individuals and society. This equilibrium consisted largely in the establishment of an aristocracy of learning, accessible to everyone; and in the diversion of personal energies and ambitions into mental channels. Intellectual interests were again focused on Talmudic learning and tradition. The social philosophy of the rabbis, optimistically disregarding the existing wretchedness of Jewish life, exalted marriage, property, and work; and placed individual human needs second to the deeper purposes of Judaism and the hereafter.

The Jewish people managed for so long without state and territory because of the idealizing legal system and the strength of Jewish communal life. Through these forces the Jews developed substitutes: instead of their own country

they possessed quarters of their own in most European and Oriental cities; failing to establish their own state, they created in the community a quasi state, more powerful within its own sphere than any of the surrounding political states. Beyond all state boundaries, they established commercial, social, and intellectual interrelations which gave rise to a feeling of solidarity more real than those existing in many a political body. Rabbinical social philosophy strengthened that solidarity so necessary to the Jewish people's struggle for survival.

Meaning of the Ghetto.—The European ghetto became the embodiment of Talmudic Judaism in a form even purer perhaps than the community in Babylonia. Socially, the Jewish community was an almost uniform group of lower bourgeoisie. Economically, it was organized as a guild of moneylenders and their associates. Legally, it was a corporation with its own unique features. Territorially and culturally, it was segregated from the rest of the population by heavy barriers.

Centuries of uninterrupted living in a given country could not make the medieval Jews feel that they were other than temporary sojourners, and their neighbors regarded them in the same light. Unceasingly they dreamed of a glorious return to their native land, never dismayed by recurrent frustration. Ahasuerus, the Wandering Jew, was always on the move, not always because of external compulsions. Out of his dreams, he created substitutes for a state and a territory, without which he could not survive. Such was the ideal, the pure ghetto, of which the physical ghetto, the segregated Jewish quarter, was merely an imperfect symbol.

The flourishing Jewish centers in Spain, Poland-Lithuania, and the Ottoman Empire, had never known the crystallization of economic endeavor and the lack of social differentiation that characterized the ghetto elsewhere. The intellectual and religious life of Spanish Jewry clearly reflected the variegated pattern of Jewish society. If, in Poland and Turkey, Jewish life seemed less vivid than in Spain, this was due to the general decline of these two countries, rather than to internal Jewish developments. Jewish energies, after the auspicious start in the 16th century, were quickly exhausted by environments increasingly tending to anarchy. Even so, the contributions of Polish and Turkish Jewry to all aspects of Jewish religion and culture remain memorable.

For all Jewry, however, the physical ghetto as well as the symbolic, or ideal ghetto molded Jewish destinies even when it could not confine the multifarious social and religious trends. It is in this sense that the ghetto typified medieval Jewish life and that its gradual breakup heralded the advent of a new era.

Bibliography.—The foregoing articles on Jewish religion and society (sections 2-7) are an adaptation, made by permission of the author and publisher, from *A Social and Religious History of the Jews* by Salo Wittmayer Baron, 3 volumes, Columbia University Press (New York 1937); volumes one and two of this work contain the full discussion of the subject, and volume three substantiates specific statements in "Notes" and a "Bibliography" of 300 pages. Institutions, Columbia University.

8. HISTORY: JEWS OF EUROPE FROM THE 18TH CENTURY TO WORLD WAR II. Jews of Eastern Europe to World War I.

—In the middle of the 18th century the Jewish population in eastern Europe totaled approximately 1,500,000, of whom the greatest number were concentrated in Poland. The Polish settlement had grown out of the nucleus of refugees who had fled from the persecutions of Christian Europe during the Middle Ages. At first, Poland had been a new Promised Land, under able and hospitable rulers. But it was a brief Indian summer of tolerance.

The great Cossack wars of the mid-17th century devastated the land. The Polish state began to founder. Administrative anarchy disrupted the country and the Jewish situation changed disastrously. Indeed, during the Cossack wars, there were massacres on a larger scale than ever had disgraced Christian Europe.

There were large Jewish settlements in Russian-controlled territory, too. Here there were severe restrictions upon movement and upon livelihood. It was fated that Russia, with its increasingly restrictive policy, should destroy Poland, take over most of it, and, by inheriting its Jews, become the largest arbiter of Jewish destiny.

Poland was partitioned in three stages; in 1772, 1793, and finally in 1795. The Polish patriots fought back valiantly, but they were no match for the coalition of Russia, Prussia, and Austria, all of whom shared in the spoils. Throughout the struggle the Jews forgot their grievances and fought shoulder to shoulder with their former persecutors. There was an all-Jewish legion, under Thaddeus Kosciuszko, which was slain to the last man, defending the doomed Polish capital.

Russian Liberalism and Reaction.—From this point forward, down to modern times, the Jews in Russia—and Russia now included most of former Poland—faced an incessant struggle for survival. Catherine the Great (r. 1762-1796) guaranteed them life and religious autonomy, but every restriction on mobility and livelihood remained to harass the Jews. In a manifesto encouraging foreigners to settle in Russia, Catherine used the phrase *kromye yzidov* (except Jews) and this exception was constantly repeated in subsequent Russian legislation. In 1791, she established the Pale of Settlement boundary, limiting all Jews to a narrow area on the west frontier. The purpose of the law was to drive Jews out of the countryside.

Alexander I inherited the Russian throne in 1801 and the early years of his reign meant a brief respite for the Jews. He relaxed some of the disqualifying laws that worked the greatest hardships, and relied upon one of his trusted advisers, Prince Golitsyn, to administer Jewish affairs. For two decades the Jews were protected

from the more violent caprices of their enemies. Toward the end of his reign, however, Alexander abandoned his liberal policies, and his protection of the Jews as well. He became so malevolent eventually that, in 1824, he uprooted thousands of Jewish families from Moghilev and Vitebsk and expelled them ruthlessly to die in the snows. The pale was further contracted and the restrictions, even in the narrower area, were tightened.

Alexander was succeeded in 1825 by his brother Nicholas I, who proceeded to rule the country as if it were a garrison. He became the reactionary gendarme of Europe, proudly boasting that he had dedicated himself to the principles of autocracy, nationalism and orthodoxy. A ruler of this type could not be sympathetic to any minority group, and Nicholas despised the Jews above all others. His reign was a thirty-years' war against them.

It is significant that of approximately 1,200 laws created to restrict Jewish life in the years between 1649 and 1881, more than half belong to the period of Nicholas I. A typical law related to military service. Seven out of 1,000 Russians were conscripted for 25 years' service in the army; but 10 out of 1,000 Jews. Moreover, the period was increased to 31 years for Jews because they were taken at the age of 12 so the youngsters could be sent to preparatory camps. They were transported long distances, away from Jewish influence, and every device was used to destroy their Jewish loyalty. The Pale of Settlement was further narrowed by new edicts. The persecution became scandalous enough in 1843 to call forth protests from all of civilized Europe. These protests, however, Nicholas ignored, and he was supported in his policy toward the Jews by some of the leading literary lights of Russia, including Pushkin, Gogol, Lermontov, and even the tolerant Turgenev.

Nicholas died in 1855, during the Crimean War, whose disastrous mismanagement revealed the rottenness of the whole autocratic regime. The accession of his son, Alexander II, was hailed as the beginning of a new era of hope.

Alexander was well educated and surrounded himself with good advisers. He inaugurated his reign with a series of epoch-making reforms, both political and judicial. He climaxed his enthusiasm for reform by liberating 40 million serfs in 1861.

Alexander's reforms in the status of the Jews were superficial and dictated primarily by the desire to assimilate them more readily. He did, however, relieve the horrors of the Nicholas system and the Jews gained in the general liberal high tide. The deadly policy of juvenile conscription came to an end at once. Schools and universities were opened to the Jews. Some of the great Russian cities were made accessible to certain favored classes. Jewish names began to appear among those of prominent lawyers. Jewish physicians found useful careers even in the army. Jewish financiers invested in Russian national enterprises, exploiting mines, building railroads, and helping in the development of the country.

Alexander's liberalism, however, also wore thin near the end of his reign. He found that his modest reforms only stimulated a desire for further concessions. Revolutionary activity did not subside. Indeed, there were several attempts on his life. Alexander concluded that only through stern measures could the Russian people be held

in subjection. He began to repudiate his liberal concessions, censored the press, and inaugurated a policy which harried liberals at every turn.

Jewish life was naturally vitally affected by Alexander's abandonment of his earlier liberal policy. In 1871 the main Jewish Talmudic schools were closed. The Odessa pogrom of 1871 was stirred by the cry, "Fight Jewish exploitation." At the Congress of Berlin in 1878 the Russian representative was the only important statesman who opposed the granting of legal equality to eastern European Jews. Accusations of ritual murder began to crop up again. There was a trial in 1878 in Kutais, in the Caucasus, and though it ended in acquittal for the Jewish defendants, it was a clear indication of how deep-seated the animosity to the Jews had become. In 1881, Alexander was assassinated by revolutionary fanatics and Russian history became, in Herzen's words, a long list of martyrs and a register of convicts and political prisoners.

The next czar, Alexander III, who came to the throne in 1881, possessed his grandfather's narrow prejudices. The brutal assassination of his father had reinforced his natural hatred of liberalism and his first proclamation called for a continuance of autocracy. He surrounded himself with bigots who turned him against the "pestilential" ideas of western Europe. He was especially influenced by his former tutor, Konstantin Pobedonostsev, who was procurator of the Holy Synod and despised parliamentary institutions, free discussion, and tolerance. Pobedonostsev began a war on all minority groups, especially the Jews, and his fanaticism earned him the title of a second Torquemada.

The new regime was inaugurated with a series of anti-Jewish riots which raged through the year and spread to every part of Russia where Jews lived. The riots, or pogroms, were undoubtedly centrally organized, and the government did little to check them. The press, especially the Pan Slavic nationalist press, contained inflammatory material that further encouraged the riots and the plundering. The minister of the interior insisted that the pogroms were the natural consequences of the economic practices of the Jews. Instead of taking measures to put an end to the outrages, he appointed commissions to investigate Jewish "exploitation."

At the beginning of 1882, the government finally checked the excesses. The result, however, was merely to transfer the right of persecution to the state. "Temporary rules" were issued, known as the May Laws, which remained in force until the outbreak of war in 1914. The pale was again materially narrowed. Jews were prevented from moving and were interned in the few places where they were permitted to live. The special classes of Jews who had settled throughout the empire during the tolerant decade of Alexander II's reign were investigated and in most cases expelled. Security of residence disappeared. Whole communities were placed at the mercy of the police, who exacted immense bribes in return for lenience in executing the brutal laws. The May Laws aroused the indignation of the civilized world, but all protests went unheeded.

Emigration.—Pogroms, civil disqualifications, legal and economic restrictions, and increased military obligations, all gave tremendous impetus to Jewish emigration. At first the Russian officials attempted to check the great flight which

began after the May Laws of 1882. The emigrants were harried wherever they turned; but despite all difficulties, tens of thousands left during the 1880's. In the last three years of the decade more than 100,000 escaped. Most of them turned to the United States, which still had an open door and welcomed those who sought its shores. By the end of the century, the Russian administration changed its attitude toward emigration and openly encouraged it. It seemed to be the easiest solution to the problem of a Jewish population.

In 1891, Baron Maurice de Hirsch, a German railroad magnate and one of Europe's wealthiest Jews, founded the Jewish Colonization Society. Baron de Hirsch suggested that the Russian government cooperate in his plan to settle Jews in the Argentine, where he hoped to transport 25,000 annually, to become farmers. Russia accepted with alacrity and tried to facilitate such emigration. Few of the Jews, however, wanted to go to the Argentine and, after 10 years, only 10,000 had settled there. Most of the emigrants turned to the United States. Millions of Jews were still left, however, when Nicholas II ascended the throne in 1894. His reign precipitated two of the bloodiest decades in the history of the Jews in Russia.

Fall of Russian Autocracy.—Nicholas II was a weak-willed, superstitious puppet whose court was a refuge for fanatical pilgrims and reactionary advisers. For the Jews, persecution soon began on a larger scale than ever. Pogroms came as regularly as the winter snows. By the end of the century, Jewish economic and social life had been completely demoralized. The census of 1897 revealed an astonishing amount of pauperism among a people always too proud to beg.

The opening of the new century brought a new wave of revolutionary activity in Russia, and many Jews were prominently involved. The government labelled the whole liberal movement a vast "Jewish conspiracy," and called upon loyal Russians to save the state from the machinations of "aliens." When the ultrareactionary Vyacheslav K. Plehve became minister of the interior in 1902, he tried to divert attention from the rottenness of the regime by deliberately inciting large-scale massacres of the Jews. The pogroms that followed, beginning in Kishinev in 1903, horrified the world.

The liberal movement grew despite every attempt of the rulers to turn up Jewish scapegoats. Russia was defeated in the Japanese war (1904-1905) and the defeat proved beyond all doubt the inefficiency of the Russian autocracy. The czar was frightened at last into convening a Parliament, the Duma, which met to draw up a new constitution and to democratize the Russian state.

In the very act of calling the Duma, however, the leaders planned a horrible means of vitiating the reforms. Bands of ruffians, the Black Hundreds, were organized to terrorize liberals and perpetrate new pogroms against the Jews. October 1905 was one of the blackest months in Russian Jewish history, a St. Bartholomew's massacre on a much larger scale. In Odessa alone, hundreds of Jews were cut to pieces, thousands were wounded, and more than 40,000 homes and shops were destroyed. In the first Duma, which met in 1906, the Jewish leaders vigorously protested the outrages and demanded that the perpetrators be brought to justice. The assembly, however, could offer only sympathy, since its own exist-

ence hung by a thread. Indeed, within a few months, the government felt strong enough to dismiss the assembly altogether and to call for a new election.

For another year there was a tug of war between the government and the liberal leaders of successive Dumas. Then, in November 1907, a purge began in which 1,800 liberals were hanged, including many Jews; for Jews were now naturally in the forefront of the battle for a democratic state. In 1911 a ritual murder case, involving a Jew, Mendel Beilis, was permitted to disgrace Russian justice, and the affair dragged on for years. Diplomatic pressure alone compelled the eventual release of the victim.

The outbreak of the European conflict in 1914 brought about the suspension of all repressive legislation. In a fervent appeal for the loyalty of all his subjects, Nicholas promised equality to all races and creeds who would rally to the support of Mother Russia in her fiery ordeal. Unfortunately, the belated promises meant nothing. The Russian autocracy was rotten to the core and, under the impact of a gigantic war, its whole structure collapsed. Nearly seven million Jews under Russian jurisdiction were now caught in the vortex of war and civil strife, which was to bring such misery that it made everything before seem trivial by comparison.

Jews of Western Europe to World War I.

Significance of the French Revolution.—On the eve of the French Revolution, the Jews of the world numbered less than three million; a pariah caste, disinherited politically, restricted economically, and despised socially. A few of the more enlightened Christian spirits of the 18th century, Lessing, Montesquieu, and Mirabeau, protested against the servitude of the people which had produced Christ. But their voices could scarcely be heard. The mass ignorance, the selfishness of classes who feared the Jews, the emotional repugnance even of the educated, the deep-rooted faith in a Christian state, were all tremendous obstacles, through which mere phrases about equality and Christian brotherhood could not cut.

It required a great convulsion, a readjustment of social and economic values, to alter conditions for the Jew. Toward the end of the 18th century the convulsion came, through the French Revolution, a mighty force which destroyed the *ancien régime* and laid the foundations for a new world.

The French Revolution, with its emphasis upon human dignity, marked the beginning of the modern period in Jewish history. To be sure, the restrictions against Jews in France were not immediately removed by acceptance of the doctrine of liberty, equality, and fraternity. Certain factors delayed for a brief period the admission of Jews to citizenship in the republic. There was still anti-Jewish sentiment, especially in the eastern provinces. The opposition of the Catholic Church to the revolution, and the very gradual accomplishment of the new freedom were other retarding elements. But the Declaration of the Rights of Man and of the Citizen, proclaimed in 1789, set a pattern which ultimately transformed Jewish life.

There were approximately 50,000 Jews in France in 1789. Four fifths of this number were in Alsace and Lorraine, living under the most degrading circumstances. There were smaller Jewish communities in Paris and Bordeaux. Special deputations appeared before the Constituent

Assembly to seek the protection of the new government. For two years the assembly dealt recurrently with the Jewish question. Count Mirabeau and the Abbé Henri Grégoire stand out as the leading spirits in implementing the legislation which eventually bestowed full citizenship upon the Jews of France. In January 1790, those Jews known as Portuguese, Spanish, and Avignonese were granted full citizenship. In November 1791, all Jews of France, without regard to origin, became active citizens (*citoyens actifs*). Thus, for the first time, the Jews ceased to be aliens and became Frenchmen.

The Jews now exhibited their loyalty to the nation through membership in the National Guard, through financial aid to the government, and through moral devotion to the new republic. During the Reign of Terror (1793-1794), the Jews suffered casualties, the desecration of synagogues, and inability to observe the Sabbath and other holy days because of the introduction of a new calendar. Throughout this period, however, their rights as citizens were never questioned and they emerged as loyal and respected members of the new state. The new Constitution of the Directory reaffirmed Jewish equality in 1795.

The victory of the republicans in France precipitated a general European war, with Austria, Prussia, and England allied against France. In 1795, the victorious French troops established the Batavian Republic in Holland. Here Jews had found a haven of refuge for many years; at the time of the French victory there were about 50,000 in the country, of whom 20,000 lived in Amsterdam. Though the spirit of equality was accepted by the Dutch, the proportion of 50,000 Jews in a total population of 2,000,000 created a reluctance to admit Jews to full citizenship lest the country as a whole become unduly "influenced" by them. A second impeding factor was the fear on the part of the traditional Jews that emancipation offered a threat to the practice and survival of Jewish religion. French intervention finally forced the issue, and on Sept. 2, 1796, the Jews of Holland obtained the citizenship status already enjoyed by the Jews of France.

Napoleon.—European history from 1796 to 1815 is largely the story of Napoleon Bonaparte and his extension of the spirit and achievements of the French Revolution. Wherever his victorious legions arrived, the walls of the ghetto fell. After the defeat of the Austrian Army in Italy, the Jews of that territory were able to throw off the worst types of medieval restrictions, especially in Rome where they were virtually serfs under Pope Pius VI.

There were constant setbacks, however. Guild members feared competition from Jews; the church made use of anti-Jewish sentiment to regain lost control; reactionary forces attempted to reassert themselves in French political life. During the first five years of the 19th century, therefore, the entire Jewish question was reopened.

Napoleon was besieged with requests to eliminate Jews from active participation in the life of France. He offered an attentive ear to much of this anti-Jewish agitation, but he refused to yield to it. He kept experimenting with various forms of Jewish communal life, a Sanhedrin, a consistory, and other vehicles of responsibility, hoping to create something which would give the Jews security and yet bind them integrally to the life of the country. In 1808, a new consis-

torial organization was decreed, establishing the Jewish community on a corporate basis. Consistories were created in every department where there were more than 2,000 Jews. To the synagogue was now assigned the duty of providing for Jewish conscription.

At the same time that the consistories were announced, legislation was enacted restricting, for 10 years, Jewish loans to peasants. Under this law new trading enterprises could not be undertaken by Jews without special permission. Though this legislation meant ruin for many individual Jewish families, the Jews as a whole had achieved legal status and a measure of autonomy. The consistorial organization remained in force in France until 1905, when state and church were separated.

The progress of Jewish emancipation continued. After the defeat of Prussia and the Third Coalition, Napoleon instituted reforms in the Jewish position throughout the German states. The new kingdom of Westphalia granted Jewish citizenship in 1808. Special taxes were abolished, and Jews were admitted to all types of economic enterprise. A consistorial organization was formed to regulate congregational life and to act as intermediary between the government and the Jewish community. When the duchy of Frankfurt was created in 1810, the Jews obtained the privileges of full citizenship, despite the opposition of the archduke. In Baden, all Jews, except moneylenders and petty traders, were granted citizenship. In the Hanseatic cities, restrictions against Jews were eliminated. Even in Prussia, which resisted most strongly Napoleon's influence, Jews were granted citizenship in 1812, although they remained ineligible for state office. Catholic Bavaria and Saxony held out longest against a change in the position of the Jew. When the Iberian Peninsula was annexed by Napoleon, the Inquisition was abolished in Spain, though by that time there was no Jewish community in that country.

Post-Napoleonic Reaction.—The final defeat of Napoleon in 1815 set loose once more all those forces he had brought into subjection. For 30 years after Waterloo, liberalism struggled with reaction. The lot of the Jews varied in each country with the fate of democratic rule. Countries smarting under years of occupation by French troops developed a new spirit of nationalism which held that the Jews were aliens.

For a while, unemployment and other economic dislocations were utilized as ammunition in the battle against Jewish rights. Legitimists sought to restore the monarchy; the church sought to re-establish former privileges; and reaction everywhere set in again. Throughout western Europe was heard the anti-Jewish cry "HEP! HEP!" (*Hierosolyma est perdita*). In Germany the old Jewish restrictions now reappeared nearly everywhere. Almost as soon as French control had disappeared from Frankfurt, the ghetto was re-established and the Jews were again forced to live under the irksome regulations which had embittered their lives for centuries. Lübeck and Bremen at once expelled most of their Jews and deprived the others of civil and political rights.

The cry for repression did not come solely from the ignorant. Goethe, the choicest spirit of the new Germany, was a leader in the movement of 1823 to reimpose humiliating restrictions upon the Jews of Saxe-Weimar. A professor of the newly organized University of Berlin advocated

the restoration of the medieval badge, "that the German who could not recognize his Hebrew enemy by face, gait, or speech, might do so by the doubtful badge of honor." A rabid Teutomania developed, idealizing a Christian Germany and warring upon "the godless" and the "soulless."

In Austria, too, the Jewish lot rapidly deteriorated. Only "tolerated" Jews could live in Vienna, upon payment of a tax. Visiting Jews had but 14 days to transact their business and had to pay taxes for the privilege. A special division of police, the *Judenamt*, was maintained to execute all the anti-Jewish restrictions. The general level of the Jews was so low that they possessed no effective organization to help them regain their civil rights.

In Italy, where some of the states had tasted a brief interlude of freedom, ghettos were restored, the Inquisition was re-established, and every Jewish right was revoked. Degradations inflicted on the Jews included compulsory attendance five times annually at the Cathedral of Saint Angelo to hear a missionary address by a priest. Jews had to pay their taxes in a carnival ceremony to which they came dressed as clowns. It was not until the reign of Pius IX, which began in 1846, that a change occurred in favor of the Jews in Italy. By that time the new spirit of Young Italy was abroad in the land and the church found it necessary to listen.

The renewed persecutions, however, helped to revive Jewish solidarity. Thousands of Jews in every western country, intoxicated by the new freedom which, for them, followed Napoleonic conquests, had rushed to take advantage of their new opportunities. Many of them had severed all connections with their own people and sought to identify themselves completely with the European world. The persecutions, however, did not discriminate between the assimilated and the unassimilated. The cry of "Hep! Hep!" was hurled at both alike. Those who had left the fold now looked wistfully back. With all its sorrows, the old life seemed to promise at least self-respect. The weary and the disillusioned who had sought to escape the identity of Jewish fate and fortune began to turn again to their people.

Temporary Triumph of Liberalism.—Then, in the mid-19th century, came another insistent attempt to eradicate the remnants of feudalism. In every country, powerful liberal movements warred against the existing systems of law and government. In these revolutionary movements the Jews played no unimportant role. Circumstances made them liberal; the black reaction everywhere had driven them into the ranks of those who opposed the status quo. By training and temperament too, most of the Jewish leaders were opposed to suppression of constitutional and national liberties. Jews were prominent in every movement which led to the revolutions of 1830 and 1848. Sometimes they were associated with the middle-class struggle for democratic reform; sometimes with the working-class struggle for radical social reform; or again, with the nationalists in their attempts to win independence or autonomy.

In time there were encouraging victories. German reaction was powerfully modified after 1848. During the regency of William I (r. 1871-1888), the first emperor of the new German state, Jews were identified with every important enterprise and became a powerful element in the

bourgeoisie. Though there were occasional outbreaks against them, they had won substantial security. In Austria, a reactionary government yielded in 1867 to the spirit of the day and accepted a new constitution, the *Ausgleich*, which became a Magna Carta for all minority groups. The Jews could now live everywhere in the land; they were made eligible for all positions, and eventually were admitted even into the hereditary nobility. In Italy, the Papal States were wrested from church control in 1870. The country was united under a liberal, democratic king. The Jews began at once to play an important part in political and intellectual life. In 1907, Ernesto Nathan, a Jew, was elected mayor of the Eternal City itself.

England had long been the most advanced country in Europe, politically and economically, with the result that its Jews lived in an atmosphere comparatively free of restrictions. Industrial development and the growth of international trade created opportunities for Jews to invest capital in industry and to engage in commerce. Their civil position was that of other nonmembers of the Church of England, the Dissenters and the Catholics. Jews could not be barristers, nor high-ranking officers in the army and navy, nor could they sit in Parliament or hold important municipal offices. A Jew could not earn a degree at Oxford or Cambridge. These were minor irritations, however, and were later removed.

In such an environment, the Jews, like all minority groups, found it possible to complete their Europeanization. The old order, which had segregated them outside the pale of civilized life, now seemed very far away. Here was a new world which called for the talents of the individual man who, regardless of faith or creed or race, could develop his potentialities and take whatever place he could win by competition. Jews could now set forth with courage, with heads held high, to build their homes in peace and security. Buttressed by the strength of the Industrial Revolution, the democratic way seemed as assured as the stars in the firmament. The Jews did not dream that the new order was still only a respite, a brief interlude; that it all depended upon the stability of the new economic and social system.

The New Anti-Semitism.—Before the new liberalism had long run its course there were storm signals up again in every part of Europe. In Germany, anti-Jewish feeling was used by Bismarck to relieve him of the pressure from National Liberals, Catholics, and Socialists, against whom he was fighting. An anti-Semitic political party was formed. Its members were recruited from among clericals, Junkers, extreme nationalists, and opportunists. Physical violence against Jews followed, with boycott of Jewish merchants. In 1891 a ritual murder case occurred in Prussia. Though the excesses gradually ceased, the Jewish community was left severely scarred. The hopes contained in emancipation began to fade. Many Jews abandoned the country for America, forerunners of a continuous migration to the New World.

In Austria, the clericals and aristocrats had never accepted the *Ausgleich* of 1867. After the financial crisis of 1873, there were sharp attacks upon the liberal *bourgeoisie* and the Jews. Literary anti-Semitism became a powerful political influence. In 1895, the anti-Semites captured the

municipal council of Vienna and installed Karl Lueger, a notorious Jew-baiter, as burgomaster. Until the outbreak of World War I, the country was ruled by anti-Semites. There were continuous outbreaks throughout the country, culminating in the riot of Prague of 1897. The Jews of Austria-Hungary had made every attempt to ally themselves with the forces of liberalism and progress, yet in every crisis, they found themselves insecure. Their confidence in emancipation gradually died.

Even in France the new anti-Semitism found "respectable" outlets. The clericals and Royalists joined to attack the position of the Jews. In 1894, a Jewish captain, Alfred Dreyfus, was accused of selling military secrets to Germany and court-martialed. He was condemned to solitary confinement on Devil's Island for life. Two years later, a young officer, Lieut. Col. Georges Picquart, as a result of information that came to him as head of the Intelligence Department, became convinced that a terrible injustice had been done. When he brought the case to the attention of his superiors he was told to drop the matter and was transferred to a foreign station. Picquart then began an earnest campaign to correct the injustice. Zola, Anatole France, and Clemenceau used their influence to obtain a new trial for Dreyfus. Zola was ruined and had to flee France, and Picquart was dismissed from the service. It became plain that the issue was between clericalism and militarism on one side, and anticlericalism and civil supremacy on the other. Dreyfus was eventually cleared in 1906, a year after the separation of church and state. The years of inflammatory anti-Semitic propaganda had their effect, however, and Jewish confidence was still more severely shaken.

One of the results of the new disillusionment was that Jews began to think about the re-establishment of a Jewish homeland in Palestine. Zionism, long a sentimental dream, now took shape as a political instrument.

Theodor Herzl (1860–1904), the founder of modern political Zionism, had begun life as a confirmed assimilationist, confident that the Jewish future lay in complete absorption in European life. Having witnessed the Dreyfus case and its anti-Semitic results, however, he began to reappraise the Jewish position. In 1896 he published *The Jewish State*. He did not fare too well in winning the support of the financial leaders, but the Jewish masses were drawn to him. In 1897 he convened a Jewish congress in Basle, Switzerland, which drew up a program declaring, "The object of Zionism is to establish for the Jewish people a publicly and legally assured home in Palestine."

Large bodies of influential Jewish opinion, especially in western Europe, violently disagreed with Herzl, terming his Zionism an unfortunate defeatism. As it turned out, however, Herzl was building a realistic instrument which was to prove a godsend in the days that lay ahead.

Jews of Europe Between the World Wars.—World War I began a new annihilation process for Jewish life in Europe. All peoples suffered, but a great part of the war on the eastern front was fought primarily in the area where the Jews were concentrated. Along the frontiers of Austria, Germany, and Russia the devastation for the Jews was incalculable. There was more than military carnage, blockade, and starvation. There were also pogroms, executions, and whole-

sale deportations. When the war ended, the foundations of corporate Jewish life in every eastern European country had been so severely shaken that it seemed impossible for normal living to be restored.

Yet, hope was not completely abandoned. Woodrow Wilson had made glowing promises. There was to be a new social order, better opportunities for all, regardless of race or creed. The Allied statesmen had made many commitments. The minorities of eastern and central Europe were to be guaranteed national and cultural rights enforced by international law. The Balfour Declaration of 1917 held forth to the Jews the glowing vision of a national homeland in Palestine.

But Jewish hopes, like the hopes of the rest of the world, were soon to be dashed. The next 25 years turned out to be the most tragic in all the mournful history of the Jews—a steady deterioration climaxed by almost complete annihilation in every European land. The two decades that followed the peaceless peace treaties were filled with deepening crises. Civil disturbances, debt, inflation, poverty, unemployment, despair—the record was the same everywhere. Amidst such conditions, the Jews were constant targets for the hungry and disillusioned masses, for the unscrupulous demagogues, and for the lunatic fringe.

Rise of the Nazis.—The center of infection was Germany. The democratic government that had been established in the first years of peace was an empty name. The old reactionaries—Junkers, industrialists, disgruntled military cliques—remained in control behind the scenes, ready at the right moment to move in again. As social distress deepened, a violent anti-Semitism spread through the country, stimulated by these groups. It was a portent of the horrors to come when Albert Einstein, one of the greatest geniuses of all time, was hooted by nationalist hooligans in the university lecture halls of Berlin.

Out of the fears, distress, and national humiliation of the German people, a powerful new party developed: the Nazis. Their fanatic purpose was to smash the democratic state, rebuild the military strength of Germany, defy the Allies, and drive the Jews out of Europe. The creator and spearhead of the party was the ruthless Adolf Hitler, whose career was to change the history of the modern world.

In 1933, Hitler became chancellor of Germany. He quickly destroyed all opposing political parties and compelled a subservient Reichstag to grant him dictatorial powers. He then launched a revolution that was to shatter most of those political, cultural, scientific, and religious canons that had been the glory of the German past. At the same time he turned to the fulfillment of his pledges regarding the Jews.

There were, at that time, 600,000 Jews living in the country, constituting one of the oldest and most useful sections of the population. The purge began moderately but the tempo soon moved up relentlessly. Jews were expelled from all public posts and then driven from professional life. In 1935 came the infamous Nuremberg Laws which deprived all Jews of citizenship rights and set them apart as a special degraded caste. By 1938 there were carefully planned pogroms. The practice of national fines was established, through which the Jewish community was mulcted of its savings. All of these

actions faded into insignificance, however, once World War II began. Behind the iron curtains of war and censorship, it was possible to round up the Jews, ship them off to annihilation centers, and there to liquidate them—men, women, and children.

Hitler Conquers Europe.—In 1938, Hitler boldly defied the Allies and marched into Austria. Though that country's independence had been internationally guaranteed, Hitler dissolved its corporate existence and declared it to be an integral part of the greater Reich. Another quarter of a million Jews were at once brought under the jurisdiction of the dread swastika. In one devastating swoop they were ejected from their places in the social order and relegated to a new caste of untouchables. Those who could, migrated or fled the country. The old, the infirm, the hopeless, who could not obtain visas or who had waited too long for flight, were soon on their way in sealed cars to the extermination camps of the east. Even the world-famous Sigmund Freud, father of modern psychoanalysis and one of the glories of Austrian life, was not spared. As he went into exile, his contribution to modern science was contemptuously stigmatized by the Nazis as "Jewish pornography."

Czechoslovakia was next. Here lived more than 350,000 Jews, a sturdy, middle-class group, highly respected, highly educated, and proud of a tradition that went back to the Middle Ages. Again, Hitler's first victims were the Jews. It was the same pathetic routine: expulsion from positions, destruction of all civil rights, homes raided, property expropriated, physical brutality, executions, degradation, and finally, expulsion and mass extermination.

The tide of disaster rolled eastward. Poland was the home of more than three million Jews. These had already suffered heavily; for the Poles, themselves only just freed, had tainted their new national life with a violent anti-Semitism. Economic restriction had gradually cut away opportunities for the Jews until half of them were reduced to beggary or kept alive by remittances from relatives abroad or by Jewish relief agencies. With Hitler came the crowning catastrophe.

World War II began when Hitler attacked Poland in 1939. In less than two months the 20-year-old Polish state was once more destroyed. In conformity with a prearranged plan, Polish territory was partitioned between Germany and Soviet Russia. A million Jews came under Soviet rule. Two million fell into Hitler's clutches. Thenceforth, German-occupied Poland became a great charnel house. Most of the Polish Jews were destroyed in the gas chambers and the crematoria which German ingenuity and thoroughness had devised for the purpose. To the Polish death houses were sent hundreds of thousands of Jews from every other part of Europe conquered by Hitler. He was determined to erase the Jewish people, and he almost succeeded.

End of the Jewish Community in Europe.—After his conquest of Poland, Hitler moved west and south. He took Belgium, Holland, France, and the Balkans. Every conquered country was looted and the population reduced to vassalage. The Jews were systematically uprooted and sent out to die. In the end, the combined power of the United Nations armies destroyed the destroyer, and the lands that he had despoiled were

freed. But the six million Jews who had been wiped out in history's greatest holocaust could not be brought back. There could be no restoration of Jewish community life in Poland, Germany, Austria, Czechoslovakia, Rumania, Hungary, perhaps even in the countries of western Europe. Left were a bare million survivors, mostly sheltered in temporary refugee camps, determined never to return to lands where all their dear ones had perished.

The Soviet Union still supported a major Jewish settlement, numbering about two and a quarter millions. Here, too, Jewish life had been radically transformed. In the Soviet economy, state planning was substituted for private enterprise, eliminating the middleman and smashing the *bourgeoisie*. It was extremely difficult for the Jews to adjust to this sudden change, for most of the Jews belonged to this doomed middle class.

After years of pain, travail, and learning how to cope with agriculture and industrialization, the younger generation of Jews finally made their adjustment. They were grateful, despite hardships, for a system which outlawed anti-Semitism and punished racial bigotry as a reactionary crime against the well-being of the state. But properly, the Jews of Russia could no longer be counted as part of the historic Jewish community. The Communists, for more than a generation before World War II, had combated all organized religion. Not only was atheism actively propagandized, but the teaching of religion outside the home was prohibited. A whole generation of young people grew up to look upon religion as an opiate, and to identify religious practice with superstition. The Jews of Soviet Russia were no longer basically tied to the world Jewish community; and, with processes of assimilation so complete, even nominal ties were disappearing.

Jewish Survival.—With the Jews of Soviet Russia rapidly assimilating, and with most of the Jews of Europe erased by Nazi sadism, the survival of Jewish life depended upon two historic settlements. The first was in Palestine, where 600,000 Jews had settled in the first four decades of the 20th century, a sturdy, vigorous, confident group, as firm in their faith as any generation in the long adventure of the Jews. This center, which became the independent State of Israel in 1948, was the final haven for most of the survivors in eastern Europe, whose coming swelled the population of the new nation to over a million Jews by the end of 1949.

The other center was in the United States, whose five million Jews constituted the strongest Jewish community in history, inheriting the mantle of Jewish destiny which rested successively on the communities of Palestine, Babylon, Spain, Turkey, Poland, and Germany, and which now had moved to the Western World.

9. HASIDISM. Hasidism, from the Hebrew word *hasid* (meaning pious, devout, godly), is a Jewish mystical, religious movement led by saddikim or zaddikim (holy men) who emphasize piety, worship, and contemplation rather than learning, dogma, and ritual. Hasidism originated in southeastern Poland in the middle of the 18th century. Scarcely a hundred years after it came into existence, it had spread so rapidly that whole communities of Jews became converted to its doctrine. In time, it won numerous adherents in Europe and Palestine, as well as in America in the 20th century. Through its glowing faith, exuberant optimism, and vitalizing enthusiasm, it stirred the religious feelings and imagination of nearly all classes of Jews, quickening almost every phase of Jewish religious and cultural life.

Hasidism emerged when the Jews of Poland—where the great bulk of Jewry lived at that time—were severely depressed psychologically and impoverished economically. The "terrible decade" (1648-1658) of the Chmielnicki massacres had brought the Jews to near-extinction. The collapse of the delusion revolving about Sabbatai Zevi (1626-1676) had shattered the Jews' faith in Messianism. The cabalistic mysticism of Isaac Luria (1534-1572), with its gloomy rites and penitential extravagances, had left them physically and mentally exhausted. The Jews of Poland had no political rights, no social status, and no economic stability. The time was ripe for a deepened religious consciousness to revitalize their lives.

Baal Shem-Tob.—It was in such an atmosphere that the insurgent movement of Hasidism was born, under the inspirational guidance of Israel ben Eliezer, known as Baal Shem-Tob (master of the good name). Baal Shem-Tob (1700-1760) was a man of humble origin, only moderately learned but of deep piety, with an extraordinary knowledge of human nature and a fanatic devotion to his people. He first dispensed cures, wrote amulets, revealed secrets, and prognosticated the future after the manner of the wonder-working cabalists of his day. Soon, however, he evolved a system which established his reputation as a gentle teacher and healer of spiritual wounds.

Much about this romantic figure is legendary. To this day, there is no authentic biography of him. Hasidic legend has it that he spurned the traditional methods of learning and spent his days in the solitude of the hills and groves of Okup, the village in which he was born. With nature his only teacher, he found joy and holiness everywhere. He beheld God in everything, and everything in God. He found something pure and holy in every act of living. He conceived an unalterable faith in all men and under all conditions; the rich and the poor, the wise and the simple, the pious and the sinner. Filled with a mystical ecstasy, he improvised his own deep

and stirring prayers, utterly unlike the melancholy ones he had heard in his youth.

After years of preparation, Baal Shem-Tob came down from the hills and settled in Miedzyboz, Podolia. He gathered disciples about him and, through stories and parables, taught them the truths that had come to him in the mountains. He preached to his followers not to despair even if they were not learned, that a warm and sincere heart was more acceptable to God than a head crammed with knowledge. He instructed them in the joyful affirmation of life, and warned them against the self-tormenting practices of the ascetic cabalists. He dwelt upon charity, love, compassion, and the brotherhood of man, without distinction of social station.

Baal Shem-Tob had not intended to introduce a new sect. It was the development of his theories in the circle which formed about him that led to the movement known as Hasidism. He preached Judaism, but with a new shift of emphasis and practice. The effect of his teachings was electrical. The masses loved their master and a new enthusiasm came over them. A democratic brotherhood shaped itself in the small company of men about the gentle teacher. Lives that were dismal became aflame with *hittahabut* (ecstasy); prayers once recited mechanically were now uttered with *kavannah* (fervor). Men did not so much pray as they sang and danced their devotions. Thus evolved from the spiritual hunger of the masses this unique type of individual in Jewish history known as the Hasid.

The progress of Hasidism did not remain unopposed, however. It was attacked from many directions. While the protagonists of Haskalah (enlightenment) resented its "obscurantism," the traditional rabbis feared in it a new sectarian movement in Judaism. Talmudic learning was treated lightly by the Hasidim, who scoffed at the official representatives of the synagogue. New prayer houses came into being. The old prayer book was modified. The dignity of divine services was impaired by shouting, yelling, and all sorts of facial contortions. Jews who remembered the Sabbatian heresy dreaded the Hasidic innovations.

The Saddik.—It was the cult of the saddikim, however, which was the principal target of attack, for the saddik had become the symbol and incarnation of the Hasidic ideal. He stood on a level not reached by the ordinary man. He was the saint, the superman. His power and influence were practically unlimited. He could not only dispense blessings and forgive sins, but salvation was impossible without him. A type of ecclesiastical functionary without precedent in Jewish history came into being, whose power was not always used discreetly. There were dynasties of saddikim whose ambition was often more temporal than spiritual. Critics of Hasidism maintain that a great deal of the poverty, ignorance, and superstition of the Jews of Russo-Poland before World War I was due to the lowered standards of the saddikim.

Attempts were made to reform the abuses of the saddikim, principally by Nahman Bratzlav (1770–1811), poet, mystic, and storyteller, who was a great-grandson of Baal Shem-Tob; and by Sheneur Zalman of Ladi (1747–1812), leader of the rationalist Hasidic school called HaBaD (acrostic formed from *hakma, bina, dea*: wisdom, understanding, knowledge). These attempts did not meet with any great success.

Hasidism's Decline.—While Hasidism was in power, it held sway over nearly half the Jews of the world. The "courts" of the saddikim, where credulous crowds gathered for healing, blessing, prognostications, and advice in worldly matters, were often marked by great sumptuousness and pomp. The spell did not last long, however. The spread of education among the Jews weakened the hold of the saddikim. Attacks upon their questionable piety increased. Lacking a central organization because of the multiplication of Hasidic dynasties, the saddikim could not successfully counter the onslaught. Up to the time of the world wars, however, Hasidism was too firmly entrenched among the Jews of Russo-Poland to be completely uprooted.

Despite the attacks against it and the impact of two world wars, Hasidism proved itself remarkably resilient. Declining and stagnating in some parts of the world, it continued to struggle for power and recognition in others. Great Hasidic houses and powerful dynasties moved westward in the attempt to establish themselves in the United States. In many instances they succeeded. There were few large Jewish communities, even after World War II, without their Hasidic "saints" and conventicles, with thousands of followers.

Despite its drawbacks, Hasidism exerted a strong positive force upon Jewish life. The emotional world of Hasidism was so broadly creative that it exercised a considerable fascination for a large variety of men, themselves not of the Hasidic faith. Notwithstanding its mysticism, these men discovered in Hasidism the breath of modernity. In religion, Hasidism made spiritual growth possible by infusing an enthusiasm and spontaneity which saved Judaism from stagnation. By creating a democratic society in which class distinctions disappeared, it spread a glow of happiness over lives that were bleak and dejected. Hasidism also inspired music, drama, poetry, fiction, and painting, and produced a galaxy of truly original religious types.

10. EMANCIPATION. Historical Origins.—In the feudal period, Christian birth and hereditary status determined the life and vocation of every individual. The feudal order allowed for no social fluidity. The Jew, an outcast theologically, lacked legal status. He lived by grace of bought privileges, and engaged in occupations not sanctioned by contemporary law and mores. Such an existence was highly precarious, as the decline in the Jewish population and the history of Jewish martyrdom in the Middle Ages testify. This decline would doubtless have resulted in the extinction of the Jews on the European continent, had it not been that their un-

sanctioned medieval occupations—trade in money and goods—were the precursors of the new economic order of international commerce and industry.

As commerce expanded, its dynamic principles of free competition and free individual initiative helped to break up the feudal system in which Jews had no legitimate niche, and to bring about the capitalistic order which was more hospitable to them. Commercial, and later, industrial capitalism required unrestricted, competitive opportunity in order to develop. It had to throw off the complex and artificial system of rights, privileges, tariffs, and bounties, all of which had their roots in religious and political absolutism, and which regulated minutely the economic, social, and religious life of the people.

The rising commercial, industrial, and professional classes had to struggle against guild, church, and other medieval regulations for constitutional government, for the rights of man—and, indirectly, for Jewish emancipation as well. The philo-Semitic aspect of the movement was incidental to the general aim of the bourgeois classes for freedom from government and church interference.

The American and French revolutions represented the alignment of new social and economic forces within the state. No sooner was despotism curbed, than the middle classes monopolized the political power, basing the right of suffrage on possession of property and payment of taxes. It was so in France, in the United States, in England, and in other European countries. This impersonal test of citizenship was a favorable factor which helped ease the admission of Jews to equality of rights. The circumstance that Jews were overwhelmingly a city population, skilled in occupations necessary for the development of the new urban industries and trades, was another factor working for Jewish emancipation. This urban status was especially effective in the early stages of the development of industrial capitalism, when the majority of the population in each country was rural, and, in most cases, legally bound to the soil. Later, when the non-Jewish merchant and industrial classes grew in strength, the Jewish middle classes began to be viewed in many countries as superfluous competitors. This was especially true in Poland and the German-speaking lands.

The economic buoyancy of the times was paralleled by an intellectual unrest which had a strong influence on the course of Western civilization and Jewish emancipation. This ferment was seen in the development of rationalistic philosophies, in the advance of the natural and social sciences, in the demand for free thought, and in the challenge to the literal interpretation of the Scriptures. It was manifested, above all, in a humanism which colored almost every phase of the scientific and literary output of the period.

This trend, as far as it directly influenced Jewish emancipation, was first heralded in 1510, by Johann Reuchlin, in his defense of Hebrew letters. Later, the cause of religious toleration and Jewish rights was taken up in England by John Toland, in 1714, in his famous work, *Reasons for Naturalizing the Jews in Great Britain and Ireland on the Same Foot with all Other Nations*. In France, it was championed by Abbé Henri Grégoire, in an essay submitted to a learned Catholic society in 1781; and by Count Mirabeau in his work on Moses Mendelssohn, in

1787. In Germany, Gotthold Ephraim Lessing dealt with Jewish emancipation in his plays *Die Juden* (1749), and *Nathan der Weise* (1779).

Forces For and Against Emancipation.—In most countries there was a delay between the granting of political and religious freedom to the general population and the application of this freedom to its Jewish members. This lag was caused by the combined resistance of many forces. The anti-Jewish bias was probably the strongest of these forces. It permeated most levels of the population, except for a thin stratum of liberal intellectuals and clerics. Its ages-old grip was not to be dissolved by a political pronouncement.

In many lands, attainment of equal rights by Jews was retarded by the prevailing belief that the state must be a Christian institution. The Prussian Constitution of 1850, while declaring the equality of all citizens, proclaimed Christianity as the basis of all government institutions. This voided many of the rights which Jews, as citizens, were supposed to enjoy. In Russia, the concept of the state as a Christian institution prevented the Jews from acquiring equal rights until the fall of czarism brought about the separation of church and state. In England, full emancipation of Jews was withheld until 1858, when the House of Commons altered the parliamentary oath, thus allowing Jewish candidates to omit the Christian formula.

The greater deterrents to Jewish emancipation, however, were the remaining feudal, ecclesiastical, economic, and other backward elements within the state. These forces fought the new equality with a counter-emancipation that made itself felt in varying degrees throughout the 19th and 20th centuries. The counter-movement was particularly strong in Germany, Austria, France (the Dreyfus Affair), Poland, Rumania, and Russia up to the Bolshevik Revolution. In Germany, it culminated in the Nürnberg Laws (1935) and the mass slaughter of Jews as Jews.

The outcome of emancipation in England and the United States was different. In England, emancipation followed an evolutionary course and was woven into the warp and woof of parliamentary tradition. In the United States, the struggle for independence, the lack of vested feudal interests, the frontier mode of life, the large immigrant element, and the diverse religious and ethnic composition of the population, all resulted in the general and genuine acceptance of religious and political freedom as the very foundation on which the new state rested.

Finally, within the Jewish population itself there were elements which resisted outside efforts at emancipation. These elements were apprehensive of the dangers that would beset the Jewish mode of life, once the barriers between the ghetto and the outside world were removed.

The earliest instance in which Jews are mentioned as deserving equal rights is found in the treaties of peace and navigation (1657) concluded by the United Netherlands with the king of Spain, and in other pacts involving the United Netherlands. These treaties declared that the members of "the Jewish nation are truly subjects and residents of the United Netherlands, and that they also must enjoy, possess and profit by the conditions, rights and advantages provided" in the agreements.

Jewish emancipation first became fully effective in the American colonies. The Surinam Act (1665), seeking to encourage Jewish com-

mercial and industrial activity in the colony because "the Hebrew nation have with their person and property proved themselves useful and beneficial," promised old and new Jewish settlers "that they shall be considered as English-born." The same desire to attract Jewish immigrants and trade to the colonies inspired the deletion of the words "upon the true faith of a Christian" from the naturalization formula of the Plantation Act of 1740. This law was adopted for Great Britain in 1753, but was repealed the following year under Tory pressure.

The French Revolution, in the historic Declaration of the Rights of Man and of the Citizen (1789), proclaimed that "Men are born and remain free and equal in rights." Two years later, the French National Assembly annulled all anti-Jewish regulations and restrictions. The date marked a turning point in the history of the Jews in Europe.

By the first half of the 19th century, emancipation had been generally extended throughout western Europe. During the second half of that century, it spread to the countries of central Europe. But not until the second decade of the 20th century did it reach eastern Europe. This retarded development in eastern Europe was largely due to the attitude of the landed classes. It was their influence which checked the progress of industrial capitalism and its accompanying development, the democratic state.

In Russia, the first relaxing of anti-Jewish legislation coincided with the Reconstruction following Russia's defeat in the Crimean War in 1855 and the abolition of serfdom in 1861. Following the assassination of Alexander II in 1881, however, the rise of Pan-Slavism and the ascendancy of the landed nobility brought about renewed anti-Jewish legislation which remained in force until abolished by the Bolshevik Revolution. The Soviet Union supplemented its emancipation of the Jews by recognizing the Jewish nationality and establishing the Jewish Autonomous Region of Birobidzhan on May 20, 1934.

The political reaction following the defeat of Napoleon brought in its wake revocation of rights granted to Jews in the German and Austrian states, as well as in Italy. In France, however, the Bourbon Restoration did not affect Jewish emancipation.

The Nazi attack on Jewish emancipation in the 20th century was an accompaniment of its all-out assault on economic and political liberalism ushered in by individualistic, competitive capitalism. The nationalistic capitalism of the Nazis bred an intense, chauvinistic spirit which resulted in total war against Western civilization. In this war, Jewish emancipation was completely liquidated wherever the German armies penetrated.

Effects Upon Jewish Life.—Probably no single event or combination of events in the postexilic history of the Jewish people had so profoundly influenced and altered Jewish life as the emancipation process of the late 18th and 19th centuries. Before emancipation, Jews were a ghetto people, ignorant and suspicious of non-Jewish cultures. Both Jewish and Christian leaders viewed Jewish lack of secular education as a major obstacle to emancipation. Christian Wilhelm Dohm, in his *Über die bürgerliche Verbesserung der Juden* (1781), called upon his government to cultivate education and a knowledge of the German language among Jews. The

Edict of Toleration of Joseph II of Austria in 1782, the Prussian Royal Commission appointed in 1789, and Prince Uvarov of Russia in 1844, all recommended the establishment of schools for Jews as the chief means of improving their civic conditions. Within the Jewish group, Moses Mendelssohn and his followers in Germany, as well as leaders of the Haskalah (enlightenment) in Russia and Galicia, carried on active propaganda for the dissemination of secular education among Jews as a prerequisite for their emancipation.

The Jews, deeply conscious of the great discrepancy between their economic position in the developing capitalistic economy and their very low political status, set themselves with enthusiasm to acquiring secular culture. How well they succeeded is evident in the phenomenal contribution which they made to the Western civilization of the 19th century. Before that century closed, Jewish names ranked high in the physical sciences, medicine, literature, the arts, journalism, politics, and economics.

The inward transformation that took place in Jewish life during the 19th century was equally great. A school of Jewish writers appeared, who, influenced by the rationalism of the period, subjected to a merciless critique all phases of Jewish social, economic, and religious life. They clamored for the people's emancipation from those inner repressions imposed by a rigorous, strait-laced orthodoxy and by centuries of cultural and physical isolation. The Hebrew magazine, *Hameasef* (The Ingatherer) founded by Moses Mendelssohn in 1784, was the earliest expression of this trend. Salomon Maimon (1753-1800), Lazarus Bendavid (1762-1832), and many others called for the reinterpretation of Jewish religion in the light of "reason."

The French Revolution and the struggle for emancipation suggested external and doctrinal changes in the Jewish religion. The external changes related to matters of ritual, such as the use of the vernacular in the service, playing of the organ in the synagogue, and the elimination of certain prayers. The doctrinal changes centered around a new concept of Israel's destiny. This concept denied the need for survival of Israel's historic Hebraic heritage, and rejected Zion as the ultimate locus of Israel's fate.

In the history of the Jews, these changes generated an unprecedented assimilationist movement which consciously strove (and still strives) for the elimination of the national, cultural, and ethnic characteristics of the Jews as a people. It aimed at making Jews identical in everything except religion with the ruling majority group in the state. This assimilationist movement accorded with the philosophy of the newly emerging democratic state, which was based on the principle of individual citizenship and was jealous of all corporate estates. On the other hand, it appeared at a time when a strong resurgence of nationalism in Europe rose to oppose the cosmopolitanism of the period. This resurgence expressed itself in the rebirth of national cultures, languages, folkways, and the arts.

As a political movement, Jewish nationalism appeared at the end of the 19th century, when the Jewish middle classes, especially the intellectuals, had become disillusioned with the workings of emancipation. Russian pogroms in the 1880's and the Dreyfus Affair a decade later were among the chief sources of this disillusionment.

Within a century and a half following the French Revolution, the Jewish population grew from about 2,500,000, to over six times that figure. This increase was part of a general expansion of the world's population. The granting of political rights did play a minor role in the Jewish population growth, but the major part of the increase occurred in eastern Europe, which remained unemancipated until the second decade of the 20th century. Commercial and industrial developments were a greater spur to population expansion than political rights. During this period the Jewish people spread over most of the world. New settlements sprang up in the Americas, the largest and most influential one in the United States; others were established in South Africa, Australia, and Palestine.

The 19th and 20th centuries witnessed the increasing urbanization of the Jewish people. In the 18th century, the Jews had lived in villages and small towns. By the 20th century, they were almost wholly a metropolitan people. Prior to the 19th century, most of the Jews, except for a thin stratum of the great merchants and bankers, were petty traders and hucksters. As the Industrial Revolution developed, as guild regulations were abolished and special anti-Jewish economic restraints were removed, the economic position of the Jews underwent a sharp transformation.

By the 1930's, Jews were represented in every trade, occupation, and profession, including agriculture, both as employers and workers. Their occupational classification before World War II was roughly as follows: commerce and finance, 38.0 per cent; industry, transportation and crafts, 36.0 per cent; professions and public service, 7.5 per cent; agriculture, 5.0 per cent; miscellaneous, 13.5 per cent. About 50 per cent of all Jewish earners were wage earners. The difference that formerly existed between the economic classification of Jews and non-Jews in each country had greatly narrowed down.

During almost the entire post-emancipation period, anti-Semitism in different forms and degrees affected the Jewish population of most countries. As a highly urbanized minority living under severe social pressures, the Jews developed a high sensitivity to social change. This was reflected in lower birth rates and higher death rates than those of the general population in almost every land; in rising suicide rates, and in an increasing number of baptisms and intermarriages. In most countries of western and central Europe during the first three decades of the 20th century, the annual number of Jewish births failed to balance the number of deaths. Many demographers foresaw a sharp decline in the Jewish population of Europe even before Nazism began its ruthless extermination of the Jews.

IMPORTANT DATES IN JEWISH EMANCIPATION

- 1787—United States Constitution: "... no religious test shall ever be required as a qualification to any office or public trust under the United States."
- 1789—French Declaration of the Rights of Man and of the Citizen: "Men are born and remain free and equal in rights."
- 1791—French National Assembly grants French citizenship to Jews.
- First Amendment to United States Constitution: "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof..."
- 1796—Batavian Republic of Holland removes civil disabilities against Jews.
- 1797—Abolition of ghetto in Venice and Padua by French occupation forces.

- 1798—Abolition of ghetto in Mainz.
- 1810—Abolition of ghetto in Rome.
- 1811—Abolition of ghetto in Frankfurt.
- 1812—Edict of King Frederick William II of Prussia proclaims Jews "natives of the country and Prussian citizens."
- 1823—Quebec Emancipation Act.
- 1848—Kingdom of Sardinia removes disabilities against Jews.
- German National Assembly at Frankfurt declares that "religious adherence shall not condition or restrict the enjoyment of civic and state rights."
- Denmark grants Jews full equality.
- 1858—British House of Commons alters parliamentary oath, allowing Jewish candidates to omit Christian formula in taking office.
- 1862—Jews of Baden attain civic and political equality.
- 1867—Constitutional changes in Austria and Hungary remove civic and political disabilities against Jews.
- 1870—Capture of Rome by forces of united Italy extends Jewish emancipation throughout country.
- 1871—German Imperial Constitution adopts principle abolishing restrictions based upon religious differences.
- 1874—Revision of federal constitution of Switzerland proclaims full religious liberty.
- 1878—Treaty of Berlin removes disabilities against Jews in Rumania, Bulgaria, Serbia, Montenegro, and Turkey.
- 1917—Balfour Declaration for "the establishment in Palestine of a national home for the Jewish people."
- Overthrow of czarism; Declaration of the Rights of the Peoples of Russia, abolishing "all national and national-religious privileges and restrictions."
- 1936—Constitution of USSR: "... the preaching of racial or national exclusiveness or hatred or contempt is punishable by law."
- 1948—Establishment of State of Israel.

URIAH ZEVI ENGELMAN,
Author, "The Rise of the Jew in the Western World."

11. HASKALAH. The word Haskalah, meaning enlightenment in Hebrew, has been commonly used to characterize a cultural movement in Jewish life which originated in Germany in the second half of the 18th century and spread to eastern Europe. Its promoters, called Maskilim (pioneers of progress), strove to secularize traditional Jewish religious education and to convey European culture to the Jews.

Attempts to acquaint the Jews with the languages and cultural trends of the countries of their residence had already been made in the 16th century. Under the impact of the Renaissance, a number of Italian Jews lectured at universities and participated in literary and scholarly activities of that period. Jewish students, chiefly from Poland, attended Italian universities to study medicine and brought back to their Polish homes an interest in worldly knowledge. In addition, Polish Jewish merchants who traded abroad eventually acquired the languages of other countries and became familiar with general cultural movements. A Polish Jew, Israel Zamosc (1700-1772), author of various books on mathematics, physics, astronomy, and philosophy, was a teacher of Moses Mendelssohn (1729-1786, q.v.), the founder of Haskalah. Other Jewish scholars from Poland and Lithuania were among Mendels-

sohn's collaborators. Genuine attachment to worldly knowledge prevailed to a still greater degree among the Sephardic Jews in the Netherlands of the 17th and 18th centuries. This cultural trend usually accompanied the attainment of favorable economic conditions.

Western Europe and Germany.—The Sephardic Jews maintained close contact with the outer world. They spoke and wrote Spanish or Portuguese, in addition to Dutch and Latin, and took part in various literary and scholarly endeavors. In Germany, too, the emergence of a prosperous class of court Jews, merchants, and manufacturers, prepared the ground for the Haskalah. Another decisive factor was the spread of the European Enlightenment in the 18th century which promoted intercourse between Jews and tolerant Christians. Some of the latter advanced the idea that the Jews should be integrated with the surrounding Christian society and obtain civil rights. The condition was attached, however, that the Jews give up their distinctiveness in customs and manners, secularize their education, and try to merge their own culture with that of the community about them. Mendelssohn, who represented such a synthesis, became the outstanding protagonist of the Haskalah. His German translation of the Pentateuch in 1783, and a commentary on the Bible, called *biur*, undertaken by his collaborators in the same year, were events of prime order in the history of the movement. They had a far-reaching effect on modern Jewish cultural developments.

Despite bitter opposition on the part of orthodox rabbis, the Haskalah leaders continued their efforts, encouraged by the Edict of Toleration (1782) proclaimed by Emperor Joseph II of Austria. Naphtali H. Wessely, one of Mendelssohn's chief lieutenants, hailed the edict in a Hebrew epistle addressed to the Jewish people. In 1783, the Maskilim formed in Königsberg a Society for the Cultivation of Hebrew Literature, and a year later started the publication of the first Hebrew periodical, *Hamecasef*. Both steps were indicative of the cautiousness of the new movement, which aimed at fostering the neglected Hebrew language, rallying around itself exponents of Hebrew culture, and promoting normal systems of education. In 1787, however, this association changed its name to the Society for the Good and Noble. Still later, in 1792, it was renamed Society of Friends, with its headquarters in Berlin.

In time, the bonds with Judaism loosened. The schools started by Haskalah educators in various cities came under the growing influence of German culture, and Jewish subjects were reduced to a minimum. The Hebrew periodical was discontinued in 1811. Many followers of the Haskalah, and many more Jews not strictly connected with the movement, severed their ties with Judaism completely and embraced Christianity. The same thing happened in the German-speaking provinces of Austria.

Galicia.—A different picture was presented, however, in the Austrian Province of Galicia, where the Jewish masses were strongly attached to rabbinic orthodoxy and Hasidic beliefs. There the Haskalah, despite desperate efforts of progressive Jewish educators, had not taken deep roots among the bulk of the Jewish population. Except for a few cities, such as Brody, Lwów, and Tarnopol, where wider groups were won for the Haskalah, the number of followers was

rather small, though they were spread over the province.

The Haskalah in Galicia emancipated itself to a considerable degree from the German spirit, emerging as a genuine cultural movement, sponsoring research into Hebrew literature, archaeology, the history of the Jews, the modernization of Jewish schools, and an ardent fight against the bigotry and vagaries of Hasidism. At the same time, the Haskalah fostered keen interest in general knowledge. The encyclopedic work, *Sefer Ha-Berith* (1797), by Elijah, a native of Lwów, which embraced a wide range of scientific and philosophical subjects, was eagerly studied by younger generations for many decades. The Galician Haskalah produced a number of Hebrew magazines of high literary standard, and contributed greatly to the development of Jewish scholarship. The philosopher Nachman Krochmal; the critic of rabbinical literature, J. H. Schorr; the biographer of medieval Hebrew scholars, Solomon J. L. Rapoport; and the writer and educator, Joseph Perl, are but a few of the outstanding figures of the Galician Haskalah whose influence extended beyond the Austrian frontier to Rumania and Russia.

It is interesting to note that some of the Polish and Lithuanian rabbis of the second half of the 18th century were influenced by the liberal trends fostered by Mendelssohn and his followers. The highest rabbinical authority of that period, Elijah, the Gaon of Vilna (1720–1797), stated that the knowledge of algebra, geometry, and astronomy, as well as of Hebrew grammar, is indispensable for a better grasp of the Talmud. Other nonrabbinical contemporaries of Mendelssohn in eastern Europe, such as Mendel Levin and the philosopher Salomon Maimon, went much further in asserting their positive attitude toward the spread of general culture among the Jews.

Russia.—The proper foundations of the Russian Haskalah were laid in the period of Alexander I (r. 1801–1825). A Jewish upper class emerged then, consisting of prosperous contractors and businessmen who, together with a few scholars and professionals, sponsored progressive cultural trends among their fellow Jews. The liberal tendencies of the early years of Alexander's rule led those Jewish leaders to think that civic equality was imminent, and this belief naturally stimulated the Haskalah movement. In addition, the spread of general knowledge was favored by the opening of Russian universities to Jewish youth in 1811, and the establishment of modern Jewish public schools in Odessa, Kishinev, Minsk, Uman, and other cities.

The Russian Maskilim, however, were wise not to follow the program of their German predecessors who had rejected Yiddish, the tongue of the popular masses. Indeed, some of the enlightened Russian Jews used Yiddish as a means of educating the masses. They planned, in 1804, the publication of a periodical in Yiddish, in addition to one in Hebrew. Even more significant was the effort of Mendel Levin to publish a Yiddish translation of the Bible. One of the most popular Yiddish writers, Isaac M. Dyk (Dik) was a staunch champion of enlightenment. The program of the Russian Haskalah was defined by its chief protagonist, Isaac Baer Levinsohn (1788–1860), in his book on Jewish education, *Teudah be Israel* (1828), as follows: study of the Bible combined with that of Hebrew grammar; use of the vernacular and the study of

foreign languages; acquisition of secular sciences; devotion to manual crafts and agriculture; and curbing of early marriages.

These modest demands, however, were regarded as revolutionary manifestations under the prevailing conditions and aroused bitter opposition. The advocates of the Haskalah movement, though they approached their task with great caution, were even more handicapped by the reactionary, anti-Semitic, and repressive policies of the government in the reign of Nicholas I (r. 1825–1856). Max Lilienthal, a young Jew who served on the staff of the imperial minister of education, acted on behalf of the government as propagandist of enlightenment. This "enlightenment" was to take the form of forced Russification and even, in some instances, attempts at conversion of the Jews to the Russian Orthodox faith. It failed utterly. Lilienthal appeared in the eyes of the Jewish masses as a "missionary." He himself soon realized that he was a tool of the Russian bureaucracy and left Russia secretly in 1845. Under these circumstances, the promoters of Haskalah had to remain on the defensive, spreading their ideas under cover in order to avoid reprisals from vast sectors of traditional Jews angered by ruthless czarist policies.

With the awakening of liberal tendencies under Alexander II (r. 1855–1881), the progressives became more active. Among their ranks were now the alumni of the rabbinical seminaries at Vilna and Zhitomir. These institutions had been founded in 1847 and 1848, respectively, and were conducted in the spirit of the Haskalah. The writings of Isaac Baer Levinsohn and Mordecai Aaron Ginsburg (1795–1846), among others, began to circulate more widely. They even reached the traditional religious schools, or Yeshivahs, whose students read them clandestinely but with great zeal. Through these writings, the Talmudic students became interested in the development of Hebrew literature and in general cultural and social movements.

In the 1860's the younger generation of Russian Jewry was under the spell of Russian literature, which championed freedom for the socially and politically oppressed. A Russian Jewish press was founded to spread these new theories of enlightenment even more boldly. In 1863, the Society for the Diffusion of Enlightenment Among the Russian Jews was formed in St. Petersburg by a group of intellectuals and businessmen. It had a vast educational and cultural program which included the establishment of public schools, trade schools, libraries, and the publication of works on Judaism. While both the newly established society and the Russian Jewish press stressed the importance of assimilation with the Russian way of life, the Haskalah literature in Hebrew continued to develop along the lines adopted by the founders of the movement. Many a Russian Jew either deserted the Jewish faith or became indifferent to the Jewish cause, owing to the trend of Russification. Many others, however, continued to combine interest in progressive Russian culture with the promotion of creative Jewish values in Hebrew or Yiddish, until they were awakened from their dreams to brutal reality.

The political reaction which made itself felt throughout Russia in the last years of Alexander II and gained in vigor during the reign of his successor, Alexander III (r. 1881–1894), resulted in staggering repressive measures against the

Jews. These caused further pauperization in the miserably crowded Pale of Settlement, and the pogroms of 1881 and 1882 provoked new despair among the Jewish population. The enlightened Russian Jews now realized the futility of their hopes and ambitions and turned to other ways of helping their people.

A return to Palestine, the ancient home of the Jewish people, offered the opportunity of rehabilitation as a nation. To many of the Maskilim it seemed a goal worth fighting for. The Russian Haskalah thus lent an incentive to the rise of Zionism. The Haskalah, moreover, was instrumental, through its cultivation of the Hebrew language, in providing the modern Jewish community in Israel with its national tongue. Other sectors of Russian Jewry, such as organized labor, as well as the various groups and parties fighting for political emancipation and national Jewish rights, had also been nurtured on the ideals of the Haskalah. Thus, Haskalah fulfilled its task of enlightening generations of Jews and, in addition, became a vital force in the process of shaping modern Jewish political and social developments.

Professor of Modern Jewish History and Sociology, Yeshiva University, New York.

12. RELIGIOUS AND PHILOSOPHICAL MOVEMENTS. The beginning of the modern period, insofar as Judaism is concerned, must be reckoned from the middle of the 18th century. The humanistic renaissance of the 15th century and the subsequent advances in science and philosophy produced scarcely a ripple in Jewish thought. To be sure, in Italy, there were a few Hebraic echoes of European humanism, and in Holland the giant figure of Benedict Spinoza towered as the last of the great Jewish medieval philosophers. Italian Jewry, however, was small in numbers and influence, while Spinoza lived under the shadow of the ban imposed upon him by the rabbis of Amsterdam. In the 18th and 19th centuries, the bulk of European Jewry was to be found in Russia and Poland. These countries in turn were in direct commercial and cultural contact with the cities of Germany, where there were flourishing Jewish communities.

The Age of Reason raised the challenges of deism and skepticism to the theistic faith of Judaism. To the deists, all religious rituals were merely survivals of ancient superstition, and orthodox Judaism entailed the observance of a multitude of rigid laws. The 19th century, which saw the rise of modern naturalism in its multiple forms, further aggravated the challenge to Judaism. On the other hand, modern theistic liberal thought accepts the unitarian conception of God, rejects the doctrine of original sin, and upholds the principle of the freedom of the human will. Thus, it is in basic agreement with the essential faith of Judaism.

The task of modern Jewish philosophy consists, first, in proving the validity of theism

generally; and, secondly, in demonstrating the special value and significance of the survival of the Jewish group and its ways of life. It is not sufficient merely to expound Judaism as one of the many particularized forms of organized religion. As the religion of a persecuted minority, Judaism needs a powerful *raison d'être* in order to overcome the escapist tendencies of its adherents. This proof of the unique and supreme significance of Judaism was generally based either upon an estimate of the values inherent in Jewish lore and ritual, or upon the extraordinary growth of Jewish national feeling in the modern period. This is why questions of Jewish nationalism and ritual play so important a role in modern Jewish philosophy.

Judaism came down into the modern period in the form of three separable streams of belief and feeling: dogmatic or anti-intellectualist Judaism, philosophical Judaism, and mystical Judaism. While the boundaries between these three types of faith are vague and shifting, it is nevertheless possible to trace the generic evolution of each from the medieval era down to our own day.

Anti-Intellectualist Judaism.—Dogmatic Judaism recognizes only one source of spiritual truth—namely, the Law, as it is set down in the Bible, the Talmud, the codes, and the *responsa*. As a rule, the proponents of this type of Judaism ignore the contemporary ferment of ideas. When they do take account of the philosophy of their day, they restrict themselves to the single-minded endeavor of exposing its weakness and insufficiency. The basic structure of their argument may be summarized as follows: Man's unaided reflective thought is beset with numerous uncertainties and pitfalls, so that it is idle to rely upon it for spiritual guidance. In contrast, the teaching of tradition is clear, unequivocal, and satisfying. Therefore, one should tread in the straight and narrow path of orthodox tradition and not swerve therefrom in the least. If "the spirit of the times" is not in accord with the spirit of the Law, then it is the duty of believers to repudiate the *Zeitgeist* in the name of faith. This argument is usually fortified by the enumeration of the diverse ethical shortcomings of modern civilization and the contrasting beauties of the "Jewish utopia" as it is portrayed in the pietistic lore of Judaism.

The representatives of anti-intellectualist Judaism fall into two classes, in accordance with whether they ignore modern philosophy and science altogether or whether they take the trouble to come to grips with these disciplines of the human mind. The former group is denoted by the term Orthodox; the latter is sometimes referred to by the misleading designation of neo-Orthodox. The difference between the two groups is in the method and form, not in the substance of the argument. Orthodoxy flourished in the Talmudical academies of central and eastern Europe. Neo-Orthodoxy recruited its adherents from among the Jews in western Europe and America. Samson Raphael Hirsch in the 19th century, and Isaac Breuer in the 20th century may be considered as the leading figures in neo-Orthodox Judaism.

Philosophical Judaism: Conservatism and Reformism.—Philosophical Judaism recognizes two sources of authority—revelation and human reason. The conflict between the two guiding principles needs to be examined anew in every age, so that a workable synthesis may be achieved.

Maimonides' maxim, "The gates of interpretation are not closed to us," is a perfect expression of the fundamental attitude of philosophical Judaism. Faith in the human mind is in no whit subordinate to faith in divine revelation. Agreement between these two coordinates of the spirit is achieved, first, by a thorough critical analysis of contemporary philosophic opinion and, secondly, by a radical reinterpretation of the dogmas of the faith. It must be remembered that the authenticated content of human reason is much greater in our day than it was in the medieval period. Specifically, the application of scientific methods to the study of the history of religions was a decisive factor in the emergence of the non-Orthodox movements in Judaism, which admit the factors of evolution and adaptation into the pattern of faith.

Both the Conservative and Reform movements are products of the philosophical trend in Judaism. Both assume the essential truth of divine revelation in the Bible and subsequent sacred literature, and both esteem the noblest insights of modern philosophy and research to be of equal merit and validity. They differ, principally, on the place of ritual within the scheme of divine revelation.

The Reformist position is that only the ethical core of the Bible and Talmud is to be regarded as binding, while the various rituals and prohibitions of the Law should not be treated as intrinsically significant and normative. The Conservatives maintain that the entire pattern of Jewish piety, as it took shape through the ages, must be regarded as divinely inspired, for ritual and piety are as interdependent as body and soul. The doctrine of progressive revelation through the universal mind of man occupies a central position in Reformist thought, while in Conservative circles, this doctrine is considerably restricted and limited in its application. Conservative opinion maintains that, in the sphere of piety, the determining factor must be the conscience of world Israel, for it is not religion in general that is socially effective but the living organisms of historic faiths.

In many details of Jewish ceremonial practice, the early Reformists took up an antiritualistic attitude in the belief that undue emphasis on external ritual was bound to detract from the purity of "ethical monotheism," which it was Israel's mission to represent. The Conservatives argued that the Jewish faith was an organic product of a long historical process; that no changes in religious observance should be introduced which are not in accord with the psychic structure of Jewish piety as it is reflected in the living conscience of world Israel.

The content of ethical monotheism, as it is expounded in modern Jewish philosophy may be summarized in the following three propositions:

(1) God is other than and transcendent to the physical forces of nature.

(2) The will of God is to evolve ethically perfect beings and an ethically perfect society through the processes of history.

(3) The will of God is reflected in the moral conscience of man, who is free and innately capable of submitting to divine guidance and achieving the divinely destined goal.

Mystical Judaism.—Mystical Judaism is the third basic current in Jewish thought. Its conception of faith is primarily a matter of inner experience, not of inherited tradition or inde-

pendent reflection. There are two types of Jewish mystical religion, depending upon whether it is a derivative of dogmatic or of philosophical Judaism. The former type is represented chiefly in the Hasidic movement. (See Section 9, *Hasidism*.) For our purpose, it is important to note the neo-Hasidic or neomystical philosophies of Martin Buber, Franz Rosenzweig, and A. I. Kuk (Kook).

Martin Buber (1878–) is entirely unconcerned with Jewish law or with any of the particularized forms of Jewish religious expression. The "I—Thou" relationship between man and God, he feels, can be established and maintained as a living and fructifying experience apart from any ritualistic exercises. It is Buber's lifelong ambition to develop the art of mystical reflection as an independent and undogmatic discipline, directed toward the creation of ideal forms of social living. The intense nationalist emphasis in his writings is a typical illustration of the multiple mystical bonds of unity which he recognizes as operative in the society of mankind. Except for this nationalist-Zionist slant, Buber's thought is representative of the Reformist position.

Franz Rosenzweig (1886–1929) describes divine revelation as the periodic penetration of divine love into the actual current of human history. From his mystico-empirical viewpoint it is clear that not only the Holy Bible, but the whole structure of Jewish life and destiny reflects the seal of God's love. Even anti-Semitism is part of the divine scheme to maintain Judaism as an undying spiritual force among the nations of the world. The fact that the central principles of ethical monotheism were taken over by the Moslem and Christian worlds in varying degrees, does not mean that the divine fire of creativity no longer requires the instrumentality of the Jewish people. Judaism is the eternal sun of faith: Christianity, the life-giving, soul-transforming, world-conquering rays. Thus, the two faiths are mutually complementary in function.

Rosenzweig strongly opposed the Zionist philosophy and program. It was his belief that the Jew was divinely destined to be a perpetual ferment in world society. Israel gave up land, language, and sovereignty, clinging instead to the law of God. This exchange turned Israel into a nonhistorical people, living in the world, yet not wholly of it. Every phase of Jewish existence is directly related to this original consecration as "a people of priests and a holy nation." The Jew makes his covenant with God not as an individual, but as a son of his people.

Rosenzweig's historical approach led him to advocate the enthusiastic acceptance of Jewish law in its entirety, though with significant modifications. He opposed the Reform movement with the argument that it seeks to attain the impossible: to preserve the religious kernel of Judaism while discarding its shell. On the other hand he opposed the rigid attitude of the Orthodox, setting forth the principle that whatever rite or custom ceases to evoke the spirit of piety should not be regarded as binding.

Abraham I. Kuk (1864–1935), the former chief rabbi of Palestine, was the outstanding philosopher of Orthodox Judaism in the 20th century. A rare and genuine mystic, he attempted a synthesis between the teachings of the cabala and the Bergsonian school of creative evolution. His

writings reveal a type of religious consciousness that is centered around profound and invigorating states of mystical ecstasy. He described the various ceremonies of Judaism as so many instruments for the expression of the divine melody of faith. "As there are laws in poetry, so there is poetry in laws," he wrote. He believed that the phenomenon of prophecy was not confined to ancient times and that the uplifting grace of God was embodied in every creative endeavor of man. As a cabalist, he maintained that the prescribed rites of Orthodox Judaism possessed the mystical power to invoke divine grace and to channel it down from heaven to earth. In the re-establishment of Palestine as a Jewish homeland, he saw the promise of a revival of the prophetic genius of Israel that would rejuvenate the religions of mankind.

Zionism and Other Influences.—The rise of Zionism in the past half-century affected profoundly the religious consciousness of modern Jews. On one hand, it offered a secularist-cultural-political definition to the term Jewish. Thus, it seemed to some of its adherents to be an adequate substitute for Judaism. On the other hand, it strengthened the centripetal forces within the Jewish group, thereby rendering the Jewish religion invaluable service. Classical Reform which, at its inception, was bent upon the elimination of every vestige of national symbolism and sentiment from the Jewish faith, was impelled by the influence of Zionism to adopt a more moderate attitude in its revised official platform of 1937. Both classical and revised Reform congregations are now to be found in the United States. Conservative Judaism drew additional strength from the movement of cultural Zionism, which emphasized the spiritual qualities of Jewish nationhood and instilled a genuine though qualified respect for the historical forms of Jewish religious experience.

The Reconstructionist movement is a direct result of the impact of Zionism upon the American Jewish scene. The Reconstructionist definition of Judaism as "the evolving religious civilization of the Jewish people" makes the element of nationality substantive and that of religion adjectival in the pattern of Jewish values. This view contrasts with the Conservative position, which regards the religious element as both substantive and central, and assays the value of the national symbols and loyalties as adjectival and peripheral. The Reconstructionist view is directly opposite to that of classical Reform, which sought to eliminate from Judaism all traces of particularistic loyalty.

On the periphery of Judaism, there are many thinkers who cherish the ethical kernel of Judaism and reject its ceremonial and organizational shells. Representative of this trend of thought on the American scene was Felix Adler (1851–1933), founder of the Ethical Culture movement, who began his career as a rabbi, and later disavowed all connections with Judaism. In modern Israel, there are many cooperative settlements, organized along the idealistic lines of Jewish ethics, dedicated to the "religion of labor," and rejecting any direct allegiance to the religion of Israel.

Outstanding Jewish Philosophers.—The names of the following men are, in addition to those mentioned above, milestones in the evolution of modern Jewish philosophy:

Moses Mendelssohn (1729–1786), a ration-

alist philosopher. His main thesis: All that needs to be known for salvation is revealed in the mind and conscience of man. The principles of ethical monotheism are contained in the common core of the Jewish and Christian traditions. The ceremonies of Judaism are revealed laws for the regulation of the life of Jewish people in accordance with the ideals of universal religion and ethics. These laws are obligatory only for those who identify themselves with the Jewish people.

Nachman Krochmal (1785–1840), a Hegelian philosopher and historian. His main thesis: The Absolute reveals Himself through the spiritual history of nations; the yearning of the Jewish national soul is for the complete unfolding of the Absolute Idea in the good society. Israel's mission is unfulfilled so long as the Kingdom of God envisioned by the prophets is still a dream, not a reality. Hegel's identification of the perfect society with the Prussian state was rejected by Krochmal, whose vision of the future was patterned along the lines of Jewish tradition. It follows that Israel is an eternal people so long as it remains true to its character and loyal to its faith.

Abraham Geiger (1810–1874), expounder and defender of the position of classical Reform and the principles of "ethical monotheism." He described the religious consciousness as centered around the awareness of tension between the infinitude of God and the limitations of man. Out of that tension there arises the aspiration to be like unto God in the exercise of moral freedom and in the quality of ethical holiness. This aspiration is the essence of Judaism and this essence is divinely revealed.

Israel Lipkin of Salant (1810–1883), founder of the "Mussar" movement. This pietistic movement aimed at the attainment of ever deepening mental states of piety. It evolved a complex method of ethical self-criticism and religious contemplation.

Solomon Ludwig Steinheim (1789–1866), who re-established the Maimonidean conception of revelation in the face of Kant's criticism. To Steinheim, divine revelation is the word of God who speaks when He chooses. The forms and categories of human reason, however, constitute the channels through which true revelation is manifested. While revelation is the matter, reason is the form of all religious truths.

Asher Ginzberg (1856–1927), known as Achad Haam, philosopher of cultural Zionism. His main thesis: The innate tendencies of the Jewish national soul consist principally in a yearning for the realization of the absolute moral order; the whole structure of Judaism is the crystallized social form of this dynamic subconscious urge. Through the re-establishment of Israel in its ancient homeland, a normal and adequate environment will be provided for the healthy growth of the ethical genius of Judaism. The Jewish religion was the product of Jewish national existence; the reborn life of the nation is certain to provide new religious insights and values.

Hermann Cohen (1842–1918), neo-Kantian philosopher. To Cohen, philosophy is a systematic critique of the human mind, a critique which consists of three basic trends of culture—the processes of logic, ethics, and esthetics. Religion is the basic motivation which impels the individual to pursue faithfully his ethico-esthetic insights. The concept of God is an implication

of the fundamental aspiration of man for truth; it lies at the base of all "pure" forms of man's "culture-consciousness." Genuine religion is concerned exclusively with the evolution of the ethical conscience. In the sources and life of Judaism, pure religion, as distinguished from mythology, is embodied. In Judaism, God is defined principally in ethical terms. He is transcendent to both logic and ethics, yet immanent in all moral acts and "pure" thoughts. His will is expressed in the qualities of love and justice. Cohen believed that the worship of God consists of a "drawing near" to Him, through intellectual "truthfulness" and ethical aspiration. The social goal of this "drawing near" is the Messianic Kingdom, as described by Isaiah and Micah.

Mordecai M. Kaplan (1881–), a pragmatist philosopher and founder of Reconstructionism. His main thesis: Religion is primarily a social phenomenon; Judaism is the evolving religious civilization of the Jewish people. Its ceremonies and concepts must be continually reinterpreted and refashioned in accord with the highest values of contemporary culture.

Solomon Schechter (1847–1915), founder of the Conservative movement in America. Schechter taught that revelation does not consist of ideas or books so much as of the living values of the organized group. The judgment and pattern of piety of living world Jewry, therefore, should be the decisive factor in the adaptation of Judaism to the modern scene.

Author and Rabbi, Baltimore, Md.

13. YIDDISH LANGUAGE AND LITERATURE. Prior to World War II, Yiddish was spoken, or at least understood, by about 12 million persons, or almost three fourths of the Jews of the world. It has, therefore, been referred to by the average person—although incorrectly—as "Jewish." Yiddish is etymologically akin to the German *jüdisch*, which, together with the archaic *Deutsch* (German), constituted the designation (Judeo-German) by which the language was known until recent times. Yiddish is written in Hebrew characters and contains a large number of Hebrew and Aramaic words. It also embodies thousands of Slavic expressions, as well as a small number of words from English and other languages. The core of the vocabulary, however, is of Germanic origin.

The Rhine Valley is generally considered to be the birthplace of Yiddish. After the rule of Charlemagne and the Franks had receded from central Europe, Old High German became the language of the Jews living in that area as

well as in other regions along the Rhine, the Main, the Danube, and in Bavaria. At first scarcely more than a German dialect, Yiddish gradually took on an independent cast. The first documentary evidence of the language, a leaflet on phlebotomy recently discovered in the Cologne archives, dates from 1396. We must bear in mind, however, that nothing short of a miracle would have preserved earlier secular writings in Old Yiddish through the constant banishments and wanderings of the Jews. It is likely that the ancestry of Yiddish dates from the 10th century.

11 Old Yiddish corresponds to the earliest phase of Middle High German, then Middle Yiddish would parallel its parent language as spoken from the 14th to the 18th centuries. Modern Yiddish was ushered in about 1750. Its Slavic loan words came from the growing traffic between German Jews who had settled in Russia, Poland, and Bohemia, and the Jews from those countries who had wandered to Germany. The Slavic words and phrases took their place beside the German, Hebrew, and Aramaic locutions, thus forming a well-knit language. The proportion in modern Yiddish of words of German origin is about 65.5 per cent; that of Hebrew and Aramaic origin, 12.5 per cent; and of Slavic origin, 18 per cent. International expressions provide about 2.5 per cent; English 1 per cent; and Romance and other languages perhaps 0.5 per cent.

The large proportion of German in Yiddish does not alter the fact that in form, pronunciation, and sentence structure, Yiddish is as separate from German as Spanish is from Italian; often differing in idiom, sense, and certainly in spirit. Before the writing of the first Yiddish grammar (of which there have been at least a score), the language already had its rules and norms which are now being standardized. Thus, contrary to wide misconception, Yiddish is not merely a corrupt German, and still less a *lingua franca*, as some British critics hold.

Although there are three Yiddish dialects—the Lithuanian (which includes White Russian), the Ukrainian, and the Polish—the differences are almost exclusively in the vowels. The literary, or standard, Yiddish has incorporated the best features of all three. Yiddish contains a vocabulary of close to 90,000 words and perhaps as many as 60,000 phrases and idioms. It abounds in Biblical and Talmudic allusions. Its expressiveness is often untranslatable and its manipulation of prefixes allows for a wealth of nuances. It is rich in diminutives and particles, and lends itself to hybrid formations and interlingual assonant combinations. Yiddish is perhaps the most ubiquitous of all languages. It can be heard often in corners of the world where English, French, or German is unknown.

The doom of Yiddish as a living tongue has been frequently forecast; yet since 1920 it has become the medium not only of poetry and fiction but also philosophy, science, and technology. Of the six million Jews exterminated by the Germans in World War II, over two thirds constituted the backbone of the Yiddish-speaking groups. But his loss served only to increase the lingual enacity of the survivors. The survival capacity of Yiddish lies partly in its vitality and pliability, but perhaps even more in the circumstance of its being a prime welder of Jewish communities throughout the world.

YIDDISH LITERATURE

Earliest Period.—Yiddish literature came into being eight or nine centuries ago in the Middle Ages, although the 14th century is the earliest to present concrete evidence of its existence. There are many indications, however, that there was a Yiddish oral tradition before that time, which gleemen, like the troubadours and jongleurs of other nations, carried with them from inn to inn or from fair to fair. Much of it may have been written down and lost, for printing had not yet been invented. There were no monastery vaults or governmental archives to serve as repositories for any Jewish productions, much less for anything so questionable as was written in a non-Hebraic tongue. Even that Yiddish best-seller of the last three hundred and fifty years, the *Tschno-Urchno* (a paraphrase of the Pentateuch for women), is now to be found only dating from its fourth edition, that of 1622. Were it not for the farsightedness of a wise Prague rabbi, David Oppenheimer (1664–1736), who collected Yiddish as well as Hebrew books, possibly hundreds of Yiddish books would have been entirely unknown to us.

Contrary to a general but erroneous belief, Yiddish literature did not begin with the *Tschno-Urchno*. There were three trends from the earliest period: (1) writings with a religious or moral direction; (2) books for entertainment; and (3) scientific observations, such as the leaflet on phlebotomy in 1396, or the bulky manuscripts on the analysis of urine, to be found at present in the Bodleian Library at Oxford. Not infrequently the devotional and the diversional motives were combined, as in the Sabbath ode by Zelmelin written about 1410, which in some respects resembles a spiritual.

Romances, Secular and Biblical.—As was to be expected, the romances and tales which circulated throughout Europe during the later Middle Ages seeped into the ghetto too. Itinerant Jewish gleemen, even as early as the 14th century, would render the *Hildebrandslied*, the *Wigalois* and *Die rich von Bern* romances, as well as the tale of the *Zibn W'azin Mainster* into Judeo-German, with a special Jewish flavor, shedding much of the cruelty and injecting a note of equity and justice. There is even good evidence that *Parsifal* and *Tristan and Isolde* had their Yiddish versions, although the manuscripts are no longer extant.

To compensate for what was regarded as an irreligious element in such tales, a new type of romance was introduced, based on Biblical narratives in a midrashic setting. Thus, there came into being the *Shmuel-Bukh* (an account of the exploits of King David) and similarly elaborated minstrel paraphrases of the books of Kings, Judges, Joshua, and Esther. There was also the cycle of tales entitled *Yoissiphun* (an adaptation and extension of Josephus' *Antiquities*), published in Zurich in 1546, in a beautiful edition illustrated with many woodcuts. About this time there also circulated several different cycles of some 250 stories, mainly borrowed from rabbinical literature. These were subsequently collected and published in Basle in 1602, under the title of *Maasse-Bukh*, which has been translated into English in a two-volume edition.

During this period, the primitive presses brought out various chapbooks, glossaries, miscellanies, commentaries, interpretations of the sacred law, histories, social reflections, and other

writings. In 1544, only 10 years after Luther translated the Bible into German, two translations of the Pentateuch appeared in Yiddish. One of these, published in Constance, contained also the Scrolls and part of the Prophets. The other was printed in Augsburg.

Elias Levita.—The 16th century may be regarded as the classical period of early Yiddish literature, chiefly because of the great figure of Elias Levita (1469–1549) who flourished then. What Chaucer was to English literature, Levita, known as Elye Bokher, was to Yiddish literature. A versatile and colorful personality, he seems to have been a teacher of Hebrew and a wandering poet before becoming a philologist and grammarian. He won such acclaim as to receive a call to the University of Paris. This he declined, continuing his services as Hebrew tutor to the powerful and scholarly Cardinal Egidio da Viterbo, until the latter was compelled to flee from Rome.

One of the foremost Hebrew scholars of his century, Levita also tried his hand at romances in the vernacular. He might be called the first eminent Yiddishist, in that he recognized Yiddish as independent of German and a medium in its own right. His *Bovo d'Antona*, an adaptation of the Italian version of the romance, *Sir Bevis of Hampton*, was the first great landmark in Yiddish literature. Although written in 1507, it was not printed until 1541. This romance (or series) in ottava rima became the most popular book in Yiddish. It has been reprinted so often, first as the *Bovo-Bukh*, then the *Bovo-Maasse*, that any tall story is now called in Yiddish a *hobbe-maasse* or "grandmother's tale." His other romance, *Paris un Vienne*, although more original and showing better craftsmanship, was not as popular in its appeal.

During the 17th century there were—in addition to the chronicles, elegies, commemorative poems, language guides, moralistic exhortations, anecdotal collections, and translations from the world's literature—the series of songs and stories called *Sinkhas Hanefesh* (Joy of the Soul); the two rival translations of the Bible, both published in Amsterdam during the years 1676–1679; and the first antidefamation book, *Yiddisher Teriak* (1615), by Zalmen Uffenhausen. The last-named work, a defense against the libels of the apostate Samuel Brenz, was later translated into Latin and has merits even today. Among other well-known works of that period were a social study of the Jews of Cochin, India (c.1675), and the memoirs of Glickel of Hamil. The latter work was written solely for her children and was hailed as a masterpiece when it was translated into German and English. The founding of the first Yiddish newspaper, *Kurantin*, which appeared in Amsterdam on Tuesdays and Fridays as early as 1686 was proof of the progressiveness of the Yiddish-speaking Jews of that era.

Enlightenment Period.—The decline of Yiddish literature in the 18th century may best be explained by the misguided efforts of Moses Mendelssohn (1729–1786) and his host of admirers in Germany, Russia, and Poland, to suppress Yiddish in the interests of emancipation. This resulted in the lack of any Yiddish works of a definitely creative value during practically the whole century. Isaac Abraham Euchel, one of Kant's students, wrote the first Yiddish play, but the theme, as with subsequent German Jewish

writers, was the Germanization of the Jew. In Russia, the Maskilim, or "enlightened," engaged in battle with the pious sect, the Hasidim, who, to them, represented backwardness and obscurantism. The Russian Maskilim wished to Russify the Jews, while the Polish Maskilim were equally anxious to convert them to the Polish way of life. Instead of employing Yiddish, the Maskilim spoke and wrote an *almost* correct German. Despite their efforts, however, the people continued to cling to the Yiddish tongue.

Yiddish by this time had become the language of Jews in many lands. From the early beginnings, it was not Germany alone which produced works in Yiddish, but also Italy, Switzerland, Holland, Bohemia, and then Austria-Hungary, Russia, Rumania, Lithuania, and Poland. Mendel Levin translated Proverbs and Ecclesiastes into the colloquial language of the Russian Jews, publishing the former work in 1817 and thereby drawing the fire of the proponents of the enlightenment.

The 19th century saw a turn in the tide. Israel Aksenfeld (1787–1866) a notary, produced some 30 works between 1832 and 1862, losing most of them, however, in his frantic efforts to obtain a publisher. Solomon Ettinger (1800–1865), a Polish physician, gave us the first play in modern Yiddish, *Serkele* (Little Sarah). Due to the censor's insistence on mutilating the texts, neither this play, nor his fables and epigrams were published until after his death, although they were known in neighboring cities from handwritten copies. At about the same time, in Vilna Isaac Meyer Dik (1814–1893) wrote some 400 stories and novelettes which barely gained him a pittance.

The Golden Period.—In 1864, 27-year-old Sholem Jacob Abramovitch (Abramowitz, 1836–1917), better known by his pseudonym, Mendel Moikher Sforim ("bookseller"), began to publish in serial form *Dos Kleyn Mentshle* (The Manikin), the tale of a small-town "big shot" who relates the sordid story of his rise as a result of cringing and bullying in turn. With Mendel Yiddish literature may be said to have reached maturity. The first real Yiddish stylist, Mendel produced a polished prose that rates highly even today. His reputation was made by *Die Kliatch* (The Dobbin), an allegorical commentary on the unhappy status of the Jews in Czarist Russia. *Fishke der Krumer* (Fishke the Lame), another of his famous works, is a realistic picture of Jewish vagrancy.

Writing at the same time as Mendele, Isaac Joel Linietzky created a furor with his *Do Polishe Yingl* (Polish Boy), an exposition of backwardness in Jewish communal life and one of the strongest indictments of Hasidic practice ever written. But Linietzky showed no further development and produced little else of note.

Sholem Aleichem (Solomon Rabinowitz, 1859–1916), the supreme humorist of all Jewish letters, has had scarcely an equal in modern literature. Dubbed the Jewish Mark Twain, Sholem Aleichem succeeds, because of his psychological insight, in producing a supreme blend of pathos and comedy. While Mendele was a caustic satirist bent on reforming his brethren, Sholem Aleichem was good-natured in his approach though just as realistic as his older contemporary. His *Tevye the Dairyman*, optimistic through a misfortune; his *Menakhem Mendl*, the luckless stock manipulator and promoter who

remains a pauper; as well as some of his child characters, have become almost household names among Yiddish-speaking folk.

In I. Leibush Peretz (1851?-1915) we have the master who endowed Yiddish literature with European universality. Even Sholem Aleichem moved in a ghetto atmosphere; his characters, taken directly from life, needed little interpretation. Peretz, however, forced his reader to reflect. His deft yet sublime *Folk Tales* contain an epitome of Jewish history. His *Night at the Old Market Place* is a Jewish conception of Faust, minus the heroes, although it contains dozens of characters; for Peretz does not deal with individuals. He portrays, instead, relationships, communities, situations, with the individual appearing as a cog in the collective machinery.

Both Peretz and David Frishman (the latter wrote mainly in Hebrew) began publishing in Sholem Aleichem's periodical in 1888. It was about this time that Yiddish literature definitely became aware of itself. Yiddish writers were now identifying themselves as part of a group, though proceeding cautiously, for their medium was still spoken of as a "jargon" in all accepted literary circles. The pseudonyms of many of these writers were forms of camouflage. A man like Solomon Rabinowitz (Sholem Aleichem), who had been a rabbi and who moved in middle-class society, could not afford to write humorous stories in Yiddish under his own name. It was characteristic of the period that on the masthead

Der Fraynd, which began to appear in St. Petersburg in 1903, one could read the words, "First Jargon Daily in Russia."

United States.—It was in the United States at the turn of the century that Jacob Gordin, through a series of dramatic adaptations, began the reforms of the Yiddish theater, which had been founded in 1876 in Jassy, Rumania, by Abraham Goldfaden. A large number of journalists, like Abraham Cahan, editor of the *Jewish Daily Forward*, poets of the caliber of Morrisinfeld and Yehoash (Yehoash S. Blumenthal), novelists and playwrights like Leon Kobrin and David Pinski, public speakers, lecturers, and actors such as Jacob Adler, David Jessner, and Boris Tomashchevsky, were now forging a Yiddish culture by and for the masses.

With conditions in the Old World becoming more and more unbearable, the Yiddish center in the United States grew by leaps and bounds. By 1905, New York City, with arteries leading out to Philadelphia and Chicago, had become the third great Yiddish center of the world, together with the old-world centers of Odessa (with Kiev as its outposts), and Warsaw (with Vilna as a juncture). By 1915 the Young group (*Di Yunge*) had been formed in the United States. Its purpose was to break away aesthetically from social ideologies and to revert to a literature of subjective moods. Leaders of this movement were David Ignatov, Joseph Opatoshu, and Zisha Landau. Within a few years after the appearance of the Young group there emerged the introspective school (*Intikhistsn*). Led by such writers as Aaron Leyeles (Glanz) and Jacob Glatstein, this group broadened both the technical and thematic sphere of Yiddish poetry. A later *proletpen* group (1930) stressed leftist aspirations and had a pro-Soviet orientation.

Yiddish as a World Literature.—Yiddish literature may truly be termed a "global" literature. Its writers are constantly wandering;

indeed, their very names in Latin characters change as they move from country to country. Although there have been various Yiddish literary centers, these very centers have been in a state of flux. Czarist oppression and two world wars have uprooted hundreds of Yiddish writers, while nearly 300 perished at the hands of the Nazis. Scores have sojourned in as many as a dozen countries, and a few have roamed through the continents of the world. In the USSR, many Yiddish writers have not been heard from since 1949, while prior to that time a score died in prisons and several on the battlefield.

A stumbling block in classifying Yiddish writers is their versatility. Seldom do we find a Yiddish writer who confines himself only to poetry, the novel, or the short story. Thus Abraham Reisen, a master of the short-story technique, is also a fine lyric poet. Zalmen Schneour excels as a novelist in Yiddish and is also a distinguished Hebrew poet. Most contemporary Yiddish poets write essays and are also publicists, critics, and columnists. The best-known of contemporary Yiddish writers, Sholem Asch, the novelist, has also written successful plays. His drama, *The God of Revenge*, has caused almost as much controversy as his novels, *The Nazarene*, *The Apostle*, and *Mary*.

Yiddish literature is represented in all genres and forms. Memoirs, such as those of the dramatist, Ossip Dymow, and the historian, Saul Ginzburg, unveiled before us the literary life of the great Russian city of St. Petersburg. Travel pictures and ethnographic accounts have been written by Peretz Hirshbein, Borukh Glasman, N. Mishkovsky, and Melach Ravitch. H. Shoshkies, an emissary of the Hebrew Sheltering and Immigrant Aid Society (HIAS) has set down colorful descriptions of outlying Jewish settlements where he has met boyhood chums. In fiction and poetry there have been singers like Itzik Manger, a balladist almost unique in modern literature; sonneteers like David Kenigsberg, J. L. Kaluschiner, and L. Kussman; and the author of rondos and villanelles, Aaron Leyeles. Dantesque in content is Isaac Kacenelson's epic of a "murdered people," written while he was approaching his end in the gas chambers. Whether we seek classicism, romanticism, realism, symbolism, impressionism, expressionism, or even decadence and surrealism, we can find adequate examples of each in Yiddish writings, both prose and poetry.

In addition to Asch, the chief novelists in the second quarter of the 20th century have been: (United States) Joseph Opatoshu, Zalmen Schneour, Israel Singer, Leon Kobrin, Isaac Raboy, Peretz Hirshbein, Borukh Glasman, and Boris Eppelbaum; (Poland) M. Burshtin, S. Horontshik, and Z. Segalowitz; (USSR) David Bergelson and der Nister (Froyim Kahano-vitch). The novelette has been employed by Lamed Shapiro, Jonah Rosenfeld, and S. Miller. The most important plays in Yiddish are: Isaac L. Peretz's *Old Market Place at Night*; Shloime Ansky's *Dybbuk*; Jacob Gordin's *God, Man and Devil*; Asch's *God of Revenge*; Hirshbein's *Haunted Inn*; David Pinski's *Treasure and Family Tzvi*; H. Leivick's *Golem and Rags*; Singer's *Yoshe Kalb* and *Brothers Ashkenazi* (both dramatized and directed by Maurice Schwartz); and Leon Kobrin's *Yankel Boile* (Country Swain). Ossip Dymow, H. Sackler, and F. Rimko have also written many outstand-

ing plays, and Sholem Aleichem's dramatizations have had varied success.

The galaxy of historians, social philosophers, essayists, feuilletonists, philologists, bibliographers, literary critics, and biographers is too large to list. The cultural movement as a whole, however, was largely inspired by two men. One was the philosopher, Khayim Zhitlowsky (1865-1943), who, through his varied socio-political affiliations, dominated at one time or another almost every radical faction among New York Jewry. The other was Ber Borochov (1881-1917), who, though he died at the early age of 36, left substantial contributions to social theory and Yiddish philology and literature. Borochov has been regarded by the Zionist labor group as its spiritual leader. The Jewish cultural movement in general may be said to derive much of its strength and faith, on the literary side, from I. L. Peretz; and on the publicistic and theoretical sides from Zhitlowsky.

Equity, the Chief Motif.—Yiddish literature has always stressed moral values and social content. Its earlier writers were compelled to resort to allegory and symbolism to evade the Russian censor, and there was more than one confiscation. Nearly all Yiddish writers of the past generation were inoculated with revolutionary ideas, and the radical impetus still sways much of the literature, except for that part which is inspired by religion and reflects the social exhortations of the Prophets. Social justice is the keynote of Yiddish literature.

Yiddish writers have always reflected in their works something of the atmosphere of their respective countries. The American scene is portrayed in the Yiddish literature of the United States, the Russian atmosphere in the Soviet writings, and the Latin American panorama in the books and journals published in Brazil, Uruguay, Cuba, Chile, Argentina, and Mexico. The latter two countries, together with Canada, represent three new Yiddish centers. Birobidzhan, in the Soviet Far East, has become a region where Yiddish is the official language and is obligatory even in non-Jewish schools.

In 1938, about 400 Yiddish newspapers and journals were circulating throughout the various countries of the world. World War II changed the situation, especially in Poland, which had been a beehive of Yiddish activity. But wherever Jewish survivors reached a haven, even in far-off Uzbekistan and Shanghai, they succeeded in rehabilitating themselves culturally with amazing rapidity. An issue of the bulky quarterly, *Di Goldene Keyt* (Tel Aviv), *Yiddische Kultur* (New York), *Der Shpigl* (Buenos Aires), or *Kiyoun* (Paris) may contain contributions from writers in Tel Aviv, Shanghai, Melbourne, London, Lodz, Johannesburg, and Buenos Aires. In 1950, Yiddish literature, for undetermined reasons, appeared to have been liquidated in the USSR, with the exception of the Jewish Autonomous Region of Birobidzhan.

In 1890, Yiddish was a small, obscure literature which consisted largely of brochures and fascicles. Since then it has developed hundreds of writers, scores of them with a dozen or more bound volumes to their credit. At the turn of the century, only a small number of Yiddish books had been translated into other languages. By 1950 over a thousand individual volumes had been translated from the Yiddish into scores of other languages. In the Soviet Union alone,

between 1935 and 1945, more than 3.25 million copies of Sholem Aleichem's books were published in 240 editions and a score of languages. Asch's works have been best-sellers in English for many years. Courses on Yiddish literature are today offered in several non-Jewish educational institutions. Despite the extermination of hundreds of Yiddish writers by the Nazis, many others survived to carry forward the Yiddish literary tradition.

Remarkable in its origin, significant in its content, and unique in its history, Yiddish literature demonstrates the possibility of unity in territorial multiplicity. Radiating cosmopolitanism wherever it circulates, it has added leaven to, and formed part of, the general national literature of the particular country in which it flourishes.

14. NATIONALISM. Nationalism arose as a powerful force in modern European history during and after the French Revolution. Jewish nationalism appeared in the last decades of the 19th century—both as an offshoot of the general nationalistic trend in Europe and as the result of a number of developments in Jewish life.

The struggle of the Jews for equal rights in the 18th and 19th centuries was only partly successful. Though the Jews of western Europe did attain political emancipation, those of eastern Europe had virtually no civil rights up to the end of World War I. Even in the Western nations, however, discriminations of various kinds remained in force. Thus, in almost all of Europe, Jews were regarded as a minority, a separate nationality of particular religious or "racial" character.

Modern industrialization considerably modified the occupational structure of the Jews, particularly in eastern Europe. Many Jewish petty traders, innkeepers, and artisans became factory workers. A few took to farming, while the younger people entered the liberal professions. These economic developments, however, often stopped halfway. The agricultural colonization projects of Austrian Emperor Joseph II in Galicia, and those of the Russian czars in southern Russia, never fully materialized. In Russia, employment of Jews in factories did not make headway, in part, because of the influx of landless peasants into the cities after the emancipation of the Russian serfs in 1861. The restrictions imposed on Jews by the Russian bureaucracy with regard to high school and university studies, increasingly barred them from professional life. The Pale of Settlement, where the bulk of the

Jewish population in Russia was segregated, became overcrowded, producing growing economic misery, deterioration of health, and moral depression. The Russian government itself constituted a major anti-Semitic force by pursuing repressive policies and instigating pogroms.

The first mass pogroms, which occurred in 1881 and 1882, opened the eyes of the intelligentsia and other groups among the Russian Jews. Realizing the hopelessness of the Jewish position in Russia, they sought a solution in a Jewish territory outside Europe, where Jews could live as a nation. Many favored Palestine for the establishment of a Jewish commonwealth. Smaller groups set out for the United States, where they attempted to build up Jewish rural colonies. A few followed the call of Baron Maurice de Hirsch to settle as agriculturalists in Argentina.

The back-to-the-soil movement as a prerequisite to a normal national life was a common feature in the outlook of the Palestine group and the "territorialists." The former joined the Zionist movement, which arose under the impact of anti-Semitism developing in Germany, Austria, and France, simultaneously with the anti-Jewish programs of the governments of Russia and Rumania. Those who favored a Jewish territory other than Palestine, set up various territorialist organizations, or explored countries for settlement without achieving practical results.

Diaspora Nationalism.—Side by side with the nationalism aimed at establishing a Jewish state on a territory of its own, there arose at the end of the 19th century another trend of Jewish nationalism which asserted that Jews were a nation even if scattered as minorities among other peoples. The protagonists of this Jewish cultural nationalism, known as Diaspora nationalism or national autonomy, believed that the Jews possessed national self-consciousness and a rich culture of their own. This heritage provided them with the right and the means of carrying on a national life, without obligations to become assimilated into other national groups.

The doctrine of personal national autonomy, which took root in the minds of some Jewish intellectuals, was advanced at the turn of the century by Karl Renner, an outstanding leader of Austrian socialism. According to Renner's conception, nationality can be assumed by a community of individuals speaking a common language and possessing common cultural, economic, and political interests. National affiliation is, therefore, not a territorial matter, but primarily a personal matter of individuals bound together by the same language and culture.

One of the pioneers of national autonomy for the Jews in Russia and Austria was Khayim Zhitlowsky (1865-1943), who attempted to synthesize this theory with socialism in an effort to gain support among Jewish and non-Jewish Socialists. National affiliation meant to him a community of interests of a group of individuals bound together by an effort to cope with cultural problems in a specific manner. Such forces molded the Jews into a separate nationality with a legitimate claim for national rights in the countries where they lived. Zhitlowsky rejected the idea of a territorial concentration of Jews through mass emigration from countries of their origin.

The historian, Simon M. Dubnow (1860-1941), advanced his doctrine of Jewish national

autonomy in a series of essays, *Letters Concerning Ancient and Modern Judaism* (1897 to 1902). Jewish nationalism, according to Dubnow, is not decided by the circumstance of residing in a separate territory, nor by membership in a given "race," nor even by some common interests of individual Jews. It is based upon common cultural ideals and common efforts to accumulate spiritual values. The determining factor is the wish for survival of Jews as a spiritual-cultural community. After the Roman conquest of the Jewish state in Palestine, there emerged, in the course of history, Jewish national-cultural centers which created spiritual values indispensable for the preservation of national self-consciousness. Among these centers were those of Palestine, Babylon, Spain, southern France, northern France, Germany, Poland, and Russia. Realizing that the Jewish position in Europe was deteriorating, Dubnow foresaw a mass transplantation of Russian Jewry to America (which he viewed as eminently suitable for the establishment of a Jewish center), in addition to a center "in Jewish Palestine of the future." Jewish life in previous Jewish centers had developed on an autonomous basis, both in the spiritual and cultural sphere, and in the social and economic field. Dubnow, however, insisted upon the secularization of Jewish autonomy, which was once permeated by rigid religious tradition.

The idea of national autonomy gained a passionate champion in Austria, where the author, Nathan Birnbaum (1868-1937), projected the concept that, contrary to the Zionist philosophy, Jewish nationalism, or "Pan-Judaism," is absolutely feasible for the Jews inside the Diaspora. He held the view that national and cultural autonomy should be made secure in countries with compact Jewish populations. The national organization of Jews in those countries would enhance their political emancipation and make assimilation impossible, contrary to the trend of assimilation which had followed the political emancipation of Jews in western Europe.

Zionists at first disagreed with the view that Jewish national rights were desirable as long as Jews lived in the Diaspora. However, a small group of Russian Zionist Socialists, also called the Renaissance group, formed an exception. According to this group's doctrine of national rights, first pronounced in 1904, each nationality of the Russian Empire, including the Jewish, was to achieve the status of a juridical and administrative unit, with a parliament, or *seym*, for the direction of all matters pertaining to that nationality. The Renaissance group considered that a national Jewish parliament and its various agencies would be the proper preparatory stage for future settlement in a national Jewish territory.

This concept of national autonomy was at first viewed with apprehension among the Jewish Socialists in the Jewish Social Democratic Party, called the Bund (founded in 1897). It won recognition, however, thanks to the efforts of Vladimir Medem, one of the most popular leaders of the Bund. In Medem's view, a nationality presented "the totality of all individuals who belong to a certain historic-cultural group, independent of the fact that they live in different territories." Each nationality would, therefore, be entitled to direct its cultural life autonomously through its own agencies.

The issue of Jewish national autonomy

emerged as a mass movement in the years between 1904 and 1907. During this period Russia lived through its first revolution, and Austrian parliamentary life became democratized by general suffrage. The idea of national rights took hold of the middle classes as well as the labor masses.

In March 1905, Jewish representatives of 32 towns, comprising mostly middle-class elements, met in Vilna and established there a League for the Attainment of Equal Rights for the Jewish People in Russia. The league's program included demands for "civil, political, and national rights," including communal self-government, and freedom of language and education. Composed of both nationalists and "assimilationists," however, the league could not long remain effective. The Zionists, who formed the strongest group among the nationalists, formulated in November 1906 at Helsingfors, their own program for "the recognition of a Jewish nationality with the right of self-government in all affairs of Jewish (national) life in Russia," such as education, health, emigration, mutual aid, and religion.

The Helsingfors platform marked a significant departure of the Russian Zionists from their former negative attitude toward national Jewish rights in the countries of the dispersion. This change was due to disappointment among Zionists over the delay in attaining a charter in Palestine, as well as the growing claims for national rights by vast groups of the Jewish population.

While some of the Zionist leaders accepted the Helsingfors program as an instrument for promoting Jewish nationalism in Russia, others viewed it only as a preliminary stage to the chief aim of creating a Jewish commonwealth in Palestine. For that reason, the nationalists under Dubnow's leadership decided to found, in December 1906, the People's Party, whose program of national autonomy was similar in many respects to that adopted by the Zionists at Helsingfors.

Among the socialist parties, the Bund had included in its program of 1905, in addition to a demand for equal political status, claims for the use of Yiddish in juridical and administrative matters, and the transfer of Jewish cultural affairs to autonomous Jewish organs. The Jewish Social Democratic Labor Party (Poale Zion) also committed itself to the fight for Jewish nationhood in Russia, to be waged simultaneously with efforts toward obtaining a commonwealth in Palestine. This view was not shared by the Zionist Labor Socialist Party, another group of Zionist Socialists rejecting the idea of national autonomy in the countries of the dispersion. These Zionist Socialists held that Jewish nationality could develop only in Palestine.

In multinational Austria, the spokesmen for Jewish nationalism in 1905-1907 advocated universal suffrage and the recognition of Jewish nationality on an equal footing with other nationalities. The Austrian Zionists formed the Jewish National Party; the anti-Zionist nationalists united in the Jewish People's Association. The Jewish Social Democratic Party in Galicia (named the Galician Bund), as well as the Poale Zion Party agitated for national rights among the Jewish workers. The first universal election to the Austrian Parliament, in 1907, witnessed a bitter struggle between the Jewish nationalist and antinationalist candidates in Galicia, where the bulk of the Austrian Jews lived. Four na-

tionalist deputies were elected, who formed the "Jewish Club."

Jewish Nationalism after World War I.—During World War I, which witnessed intensification of nationalism throughout Europe, Jewish nationalists, both in the belligerent and neutral countries, continued to elaborate their programs and prepare for their realization under postwar conditions. In the United States, the American Jewish Congress was created in 1916. Its purpose was to secure, in addition to equal political rights (where such were denied), "national rights . . . in countries where such rights are conferred upon the various peoples residing there." Similar demands were made during World War I by various groups in Holland and Switzerland, and by the Copenhagen office of the Zionist organization. The Jews of Germany and Austria set up committees, or associations, for the defense of the rights of Jews in the Russian provinces occupied by the Central Powers, and also for safeguarding their own rights at the forthcoming peace conference.

The Russian Revolution of March 1917 saw a vigorous resurgence of the movement for Jewish national rights. Virtually all Russian Jewish parties agreed to call a congress which would state the fundamentals of Jewish self-government in Russia, determine the safeguards of a Jewish minority, and consider steps for guaranteeing Jewish national rights in an independent Poland, in Palestine, and in Rumania. Elections to the congress were held in the winter of 1917-1918, but the Bolsheviks, who had in the meantime assumed power, prohibited the congress. The delegates then formed a Jewish National Council, which elaborated plans for a federation of Jewish communities. With the firm establishment of the Soviet regime, however, the Jewish problem in Russia assumed a different aspect. The movement for Jewish national rights, as given expression by the various Zionist and Zionist Socialist groups, was regarded as bourgeois by the Bolsheviks and came to an abrupt end.

The Central Rada of the Ukraine, which declared its independence after the March Revolution of 1917, issued in January 1918 a Statute of Personal Autonomy in the Ukrainian People's Republic, to be applied to all national minorities, including the Jewish. A Jewish National Council, as the supreme body of the autonomous communities, functioned for a short period, and a minister for Jewish affairs sat in the Cabinet. Civil war soon broke out, however, and a statute which had been hailed as an achievement of national autonomy remained a dead issue.

The Lithuanian Republic established in 1919 a Ministry for Jewish Affairs, and in March 1920 granted the Jewish population autonomous status in educational and cultural matters. The communities formed a Jewish National Council, which was accorded *de facto* recognition by the government. In Poland, a Jewish National Council was organized in 1919. Similar bodies were set up in 1918 and 1919 in Rumania, German Austria, Bucovina, Bessarabia, Hungary, Greece, and Turkey; and all demanded national rights.

These demands met with the disapproval, even the stern opposition, of some Jewish groups in Great Britain, France, and the United States, which were afraid that realization of the demands would affect the achievements of emancipation. The American Jewish Committee, in a statement

addressed to President Woodrow Wilson at the Paris Peace Conference, protested against the principle of "a national home for the Jewish People in Palestine," though it welcomed the establishment of a home for Jews in Palestine. Similar attitudes were assumed with regard to Jewish national rights by the League of British Jews and the Alliance Israélite Universelle, the leading organization of French Jewry.

At the Paris Peace Conference, the delegates of the American and west European communities were faced with a solid front of the east European representatives who advocated the recognition of minorities as national entities. Differences between the two blocs were ironed out, and a Committee of Jewish Delegations was formed, offering a fairly united Jewish representation. On May 10, 1919, this committee submitted to the peace conference, in the name of nine million Jews, a set of "clauses intended for the protection of the several national, religious, racial, and linguistic minorities" in the countries of east and central Europe. These clauses were, in one or another phrasing, included in the different peace treaties as minority rights.

The minorities treaties were acclaimed by various Jewish communities, but the governments involved failed to honor them, as the history of the interwar period showed. The rights of Jews to use their mother tongue in conducting public affairs and obtain government cooperation in building up their educational system were disregarded, except in Czechoslovakia, Bulgaria, and Yugoslavia. In addition, the machinery instituted by the League of Nations for the protection of minorities proved unsatisfactory. Complaints submitted to the League by minorities were considered by the governments in question as traitorous acts. Thus, the whole work undertaken at Versailles for the protection of Jewish minorities and the free development of their national rights ended in a virtual fiasco.

World War II resulted in the annihilation of some six million Jews, mainly of east and central Europe. For the survivors, the problem of individual as well as group rights remained. Zionists, though insisting on mass emigration to Palestine, realized that there would remain Jews in Europe who need safeguards to carry on their cultural and national life. The Bund, which rejected the idea of Jewish mass emigration from Europe, continued its claims for cultural autonomy and state support of Yiddish schools. The orthodox Agudath Israel sought autonomous Jewish community organizations with jurisdiction over religious, educational, and social matters. Among other Jewish groups, there persisted an antinationalist attitude opposed to the idea of national rights and favoring the adoption of an international bill of rights to protect all individuals without distinction of color, race, or creed. However, it was to the new State of Israel, established in 1948 and growing rapidly as a significant new Jewish center, that most of the surviving European Jews turned who sought fulfillment of nationalist hopes.

15. ANTI-SEMITISM. The modern term anti-Semitism, for want of a better one, has been applied to the hostility to Jews by non-Jews, a hostility evident from ancient times to the modern era. As a term it is misleading, for it is actually meant to represent an agitation directed against one part of the original Semitic group, the Jews. It is also anachronistic, because the Jews have been a part of the Western World for thousands of years. During that time Jewish society was conditioned, modified, and transformed by Western influences; and, conversely, Western society was, through Christianity, basically influenced by Jewish religion and ethics. Thus, anti-Semitism is not only irrational but morally and spiritually untenable.

As a mass movement, anti-Semitism is more synonymous with hatred of the Jews as a "race" than as a religious community. But even restricted sociological or psychological phases of this prejudice may be termed anti-Semitism. Some students have tried to limit its meaning to the antagonism felt by non-Jews towards the political and social equality of Jews, resulting from the Jewish emancipation. In the light of anti-Semitism's long history, however, and the variety of forms it has assumed, it cannot be so restricted. The character of anti-Semitism changes from age to age; it must be examined in relation to a given area or era, in terms of the peculiar forces operating in a specific society. Anti-Semitism may have one set of connotations to the practicing anti-Semite, another to the object of his aggression. Even to the objective social scientist, anti-Semitism is often a baffling phenomenon, inasmuch as it does not, by reason of its age, persistence, extensiveness, and intensity, seem to resemble other forms of group hostility.

Anti-Semitism's History.—*The Ancient World.*—Anti-Semitism, in the modern sense, did not exist in the ancient world. The Jews, like the Egyptians, Syrians, Greeks, Romans, and particularly the early Christians, were at times the objects of animosity. Generally speaking, the national and religious aspirations of the Jews came into conflict with those denationalizing tendencies of the ancient imperial systems, to which, in the end, they became adjusted. The Hellenization of large masses of Jews scattered in the Diaspora, and their socio-economic transformation, eventually disrupted the stubborn unity of the Jewish people. If the Jews were unique in antiquity, apart from the quality of their religion and culture, it was because they were everywhere connected with a central national group with which they maintained relations.

The rapid growth of the Diaspora favored an anti-Jewish hostility in the Hellenistic East, particularly in cities like Alexandria and Antioch, where the voluntary segregation and the strong communal organization of the Jews aroused fear and contempt. The first real pogrom took place in Egypt in 38 A.D. In the Graeco-Roman world, the character of the Jewish people and of Judaism became a subject of passionate controversy, and the success of Jewish moral propaganda the cause of both conversions and resentment. As a consequence, the Jews became the targets of literary Jew-baiting. Apion asked how the Jews, whose cult had no images, could be legitimate citizens of Alexandria when they repudiated the city's gods. He also adduced the lie of ritual murder, a canard which was to plague the early Christians. Tacitus accused the Jews of alienating their proselytes from imperial loyalties, and Seneca represented the repose of the Jewish Sabbath as congenital idleness. Jewish observance of circumcision and dietary laws appeared to pagans as gross superstition. It would seem that much of the ancient hostility to Jews was based on the feeling that their distinctiveness of creed and their aloofness from sophisticated custom was the studied insult of a barbarous minority to a world of high refinement. Thus, the anti-Jewishness of the ancient world appeared primarily as a literary and folkloristic xenophobia rather than as a mass aggression. "From the disparagement of Jewish 'contribution to civilization,'" observes Salo W. Baron, "to the discovery of an offensive odor emanating from Jewish bodies; from cheap witticisms about circumcision and abstinence from pork to allegations of 'atheism' or donkey worship, almost every note in the cacophony of medieval and modern anti-Semitism was sounded by the chorus of ancient writers."

Medieval Anti-Semitism.—The Jews, for the most part, were excluded from medieval Christian culture and forced to retreat behind ghetto walls. The anti-Semitism of the Middle Ages had one major root in ecclesiastical policy, while another gradually developed on economic grounds. Although there is no evidence that the founder of Christianity wished to see the Jewish people destroyed or degraded, victorious Christendom, through canonical and temporal action, reduced the Jews to a pariah people and evolved in the popular imagination the unbending conception of the Jew as something less than a human being.

To the medieval Christian world, Judaism was not a different religion, but a distortion of the only true religion. Its followers were neither conventional heretics nor pagans, but a people who, having witnessed, as it were, the Christian revelation at its very fountainhead, yet appeared as deliberate unbelievers. Hence, of what crimes were these Jews not capable, what inherent depths of depravity did they not possess, to be so unyielding to the only universal and apparent truth? What illuminates most sharply the medieval conception of the Jew is the conviction of that time that the Jew was (in the words of Cecil Roth) "the only exception which qualified the universal homogeneity of faith." Thus considered, the Jews could, without great difficulty, be maligned as "Christ-killers," "ritual murderers," desecrators of the Host, the cause of the Black Death in the 14th century, and the very "children of the Devil." Europe was later to match in fury, even to excel

in sheer quantity and certainly in scientific efficiency, all the persecutions of the Middle Ages. But only in the medieval period were they so spontaneous, folkloristic, persistent, and universal.

In the 9th century, Jews still furnished an outstanding commercial class. From the close of the Crusades, however, the separation of the Jews from the Christian world was complete, except when they were temporarily tolerated as convenient instruments, as in Italy, where they had status at least equal with the burghers. In the early Middle Ages, Jews had been active in agriculture, trades, and crafts, playing no role in credit and finance. Later they found themselves excluded from all guild-organized Christian monopolies, and subsequently suffered economic displacement from the rising and competitive Christian mercantile classes. Nothing remained but to make of the Jews the commodity of princes and governments, either as moneylenders or farmers of taxes and customs. When the odium of these functions had sufficiently festered in the oppressed classes, the Jews could be cheaply sacrificed with a pogrom or an expulsion, thus channeling resentment away from the oppressing governments. Moreover, the expelled Jew (banished from England in 1290, from France in 1306, from German, Austrian, and Spanish cities in the 14th and 15th centuries) often left behind certain valuable assets, including his deserted property, bonds, and list of creditors. The Jew thus served a necessary, if unpleasant, function in the economic life of the medieval world.

Modern Anti-Semitism.—The Jews entered the modern period stripped of civil rights and bound by economic restrictions. Between Martin Luther's violent disappointment at their refusal to be converted to Lutheranism, and the fury of the Counter Reformation, anti-Semitism began to gather new momentum. This, however, abated wherever in central and western Europe reformers and humanists, like Johann Reuchlin and others, permeated the intellectual scene with a philo-Semitic attitude. The 17th century produced violent contrasts in Europe. On the one hand, there was a general diminution of insecurity for Jews in the west, even a new Jewish feeling in Puritan England. On the other hand, in Poland, the infamous anti-Semitic decade of 1648-1658 produced the bloody revolt by Chmielnicki's Cossacks. Though the mass of Jewry in the 17th century consisted of petty tradesmen, they included other economically valuable members who, like some of those driven from Spain and Portugal, vitalized the mercantile life of Amsterdam, Antwerp, Hamburg, Leghorn, and Bordeaux. In the states which tolerated them, Jews could still use those family-inherited cosmopolitan connections by which they had survived the worst of medieval migrations, again to promote the exchange of goods in Europe.

With the spread of revolutionary ideals from France, the growth of urbanization and urban trade, and the extension to Jews of human rights, the stages of their political emancipation in the west began. In the resultant diffusion of economic opportunity and liberalism, Jews were gradually absorbed into the respective national economies. They were permitted to enter handicrafts, trade at fairs, settle in the cities, build factories, promote exports, rise from peddling

to storekeeping, and engage in the arts and professions. Where economic opportunity was artificially restricted and the hostile pressures remained too high, Jews participated in the domestic shifts of the population when possible, or in overseas migration. During 1889-1914, for example, they constituted 40.7 per cent of the emigrants from Russia. The normal growth of a commercial and professional middle class in those eastern European countries which had been lacking or weak in one (including Poland, where the mercantile and artisan rivalry with Jews went back for centuries), resulted in an economic conflict with urbanized Jews and in the modern upsurge of anti-Semitic fascism.

Having surrendered their internal social autonomy and many of their traditional customs when they were emancipated, the Jews were often made to feel that the price was too high. In Germany, Jews saw their emancipation mocked by the rise of a contagious anti-Semitism based on theories of nationalism and race, and destined to culminate in National Socialism. Dramatized by the Dreyfus Affair, anti-Semitism in France fed on a dangerous cleavage of interests between social classes. In the eastern countries, where anti-Semitism was not only chronic but acute, restrictions of domicile and occupation were the normal conditions. The Pahlen commission of 1888 had found 650 exceptional laws directed against the Jews of Russia, and 90 per cent of the Jewish population leading hand-to-mouth existence. The catastrophe of World War I and the anti-Semitic excesses of the Russian counter-revolutionary forces were devastating. The unprecedented and generous fruits of the successful revolution, which officially abolished anti-Semitism, coincided, however, with internal developments which sealed off intercourse between Russian and other Jews and tied up the richest current of Jewish national addition. With the widespread success of German anti-Semitism before and during World War II, the extermination of six million Jews, and the economic impoverishment of most Jewish survivors in Europe, it seemed that the era of modern emancipation had resulted in a tragic failure.

Sociology of Anti-Semitism.—While no single cause can adequately explain the complex phenomenon of anti-Semitism, social analysts have generally adduced certain broad tendencies relevant to its rise in the modern world. The widespread weakening of belief in ethical norms and the cynicism concerning morality has favored the production of an amoral pattern of social behavior not inhospitable to the growth of prejudice. The mushrooming of nationalistic and pseudoscientific dogmas has made "race" into an obsession with some peoples of the world. The great social strains and economic dislocations of capitalist society have bred stresses and animosities of which the Jews are often made the bearers.

The terminology of anti-Semitism has varied from era to era according to the need at hand. Anti-Semitism was couched in religious terms when religious dogmas were dominant, and appeared in the guise of anthropological phraseology when race theories were evolved. Where capitalism was hated, Jews were labeled capitalist, which did not prevent their being called communistic when the anti-Semite chose to shift ground of attack. At almost all moments of

high social tension, political capital could be made out of anti-Semitic slogans and subterfuges. Social analysts have long observed the discrepancy between the anti-Semite's real and stated reasons for his hatred, and his characteristic disregard of logic and scientific facts. For their activities and propaganda, anti-Semites have traditionally seized upon and distorted certain historical conditions specific to the Jewish people.

A most common and obvious pretext for persecution has been the religious unity and uniformity of the Jew, as manifested in a body of special attitudes, sentiments, folkways, observances, and institutions. Though Jews made no fetish of race and banned intermarriage only on religious grounds, their concept of a "chosen people" has been widely misinterpreted as a Judeocentric view of history, or as a special election and a racial monopoly. The conditioning of a ghetto way of life, on the one hand, and of international family ties, on the other, have often made of the Jew an irritant to nationalizing majorities as well as to provincial communities, and have provoked anti-Semites to charges of "dualism of Jewish interest." The traditional minority status of the Jew has likewise kept him prey to suspicion, fear, and antipathy, giving the stereotyped Jew of the anti-Semitic legend the semblance of an "international problem."

As minority groups within their respective countries, Jews, whether pro- or anti-Zionist (excepting total assimilationists), have always felt that the identity of Jewish life must be preserved side by side with the integrity of their respective citizenships; and that this preservation of their tradition in no way diminishes their true citizenship, or conflicts with the concepts and practices of a democratic community. Some sectors of modern Jewish communities, however, have rejected the theory of Jewish "homelessness" and consequent Jewish nationalist aspirations, seeing in these concepts a danger to complete identification with their respective countries and anticipating suspicions of paradoxical allegiance.

Another source of anti-Semitism and of the anti-Semite's stock of arguments has been the long-standing marginal economic status of the Jews. An agricultural people originally (and again, to a degree, in modern Israel), the Jews were driven by dispersion and restrictions into handicrafts in the early Middle Ages. Guild monopolies later forced them out of the handicrafts into the lowliest manual labor or into commercial activities. Having pioneered in developing the commerce of Europe, Jews were once more ousted by municipal corporations, trade guilds, and ecclesiastical decrees. Excluded from the soil, the handicrafts, and legitimate commerce, the Jews were pushed into forming a society of peddlers, middlemen, and moneylenders, thus, incidentally, assisting in the general European transition from an economy of barter to one of finance. Invidious recognition of these services took shape in the indelible myths of "Shylock," of the "international financier," and of the "guileless Gentile."

The special economic status of Jews continued, to a modified degree, into modern times. Jews in the modern era, writes Mary Beard, "have done what they always had to do; namely, pioneering in certain fields and lands where others had not staked out claims. In the Middle

Ages, Jews lent money to the small businessman or turned to frontier lands disregarded by mightier Gentile usurers who dealt with kings and popes. Under Absolutism they became agents of the lesser courts, while Gentiles mastered the royal businesses of stronger monarchs. In modern times, finally, the Jews entered new industries, like the Rathenaus in the German electrical field, transformed old industries, or occupied certain neglected lands like Russia, Poland, and Austria."

The economic myths of anti-Semitism survived the emancipation period, even when the Jews, where permitted, engaged in normal middle-class activities. Conditioned by their historical experience and still concentrated in large cities, Jews were slow to arrive in fields of agriculture and modern industrial occupations. The bulk of Jewry was long contained in central and eastern Europe, where industrialization, which gave Jews an opportunity to rise to new economic positions, also prepared the way for a new, competing middle class of non-Jews. This new middle class strove to displace their Jewish competitors and eagerly turned the weapon of anti-Semitism to that end.

To those classes at the bottom of the social and economic scale—the debt-ridden peasants and impoverished urban workers—the Jews were held forth as the agent of all misery. As a conspicuous and vulnerable minority, the Jews thus provided an ideal scapegoat upon which the wrath of the aroused masses could be directed in times of economic crises. Czarist Russia frequently resorted to this inhuman strategy.

Psychology of the Anti-Semite.—The anti-Semite often shows an amazing readiness to believe, with an almost psychopathic obsession, precisely what is most unacceptable to the rational mind—for example, the absurd forgeries of the "Protocols of the Learned Elders of Zion." To the social psychologist, this predisposition indicates that the anti-Semite's hatred is not based upon a mere confusion in political or economic thinking. The anti-Semite, rather, is seeking satisfaction of a definite psychological need, the need of an outlet for certain hostile social attitudes having their source in specific economic, social, or personal frustrations. He requires a symbol for the displacement of his hostility and a self-defense against the sight of his own failure. While there is no inherent reason why the Jew should be the object of aggression, a combination of historical factors renders him the classic target. The anti-Semite's stereotype of the Jew thus takes shape, based upon the hater's distorted conception of differentiating "Jewish characteristics."

The anti-Semite displaces his aggression toward the Jew because he cannot overcome the feeling of guilt which results from consciously hating a member of his own group. He projects his own feared, despised, suppressed, and guilty attitudes upon a weaker object outside his group; he rationalizes by substituting consciously acceptable motives for true but censored ones. Anti-Semitism may thus be defined in psychological terms as "a displacement of aggression with a projection of guilt and a rationalization of motive." Under the stresses of modern society, frustration and anxiety are so widespread that anti-Semitism can easily and rapidly take on the proportions of a mass movement. This serves to shield from public scrutiny the real

underlying social disorder. Thus, anti-Semitism serves both as a satisfaction and a screen.

Modern Anti-Semitic Theories.—The era of political emancipation for the Jews saw the rise of a modern anti-Semitism assisted by the evolution of pseudoscientific dogmas about race. Whether Jews are a race in a strictly biological or anthropological sense is doubtful. Anthropologist Carleton S. Coon considers them only as a group "united biologically as is the average intermarrying social or geographical unit," with "racial peculiarities which serve to differentiate the majority of them anthropometrically from their non-Jewish compatriots and neighbors." Melville Jacobs, however, states that "there is no evidence for the existence of a distinctive Jewish blood or 'race,'" though "it will continue to be possible to identify many of the Jews on sight, just so long as many are forced to remain in their present web of economic and social exclusion and persecution."

Undoubtedly, many "Jewish peculiarities" are merely behavior patterns which have been evolved in the process of the Jew's efforts to survive in a persistently hostile environment. But regardless of whether Jewish attributes are caused environmentally or by heredity, it is true that Jews have been considered and treated as a race. This assumption has been one of the gravest factors in modern anti-Semitism, and the influence it has exercised on events cannot be overlooked. The medieval view of the Jews held that they were an unassimilable religious fraternity. Modern anti-Semitism, to the contrary, has portrayed the rapidly assimilating Jews not as a separatist body of nonconformists, but as an insidious citizenry and a corrupting ferment. From the implacable and organized intolerance of racial and "intellectual" anti-Semitism, the victims could no longer escape through baptism or the most adroit protective disguises. This form of anti-Semitism poisoned that era which the Jews called their emancipation, and became a powerful force in world affairs.

To the old classic charges based on the lie of ritual murder, or derived from ecclesiastical animosity and the hostility of reactionary political groups, new accusations were added in the 19th and 20th centuries. It was alleged that an inferior breed of migratory Jews was infiltrating central and western Europe from the east; that the Jews artfully concentrated in commerce and the professions, and in their materialistic drive to power managed somehow, within a single conscious and conniving unit, to be both capitalists and Marxists; that Jews lacked patriotism, were responsible for defeats in war, and promoted liberalism, revolution, artistic experimentalism, intellectualism, moral decadence, gross materialism, and spiritual pacifism.

In the struggle of European nationalisms and the social and economic crises between two world wars, anti-Semitism became the convenient center of convergence for many movements and motives. In the words of Salo W. Baron:

It included those who wanted the elimination of Jewish competition in the economic field; those who wished to destroy the Jews as capitalists; those seeking revenge on Jewish leaders of socialism; those who believe in racial purity, and the superiority of their own race over all others; those demagogues who detected in the excitation of popular anger against the Jews a means of personal aggrandizement; and those who sought to deflect popular resentment of their own misgovernment into other channels.

Indifferent to logic or proofs, heightened by economic depression and national humiliation, yet mitigated but little by prosperity or victory, anti-Semitism seemed to be clearly not so much the "Jewish problem" as a problem of the non-Jews and their societies.

Jewish Reactions to Anti-Semitism.—Until the 18th century, the relationship of Jewish society to the outside world was comparatively simple. The bulk of Jewry had a corporate character with duties and economic functions, but generally no rights freely derived from common citizenship, and few human satisfactions not limited or crushed by an oppressive environment. The emancipation which began in the 18th century not only ended the simplicity of the relationship between Jews and the outside world, but demanded new attitudes by Jews to their own group. The emancipation was based on an individualistic rather than a group basis, and arrived, moreover, in an era of developing and conflicting nationalisms. It was neither welcomed by the anti-Semites nor considered as an unmixed blessing by most Jews.

In general, the reaction of Jews to anti-Semitism took the form of increased ethnic and cultural self-consciousness. It also resulted in other types of responses ranging from self-assertion to self-effacement, even self-hatred. Great spiritual conflicts attended the Jews' efforts at adjustment. Finding that society rarely accepted them without reservations, Jews were often in general confusion as to what they were supposed to be, or do, to resolve "their" problem.

Emancipation had made a competition of ideas possible in Jewish society by exposing it to the surrounding secular forces and philosophies. Hence, there appeared a variety of proposed solutions deriving from movements then current in Europe, such as nationalism, international socialism, migrations to new territories, social humanism, cultural pluralism, and perfectionist theories of intersectarian reconciliation. As reactions to anti-Semitic pressure, the developing Jewish attitudes led, in effect, to what may generally be characterized as separatist or antiseparatist solutions.

A Jewish Homeland.—Although anti-Semitism was definitely a powerful catalyst of political Zionism, it cannot be regarded as its cause; for Zionism has distinct features of an irrepressible Jewish tradition. The viewpoint of Zionism toward modern anti-Semitism is that emancipation had liberated individual Jews but not the Jewish people, and that the abnormality of Jewish society ill derived chiefly from its permanent minority status everywhere. In that classical land of Jewish apologetics, Germany, the effort of Jews to become assimilated was not a success. Where assimilation was successful, as in socially and economically egalitarian Soviet Russia, the survival impulse of Jewish identity, along its traditional and historical lines, met with obstacles. Where attempts were made to treat Jews according to the principle of safeguarding national minorities, the result was generally a failure in practice. Hence, Zionism held that it was necessary to separate the Jews physically, that is to say geographically and politically, from their hostile environment by producing a center of "normalized" Jewish life in Palestine. This, it was believed, would also relieve the anti-Semitic pressure on Jewish society in the Diaspora.

Assimilation.—The viewpoint at the opposite

extreme from Zionism maintained that under conditions of universal fellowship the Jewish communities were capable of assimilation, linguistically and biologically. The assimilationists stressed that any differences which served to identify Jews were due to socio-economic exclusions and other conditioning factors. Since changes in social relationships had the effect of obliterating differences, the Jewish minority could solve its problem by sacrificing its identity.

As to this theory, however, even if the act of total absorption were indeed morally or intellectually acceptable, the practical means were lacking. There was not yet a specific therapy for existing anti-Semitism, nor the necessary mutual desire for large-scale intermarriage. Feasible perhaps on an individual basis, any wholesale absorption would result only in distinct groups of "new Christians" or secular but still distinguishable "post-Judaic" communities.

Secular Nationalism.—Still another view discounted the existence of a "Jewish race" for lack of scientific evidence, but pointed to a Jewish community of interests, the Jewish religion, the historical continuity of cultural forms, and other nonbiological factors. Solutions based on this outlook sought the survival of one or more traditional possessions, and offered no objections to the loss of orthodox dogmas and ethnological or national patterns.

Under the influence of secular philosophy, there were Jewish movements which advocated a socio-economic change in the structure of Jewish society and aimed at the creation of a bicultural or multicultural Jew. Jewish secular nationalism either sought to obtain recognition for Jews as a minority nationality (as in the eastern European multinational states), or, as in Zionism, concentrated on a single territorial objective, Palestine. The solution by which it was proposed to settle compact masses of Jews on favorable new territories, regardless of historical ties and sentiment, found few or no available areas for this purpose. Except for Birobidzhan in Soviet Russia, which drew on some of the ideas inherent in territorialism and Zionism, these attempts resulted merely in small, philanthropic experiments of little permanent significance.

Other Solutions.—At opposite ideological poles on concepts of Jewish adjustment were the influences of extreme religious orthodoxy and international socialism, with their contrasting adherence to theories of divine salvation or social revolution. Still other theorists, faced with the complexity of explaining and removing anti-Semitism, regarded the Jewish problem as incapable of facile solution, but maintained that, even without a specific therapy, latent anti-Semitism could be prevented from becoming overt in the democracies. Many Jews who assigned an historical and cultural value to their heritage, and whose survival impulse continued strong despite anti-Semitism, found that they could achieve a balance between absorption and isolation in the American-type democracy embracing many different cultural and religious groups.

ISIDORE ABRAMOWITZ,

Author, "The Great Prisoners"; formerly an editor of "Jewish Frontier."

16. ZIONISM. Zionism, during the half century preceding the emergence of the State of Israel in 1948, was the organized political effort to establish Jews in need of a homeland as an autonomous and self-governing people in Palestine. The movement had as its aim the development in Palestine of a secular and democratic society, based on a belief in the national and ethnic unity of the Jewish people, and inspired by the modern Hebrew renaissance in language, culture, and social and political ideas. At various stages preceding the proclamation of a Jewish state, Zionism sought this consummation by specific international sanctions, without prejudicing in any way the rights and political status of Jews in any other country, or the civil and religious rights and general welfare of existing non-Jewish communities in Palestine. The terms of the Basle Program, as formulated in 1897 by the First Zionist Congress, were as follows:

Zionism strives to create for the Jewish people a Home in Palestine secured by public law. The Congress contemplates the following means to the attainment of this end: (1) The promotion on suitable lines of the colonization of Palestine by Jewish agricultural and industrial workers. (2) The organization and binding together of the whole of Jewry by means of appropriate institutions, local and international, in accordance with the laws of each country. (3) The strengthening and fostering of Jewish national sentiment and consciousness. (4) Preparatory steps toward obtaining Government consent, where necessary to the attainment of the aim of Zionism.

In the terminology characteristic of the movement's literature for a half century, the justification of Zionism has been expressed in the following words: "The homeless and landless Jewish people, which is compelled to migrate, strives to overcome its abnormal political, economic, and spiritual condition by re-establishing itself in its historic homeland through an uninterrupted immigration and settlement, and by recreating in Eretz Israel (Land of Israel) its national life with all the essential features of a people's national existence."

Modern political Zionism was profoundly affected and greatly accelerated, but not basically caused by anti-Semitism. It has, nevertheless, been so mere philanthropic movement for the relief of Jews in distress; nor has it been a mere movement for any promiscuous territorial solution of the Jewish problem, or a movement which might have been satisfied with large-scale colonization elsewhere than in historical Palestine. Its modern phase originating in the 19th century among the Jewish masses of eastern and central Europe, Zionism amalgamated a cultural renaissance with a national political movement rooted in a complex of ideas, emotions, backgrounds, and practical necessities. Directed toward stirring Jewish ethnic loyalty, nationalist sensibility, cultural vigor, and revolutionary social reform, secular political Zionism offered its followers the theory of an escape from typical Jewish abnormal-

ities of status, both economic and psychological. It appealed even to Jews in countries where their lives and liberties were comparatively secure, to say nothing of those Jews in countries where physical danger and chronic social-economic distress was their lot.

Political Zionism evolved in a climate of opinion which held that Jewish political emancipation had not solved the Jewish problem; that the Jews had not, in the fullest sense, been admitted into their respective societies; and that they would always constitute a minority group in the more unfavorable countries of the world. For these reasons the major principle of Zionism asserted the "historic right" of the Jewish people to build its national home in Palestine and the moral obligation to recover its wastes and unsettled places.

According to typical Zionist thought, "not only the settlers as individuals, but the collective body as a people, when it has once more put into the country a part of its national wealth—men, capital, cultural institutions—has again in the country its national home, and has the right to extend and to complete its home up to the limit of its capacity." For those Jews who saw Zionism revive Jewish creative powers for colonization quite unsurpassed in the century, build social institutions, and culminate in self-government, the movement seemed to be the logical consequence of prophecy and tradition in past Jewish history. The United Nation's decision on the partition of Palestine (Nov. 29, 1947), the Jewish provisional government's proclamation of the State of Israel (May 14, 1948), and the subsequent diplomatic recognition accorded the new state by both great and small powers, were, in effect, an acknowledgment of the organic maturity and political reality of a half century of Zionism.

Origin and Development of the Zionist Idea.—The idea of a national future, so lyrically invested in Jewish prophecy, liturgy, and secular literature, was never wholly uprooted. In the centuries of dispersion, it survived as more than a mere nostalgia for Zion or an ethnic memory-pattern of Palestine. The vitality of the Zionist idea was in direct proportion to the extent of Jewish exclusion from the privileges and security of the general community. It was repressed in unsuccessful rebellions, like that of Bar Cochba (Kokba) in 132–135 A.D. It rose from the ashes of one Messianic movement after another, as in the cases of the pseudo redeemers, David Alroy (c.1160 A.D.) and Sabbatai Zevi (1626–1676). Its devotees sought to hasten the Messianic era through the cabalistic devices of fast and prayer. Beginning with the late 17th century, however, it progressed from medieval pieties to mundane projects when the concept of a large-scale return to Palestine took shape in many utopian and curiously ingenious schemes, petitions, memoranda, letters, and pamphlets.

Earliest approximations of modern Zionist attitudes are to be found in the views of the distinguished 17th century Amsterdam rabbi, Manasseh ben Israel, who so eloquently pleaded the cause of Jewish readmission into England; and in the expressions of Puritan friends of the Jews who welcomed them back as an ancient "nation." Similar attitudes were held by Christian pioneers of religious liberty in many lands; were expressed in the idea of doing "national justice" to the Jews held by Christian writers on the restoration of Israel; or formed the basis of many schemes to

establish autonomous Jewish colonies. The emotional attachment of Western peoples to the Bible and Biblical prophecy generated an embryonic political Zionist idea in the minds of many intellectuals, from the philo-Semitic pamphleteers of the 17th century to such eminent 19th century personages as the Earl of Shaftesbury, the English mystic Laurence Oliphant, and the humanistic novelist George Eliot. Dislodged from any articular reference to Jews, the Zionist idea furnished nonconformist Christian vocabulary and Western poetic speech with enduring imaginative terms like "The Promised Land" and "Zion," or as expressed in the poetic wish of William Blake that "Jerusalem" be built "In England's green and pleasant Land." The concept of a religious commonwealth after the Hebraic pattern affected the character and mode of Puritan colonization in America. Thus, the "Zionist" motif also took course quite apart from its specifically Jewish conception and use.

During his campaign in the east, Napoleon Bonaparte in 1799 issued a call to the Jews "to restore ancient Jerusalem." Though vague, fruitless, and only a military expedient, this summons nevertheless reflected in some measure the climate of contemporary European opinion. Napoleon's later convocation of a Great Sanhedrin of Jewish legislators failed to re-establish that ancient institution of government, yet succeeded in dramatizing modern recognition of a Jewish community of interests.

The secular and political Zionist idea of the late 19th century was thus anticipated in a combination of mystical and rational motives. Missionaries hoped for the conversion of Jews to Christianity as a precondition of their return. Enlightened philo-Semites saw in the restoration of Israel an act of collective justice to a persecuted people. To diplomats watching the fortunes of the troubled Near East, the resettlement of the Jews appeared as a possible medium for advancing their interests. To well-meaning philanthropists, the rebirth of a Jewish nation in Palestine was seen as an aid to the alleviatory colonization of Jewish emigrants.

Both within and without the Jewish communities of Europe, currents of thought and historical events were preparing Jews for the political idea of a Jewish restoration. Hasidism, a remarkable social-religious movement which began in the 18th century and expressed the revolt of the simple village Jew against the intellectualism, abbinism, and authority of the urban Jew, stirred the eastern masses into a new individualism, a more democratic pattern of living, enriched by static and folkloristic elements. Haskalah, the Jewish enlightenment movement which paralleled the secular and cosmopolitan development of the European Enlightenment, brought thousands of Jews out of the traditional community structure to a more secular outlook. It infused starved minds with fresh enthusiasms and set into motion competition of new and aggressive ideas. It accelerated a renaissance in culture and manners, revision of Judaism, and rich creations in Hebrew, Yiddish, and European literatures.

Coinciding with these stirring cultural and social developments was the progressive achievement, particularly in western Europe, of legal guarantees for the emancipation of the Jews as individual citizens. This trend, which further shattered the former corporate character of Jewish society, did not, however, evolve an equivalent

solution for assimilating whole masses of Jews deeply conscious of their ethnic unity and traditions. Precisely in eastern Europe, where the Jewish masses were most concentrated, their misery and humiliation greatest, and their ethnic consciousness strongest, did political and economic emancipation make little or no headway. However feasible Jewish assimilation or Europeanization proved in individual cases, it did not work out effectively on a mass scale, whether by coercion, as in eastern Europe, or by voluntary adaptation, as in the west. Jews who streamed into the new economic services and intellectual positions of an urbanized, industrialized, and capitalistic economy, only succeeded in giving anti-Semitism new forms of accusation and rationalization.

Secular political Zionism, however, was not a mere reaction to anti-Semitism. Antedating Zionism's political formulation at the end of the 19th century was the basic and widespread Jewish consciousness of an indissoluble connection with Palestine; indeed, experiments in Jewish colonization already existed. The European Enlightenment, liberalism, and the Jewish emancipation might possibly have retarded the development of acute Jewish nationalism, had these movements embraced more than a limited class of intellectuals or covered more than the limited areas of Western Jewish society. The persistent Zionist idea, nevertheless, would sooner or later have arisen in defensive or affirmative reaction to the continuing ethnic absorption, which the overwhelming majority of Jews did not favor as the price of liberalism. There is little doubt, however, that the gross hostilities of nationalism and anti-Semitism stirred both the secularized and unassimilated Jews to common political Zionist action; that the contemporary nationalist theories in Europe furnished Zionism with some organizational models and a fresh modern appeal; or that the imperialism which began to impinge on the Middle Eastern world shaped the historical background, though not the motive and practice, of Jewish colonization in Palestine.

Between 1880 and 1910 a considerable proportion of world Jewry was in feverish migratory flight from all types of oppression. The consequences of World War I were catastrophic enough for the Jewish communities, especially in the eastern countries of Europe. With World War II, the concentrated loss, under the German domination, of six million Jewish lives, a third of the whole Jewish people (and that Yiddish-speaking third which was perhaps closest to the creative sources of its folklore and civilization), the promise of a modern era of Jewish emancipation seemed to have received the final mark of bankruptcy in Europe, and the Zionist idea the severest test of historical validity.

Main Currents of Zionist Theory.—*Moses Hess.*—The first modern thinker to pose the Jewish question logically, in the context of nationalist movements set off by the French Revolution, was Moses Hess (1812-1875) in his book *Rom und Jerusalem* (1862). A leading socialist in the days of Marx and Engels and a talented political philosopher who had fled from Germany after the revolution of 1848, Hess found the emancipation of the Jews not worth the price exacted by their assimilation. The underlying principle in the Zionism of Hess was the indestructibility of Jewish nationality. The motivating idea was the desire to see the spirit of Jewish

tradition, with its acute sense of social justice and its combination of a national and cosmopolitan outlook, survive through democratic socialism in Palestine.

Leon Pinsker.—Perhaps the first political Zionist in the modern sense, one who anticipated Theodor Herzl in the recognition of practical necessities (especially a politically secured territorial center for the Jews), and one of the first Russian Jews to treat the Jewish problem scientifically rather than apologetically, was Leon Pinsker (1821–1891). Pinsker turned against his personal environment, the world of the Russian and Polish Jewish intellectuals, whose liberal ideas were dissolving the foundations of traditional Jewish social and cultural life. An eyewitness of pogroms in Russia, Pinsker in 1881 issued his very influential pamphlet, *Autoemancipation*. A physician by profession, he diagnosed the condition of the Jewish people and the psychology of anti-Semitism in terms of social pathology. Why were the Jews hated? Because, wrote Pinsker, without a national existence they have nevertheless continued to display the spiritual characteristics of a national entity. "Judaophobia," he declared, "is a psychosis," a "disease" which two thousand years of Jewish exile has made "incurable." The Jew is "a stranger everywhere, wanted nowhere, and having no home of his own, he cannot claim hospitality." The treatment of this "disease" can begin only with the emigration of Jews, with the consent of the European powers, to some territory where they would lead the national life of a "normal people." For their effective liberation, however, the Jews must not continue to rely solely on the progress of civilization, but on their own inner forces, their own historic will, on self-help or "autoemancipation."

Achad Haam.—Under his famous pen name of Achad Haam ("One of the People"), Asher Ginzberg (1856–1927), a philosophical essayist writing a restrained and admired Hebrew prose, evolved a theory of Jewish nationalism which was to permeate all Zionism and supplement its emerging political ideology with a metaphysical conception of the national spirit. In his celebrated theory of cultural Zionism, he projected the positive character of Jewish nationalism, in contrast to a mere defense against anti-Semitism and ethnic assimilation. Achad Haam combined the classical prophetic tradition with a modern positivist biological theory of the national will-to-live, in a secular and cultural synthesis of traditional Zionism and modern nationalism. His emphasis on the necessity of Hebrew culture made a deep impression on the Zionist movement.

Less effective, however, was his criticism of practical Jewish colonization. This criticism, inspired by the first experiments in Palestine, held that it was unreasonable to expect of Zionism to provide a quantitative solution of Jewish needs by the concentration of huge masses in Palestine. For Achad Haam, the primary Zionist concern was qualitative and metaphysical: the resolution of the chronic spiritual crisis of a Jewry too long alienated from the original national community of sentiment. Not the number of settlements, their size, or the colonization of millions would give Palestine the power to serve as the focal point of a radiating Jewish renaissance, he believed; but only its rise as a purely spiritual-cultural center of Jewish civilization. What Palestine needed, therefore, was an elite of culture, a selected and

dedicated community of Jewish farmers, artisans, and scholars, whose example and way of life would rejuvenate the Jewish national idea everywhere in dispersion, and whose spiritual fruits would nourish the total biological and cultural organism of modern Judaism.

Theodor Herzl.—Theodor Herzl (1860–1904), the dominating personality of the Zionist movement, formulated but did not originate the theory of political Zionism. The idea of generating political conditions favorable to the establishment of a Jewish state in Palestine was already, in the 1880's and 1890's, a widespread if still ineffectual ideal of hundreds of Zionists and Jewish student-colonies all over the European continent. A rising man of letters in a central European milieu of middle-class secularized culture, Herzl had no particular feeling for traditional Jewish values. His outlook was rather detached from the living stream of Jewish ethnic life and the problems of eastern Jewry. Nevertheless, he was profoundly shaken and wrenched out of his conventional literary career by the Dreyfus Affair, which he covered as the leading correspondent of the Vienna *Neue Freie Presse*.

In his book, *Der Judenstaat* (1896), Herzl published his influential conclusions that assimilation was a failure; that anti-Semitism exists and is inevitable wherever Jews live in considerable numbers (indeed, was growing in the course of their larger migrations); and that the Jewish question, therefore, "is a national question, which can be solved only by making it a political world-question to be discussed and settled by the civilized nations of the world in council." Given international sanction, the creation of a Jewish state would require a "Society of Jews" to make the necessary political preparations, and a "Jewish Company" to serve as the instrument of colonization. The Herzl program was a call to large-scale action by Jews, the abandonment of mere philanthropic ventures in colonization, the employment of Jewish capital and modern technology, and, above all, the acquisition of a charter for an autonomous Jewish homeland guaranteed by international approval.

Offering a sharp contrast to religious and cultural Zionism, Herzl's secular nationalist program was a historical step forward. It provided the theory which was to create the World Zionist Organization and its basic institutions. Herzl's program made no metaphysical reference to creative forces in Judaism, or to a Hebrew culture and national language, or even to radical transformations which would develop a Jewish society different from its old middle-class and European forms. Nor, when the body of this program came to be directed specifically toward Palestine as its goal, did it anticipate problems with regard to the existing non-Jewish community there, much less the yet unborn era of Arab nationalism. But the purely political content of Herzl's program was historically momentous for its internal effects on Jewish society during the seven short years of Herzl's leadership, before his death in 1904.

Herzl's political negotiations for a charter came to naught. He died under the enormous burden of his work at the age of 44, conscious of diplomatic failure. Yet, with all his shortcomings, Herzl was probably the most successful leader which modern Jewish society produced. With the infectious energy which he, more than any other single individual, infused into the Zionist movement, Herzl and his colleagues set up

beginning in 1897, the series of congresses which constituted the first Jewish parliamentary leadership since ancient times. Democratic and international in scope, political Zionism, within only two to three decades, came to represent great masses of Jews whose passion was to achieve the rehabilitation of nature, man, and culture on the costly and desiccated wastelands of Palestine.

The Zionist-Socialists.—Among the numerous shades of Zionist ideology which were to influence groups of adherents, create political parties, and determine the future social fabric of the State of Israel, some were the products of theoretical syntheses, such as the synthesis of Zionism with socialism, orthodox Judaism, or laissez faire capitalism. Such major forces were the Marxist Zionism of Ber Borochov (1881-1917), the non-Marxist socialist Zionism of Nachman Syrkin (1868-1924), and what might be termed the Hebraic socialism of Aaron David Gordon (1856-1922).

The synthesis of socialism and Zionism was contemporaneous with the emergence of secular political Zionism itself. Nachman Syrkin, who first attempted it, took as his frame of reference the problem of an ever abnormal social-economic status of the Jewish masses. To attempt a wholesale reform under existing conditions, declared Syrkin, was only to create so many assimilating middle-class individuals with fresh problems. For the Jewish proletariat, therefore, there was a "double-area" of socialist activity, both where they resided and in the upbuilding of Palestine. To avoid the social infirmities of modern life, and to build a virgin society, from the very beginning, on the basis of social equality, meant for Syrkin that "the Jewish state must be socialist state if it is to be realized."

Ber Borochov, under the special conditions of the European multinational states, evolved intricate theories of the role of a landless nation and Jewish proletariat, as well as a principle of organic unity between socialism and working-class nationalism. "The fact that the Jewish people possesses no territory," stated Borochov, "is the primary cause for the abnormality of the working place of the Jewish laborer and of the strategic basis of the fighting Jewish proletariat." Wholesale economic redistribution is impossible everywhere. Only in Palestine can the Jewish worker develop a normal economic structure by entering all branches of production and so find its "strategic base" for achieving socialism.

A. D. Gordon, whose revered Tolstoyan life and figure in Palestine symbolized a revolt against the intellectualization and materialism of Jewish society, preached a return to nature, simplicity, labor, love, and mutual aid. According to Gordon, the practice of these virtues, and not the efforts of statesmen like Theodor Herzl or prophets like Achad Haam, would bring about Jewish redemption. Gordon's ideas and sentiments, constituting a romanticized version of the materialist analyses and providing the ingredients of an indigenous Hebraic socialism, deeply inspired the young Jewish pioneers with the conviction that they had a proprietary right only to land which they had bought, worked, and fructified with their own bare hands. A religion of labor was the justification of their return to Palestine and the creative principle of Jewish national life.

Other theoreticians, opposed to the secularization of Zionism, established a synthesis of nationalism and orthodox Judaism to safeguard the

traditional religion. The revisionists of the Zionist movement, who dissented from the official political strategy, did not so much evolve a theory of Zionism as a species of militant, later violent, tactics.

In the evolving practice, the rigid dogmatic materialism of the early Marxists was modified. Applied to the task of colonizing a homeland not only for the Jewish proletariat but for the whole Jewish people, the socialist energy was largely directed into cooperative institutions. Despite internal doctrinal divergences and the unceasing generation of party groups, factions, and sectarian conflicts, the World Zionist Organization, already firmly established before the death of Herzl, maintained a central neutrality. The movement had sufficient discipline, elasticity, broad common appeal, and democracy to retain its unity through one crisis after another.

Zionist Colonization in Palestine.—In 1897, at Basle, Switzerland, Theodor Herzl called together the First Zionist Congress, which evolved into a democratic body elected by popular vote. This congress founded the World Zionist Organization, whose membership in all countries adhered to the Basle Program, a definition of basic Zionist objectives. The poorest contributor of the nominal dues (the shekel) had equal representation with the largest donor of funds, thus marking a complete break with traditional philanthropic paternalism and guaranteeing Zionism as a mass movement. Congress decisions remained binding, while elected officers and bodies directed policy. In the Jewish National Fund (Keren Kayemeth) for the purchase of land to belong to the people and be given in hereditary lease to Jewish farmers, and in the Palestine Foundation Fund (Keren Hayesod) for general activities, the congresses forged practical instruments of colonization.

Despite the diplomatic failure of Zionists to obtain a Turkish charter, the years before World War I witnessed the beginnings of colonization. The war was catastrophic for the communities of western and central European Jewry, but on a basis laid by Dr. Chaim Weizmann (b. 1874), the pilot of Zionism after Herzl's death, the British Cabinet authorized its foreign secretary, Lord Arthur J. Balfour, to declare British support of Zionism as embodied in the memorable Balfour Declaration of Nov. 2, 1917:

His Majesty's government view with favor the establishment in Palestine of a national home for the Jewish people, and will use their best endeavors to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine or the rights and political status enjoyed by Jews in any other country.

Official confirmation of this historical document was given by all the Allied Powers, accepted by the Conference of San Remo (1920), and included in the Treaty of Sèvres (1920) between the Allies and Turkey. In January 1919, the Emir Feisal, then the most authoritative spokesman for the Arabs, and Chaim Weizmann for the Zionists, signed an agreement providing for the carrying out of the Balfour Declaration, for large-scale immigration by Jews into Palestine, and for the protection of Arab rights. On June 20, 1922, a joint resolution was adopted by the United States Congress in Washington: "That the United States of America favors the establishment in Palestine of a national home for the Jewish people," with proper safeguards for the non-Jewish communities. On July 24, 1922, the Coun-

cil of the League of Nations confirmed the Mandate for Palestine, which came into force on Sept. 29, 1923. The mandate, incorporating the Balfour Declaration, imposed on the mandatory power (Great Britain) the obligations of securing conditions favorable to the establishment of a national home by facilitating Jewish immigration into Palestine and encouraging close settlement on the land, and provided for a Jewish Agency to advise and cooperate with the Palestinian administration. A convention between the United Kingdom and the United States, dealing with the rights of American nationals, properties, and institutions in Palestine, was signed on Dec. 3, 1924, and in due course ratified. This document included the entire text of the Palestine Mandate and, in its preamble, restated the Balfour Declaration. An enlarged Jewish Agency, including both Zionists and non-Zionists and constituting one of the most completely representative gatherings of Jews to meet in modern times, was established at the Zionist congress at Zurich, Switzerland, on Aug. 11, 1929.

The modern colonization of Palestine by Jews was the result of periodic waves of immigration, each cycle known as an *aliyah* or "ascent" to the historic land. Of the vast western migration by eastern European Jews after the 1880's, only a feeble trickle flowed toward Palestine. The *Chovevei Zion* (Lovers of Zion), inspired by ideas of "autoemancipation" in the early literature, and by the traditional doctrine of *ge'ulah haarets* (redemption of the land), organized groups in many Russian cities for a program of colonization and settlement in Palestine. For the earliest idealistic but inexperienced settlers this was a period of agricultural experiment and psychological hardship. The first wave brought largely untrained middle-class colonists to a desolation of sand, rock, disease, loneliness, and wasteland, at a time when the Zionist movement had as yet no legal status. The colonies, kept alive by philanthropy, relied on Arab labor. By 1897, the year of the First Zionist Congress, the Jewish population in Palestine numbered about 50,000, of whom some 5,000, in 22 colonies, were pursuing the still unpromising experiment to labor on the ancestral soil. A milestone in the history of the young economy was the introduction, by the Zionist Congress, of the Jewish National Fund (JNF), which bought land as the inalienable property of the Jewish people.

The second wave of immigration, following the Russian upheavals of 1905-1906, brought into Palestine the first groups of fully conscious Zionist pioneers or *halutzim*. Under the influence of a philosophy of social reconstruction, the *halutzim* held forth the slogan of "the conquest of labor" or *kibbush avodah*. These pioneers sought in the creation of a productive Jewish working class their own complete psycho-biological transformation; and, through a new occupational distribution in Palestinian Jewish society (the *yishuv*), a radical reform of the traditionally unbalanced Jewish social structure. Frustrated by conditions in middleclass colonies which were cool to their social philosophy, and by competitive cheap Arab labor, these idealists began to form the first collectives, known as *kvutzot*, on swampland and barren areas rejected by private initiative. These village communes owed their existence much less to socialist dogma than to the need of a loose conglomeration of idealists to solve their problems of work through mutual aid, and eventually

branched off into additional intermediate and semi-individualistic forms. All communal groups engaged in debating their particular ideologies, each recognizing the relative contribution of the other rival forms to the national idea. As Martin Buber points out, it was unique in the history of cooperative settlement and 20th century socialism that men of many doctrines engaged in building a country should be "so deeply involved in the process of differentiation and yet so intent on preserving the principle of integration."

There were various dreams about the future: people saw before them a new, more comprehensive form of the family, they saw themselves as the advance guard of the Workers' Movement, as the direct instrument for the realization of Socialism, as the prototype of a new society, they had as their goal the creation of a new man and a new world. . . . Behind the Palestinian situation that set the task of work and reconstruction, there was the historical situation of a people visited by a great external crisis and responding to it with great inner change. Further, this historical situation threw up an elite, the *halutzim* or pioneers, drawn from all classes of the people and thus beyond class. (Buber, Martin, *Paths in Utopia*, New York 1950.)

On the whole, these pioneers encountered no worse hardships than had men and women on other frontiers, but without the classic prospects of adventures and immediate material rewards. Their considerable historical distinction is that they became the vanguard of a pioneer spirit of social justice (*halutzut*) and established on their land-collectives a new Jewish prototype and mode of living.

The *halutz* movement spread widely in countries of Zionist activity among middle-class young men and women who, eager to be re-educated as farmers and laborers, hardened themselves in farm-camps with special training (*hakshara*) for the anticipated ordeals of pioneering in Palestine. It was such a third wave of immigration between 1919 and 1924 that laid the foundations for the expansion of a Jewish Palestine. The *halutz* movement gathered momentum, while more collectives were established under the skillful direction of the Histadrut. This unique institution combined the functions of a labor federation among the growing body of workers in Palestine, with those of a colonizing agency aiming to expand immigration and introduce cooperative forms. A fourth wave of immigration, precariously large for conditions existing between 1925 and 1928, consisted mainly of middlemen and artisans with small capital who temporarily strained the urban economy, though not the agricultural sector. The fifth cycle of immigration was a floodtide of refugees from the economic decline of Poland, a worldwide depression, and the anti-Semitic program in Germany.

Within only a few generations of the Zionist founding fathers, the urban population and the colonies had grown through the addition of business and professional newcomers arriving with some investment capital, thousands of *halutzim*, and contingents of the children's crusade known as the "Youth Aliyah." So inadequate was the rate of immigration approved by the mandatory during the early years of the Nazi program, and later when extermination camps for Jews were set up during the course of World War II, that a so-called "illegal immigration" began to reach the shores of Palestine from all Mediterranean ports. For a time after World War II the wretched boatloads of refugees were barred by British naval patrols and incarcerated on Cyprus. With the termination of the British mandate on

May 14, 1948, however, immigration reached unprecedented proportions. By November 1949 the Jewish population of the new State of Israel passed the million mark.

JEWISH POPULATION GROWTH IN PALESTINE

Year	Estimated Jewish population
1882	30,000
1919	65,000
1929	157,000
1934	283,000
1939	446,000
1944	525,000
1946	630,000
1950	1,200,000

Zionism After the Emergence of Israel.—

The establishment of the State of Israel in 1948 raised the question of whether Zionism had not fulfilled the original 1897 Basle Program of "establishing for the Jewish people a publicly and legally assured home in Palestine," and whether the movement's functions had not indeed been displaced by those of the new state. The validity of Zionist principles was re-examined in the context of the new situation.

The political function, one of Zionism's main functions before the state was created, had been exercised through the executive arm of the Jewish Agency for Palestine. Citizens of the United States, Great Britain, Poland, and other countries had been elected to the Jewish Agency and had had equal voices with Palestinian Jewish members in shaping policies. After the state was created, such Jewish Agency leaders as Dr. Haim Weizmann, David Ben-Gurion, and Moshe Sharett (Shertok) became members of the government, which naturally took over responsibility for state affairs. During this transitional phase the functions of Zionist bodies narrowed down, thus bringing to the fore questions of the expediency of legalizing the status of Zionist activity, altering its nature, delimiting its scope, and reorganizing its structure.

The balance of argument on proposed new measures for the Zionist movement weighed in favor of conserving its storehouse of energy, resources, and accumulated experience. The premise was that Zionism's ultimate goal had not been the establishment of the state, but the "ingathering of the exiles" (*kibbutz galuyot*), a goal partially consummated by the wholesale immigration of the Yemenite and portions of other Jewish communities, these being only a fraction of the total potential immigration from Europe, Asia, and Africa, artificially barred by political strategy. Thus, the fundamental debate in Zionist principle soon turned to a discussion of the division of functions between the State of Israel and the Zionist movement. Even before

Zionist congress could assemble to give parliamentary sanction to a neo-Zionist program following the emergence of a state, it was clear that those political and economic spheres reserved to the sovereign authority of a state would remain beyond the jurisdiction of the movement. The movement itself would be empowered to assist in the processes of facilitating immigration and the initial stages of colonization in Israel, while Zionist sections in their respective countries would engage in raising the traditional funds, promoting education and cultural activity, training youth preparatory to settlement, and stimulating private capital investment and technological skill in Israel. Thus, the Zionist move-

ment, after a half century of activity, reached a period of experimental adjustment to the following realities and problems: the movement's internal organizational structure and functions; the legality and competence of the Jewish Agency for Palestine; conditions of Zionist membership in the new phase; the relationship of Zionists, as nationals of several countries, to the sovereign entity of Israel; and the status of various Israeli political parties as they affected the party structure of Zionist congresses and internal affairs of Israel.

By 1950, the Zionist movement, as dating from the first congress at Basle, was 53 years old and had labored only about three decades under a status of international sanction. More than a million Jews were settled on the partitioned area of Palestine that was the State of Israel. Under favorable conditions for the right and means of emigration, another potential million could have engaged the attention of the movement. The results achieved and the opportunities established vindicated a half century of Zionism. The concentration on Palestine by Jews had undoubtedly been accelerated by economic disorders, war, and anti-Semitism during a period when nearly all the doors of immigration, except to Palestine, had been shut to Jews migrating in large numbers. But long before 1933-1950, Zionism had been the catalyst of a Jewish national and cultural renaissance. In the years of crisis, it mitigated the catastrophe in Europe and sustained the promise of Jewish life when instruments of philanthropy alone were inadequate and when the humanitarian acts of liberal countries were too reserved or belated. By creating the first Jewish parliamentary organization since ancient times and bringing universal attention to a corporate solution of the Jewish problem, Zionism had become a factor in the political world of the 20th century. In the homeland which became a state, Zionism showed organizing ability unique in the history of colonization, developing an idealistic pioneering elite that exercised a formative influence on the social institutions of the country, and thus bringing into an unwilling semifeudal Arab Middle East concepts of democracy and technology at once promising and irritating.

To the extent that Israel was a country of immigrants which was compelled (though willing) to keep pace with external crises that brought an influx of heterogeneous human material, its powers of acculturation and its young economy were strained. Not even under these circumstances, however, was its extraordinary policy "to welcome home every Jew who seeks entry" modified. The promise of a spiritual, religious, and cultural center was greeted by both Zionist and non-Zionist Jews. As witnesses of an historical event attended by profound associations derived from a common Bible, many Jews and Christians throughout the world saw a confirmation of the prophetic vitality of the old Israel in the restoration of the new Israel. The reconciliation of the Arab world to the existence of the Jewish state remained a devout hope of mid-century international diplomacy occupied with the problems of world peace. Among many forces which have stirred the masses of Jewish society, Zionism may be called the main current of action and belief in modern Jewish history.

17. JEWS IN MODERN PALESTINE.

More than a half century of Zionism, and the emergence of the State of Israel in 1948, have given Palestine a unique place in modern Jewish society. Palestine contains one of the two most important traditional communities of Jews remaining after World War II, the other being the Jewish community in the United States. For wider historical, religious, political, and geographic reasons, interest in Palestine is out of all proportion to the extent of its area, population, and resources. It is profoundly associated with three great religions, Judaism, Christianity, and Islam. Moreover, Palestine is part of an Arab Near East which stretches from Iraq to Egypt and from Syria to Oman, a region of the highest importance in global politics, where the interests of the big powers have converged or collided over oil resources, communication arteries, and diplomatic strategy. In antiquity, during the Crusades, through two world wars, down to the partition between Jews and Arabs, the small land area of Palestine has had few equals for complexity of moral and material forces.

Historical Background of Modern Israel.—

A Jewish state in ancient times, Palestine was not independent during the 1,800 years after the Roman invasion and the Jewish dispersion, suffering the changing fortunes of the Byzantine Empire, conquest by Moslems, the Crusades, the Moslem recovery, and conquest by the Turks. Thus, in 1914, Palestine was a province of the Ottoman Empire. When the Turkish front collapsed at the end of World War I, the British occupation forces took over the administration. Notwithstanding the vicissitudes of history, reimmigration of Jews into Palestine went on in almost every century since the days of the Babylonian Captivity, though only in small numbers, commensurate with prevailing political and economic conditions and the enormous difficulty of travel. Despite wars, invasions, and natural calamities, the Jewish population of Palestine never disappeared entirely and constantly replenished itself through the arrival of individuals.

families, or groups. The Hebrew word for "exile" (*galut*), expresses a concept implying "homelessness" and the continuity of Jewish attachment to Palestine. Among the Jewish settlers or pilgrims, some having come to end their days on ancestral soil, were pietists, scholars, philosophers, poets, cabalists, and statesmen. Whether in prayer or folklore, passionate Messianism or ethnic cohesion, the bond between Diaspora Jewry and Palestine constituted a historical connection which colored the whole of Jewish life.

In the 20th century, the forces behind the return of large Jewish masses to Palestine were principally the need of many Jews for an economic and psycho-physical readjustment, the rise of racial anti-Semitism, and the successful Zionist colonization efforts in that country. The first Zionist Congress met at Basle, Switzerland, in 1897, establishing a program for a "publicly assured and legally secured home for the Jewish people in Palestine," and setting as its task the colonization of the land by Jewish agricultural and industrial workers. The Balfour Declaration, issued by the British government in 1917, incorporated the purposes of the Basle program and was made part of the Palestine Mandate issued by the League of Nations to Great Britain, coming into full effect in 1923.

Before the mandate went into effect, the local Arab population, until then neutral or even friendly, was led into sporadic rioting by Arab nationalists. To conciliate the militants, Transjordan (about 35,000 square miles) was partitioned from the remaining area of Palestine 10,429 square miles), to which the establishment of the Jewish home was now to be confined. Moreover, the basis of British policy was embodied in the restrictive White Paper of 1922, which declared that "the terms of the declaration . . . do not contemplate that Palestine as a whole be converted into a Jewish National Home, but that such a home should be founded in Palestine." The concept was also established of the country's "absorptive capacity" as a limiting factor upon Jewish immigration, but the Jews were declared to be in Palestine "as of right and not on sufferance."

The basic feature of life in Palestine during the period of the Jewish National Home was its division into two communities, Jewish and Arab, with contrasting economies and cultures. In the relative peace up to 1929, the Jewish population increased to 16 per cent of the total. Jewish effort gradually raised an economy within Palestine above the prevailing semifederal, patriarchal, and generally illiterate level. Westernizing influences were introduced in the forms of agricultural technique, industry, education, hygiene, and social relationships. Between the Arab peasant fellahin and the hereditary land-owning effendi there stood only a small and weak middle or laboring class and any stimulus to change was frustrated. Among Arab nationalists, divided by internal political rivalries, Zionism became a unifying symbol of Western imperialism.

Notwithstanding the drastically modified terms¹ and reduced area of the Jewish National Home, Arab violence came to a head in 1929-1930 and 1936-1937. These crises resulted in a checking of Jewish immigration and in the instituting of various investigations which produced contradictory proposals. The general policy of the British Colonial Office frequently created the impression

JEWISH HISTORY AND SOCIETY

(1) A Rumanian-born pioneer, his rifle at his side, plows the land with a Diesel tractor in the Latrun border district near Jerusalem. (2) Hoisting the Israeli flag at the start of a new kibbutz (farm collective). (3) An immigrant family arrives at the large reception center of Shaar Ha'aliyah near Haifa. (4) Modern education of kibbutz children at Kfar Blum, in the Northern Galilee. Named after the former French premier, Léon Blum, the kibbutz has a large proportion of members who came from the United States. (5) Kibbutz En Hashofet, founded in 1937 on the hills of Ephraim, is well developed in all branches of agriculture. En Hashofet (meaning spring of the judge) is named after the former U.S. Supreme Court justice, Louis D. Brandeis.

among Zionists of a frankly sceptical or even hostile attitude toward fulfilling the terms of the mandate. Thus, the Shaw Commission of 1929, indirectly justifying the Arab outbreaks, recommended greater restrictions on Jewish immigration and a virtual prohibition of land purchase by Jews. The Peel Commission of 1937, however, denied the theory of equal obligations to Jews and Arabs, and asserted that the mandate had been predicated on the supposition that the Palestine Arabs would accept the Jewish National Home. Recognizing, however, the political basis of Arab national resistance, and frankly admitting that Arab violence was largely the result of giving the Arabs an impression that Great Britain was not seriously committed to the Jewish National Home, the Peel Commission recommended the partition of Palestine, with the creation of a Jewish state and an Arab state joined to Transjordan. On the basis of this plan the Council of the League of Nations called for a detailed study of the partition of Palestine; but still another of the interminable investigations, under Sir John Woodhead in 1938, reported that no successful plan of partition could be developed.

The Jewish population had increased to 28 per cent of the total when, after the Arab incidents of 1936, the immigration policy, professedly based on economic absorptive capacity was curtailed for political rather than economic reasons, and then permanently abandoned by Great Britain after the White Paper of 1939. That document announced the unwillingness of Great Britain to continue the development of the Jewish National Home. It outlined a program restricting Jewish land purchases, limiting the Jewish community to one third of the total population, and preparing Palestine for self-government under these controls within 10 years. This policy was pronounced by the Permanent Mandates Commission of the League of Nations as in conflict with Great Britain's mandatory obligations. The practical effects of the 1939 White Paper were to shut off Palestine to any sizable Jewish immigration in the period when six million Jews died in the Nazi trap in Europe, and to throw the Jewish community of Palestine into great agitation.

The Arab-Jewish conflict after World War II was sharpened by the course of action taken by the mandatory. Even before World War II, the policies of the British government in the Middle East were undergoing change, as shown in the restrictive White Paper of 1939 and the developing new political, economic, and military arrangements with the Arab states. Postwar British immigration policy in Palestine resulted in the interception of ships carrying Jewish refugees and the internment of these refugees on Cyprus. Assisted by underground channels of the Haganah, the Jewish resistance force which was to form the base of the army of Israel, a number of refugees reached the Palestine coast as "illegal" immigrants, though some of their ships were sunk, resulting in the loss of life, and inflaming both their kinsmen in Palestine and the world Jewish population. Mounting tensions and the accumulation of tragic episodes led to armed attacks on the British by less disciplined forces than the Haganah, such as the independent and sometimes terrorist units, Irgun Zvai Leumi and the Stern Group. These acts, in turn, resulted in the enforcement of further restrictions the mandatory, serving it with occasions to suspend civil liberties, govern by martial law,

and arrest members of the Jewish Agency for Palestine.

Meanwhile, in 1946, the Anglo-American Committee of Inquiry, constituted the previous year by the United States and Britain, had recommended that 100,000 Jews be authorized to immigrate into Palestine at once, that Palestine become a trust area under the United Nations, and ultimately be neither Arab nor Jewish. In the ensuing public debate, many solutions were proposed, such as partition, federalization, cantonization, and multiple varieties of these plans. In February 1947, on the assumption that "the Mandate has proved unworkable," the British government placed the problem of Palestine before the United Nations. A United Nations Special Committee on Palestine (UNSCOP) was formed and proceeded to investigate the disordered scene in Palestine, the Jewish displaced persons camps in Germany, and the problem of Jerusalem and the Holy Places. A majority of the committee proposed the partitioning of Palestine into separate Arab and Jewish states with economic union, and a trusteeship for an independent city of Jerusalem. The minority proposed the plan of a federal state, with controlled Jewish immigration. On Nov. 29, 1947, the U.N. General Assembly adopted the majority partition plan by a vote of 33 to 13 with 10 abstentions. The assembly resolution provided for the termination of the British mandate, defined the boundaries of the Jewish and Arab states, instructed the Trusteeship Council to prepare a statute for Jerusalem, and called upon the Security Council to aid in the plan's enforcement. The partition plan was immediately denounced by the Arab Higher Committee of Palestine and by Egypt, Iraq, Lebanon, Saudi Arabia, Syria, and Yemen, the six Arab members of the United Nations. Within a week after the passage of the United Nations resolution, troops from these neighboring Arab countries invaded Palestine.

Despite the refusal of Great Britain to allow United Nations representatives to enter Palestine in order to halt hostilities and prepare for the transfer of authority, the termination of the mandate on May 14, 1948, found a provisional Jewish government already functioning; for the State of Israel had been proclaimed that same day in Tel Aviv. Thus, the passing of the British mandate failed to leave a political vacuum. Even as the Security Council questioned its own ability to enforce partition, the establishment of a state by the Jewish community constituted the only implementation of the United Nations resolution; and the decision of the Arab states to make war only added to the reality of the partition. Moreover, almost simultaneously with the proclamation of a Jewish state, President Harry Truman announced that "The United States recognizes the Provisional Government as the *de facto* authority of the new State of Israel," and the recognition of other powers, including the Soviet Union, followed.

The Arab League at first attempted, through guerrilla warfare, to prevent any consolidation of Jewish governmental authority by disrupting interurban communications and attacking exposed villages; but after a series of defeats, the panicky flight of the Arab masses from Jewish areas removed the means of continued guerrilla warfare. Jewish ports came under Egyptian aerial and naval bombardment and regular Arab armies

marched on the Jewish community. Israel's improvised army, Haganah, its tiny military striking force, Palmach, and the home guards, all products of underground training, lacked arms, planes, and oil. Yet, up to the first United Nations truce, they staved off Syrian tanks in the north; encircled the Egyptians near Isdud in the southern Negev; and, having lost the Old City of Jerusalem to the British-trained and equipped Arab Legion of Transjordan, held the beleaguered New City with its 100,000 Jews. In the intertruce period, Israeli forces seized the Lydda Airfield, Ramle, and Nazareth. Thereafter, its supply of arms improved. Israel quickly achieved military superiority in the Negev and Galilee, since, with the exception of Transjordan, the Arab states had not risked their full military strength, had no unified command, and were plagued by internal political dissension. Moving into a vacuum left by Arab flight and the inability of the United Nations to stop the Palestine War, Israel attained unanticipated *de facto* boundaries. Thus, continued warfare was halted by hard military facts, Arab disunity, and the political action of the United Nations, which in 1949 effected separate armistice agreements between Israel and each of its Arab neighbors.

The original United Nations partition plan of 1947, guided by the distribution of Arab and Jewish populations and the problem of dividing resources, had provided for an Arab state of 4,300 square miles and a Jewish state of 5,700 square miles. However, the invasion by the Arab states and the flight of the Palestinian Arabs had basically altered the distribution of the population. Under the 1949 armistice agreements, about 7,100 square miles were controlled by Israel, thus adding about 1,400 square miles to the area originally assigned to it under the 1947 partition plan. Israeli claims to the additional territory, which lay chiefly in the Negev and Galilee, were based on the military victories which had won Acre, Lydda, Ramle, Beersheba, Nazareth, and surrounding areas. Claims to Galilee as an essential part of Israel were made also on the grounds of its strategic potentialities as a base for attack by Arabs. The Negev was regarded by the Jews as the only area where there were land reserves for large-scale colonization and development, providing also access to the Dead Sea minerals and a foothold on the Gulf of Aqaba. Under the 1949 armistice agreements, Transjordan occupied about 3,000 square miles of the former mandate, 125 square miles were held by Egypt in the Gaza area, and a tiny frontier section in the El Auja vicinity was constituted a neutral zone under United Nations supervision.

Economic, Political, and Social Life of Israel.—The basic feature of society in the new State of Israel is its fluidity. While the powerful original impulse and idea—a Zionist, cooperative, ethical, and religious influence—exerted fundamental force, Israeli society, both in its economy and its diverse culture, is in the process of becoming. Thus, the New Jerusalem with its growing network of surrounding villages; Galilee with its project to convert thousands of marshland acres into fertile soil; the Negev with its new pipelines and agricultural experimentation; the discovery of sweet water in the desolate Azaba Valley south of the Dead Sea; the new docks in Eilat on the Gulf of Aqaba; and the proposed "Jordan Valley Authority"—these, and the growth of new settlements and industries under the impact

of immigration, attest the dynamic character of life in the young Jewish state.

With private capitalism, cooperative enterprises, and collective land settlements existing side by side, and with the citizen or immigrant free to select or shift to that economic unit which attracts him, the structure of Israel's economy is one of the significant social experiments of the 20th century. Though perhaps lacking the essentials for a large-scale development of heavy industry, Israel, both in its human and natural resources and its advantageous location, contains the basic elements for the growth of a varied and specialized light industry, a mixed agriculture producing both for domestic consumption and export, and an active foreign trade. In the Jezreel Valley of the north lie agricultural lands richly reclaimed from once malarial swamps. In the south, the extensive Negev desert is already in the process of reclamation, giving promise of further settlement. On the Mediterranean coast, ports, which could one day form a nexus of international trade, are under expansion. In the east, the abundant Dead Sea chemical deposits provide the basis for a growing chemicals industry. In its human element, a population approaching 1,500,000 in 1950, but still expanding at an unprecedented rate by continued Jewish immigration, the country possesses a highly literate community, a trained labor force, and a high ratio of skilled and professional workers.

Industry and Trade.—The influx of raw materials and machinery, the increase in technological knowledge and electric power, and the phenomenal population growth radically altered an economy whose chief activity in 1921 had been agriculture. Since 1937, Jewish light industry has been directed to such branches as textiles and clothing, leather tanning, woodwork and furniture, building materials and chemicals, paper and printing, metal working and engineering, industrial processed foodstuffs, and diamond working. By 1947, the distribution of gainfully occupied Jews was: agriculture, 12 per cent; manufacturing, 25 per cent; building and construction, 6 per cent; transportation and communication, 7 per cent; commerce and trade, 15 per cent; professions, 14 per cent; services, 7 per cent; and miscellaneous, 14 per cent. In occupational distribution, and the dependence of its skilled labor on imported raw materials, Israel follows the economic pattern of Great Britain, Belgium, and Switzerland.

In the expanding economy of Israel, foreign trade plays a role of prime importance. Israel is not only heavily dependent upon imports, but also requires foreign markets for its industries and to supply much-needed foreign exchange. Despite the growth of mixed farming, Israel still requires cereals, vegetables, dairy products, cattle, coffee, sugar, and other foodstuffs from abroad. For its growing industries, Israel imports cotton, wool, wood, steel, rough diamonds, oil, aluminum, and other raw materials and semifinished products. Imports of manufactured goods include agricultural and industrial machinery, wearing apparel, medical and optical supplies, fertilizers, paper, motor vehicles and parts, electrical goods and appliances, and many other items. Israel's chief exports are citrus fruits and byproducts, finished diamonds, fashion goods, concentrates, household articles, gift items, textiles, and chemicals.

Under the conditions of unprecedented immi-

ration and economic expansion, Israel's imports far exceed exports, creating problems of a heavily unbalanced foreign trade. Thus, in 1949, imports amounted to £87.7 million, as against exports of only £10.6 million (the Israeli pound equaling 2.80). However, assuming political stability and general harmony in the Middle East area, Israel's chemical deposits are available for export on a larger scale; citrus concentrates are ready for vitamin-starved populations abroad; export industries based on highly specialized skills in diamonds, style goods, handicrafts, artificial teeth, and instruments can be further expanded; and Israeli manufactures can replace articles formerly imported from distant sources by the Middle East.

Histadrut.—Private industrial enterprise, representing 80 to 90 per cent of the total industry of the country, dominates the metal, chemical, paper and printing, diamond, textile and clothing, dye, woodworking, and leather industries, and segments of the building material and construction branches. The remainder is in the hands of the cooperatives, the most important of which are controlled by Histadrut, Israel's General Federation of Labor. By any standards this is a unique nexus of institutions, whose membership embraces about 90 per cent of all organized labor in Israel. It is stronger than any trade union in any other free and democratic country, and for a generation has been the training ground for the personalities who provide the dominant political leadership of the state.

Histadrut operates the country's labor exchanges (the official employment bureaus which dominate the labor market), its authority amounting to a virtual closed shop in the industrial sector of the economy. Through its agricultural settlements it controls about 70 per cent of the country's mixed farming, and is also the owner of factories and warehouses and an employer of labor, with a direct owner-manager stake in about 20 per cent of Israel's commerce and industry. Since 1920 it has been the outstanding agency of Jewish colonization in Palestine, having organized labor immigration, established and supervised collective farms, organized the sale of agricultural products and the cooperative purchase of consumer goods, operated contracting agencies, a bank, loan associations, a sick fund, an unemployment fund, a newspaper, a publishing house, clinics, hospitals, schools, and numerous cultural activities.

Histadrut has considered its network of cooperative enterprises the basic pattern of a future state, and its special political structure the prototype of a future labor commonwealth. It has encouraged trade union organization among the Arabs, maintained connections with international labor and socialist bodies and congresses, and aroused worldwide interest in itself as an important social laboratory of the 20th century. The origin of this workers' movement may be traced to the socialist ideology of the earliest agricultural Labor-Zionist immigration which founded the first trade union in Palestine, and indeed in the Middle East. It was altogether unusual that agricultural workers should form the vanguard of a trade union movement; that unions should engage in collective and cooperative enterprises; and that a labor organization should subordinate the conventional duty of protecting jobs and wages to that of colonizing farmers and laborers arriving steadily from other lands. The social

philosophy and institutions of Histadrut have been among the most influential factors in the life of Israel.

Agriculture and Land Settlement.—In the course of half a century, Zionist colonization has developed Israel's three basic forms of land ownership and cultivation: private capitalist, cooperative, and collective; the latter two having been as much the result of the settlers' need to pool manpower, capital, and skills to survive the rigors of pioneering, as of socialist and cooperative theories. The Jewish National Fund (JNF), a Zionist institution, holds land as the inalienable property of the Jewish people and leases it to individuals and groups. In 1920 the JNF owned about 10 per cent of the area of Jewish rural land; at the end of 1943 about 52 per cent. By value, however, the share of the JNF was smaller, for the most valuable citrus lands were chiefly in private hands and the JNF owned very little urban land. Thus, about half of the Jewish-owned nongovernment land is owned by the JNF, and the remainder by individuals or private land companies. JNF land, which is leased, not sold, is primarily agricultural, though the organization has played an important role in urban development, such as industrial land development around Haifa. Privately held Jewish lands are concentrated in the cities, in some sections of the coastal plain between Haifa and Tel Aviv, within the older settlements like Petah Tikvah, and in some parts of Galilee. The Israeli government inherited all the mandatory's governmental property and keeps in trust all land abandoned by the Arabs during the Palestine War.

The three main forms of social and economic organization of Jewish agriculture are the *moshavot* or private villages with individual farming; the *moshavim* or villages based on cooperative ownership and farming; and the *kibbutzim* or *kvutzes*, which feature collective ownership and farming. Each village form in Israel represents a distinct mode of life and farm operation. Individual or small-capitalist farming, especially in citriculture, was most important in numbers employed, investment, and output, before the dislocation of shipping during World War II. Second in importance has been cooperative farming, with houses designed for individual families on individual garden plots, each cooperative farmer working for his own account and savings. In the collective farms, which are also established on JNF land, no private property or accounts are owned by members. All community matters in the collectives are decided by majority vote. Members, who are purely voluntary, are zealously dedicated to the social philosophy of a communal, democratic, nonexploitive society. All share equally in the common economic fortunes and facilities of the collective, including its dormitory rooms, dining hall, library, medical unit, separate children's houses, and school.

Among the more than 300 agricultural village settlements in 1950, with a population of 150,000, the cooperative and collective forms were dominant. Private agriculture, which produces only about 30 per cent of mixed farming products, yields 80 per cent of the citrus crops. About 13 per cent of the country's total agricultural output consists of cereals and fodder, 19 per cent vegetables and fruits, 28 per cent dairy products, 12 per cent meat and fish, and 28 per cent citrus crops. Chief trends in Israel's agriculture are the application of scientific methods, including

improved crop rotation and mechanization; a shift from production of grains to vegetables and fruits; and intensive utilization of land, with increased productivity through the development of irrigation facilities.

The Israeli State and Community.—The political basis of community life was laid as early as 1920 in the National Council (Vaad Leumi) and, in 1928, in the supreme governing body, Knesset Israel, which gathered taxes on a voluntary basis for education, social welfare, and rabbinical courts. There was close collaboration between the local community's Vaad Leumi and the Jewish Agency for Palestine, which represented the international Jewish community in the colonization of Palestine. When a Jewish provisional council met in Tel Aviv on May 14, 1948, it proclaimed *Eretz Israel* (Land of Israel) and established a provisional government, with Dr. Chaim Weizmann as president and David Ben-Gurion as prime minister. In the general election of Jan. 25, 1949, some 440,000 Arab and Jewish voters cast their ballots for the 120 representatives to the Knesset, the single-chambered national Parliament. The strongest of the 12 parties which won seats in the Knesset were the socialist Mapai (Israel Workers Party) which obtained 35 per cent of the popular vote and 46 seats, and the more leftist Mapam (United Workers Party) with 15 per cent of the votes and 19 seats. The Knesset, convening in Jerusalem, elected Dr. Weizmann as president of Israel on Feb. 17, 1950. Dr. Weizmann then appointed David Ben-Gurion as premier, who formed a four-party coalition cabinet which is responsible to the Knesset.

While the draft constitution clearly guaranteed the equality and freedom of persons of whatever race, religion, language, or sex (including special proposals to abolish the death penalty, give free access to holy places, guarantee the right to work and organize unions, legislate for social security, and "welcome home every Jew who seeks entry" into Israel) and was thus generally based on principles of tolerance and equality, it nevertheless had some provisions contrary to a Western concept of religious freedom. Though it established no special privilege for Judaism, contained no explicit discrimination against any other religion, and in fact protected the three major religions in the country on a basis of equality, it did not provide for a strict separation of church and state. As under the mandatory, questions of personal status (such as marriage, divorce, and inheritance) were assigned to special religious courts of the Jewish, Moslem, and Christian communities. While perhaps only 20 per cent of Israel's inhabitants actually accepted the whole orthodox Jewish code, no provisions were made for secular, nonreligious courts with jurisdiction in these matters. In the early critical period of the state, a *kulturkampf* was averted by compromise between secular and religious authority, in a coalition government of Mapai and the religious bloc. The delay in adopting a written constitution was prompted by the desire to avoid a premature stratification of the legal structure and the entrenchment of clerical influence in a young and rapidly changing country. Thus, on June 13, 1950, the Knesset voted, 50 to 38, against the immediate adoption of a full written constitution. It decided instead to legislate separately on basic matters within the next several years, these acts to be eventually combined into a fundamental code of laws. Though

a law providing for free education was passed in 1949, a uniform educational system was lacking in a community which insisted on maintaining four types of schools, each with a specific indoctrination: general (about 42 per cent of all students); labor-socialist (31 per cent); and two religious types (26 per cent together).

A new monetary system was introduced, based on the Israeli pound. Hebrew was proclaimed the language of the Jewish part of the community. Both the Jewish and Gregorian calendars were adopted for official use. A universal conscription bill imposed various lengths of military training, and a service bill provided for the drafting of young men and women for a year of agricultural and military training and a year of specialized vocational training. Reflecting the cooperative tendencies which dominated the development of the Jewish community, the two labor parties—the moderate Mapai which controlled the government, and its left-opposition, Mapam—were the two strongest groups in the Knesset. But passage of the investment bill to encourage the influx of private capital was an indication of readiness to subordinate socialist principles to the needs of the economy. However, the state resorted to central planning of immigration, defining areas for rapid settlement and the economic policy, but without enforcing any particular form of economy. Its professed goal was a mixed cooperative and private economy, based on intensive agriculture and a highly specialized light industry, supplemented by maritime trades, fishing, and tourist enterprise.

To the 650,000 Jews in the country before the declaration of the state, the immigration of only two years added about a half million from Europe, Asia, and Africa. This influx exerted a considerable strain on the young economy, necessitating the imposition of an economic austerity program and requiring financial aid from Jews abroad. Nevertheless, most of the newcomers were absorbed in the towns, villages, and settlements, though many waited in reception camps for months during the crisis of allocating jobs and housing. No less challenging than the problem of shelter and employment was the social problem for Israel of a heterogeneous society embracing Jews with both Western and Oriental outlooks and folkways. While the earlier settlers and the first waves of postwar immigrants were chiefly from central and eastern Europe, an increasing proportion of newer arrivals came from North Africa, Yemen, and Iraq, adding to the already diverse cultural strains.

The Arab population of Israel, about 175,000 in 1950, lived in some 130 villages, for the most part in the north, and the rest in the central "triangle." The Arab town population was concentrated in Nazareth, Haifa, Jaffa, Acre, Majdal, Ramle, and Lydda. The majority of Arab villagers are small farmers, while the urban element consists of workers and artisans and a small professional group. Marked changes in the Arab social structure within Israel are the disappearance of extreme wealth and poverty with the passing of the landowning effendi; an increased ratio of rural population; the beginnings of a self-conscious workers' and small farmers' class organized in various trade unions; and the emergence of consumer, producer, and marketing cooperatives, mutual aid institutions, and even Arab experimentation in collective living patterned on the Jewish *kibbutz*.

Among the long-standing accomplishments which have raised living standards in Israel and have had widening effects throughout the Middle East, are the improvement in sanitary and health conditions, the control of malaria and trachoma, the network of modern hospitals and welfare stations (especially those created with talent and energy by the welfare organizations, Hadassah and Kupat Holim), the devotion to children, and the rapid introduction of scientific research and techniques. A cultured if pioneer community, Jewish Palestine has long been creative in music, art, the theater, literature, and journalism. The vitality of its cooperative life and the Hebrew renaissance have revitalized national customs and generated new folkways. Indeed, the native-born Israeli youth, or *sabras*, are said to have developed an indigenous Jewish type in manner, style, and physique.

editor of "Jewish Frontier."

18. ETHNIC STATUS OF THE JEWISH GROUP. Before the emancipation period, which began at the end of the 18th century, all Jews considered themselves members of the Jewish nation, a group restricted to those confessing Judaism, chosen by God to spread monotheism. The ancient loss of statehood and the dispersion failed to affect this concept. Jewish theology viewed these events as punishment for the sins of the Jewish people, and taught the Messianic renewal of statehood in Palestine. The definition of the Jews as a religious nation was also shared by the Christian and Moslem religions.

With the rise of emancipation began the abandonment of the traditional definition. The concept of nationality became identified in modern times with political statehood or citizenship. Many Jews, having abandoned the traditional pattern through fear of anti-Semitism or other reasons, felt that in order to obtain political equality, it was essential that they retain only religious connections with their people. Assimilation also led to the definition of the Jews as a cultural group. Marxists put forward the definition as an economic caste, which led, in part, to the definition as a social or linguistic group. Various secular nationalist theories arose in the 19th and 20th centuries, which insisted on defining the Jews as a nationality. Most Jews, nevertheless, retained the traditional view of themselves as a religious people. Zionism introduced the drive for political "normalization" through a Jewish national state in Palestine and through a Hebrew cultural renaissance. Nineteenth century persecution and 20th century mass killings at the hands of the Germans and their collaborators also strengthened Jewish nationalism.

Jews as a Religious Community.—The

most common postemancipation definition has been that of a religious group. This designation was in keeping with the tendencies of the national states toward a single nationality. In the multinational states, assimilated Jews usually joined the master nation or the culturally higher national group. The religious definition, however, falls short of reality, since it does not hold true for the atheists or agnostics among Jews, nor for the secular nationalists who have not severed their connections with the Jewish group. The adherents of the religious definition are usually within the extreme antinationalist wing in Reform Judaism, assimilationists, or those of the Left wing with increasingly tenuous Jewish contacts. The overwhelming majority of the religious Jews modify the religious definition by adding the national element, thus adhering to the traditional religious-national concept.

Jews as a Race.—Discussion of the absurd anti-Semitic racist definitions of the Jews as a lower race in contrast to the superior "Aryans" is pointless. The Jews have always been racially mixed, having absorbed individuals and groups of many races throughout their long history. Ezra's exclusion of "aliens," designed to protect the Jewish religion and the Hebrew language, was short lived. It left no impression, as evidenced by the assiduous and successful Jewish missionary activities. These activities reached mass proportion in the 1st century B.C., as well as during the following two centuries. Conversions continued in spite of prohibition by the Moslem and Christian churches. The most significant among the later waves were the proselytizing of the Khazars in the 8th century and in Russia in the 15th, and 19th centuries.

While the overwhelming majority of the Jews belong to the "white" race, there are also Jewish groups among other races, such as the Negroid Hamitic Falashas in Ethiopia, Black Jews in India, and Indian Jews in Mexico. Bukharian Jews display evidences of Turko-Mongolian mixture. Anthropologists disagree about the racial continuity of the modern Jews with their Palestinian ancestors. Some assert that such a continuity exists and that, modified through admixture, it produced a blending of Nordic, Alpine, and eastern Mediterranean elements, with subsequent characteristic physical features. Inconclusive measurements indicate that the majority of the Jews belong to the brachycephalic head type, with small groups of mesocephalics and dolichocephalics in North Africa and Yemen, respectively. Most Jews have dark eyes and hair. Among the European Jews are considerable numbers with light eyes and light hair, in some countries as high as 51.3 and 29.9 per cent, respectively. There is evidence of a predisposition to tall stature, which comes to the fore with better nutrition. Only 14.25 per cent among the men and 12.70 among women, less than among the Bavarians, Italians and Armenians, have the hooked "Jewish" nose; the majority, 57.2 per cent among men and 59.42 among women, have "Greek" noses. Studies also show that there are marked differences in blood type between Jews and gentiles, with very large differences between Jews of different countries, and with a generally greater percentage of type B.

Jews are frequently called a "race" in the same sense as the English or Irish. This has nothing to do with the derogatory racist definition and often stems from the difficulty in accepting

the national definition and the limitations of the religious one. Since the rise of Nazism, Jews have evinced a great deal of sensitivity towards the racial definition, even in the nonderogatory sense.

Jews as an Economic, Social or Cultural Group.—Purely historical in its importance is the definition of the Jews as an economic middle-class caste. Its most prominent protagonists were Karl Marx, and his followers, Mehring, Kautsky, Lenin, and Stalin. Untenable in view of the economic diversity of the Jewish people and the desire for national self-determination expressed at the time of the Bolshevik Revolution, this definition was not accepted in practice by the Soviet regime. Most Socialists and all Communists now adhere to the definition of Jews as a national minority. However, the Russianization policy begun in 1949 may portend the abandonment of this definition.

Definition as a social group is based on the seemingly constant factor of social separation between Jews and non-Jews. It fails to take into account the social differences within the Jewish group; nor does it give sufficient importance to religious, cultural, and other forces. Sometimes this definition is used in the sense of a community of fate (*Schicksalsgemeinschaft*), a term that is not sufficiently descriptive, for the above reasons, yet more historically correct.

Similarly, the definition of the Jews as a linguistic minority, derived from the presence of large masses of Yiddish-speaking Jews in eastern Europe (a definition supported by some Socialists), is not valid in view of the variety of languages spoken among Jews. It also disregards other factors, such as the religious and cultural. In consequence of the Nazi eradication of most Yiddish-speaking people in Europe, Yiddish was no longer the primary language of the majority of the Jews following World War II.

The definition of Jews as a cultural group is quite common in American sociological literature. In a certain sense the Jews can be said to form a culture group, just as do the Irish Americans or Pennsylvania Dutch, if one is to judge by common mores and traditions. Such a definition, however, does not cover the international aspects of the Jewish group, nor provide for the varieties of Jewish culture and ways of living, some of which have little in common with others. Most prominent among these cultures was the historical-religious-national genre, with its concentration on Hebrew and Yiddish, the latter predominant until its reduction by communism in the USSR and the near annihilation of the Jews by the Nazis and their collaborators throughout Europe. Its modern development is the westernized pattern of religious-national culture, expressed in Hebrew as well as in the languages of the majority population, and upheld by the neo-Orthodox, Conservative, and moderate Reform groups.

There were several forms of Yiddish secular culture in Europe, considerably weakened by the Nazi mass annihilation and hampered in particular by the disappearance of the Yiddish-speaking center of Poland. The Nazi invasion of Greece and Yugoslavia reduced drastically the strength of the Ladino-speaking Jews, who also evinced strong secular tendencies, which never, however, approached the extremist position of the Yiddish secularists. Several types of Hebrew culture have been developed in Palestine ranging from the minority secular-Marxist to the majority

religious-national pattern, which displays striking parallels to the milieu of the Second Commonwealth of ancient times.

Manifestations of Jewish culture among the assimilated and the semiassimilated Jews vary from the retention of occasional Hebrew and Yiddish phrases in speech, addiction to Jewish humor and cooking, adherence to philanthropic and defense organizations and nominal synagogue affiliation, to the absence of any connections with the Jewish group, except those of birth and persecution. The followers of so many cultural patterns can hardly be classified as a culture group. This term, however, helps to describe the Jews in relation to the non-Jewish majority in mono-national or "melting-pot" types of society.

Jews as a Nation (Nationality).—This definition, unchallenged until emancipation, was the one accepted by the majority of the Jews in the central and east European centers, as well as by their descendants. It is official in the USSR, Poland, Israel, and other eastern and central European states. The traditional concept of Jewish nationalism held by the majority of the Jews, however, identifies it inextricably with the Jewish religion, constituting the religious-national synthesis, so that the voluntary abandonment of Judaism for another faith generally implies departure from the Jewish group. Many Jews, particularly in Western countries, refuse to accept the definition of Jews as a nationality, preferring to classify themselves as members of the Jewish religious or cultural group. This approach is accepted mostly in countries where the term nationality (nation) is synonymous with citizenship and statehood. Some Jews are motivated by the fear of being identified with an alien group, a corollary of anti-Semitism; this in spite of the recent experiences that anti-Semitic propagandists are more apt to blame the Jews for "polluting" the native cultures, rather than for their "separateness." The tendencies of some Jews to reject the idea of Jewish nationality are consequences of the progressive abandonment of Jewish culture, learning, mores, and group solidarity, as well as of fatigue with the seeming dilemma of identification and constant threat of persecution.

Because of the many difficulties involved in the national definition, the tendency is evident in Western countries of substituting for the term "Jewish nation" and "nationality" the word "people," an expression which does not carry political connotations, yet goes beyond the other, more limited definitions. Such difficulties were rare in the multinational states of eastern Europe which adhered to a wider concept of nationality, extending it beyond the political state or citizenship. Such a definition of nationality, advocated by students of nationalism as referring to a group bound by common ties of descent, historical background, awareness of a common fate, cultural links, and aspirations of national liberation and cultural continuity, would establish the Jews as a nationality, just as the Czechs and Greeks constituted such groups even before they had regained their independence.

On the basis of either definition, the Jews in Israel possess all attributes of nationhood, including, since 1948, political independence. A number of Jewish national centers existed in the USSR before World War II. Of these, only Birobidzhan survived the war. Jews have also waged a bitter struggle for their recognition as national

minorities in Poland, Rumania, Lithuania and other countries. International recognition of the Jewish nationality in Israel has been achieved through the establishment of an independent Jewish state and its acceptance within the family of nations.

The difficulty of defining the Jewish group should by this time be obvious. It is an ancient, ubiquitous, oft-persecuted, dispersed, and seemingly permanent minority group, restricted primarily to followers of the Jewish religion, yet sometimes forced to accept individuals of Jewish descent of the Christian faith, as was the case under the Nazis. It is also diversified denominationally, linguistically, and culturally, yet united by tradition and religion. It is continually weakened by assimilation and the fear of anti-Semitism, yet forced to greater cohesion by persecution. The Jewish group managed to retain its national and religious identity through almost two millennia of dispersion and loss of statehood, under different social orders ranging from feudalism to Soviet communism. Because of its intimate connection with Jewish nationalism and its dispersion, the Jewish group developed forms unparalleled in the national movement of other nations. The Jewish group is therefore generally acknowledged by historians as presenting a unique historical development in group life, religious, cultural, ethnic and national.

To apply accepted concepts: If the term nationality or nation is employed in the wider sense as denoting a historical-ethnic-cultural group, most of the Jewish group can be classified as a nationality. If the more restricted sense is used, namely that of statehood or citizenship, or official recognition by individual states or international law, not to speak of self-determination, most Jews in the Soviet Union, in eastern and central Europe, in the Arab Near East, and in Israel, are best described as members of the Jewish nationality. It must be stressed, however, that the condition for remaining within the group, in either case, is the nonconversion to another religious faith.

19. RELIGIOUS TRADITIONS AND CUSTOMS. Until the end of the 18th century,

practically all Jews adhered to the traditional conception of Judaism. Since that time, variations within the Jewish group have developed. Some Jews have retained the traditional regimen, while others have repudiated some parts of it. Still others have instituted modifications in the practices and have reinterpreted the traditions.

The traditional attitude was based upon the belief that the entire Jewish way of life had been revealed by God to the Jewish people, through the Pentateuch and its authorized interpreters. The interpretations of the Pentateuch are to be found in the rest of the Holy Scriptures and in the rabbinical writings, principally the Talmud in its Babylonian version edited about 500 A.D.

All types of commanded behavior were regarded equally as of divine origin, and therefore equally binding. Ethical laws and ritual laws enjoyed the same status. They were all designated as *mitzvot* (commandments). There were, in all, 613 commandments intended to guide the Jew through every moment of his life from birth to death, and from his awakening in the morning until his going to sleep at night.

Commandments for the Male Jew.—In the life of the orthodox male Jew the following important *mitzvot* are observed.

Circumcision.—In Hebrew this is called *berith milah*. This rite is referred to in the Bible (Genesis 17:10) in the following words: "Every male child among you shall be circumcised." On the eighth day of life, the foreskin of the male organ is cut by a *mohel*, a man specially trained for this operation. A *minyan* (10 males) is generally present, representing the community. At the conclusion of the rite, the child is named. Circumcision is a sign of the Covenant of Abraham, which binds Israel to God. During the operation the *sandek* (godfather) holds the infant, and just before it takes place, the infant is placed upon a special chair which is known as the chair of Elijah, in honor of the Prophet Elijah who was believed to be the forerunner of the Messiah.

Girls were officially named in the synagogue, usually on the Sabbath following birth.

Pidyon Haben.—If a boy is the first born in the family, another ceremony takes place at the end of one month. This is called *Pidyon Haben*, or "redemption of the first-born male." According to tradition, the first-born male is always dedicated to the service of God, to serve in the Temple. The parents, however, are given the opportunity of redeeming the first-born child from such service by the payment of five *shekalim* to a *Cohen* (priest), who serves for him. Since the destruction of the Temple nearly 2,000 years ago, the ceremony has persisted, and the money is usually given to charity.

Bar Mitzvah.—When a boy reaches the age of 13, he is legally an adult, and hence responsible for the observance of all those commandments incumbent upon Jewish adults. The ceremony of induction takes place in the synagogue on the Sabbath of the 13th birthday. At this time the lad is called up to the Torah (Law) and he recites the benedictions and the portion of the Law designated for that day. Usually he also chants the *Haftarah*, or portion from the Prophets of that week. Thereafter he is expected to participate in the life of the Jewish people in all its aspects.

Prayer and Prayer Symbols.—The traditional Jew recites his prayers every morning, afternoon,

and evening. During the weekdays he puts on the *tallit*, which is a prayer shawl containing the fringes, or *tsitsit*. The fringes are referred to in Numbers 15:37-41, as follows: "Let them make them a fringe upon the corners of their garments . . . that they may look upon it and remember the commandments of the Lord." In olden times, these fringes were worn on the outer garments in daily use, but later a small undergarment with fringes was substituted for this costume, known as the *tallit katan*, the larger shawl being worn only during prayers.

The daily morning prayers are also accompanied by the wearing of the *tefillin*, or phylacteries. This is referred to in the Bible: "Thou shalt bind them for a sign upon thine hand and they shall be for frontlets between thine eyes." *Tefillin* are small boxes, containing manuscripts, attached to long leather straps. One is worn on the head, the other on the left arm pointing to the heart. The manuscript in the head phylactery contains quotations from the Bible, reminding the Jews of their liberation from slavery; of the commandments to observe the Passover; the law regarding the redemption of the first born; and the basic prayers known as the *Shema*, which affirm the unity of God. The arm phylactery includes the same four selections written on one single strip of parchment.

During prayers the skull cap too is worn. This is the traditional way of showing respect. It derives from the practice of Oriental peoples in general. The very pious, traditional Jew wears the skull cap at all times, because he considers himself always in the presence of God.

Marriage and Divorce.—Since the purpose of marriage has always been to establish a home, the ceremony takes place under a *huppah* (canopy), symbolic of the home. A *ketubah* (marriage contract) is drawn up and witnessed by two Jews, neither of whom may be related to the bride nor groom. This document contains the obligations of the groom to the bride, as well as her obligations to him. The ceremony itself consists of a number of benedictions, but the actual declaration of marriage is made by the groom to the bride in these words: "Be thou sanctified unto me with this ring in accordance with the law of Moses and of Israel"; at which time the groom places the ring on the finger of the bride. The ceremony concludes with the breaking of a glass to commemorate the destruction of Jerusalem and the dispersion of Israel.

According to tradition, only the husband may institute proceedings for divorce against the wife, but she is protected by the provision that no divorce is valid unless she consents to accept it from the husband. It is customary for the rabbi to attempt to dissuade the husband from such action, but failing this, he then arranges to have the *get*, or bill of divorcement, written for him.

In traditional Jewish law the husband and wife may not have any physical contacts during the period of the woman's menstruation or for seven days thereafter. At the end of that time, the wife is required to take a ritual bath in a pool, especially designed to provide running water (*mikvah*). A bride also bathes in a *mikvah* before her wedding.

Burial and Mourning Rites.—Before the dying person breathes his last he recites the *viddui* (confession). In this confession he declares his willingness to accept death with resignation and faith, and he reaffirms the unity of

God. Upon hearing of the death of a fellow man, a Jew recites "Blessed be the true judge," thereafter performing the rite of *keriah*, that is, making a slight tear in his clothing as a sign of mourning. This, however, is not permitted on the Sabbath or holiday. It is also customary, as a sign of grief, to cover up or put away all mirrors or other decorative objects. A large candle is lighted, and renewed for 30 days (except on the Sabbath). The corpse is bathed and cleaned and prepared ritually (*taharah*). It is then placed in a simple white shroud (*tachrichim*). All burial tasks are usually performed by a volunteer society of pious Jews known as the *Hevrah Kadisha* (Holy Society). It is considered a *mitzvah* to take part in the funeral procession. A eulogy (*hesped*) is generally delivered only for distinguished men or scholars. Pious Jews arrange to have a little sack of Palestinian soil put in their coffins, and their bodies are placed in the ground so that their heads face toward Zion. Cremation is forbidden by Jewish law, since resurrection is a cardinal dogma and destruction of the body by cremation is, by implication, a denial of resurrection.

The surviving members of the immediate family then sit *shivah*, literally "seven," referring to the seven days of mourning during which they do not leave the house, remaining at home to receive visitors who come to console them. The children of the deceased recite prayers three times a day for 11 months, adding the *Kaddish*, the special prayer in honor of the dead. This prayer, in Aramaic, makes no reference whatsoever to the dead, but is a paean in praise of God, who is honored in spite of whatever may befall man. Every year the death anniversary is observed at home and in the synagogue by the lighting of the memorial lamp for the period of 24 hours. Frequently the grave is visited on that day. This is known as *Yahrzeit*, or the anniversary of the death. Memorial services for the dead are usually held in the synagogue on *Yom Kippur* (the Day of Atonement), and on the three major festivals.

At the end of the first year, a *matsevah* (memorial stone) is set up in the cemetery in memory of the deceased.

Household Symbols.—The Jewish home is first identified at the door by the *messusah* fastened to the door post. It is a small case of metal, or wood, in which a parchment scroll containing verses of the *shema* (the declaration of the unity of God) are written in Hebrew script. Upon entering or leaving the house, the pious Jew touches his fingers to the *messusah*, and then to his lips. Inside the home, hanging on the east wall of the room, may be found a *mezuzah*, a picture with verses and illustrations in praise of God and Zion. Placing it on the east wall indicates the direction of Jerusalem, and hence the direction toward which prayers are to be said. Ceremonial objects for various occasions of the year are to be found in the home.

Dietary Laws.—Every traditional Jewish home observes the laws of *kashrut* (dietary laws). These refer to the distinction between foods that may be eaten and those which may not. *Kosher* foods are permitted, and those forbidden are known as *trefah*. The laws of *kashrut* refer, first, to foods that may not be eaten at all. These include all winged insects and creeping things. Among the fish, those that have scales and fins are permitted; others, like shellfish, are forbid-

jen. Among mammals, only those which have cloven hoofs and which chew the cud are permitted. Others are forbidden. In the family of fowl, certain specific birds are forbidden, including vultures, hawks, owls, ravens, storks, bats, and others.

Then there are those foods which are forbidden because they have not been prepared in the proper manner. Meat must be slaughtered according to the rules of *Shehitah*. The slaughtering is done by a *shohet*, who has been specially trained to kill the animal according to the law. This is generally done by slitting the throat in one swift, painless stroke, permitting all the blood to flow out of the body. Blood may not be eaten in any form because, according to the Bible, blood is life. In order to make sure that all the blood has been removed, meat is soaked in water half an hour, kept in salt for a full hour, and then thoroughly rinsed. Even eggs which contain blood spots are forbidden by Jewish law.

Another phase of *kashrut* is the separation of milk and meat, based upon the Biblical statement, "Thou shalt not seethe kid in its mother's milk." From this one law there developed a complex of laws based upon the separation of all meat from all dairy food. The pious Jew waits six hours after a meat meal before eating any dairy food. The separation of milk and meat extends to the use of two sets of dishes in the home—one for meat and one for dairy, as well as two sets of pots and pans, and two sets of towels.

Prayers for Special Occasions.—Before each meal the blessing is recited: "Blessed art Thou, O Lord, our God, King of the Universe, who bringest forth bread out of the earth." After each meal, a longer grace is recited; special additional prayers are included when three males, or more, eat together (*Mezuman*). Prior to the grace on weekdays, Psalm 137 is recited; Psalm 126 on Sabbath, festivals, and holidays. In addition, special blessings are prescribed for special events as they may occur. For example, when a pious Jew sees the trees of spring, or the ocean for the first time, meets a friend after a long absence, or observes any natural phenomenon like the rainbow, or meteors in the sky, he recites the blessing appropriate to the occasion.

Festivals and Holy Days.—The Sabbath is the great day of the week. During the six days, the traditional Jew looks forward to the Sabbath with eagerness. On Friday afternoon, *erev Shabbat*, he sets aside his work earlier than usual and repairs to the synagogue. When he returns home, he finds that his wife has kindled Sabbath lights, and has placed on the table a white cloth, special *hallot*, or twisted loaves of bread, and wine for *kiddush* (the sanctification chant of the Sabbath). He places his hand on the head of each child in turn, and blesses them. He also chants the verses from the 31st Chapter of Proverbs, in praise of his wife. A special meal is served, after which *zemirot* (distinctive songs for the Sabbath table), are sung, before the closing grace. Every traditional Jew believes that on the Sabbath he possesses a *neshamah yterah*, an additional soul, with which to greet the Sabbath in joy.

No work is permitted on the Sabbath day. The tradition is to consume three full meals on the Sabbath. The third meal was called the *seudah shelishit*, frequently partaken of in the synagogue, together with the community. After sunset, the Sabbath is bidden farewell with a cere-

mony known as *havdalah*, meaning "separation." In Jewish tradition, the peace and serenity of the Sabbath are a foretaste of the bliss of the world to come.

Aside from the Sabbath, the major Jewish holidays are Passover, Pentecost, New Year's Day, the Day of Atonement, and the Feast of Tabernacles. Passover (*Pesach*) is observed in the springtime, in memory of the emancipation of the Jews from Egyptian bondage. Pentecost (*Shabuot*) commemorates the revelation of the Torah to Israel on Mount Sinai. New Year's Day occurs early in the fall. It is called *Rosh Hashanah*, and is the beginning of the religious year, a time of stock taking and heart searching. It is followed 10 days later by the Day of Atonement (*Yom Kippur*), a day of fasting and penitence. The Feast of Tabernacles (*Sukkot*) is celebrated to commemorate the wandering of the Israelites in the desert, when they were forced to live in *sukkot* (huts).

Each of these special occasions has its distinctive rituals. Passover is associated with the *Seder* (family service), at which the *Haggada* is recited, telling the story of the Exodus. The distinctive food is the *matsah*, the unleavened cake, recalling the bread of affliction eaten by Israelite ancestors. On *Shabuot* the synagogue is gaily decorated with flowers in commemoration of the early harvest in Palestine. *Rosh Hashanah* brings with it the blowing of the *shofar* (ram's horn), which is symbolic of warning and hope. The *Sukkot* festival is distinctive by virtue of the *sukkah* itself and the palm branches (*lulav*) and citron (*ethrog*) which are carried in procession in the synagogue.

The best known special prayer said on any of these occasions is the *Kol Nidre*, recited on the eve of *Yom Kippur*. When this prayer is recited, the traditional Jew feels that he is at the most solemn moment of the entire year. In this prayer he prays for release from any vows which he may make in moments of emotional excitement, which may alienate him from his fellow men.

Minor festivals are: *Purim*, which occurs in the spring, recalling the escape of the Persian Jews from the annihilation at the hands of Haman; and *Hanukkah*, the feast recalling the rededication of the Temple after the Maccabean victory over the Syrian Greeks. On *Purim*, the Book of Esther is read in the Synagogue; on *Hanukkah*, lights are kindled for eight days, recalling the rededication of the Temple (165 B.C.). In midsummer there is a fast known as *Tisheah B'ab*, which recalls the destruction of the Temple in Jerusalem in the year 586 B.C., and again in the year 70 A.D. In addition to fasting, the day is observed by the recital of the Book of Lamentations.

The Synagogue Service.—When the ancient Temple in Jerusalem was destroyed, the Jews developed the institution of the synagogue which enabled them, wherever they might find themselves, to carry on their worship and their study. The synagogue took over, in modified form, many of the practices of the original Temple; and because traditional Jews never ceased to hope that the Temple would be rebuilt, all synagogues were "oriented" toward the east, and all prayers were recited while facing in that direction. The distinctive objects in the synagogue are the *ner tamid* (the eternal light), symbolizing the eternity of the faith of Israel; the *aron hakodesh* (holy ark), containing the parchment of the Pentateuch, read

on Mondays, Thursdays, Sabbaths, and holidays before the congregation; and the *bimah* (platform), from which the service is conducted. Any Jew is permitted to conduct the service if he knows how to do so. However, most synagogues have a *hazzan* (cantor), who is versed in the traditional melodies and texts of the various services throughout the year. Each day, three services are held—the *shaharit* (morning service), *minhah* (afternoon service), and *maariv* (evening service). The first two are in keeping with the Temple ritual, where morning and afternoon sacrifices were offered daily. The evening service was a later innovation.

General Concepts.—In Jewish tradition, the complex of rites and observances contained in the Torah is obligatory upon all Jews, but the ethical ideals are universal in scope. Thus, for example, the seven so-called Noachian Laws are considered the basis of all human living. They included the ban on murder, theft, cruelty to animals, sexual license, blasphemy, idol worship, and civil injustice. Non-Jews who observe them are looked upon as the "righteous of the people of the world." Jews are taught that if they are faced with danger of death by virtue of their adherence to Judaism, they are permitted to neglect *mitzvot*, except the law against murder, sexual license, and idolatry.

The observance of the law is put into the category of *kiddush hashem* (sanctification of the name of God). This implies that Jews should regard themselves as representatives of God on earth; therefore, any wrong action by them is a reflection on the power of God over human beings. *Zedakah*, commonly translated "charity," really has its root in the word "justice." What is implied is that society owes to the unfortunate the security and sustenance which all desire. It therefore becomes the responsibility of all who can, to support those needing help. As a rule, a Jew is expected to give one tenth of his income (*maaser*) to charitable purposes.

The great ethical treatises composed since the time of the Talmud (500 A.D.), stress the importance of avoiding the sin of *leshon hara* (the evil tongue, or slander).

The Jewish Home.—Hospitality is highly regarded. The ancestor Abraham, who entertained his guests in his tent, is held up as the prototype of the hospitable man. It is the custom on the Sabbath, and particularly on Passover, at the *Seder*, to ask guests to one's home.

The Jewish home is perhaps the main bulwark of Jewish morality. The command, "Honor thy father and thy mother," is taken very seriously. Peace in the home is held to be of paramount importance. The Talmud says, "God's presence dwells in a peaceful and loving home." The ideal Jewish mother has always been considered the one who lives up to the standards prescribed in Chapter 31 of Proverbs (Verse 10-31). She is the *eshet hayil* (woman of worth). The father is bound to teach his son a trade; if not, says the Talmud, he brings him up to be a thief. It is also the father's duty to give his child an education. Many statements in the literature indicate that it is considered wrong for a Jewish family to live in a community which has no school.

Jewish Traditions in Modern Times.—Traditional Judaism is, therefore, a way of life which endeavors to make virtually every action of the Jew a means of rendering himself holy. All the rituals are intended to remind him that

he is the servant of God, and so must honor his fellow man and live in accordance with the highest ideals.

Since the beginning of the 19th century, the traditional way of Jewish life has broken down to some extent. Due to new social, economic, and political conditions, the integrity of the Jewish community was destroyed. As a result of the new cultural and intellectual challenges, many Jews began to question the fundamental assumptions of traditional Judaism. In order to adjust themselves to these new conditions of emancipation and enlightenment, several different versions of Judaism developed.

(1) The Orthodox group continues to reaffirm the basic belief in the revelation of the Torah and its authority over all Jews. Strict adherence to the tradition is advocated.

(2) The Reform group has urged the abandonment of those rites and practices which set the Jew apart from his neighbor to too great an extent. Reform leaders have urged that only those rites and traditions be retained which have a direct religious or ethical significance. Hence, while they have retained the Sabbath, they have relaxed the stringency of its observance. They have abolished the *pidyon haben*; they have neglected the use of the phylacteries and the *tallit* (head covering). In their marriage ceremony, the *ketubah* has given way to a simple marriage certificate. Reform Jews omit the use of the *huppah* and the breaking of the glass. Dietary laws have been given up. Many of the restrictive rules of the Sabbath have been abolished and many of the holidays have been shortened from two days to one.

There is also greater stress on the ethical message of Judaism among the Reform group, and a lesser emphasis on its ritual manifestations. In recent years, however, the Reform group has begun to readopt several of the traditional practices of Judaism and to revive some of the folk mores of the past. Without them, Judaism ceases to be a religious way of life, and is reduced to an abstract religious philosophy.

(3) The Conservative group is midway between the Orthodox and the Reform. Believing in retaining a maximum of the tradition, its leaders are nevertheless aware of the need for adaptation to new conditions. Thus far, however, they have not clarified just which traditions are to be kept and which are to be given up.

(4) The Nationalists retain many of the traditions and customs of the Jewish people, but dissociate them from the religious significance which they originally conveyed. They wish to retain the Jewish way of life on purely national or ethnic grounds.

(5) A new movement known as Reconstructionism, the youngest of all of those mentioned, urges the reinterpretation of traditional observances, where such reinterpretation is possible, rendering them meaningful for modern times. It favors the abandonment of those which are completely obsolete, but also stresses the need for new creativity in Jewish life, and for the formulation of practices to help articulate new experiences and ideas.

20. EDUCATION. The Traditional Pattern.—The classic system of Jewish education was based on Biblical injunction and on rabbinic tradition. The Bible places the obligation to teach them diligently to thy children" immediately after the obligations to "love thy God with all thy heart" and "love thy neighbor as thyself." This educational behest the ancient Jews took very seriously. Pilgrimages of parents and children to the Temple in Jerusalem, missions of Levites and prophets to the local communities, and private and public celebrations of historic religious festivals were all concerned with the fulfillment of the injunction "to teach and to study."

During the Second Commonwealth, in the centuries before the destruction of the Temple, the study and teaching of Torah (law, literature, and lore) were made the primary religious duty of every Jew, more important even than worship and charity. Learning became the cherished occupation, "dearer than fine gold"; and the "disciples of the wise" became the honored class in the community. As early as 66 B.C. the High Priest Joshua Ben Gamla laid the foundation for a universal, compulsory system of elementary schools for Jewish boys, to be maintained either by the parents or by the community. After 70 A.D., when the Jews were dispersed in the Roman-Parthian world, they carried with them their three great social inventions: the synagogue, their compulsory school system based on divine behest, and their sacred literature as the common textbook. In postexilic Palestine, and more especially in Babylonia, they developed academies of Talmudic learning, the "great Yeshivahs," which encompassed in their studies the entire scope of life and knowledge, as interpreted in the light of Biblical tradition. These Yeshivahs became the prototypes of similar Jewish academies in all the lands of Jewish dispersion, throughout the Middle Ages and in modern times. They were the capstones of an educational system which rabbinic writings prescribed in definite outlines.

As soon as a child could talk clearly, he was to be taught simple prayers and the alphabet. At the age of five he began to study the Scriptures, and at the age of 10 the Mishnah (commentaries and derived laws). From then on he was to proceed, as rapidly as his capacities permitted, to the study of rabbinic literature, in which he continued throughout his life. The obligation of daily, lifelong study was not for the learned alone; even the humblest laborer was commanded to set aside some part of the day for study, in accordance with his individual capacities. The texts studied were in Hebrew and in Aramaic; but usually the vernacular of the particular country was used as the medium for teaching and discussion. Where parents could pay for the instruction, their children went to private school, the *heder* (schoolroom). For other children, the community maintained the Talmud Torah (school for the study of the Torah). Every community, however poor, sought to maintain at least one Yeshivah, on a secondary or higher academic level, for its adolescent and adult students. Itinerant students (*bahurim*) came from Yeshivah to Yeshivah in quest of knowledge.

Modern Tendencies.—Within the last two centuries Jewish education was profoundly influenced by three new, powerful forces: (1) the enlightenment (*Haskalah*), which stemmed from the liberal, cosmopolitan rationalism in the latter half of the 18th century; (2) political emancipation, as it spread during the first half of the 19th century; and (3) European nationalism, developed during the latter half of the 19th century. New types of Jewish schools were established by Western "reform" Jews, fashioned at first after the *philanthropin* academies of central and western Europe. Later they became supplementary religious schools or classes wherever the general government schools accepted Jewish children as pupils. In eastern Europe, Jews also began to establish modern schools, but these existed side by side with the traditional schools and were strongly nationalist in spirit.

The Jewish nationalist schools took two main forms: (1) the Hebraic-Zionist *Heder Metukan* (improved school) which, in addition to the classic curriculum, stressed modern Hebrew language and literature and the national renaissance in Palestine; and (2) the *Yiddische Folkskule*, which made Yiddish (a Judeo-German vernacular language) and its literature the main subjects of study. The Yiddish school, in its extreme form, went very far afield from the classic educational Jewish tradition, both in secularizing its spirit and in revolutionizing its content. This was especially true in Russia.

From these main types there were many variants, the most important of which was the bilingual school (as in Lithuania and Poland) in which Jewish subjects were taught through the medium of modern Hebrew or Yiddish, and secular subjects in the language of the country. In Palestine, the new Yishuv (Jewish settlement) developed a full-fledged Hebrew public school system, from kindergarten to the university, comparable to modern school systems elsewhere.

Jewish Education in America.—When the Jews came to America, they brought with them their educational traditions and institutions, and adapted them to conditions in the new land. The earliest American Jewish school was established in 1731 by the community of Sephardim, the Jewish settlers who stemmed from Spain and Portugal. This school, the Yeshivath Minhath Areb, of the New York congregation, Shearith Israel, was a typical colonial school. When the German Jewish settlers began to come in large numbers during the middle of the 19th century, the schools they established followed at first the existing patterns of the church-supported schools and the private academies. Later, with the spread of the American public school system, the Jews eagerly sent their children to the government public schools and converted their own schools into Sunday schools, after the model of the Protestants.

The eastern European Jews, whose large migration began with the latter part of the 19th century, brought with them the entire gamut of their educational institutions: the *heder*, the Talmud Torah, the Yeshivah, the national Hebrew school, and the *Yiddische Folkskule*. Most of these schools were conducted in the afternoon and evening, as well as on Sunday morning. They were supplementary to the public schools which the children attended. Beginning with the 1930's however, the number of "integrated," all-day or parochial schools increased steadily, particularly among the orthodox.

There are three main types of Jewish schooling in America: (1) the Sunday schools (Reform and Conservative); (2) afternoon weekday schools (Conservative, Orthodox, and Nationalist); and (3) all-day or parochial schools (mostly Orthodox and Nationalist). It was estimated in 1946, that of the 600,000 Jewish children of elementary-school age, 30 per cent received Jewish education at any one specified time, but a considerably larger proportion, probably 70 to 80 per cent, received some Jewish instruction at some time during their childhood. The pupils taught in American Jewish schools were roughly divided as follows: 75 per cent attending weekday afternoon schools; 20 per cent attending Sunday schools; and 5 per cent attending all-day or parochial schools. These proportions continued into the secondary or high school level.

While there is a very wide variation of curricula and methods of instruction in these schools, there are certain common elements which are basic, however wide the latitude of interpretation and selection of materials. All American Jewish schools teach or strive to teach: (1) Torah, the classic tradition in its literary and institutional forms; (2) the Hebrew Language (some schools also teach Yiddish); (3) the history and status of the Jewish people; (4) Palestine, past and present; (5) Jewish customs and folkways; (6) the American Jewish environment: current problems and institutions; and (7) Jewish faith in divine purpose and human betterment. These basic elements are variously interpreted and stressed by each school and by each group of schools.

A number of Jewish institutions of higher learning have developed, which represent the culmination of each of these school types. They conduct courses for the training of rabbis, teachers, and scholars. The most important are: The Hebrew Union College in Cincinnati, established in 1875 by the Reform congregations; The Jewish Theological Seminary, established in 1886 (Conservative); Dropsie College, Philadelphia, 1907 (for postgraduate research); Jewish Institute of Religion, New York, 1922 (Reform Zionist); Yeshiva University, New York, 1915, and Hebrew Theological College, Chicago, 1922 (Orthodox Zionist); Yeshivah Torah Vodaath, New York (Orthodox non-Zionist); and Yeshivah Tomche Tmimim, New York (Orthodox Hasidic). The Hebrew Union College (Cincinnati), and the Jewish Institute of Religion (New York) have merged to become the only Jewish Reform seminary in the United States.

In addition to the formal schooling given by Jewish schools and congregations, much educational work, both formal and informal, is done by organizations and institutions dealing with youth. Among these are the Young Men's Hebrew Associations, the B'nai B'rith, and the various Zionist and other party organizations. The social service institutions which concern themselves with child care have given increasing attention to the Jewish education of their charges. There is also considerable study of Hebrew and Judaism in American colleges and public high schools, particularly in New York City.

Alongside this diversified system of Jewish education in the United States there are unifying community educational agencies consisting of bureaus, boards, committees, or associations. The function of these bodies is to deal with the common aspects in American Jewish education, such

as financial matters, teachers' welfare, publications, standardization, and experimentation. The first of these community agencies was the Bureau of Jewish Education in New York City, established in 1909 under the pioneering leadership of Samson Benderly, and later merged with the Jewish Education Committee of New York. By 1950 there were 40 such unifying educational agencies, most of them in cities and towns, but some covering counties and states. Maintained by Jewish community councils, welfare federations, or special associations, these agencies seek to cooperate with all of the diversified Jewish school groups in their respective communities. They aim to improve the work of the schools without interfering with their particular backgrounds or outlooks, and to expand educational facilities to meet the needs of American Jewish life, in the spirit of the democratic environment and of the classic Jewish tradition.

Education Committee of New York.

21. COMMUNITY ORGANIZATION AND SOCIAL WELFARE. Jewish community organization in modern times reflects the tremendous changes which have taken place in the world and within the Jewish community since the beginning of Jewish emancipation at the end of the 18th century. The medieval state's utilization of the Jewish community as the fiscal agent and controlling instrument of all the Jews was discarded by the rising modern state. The new national states either fought the established Jewish self-government bodies in order to weaken their hold over the individual, or tried to control the communities, limiting their competence to religious and philanthropic spheres. Restricting the power of the communities to the religious-philanthropic area, however, was almost impossible, due to the difficulty of separating the Jewish national-cultural elements from the strictly religious ones. Moreover, migrations and the impoverishment of large sectors of Jews by 20th century persecutions increased the importance of the philanthropic organizations and defense bodies against anti-Semitism.

The most striking change since emancipation was the decline of "integral Jewry." In the Western countries, the individual Jew's identification with the Jewish community was generally reduced to nominal religious connections. In the eastern European countries, the enlightened elements among the Jews usually abandoned the religious identification, substituting for it purely nationalist criteria. Nevertheless, large sectors of the population either retained their age-old integral Judaism, or attempted to modernize Jewish life without entirely abandoning tradition.

In eastern Europe, socialism and communism influenced specific Jewish schools of thought.

Zionism was another, even more powerful influence. Desire for recognition as a nationality also motivated powerful movements among the Jewish masses. Social conflict within the Jewish community itself was apparent in the attempts toward democratization. Thus, Jewish community organization in the 20th century not only reflected the breakdown of the traditional Jewish settlements everywhere, but was also conditioned by the powerful forces afoot in the world at large.

Forms of Community Organization.—Napoleon I evolved the consistory system of Jewish organization, concerned almost exclusively with religious matters and charities. This system continued, with modifications, until the separation of church and state in France in 1905. Czarist Russia replaced the ancient *kahal* in 1844 with "Jewish committees" which, resisted by the Jews, were designed to serve the state primarily, rather than the Jewish community. In Russia, the 20th century brought agitation for the community organization of Jews as a national minority, with an autonomous national representative body based upon democratic local units (*kehillot*).

Following the March 1917 revolution, this system of community organization came into effect in Russia and the Ukraine, but was abolished by the Bolshevik regime. In Lithuania, Jewish national autonomy was realized until 1924, through a Jewish National Council and a minister of Jewish affairs. The government of Soviet Russia, which had abolished the democratic *kehillot* in 1919, set up substitute bodies—such as the *Yevsektsia*, *Yevcom*, and *Gezeder*—most of which were short-lived. In Birobidzhan and the Jewish national regions of the Ukraine, community organization was based on municipalities and villages. In 1946 the number of existing religious Jewish communities based on Soviet law was estimated at 76, a drastic reduction due to the German invasion. As a result of the wartime stay of Polish Jewish immigrants, there was some increase in clandestine religious education and unofficial philanthropic work among Soviet Jewry which had no central religious or secular organization, or religious schools.

Most post-Versailles states in eastern Europe limited the Jewish community to strictly religious and philanthropic functions. Thus, in Poland, the 1927 community ordinance provided for compulsory taxation and the maintenance of *kashrut* (ritual preparation of food), religious education, and social services, by democratically elected community boards.

Before Nazism, Jewish communities in Germany usually enjoyed the right of corporations in public law, with the privilege of taxation on the basis of civic lists, as well as ample autonomy. The Nazis introduced compulsory community set-ups based on the Nürnberg Laws. These communities, however, showed both vitality and courage, carrying on forbidden functions of education, underground contacts, and escapes. In the final liquidation stage, the European communities under Nazi rule were perverted into virtual auxiliaries for their own annihilation.

Modern Palestine developed a new and many-sided, integral Jewish community organization. Before the establishment of the State of Israel, almost all the Jews, with the exception of the ultra-orthodox Agudath Israel, voluntarily belonged to the community of Jews known as Knesset Israel. Their secular and democratically

elected Vaad Hanivcharim (Assembly of Delegates) in turn elected the Vaad Leumi (Jewish National Council), spokesman for the Jewish community under the mandate. The Knesset Israel levied taxes for education, social work, and the rabbinate. Its ecclesiastical branch consisted of the Rabbinical Council and the rabbinical courts. With the birth of the State of Israel on May 14, 1948, the first Jewish state came into being since the destruction of the ancient Jewish commonwealth by the Romans. The organs of self-government which developed in Israel—including a Knesset (Assembly), a civil service, an army, and other features of state machinery—embodied much of the experience and personnel of the Jewish community organization under the mandate.

In the United Kingdom, with a legally recognized Jewish community, the United Synagogue unites the majority of the Ashkenazic (German-East European) congregations. The chief rabbi is official head of most communities, while the Board of Deputies of British Jews is spokesman for most religious and secular organizations.

Community Organization in the United States.—In the New World, where Jewish emancipation was granted without conditions, community organization assumed a wide diversity of forms, varying from city to city, and usually without effective central bodies. Generally speaking, the evolution of Jewish community organization began with the voluntary religious congregation or burial society. This was followed by benevolent organizations, fraternal orders, credit societies and, later, recreational and cultural organizations. Though only one or two generations apart as settlers, a struggle for leadership and control of the Jewish community developed between the earlier German minority and the later east European majority. The descendants of the earlier immigrants usually concentrated on coordinated philanthropies and the Reform movement. They had a tendency to view the Jewish community from a strictly denominational viewpoint, and to frown upon movements of Jewish cultural retention, such as Zionism and orthodoxy. The conflict between these various factions, however, diminished with the numerical decline of the minority group, the implications in the debacle of European Jewry, the achievements of Zionism, and the growing fear of reaction.

The Jewish community of the United States after World War II constituted about five million out of the reduced postwar Jewish population of 11 million. It presented a great variety of communal organizations and institutions. Most congregations were Orthodox. There were three central congregational organizations representing the three religious groupings—the Orthodox, the Reform, and the middle-ground Conservative. These united in a central religious spokesman—the Synagogue Council of America. In addition to theological seminaries and teachers training schools, there were several school systems in which most Jewish children received some part-time education, with a considerable growth of all-day schools.

Early benevolent societies gave way to thriving fraternal orders. The *landsmanshaften*, relief societies established on the basis of the immigrants' geographical origin, were active in overseas and local philanthropies. The threat of anti-Semitism in the United States caused a large investment of the Jewish community's funds and energies into movements for strength-

ening democracy through the so-called defense groups or community relations bodies.

According to the Jews' tradition of caring for their own, each Jewish community of any size maintained a variety of institutions, such as relief and social-work organizations. In addition to the religious, charitable, and educational establishments, there were local branches of the national fraternal orders, Zionist groups, student organizations, and other youth units. The tendency to federate for the purpose of fund raising and management was evident in the development of the Welfare Fund, an instrument for campaigns and the distribution of all local, national, and international appeals. Much of the community's budget was devoted to overseas relief. The local community council began to evolve into an overall body, representing all organizations, with the Jewish community center as the geographical focus of its activities.

A major problem of the Jewish community was the lack of an authoritative and democratically elected central representative body. The American Jewish Conference, established for the solution of problems arising from World War II, had no jurisdiction over communal matters, but represented the majority of the Jewish community in the United States after 1943. The World Jewish Congress claimed the adherence of central representative bodies in most countries; the 1948 session at Montreux, Switzerland, was attended by representatives from 60 nations. The World Zionist Organization, however, was the best-established, international central body.

Central representative bodies have developed in Canada and in the Union of South Africa, as well as in postwar Europe. Everywhere community organization tended to take over the functions of planning for Jewish defense and cultural-religious survival. The trend toward a democratic form of central representation testified to the abandonment, by affiliated Jews, of the laissez faire community of the 19th century, and the return to a more integral concept of community organization.

22. SOCIAL AND ECONOMIC DEVELOPMENTS IN THE 19TH AND 20TH CENTURIES. The epoch of Jewish emancipation can be divided into three periods: the period of ascent (1800-1914); the period of crisis (1915-1932); and the period of catastrophe (1933-1945). Historians may later add a fourth—the period of readjustment and renewal, commencing in the years after World War II and highlighted by the birth of the State of Israel in 1948.

The period of ascent was characterized by a rapid increase of population among Jews all over the world and by a large-scale migration of Jews to new continents and countries. New occupational and social groups emerged among the Jews, including the middle-class professionals and the modern working class. A Jewish *bourgeoisie* of considerable economic significance developed. The non-Jewish world generally tended to incorporate the Jews within the general economic, political, and cultural life and to assimilate them. This evolution was not a steady process; it was often interrupted by waves of anti-Jewish riots and pogroms all too reminiscent of the Middle Ages. Seen as a whole, however, this period can be described as one of upward growth, on a scale unparalleled in the Diaspora period of Jewish history.

The period of crisis was marked by a general falling off of the birth rate among Jews throughout the world, and especially in the countries of western Europe. An intense movement took place in most European countries to oust Jews from their economic positions and isolate them from the general political and cultural life, thereby resulting in widespread insecurity among the Jewish masses. This era was also characterized by the growing, tragic discrepancy between the increasing need for Jewish emigration from the hardship areas, and the constantly shrinking possibilities of immigration to the more hospitable centers.

In the period of catastrophe, the elimination of Jews from the general life of most European countries proceeded with greater and greater ruthlessness, culminating, during World War II, in the slaughter of two thirds of European Jewry and the expropriation of most of the survivors.

This division into periods applies mainly to the countries of central and eastern Europe which harbored about six million Jews, or approximately two thirds of European Jewry. Quite different was the lot of the small Jewish communities in the countries of northern and western Europe, totaling only one million Jews. Different, too, was the position of Soviet Jewry, whose economic dislocations and national disintegration were caused, not by persecutions of Jews, but by factors of a general nature. Altogether different was the evolution of Jewish communities in the countries of immigration, such as the United States and Palestine, where the process of economic and cultural ascent had not fully set in until after World War I, reaching a peak in the years during and after World War II.

Crisis of Jewish Population.—The growth of the world Jewish population since 1800, and the disaster that overtook it at the end of an epoch of emancipation, are shown in Table 1.

Table 1—WORLD JEWISH POPULATION

Year	Population
1800	2,500,000
1825	3,280,000
1850	4,750,000
1880	7,650,000
1900	10,600,000
1914	14,000,000
1939	16,725,000
1946	10,750,000
1949	11,000,000

The catastrophe of European Jewry shortly before and during World War II amounted to an annihilation of almost six million Jews. From the cold, historical viewpoint of group survival,

even figures of such proportion do not measure the full and potential extent of the evil; for the chief victims of the Nazi murderers were east European Jews with a particularly vital Jewish consciousness and a high birth rate. According to the areas of original residence, the numbers and percentages of Jews of the various European communities who perished between 1939 and 1945 were as shown in Table 2.

Table 2—JEWISH DEAD IN EUROPEAN COUNTRIES UNDER AXIS DOMINATION

Country	Jewish population in 1939	Total Jewish dead ¹	
		Number	Per cent
Poland.....	3,250,000	2,850,000	87.7
USSR ²	3,050,000	1,350,000	44.3
Rumania.....	850,000	425,000	50.0
Germany.....	504,000 ³	250,000	49.6
Hungary.....	403,000	200,000	49.6
Czechoslovakia.....	380,000	280,000	77.8
France.....	240,000	120,000	50.0
Austria.....	175,000	70,000	40.0
Lithuania.....	155,000	135,000	87.1
Holland.....	120,000	80,000	66.7
Latvia.....	95,000	86,000	90.5
Yugoslavia.....	75,000	60,000	80.0
Greece.....	75,000	62,000	82.7
Belgium.....	55,000	30,000	54.5
Italy.....	57,000	12,000	21.1
Bulgaria.....	50,000	7,000	14.0
Denmark.....	6,000	2,000	33.3
Estonia.....	5,000	4,000	80.0
Luxembourg.....	3,000	2,000	66.7
Norway.....	2,000	1,000	50.0
Total.....	9,530,000	6,026,000	63.2

¹ The number of victims comprises only the old-established Jewish inhabitants of the country. The refugees, for example, the German Jews in France, Belgium, and Holland, are credited to their country of origin. ² The percentage of victims in the Soviet Union is based on the total number of Jews in that country in 1939. However, not all of the Soviet Union was occupied by the Germans. ³ We take only the occupied regions, which contained only 100,000 in 1939, the percentage of Jewish victims amounts to 64.3. ⁴ 1933. ⁵ 1940.

The Germans were not alone in organizing and supervising this slaughter; they were aided by many other nationals—chiefly in eastern Europe—including Ukrainians, Lithuanians, White Russians, Croats, Rumanians, and Hungarians. Hitler's selection of Poland as the mass grave of Jews from almost all of Nazi-occupied Europe was no accidental choice. The contrast in the extent of the catastrophe in the east and in the west was a significant aspect of the tragic picture. Of approximately a million Jewish children under 14 years of age in prewar Poland, only about 10,000, or one per cent survived; while of 60,000 young Jewish children in France, at least 20,000, or one third, remained alive. The somewhat "mitigated" extermination in the western countries, such as France and Belgium, was due, at least in part, to the fact that the Jews were often afforded protection from the Nazis by the non-Jewish population.

Distribution of the World's Jewish Population.—In the 19th century the Jews were a predominantly European people. Though there were small Jewish communities in Asia, North Africa, and the Western Hemisphere, these centers comprised an insignificant percentage of world Jewry and did not play a significant role in Jewish cultural life. During the last quarter of the 19th century, the geographical distribution of Jewish population began to change, and during the first quarter of the 20th century the process of alteration became accelerated. This change in distribu-

tion was still an organic process, however, with the center of world Jewry gradually shifting toward the American continent. The catastrophe of World War II mechanically transformed the Jews, numerically speaking, into a predominantly American community.

Table 3—DISTRIBUTION OF JEWS BY CONTINENTS

Continent	Per cent of world Jewish population			
	1800	1875	1939	1950
Europe.....	76.9	87.5	56.8	25.3
Asia.....	13.4	5.0	6.2	15.5
Africa.....	9.6	4.1	3.7	6.2
Americas.....	0.1	3.3	33.1	52.7
Australia.....	...	0.1	0.2	0.3

Although comparisons for different periods cannot be strictly accurate because of the shifting of political boundaries, rough estimates may serve to show the great changes in distribution of Jewish population by countries. In 1840 there lived in the six nations of Russia, Rumania, Germany, Austria, Turkey, and Hungary, more than 92 per cent of world Jewry, as compared with less than 20 per cent in 1950. In Germany and Austria the Jewish population in 1840 constituted 18.2 per cent of world Jewry; in 1950 there were only 20,000 Jews in German towns with functioning Jewish *gemeinden* (communities), while only 12,000 Jews were registered with the *gemeinden* of Austria in 1950. In 1840 the ratio of Jewish population in Russia to world Jewry was 51.1 per cent; in 1950 this proportion had dropped to 16.3 per cent for the combined Jewish population of Soviet Russia and Poland.

In 1950 the United States contained about five million of the estimated 11,000,000 Jews in the world, as compared with 1.9 per cent for all the English-speaking countries in 1840. This development signified more than a mere geographical shift; it had definite socio-economic and, primarily, linguistic and cultural aspects. In the Slavic countries, which in 1840 harbored over two thirds of world Jewry, the assimilating power of the dominant culture group was very limited. Moreover, the Ukrainians, White Russians, Lithuanians, Letts, Czechs, and Poles, among whom the Jews lived, were long subjugated politically. In contrast, the assimilating capacity of the culturally and politically advanced English-speaking nations proved to be incomparably greater. The tendencies toward Jewish assimilation have thus been far more marked in the English-speaking countries and have had a consequent effect upon the character of the Jewish groups within those countries.

In 1840, Jews lived in some 20 countries. Following World War II, however, Jews were dispersed among more than 90 countries. Nearly two thirds of world Jewry, nevertheless, were to be found in two nations, the United States and the Soviet Union. A third new center, the State of Israel, contained more than a million Jews at the end of 1949. The number had nearly doubled in the five years since 1944, the new settlers having come chiefly from eastern Europe and the displaced persons camps of Germany and Austria.

Urbanization and Concentration.—The Jews are the most urban and the most metropolitan people in the world. This is particularly true of the Jewish population in the United States. In 1948 the 10 largest cities of Jewish population in the United States harbored over 3,260,000 Jews, or more than three fifths of American

Jewry. Of Soviet Jewry, 42 per cent lived in the 5 largest cities of the Soviet Union in 1939. Before World War II, about 18 per cent of all Polish Jews lived in the two cities of Warsaw and Lodz, representing 30.8 per cent of all the inhabitants of those cities. Half of prewar Hungarian Jewry lived in the one city of Budapest. In 1948, two thirds of all British Jews lived in London; while over half of French Jewry were to be found in Paris. In several postwar eastern European countries, Jews tended to disappear entirely from villages and small towns, which, for a time, lacked elementary conditions of personal safety. In the new State of Israel, about half of the Jewish population in 1949 lived in the three cities of Jerusalem, Jaffa-Tel Aviv, and Haifa. The young Jewish state, however, promoting agricultural settlement in collectives and smallholders communities, had the highest percentage of Jewish village-dwellers.

Economic Development, 1800-1914.—The technical and industrial revolution of the 19th century, generally speaking, made the urban classes the dynamic classes in human history. At the same time, industrial capitalism produced the most favorable conditions for the oldest of urban peoples, the Jews, opening large possibilities for their accumulated financial and trading experience. After centuries of wandering as an alien, urban people among firmly settled farming populations, the Jews found themselves in the dynamic world of capitalism and industrialism. Occupations which had formerly alienated them from the surrounding populations became respected and valued functions in the life of nations. The rapidly growing urban classes opened their ranks to the Jews, who possessed not only the qualifications of commercial experience but also the important asset of liquid capital.

The influence of Jews in the evolution of capitalism differed widely in different countries. In western Europe and the United States, where Jewish immigrants found capitalism already highly developed, Jews assumed an important place side by side with the business classes of the majority populations. In Great Britain, Jews played a prominent role in assuring British control of foreign markets through the medium of British capital. In the first half of the 19th century the banking firm of Rothschild granted 44 foreign loans to 20 countries (including Prussia, France, Russia, Brazil, and Greece) aggregating over £130,000,000, in those times an exceedingly large sum. In the United States, where the Jews were only feebly represented in heavy industry and finance, they nevertheless have played an important part in many commodities-producing industries, such as clothing.

In central Europe, Jews were almost the only possessors of liquid capital in the 18th century and at the beginning of the 19th century. In Germany, Austria, Hungary, and Czechoslovakia, Jews played an important pioneering role in the first stages of capitalist evolution, occupying a considerable place in what may be termed the nerve-centers of capitalist evolution, such as banking, export and import trade, and similar fields. In 1800, in Frankfurt on Main, with its Jewish population of 600 families, 43 per cent of the entire Jewish capital was owned by 60 families which controlled the only 12 important Jewish firms in the city. Many of these families later headed banking enterprises of world fame, such as the Speyers, Rothschilds, Seligmans, Oppen-

heimers, and others. On the other hand, no less than a quarter of Prussian Jewry were, at the same time, peddlers who seldom eked out more than a bare existence. After the Franco-Prussian War (1870-1871), Germany embarked on a course of rapid industrialization and began to occupy a prominent place in world commerce. The Jews had a major share in this process. The class of Jewish capitalists increased considerably; the Jewish middle classes also grew in number and acquired a greater weight and influence. A Jewish intelligentsia came into existence which soon achieved a prominent rank in German literature, art, and science.

In the countries of Russia, Poland, Lithuania, Latvia, and Rumania, compact Jewish masses had lived for centuries, holding almost a monopoly on a large part of commercial and industrial activity. The Jews in these countries were not only the commercial pioneers, but were almost the only founders and owners of enterprises in many branches of trade and industry. In Russia and Poland, Jewish industrialists and financiers, such as the Poliakovs, Kronenbergs, Nathansons, Günzburgs, the bankers Efrosi and Company, and others, were the most prominent railway builders in the second half of the 19th century. Jews laid the basis and promoted the development of Russian and Polish banking. Within Russia's 1914 frontiers there were 300 sugar factories, of which 100 were owned by Jews. Of the 217 textile factories established in Lodz, Poland, between 1881 and 1909, no less than 142, or 65.4 per cent were owned by Jews.

Economic Development, 1915-1933.—In the period between the two world wars, the countries of the world may be divided into three major groups based upon their respective social and economic systems. In each group the position of the Jews differed significantly.

The countries based on the system of free enterprise—Great Britain, the Netherlands, Belgium, France, the United States, Australia, and the South American republics—comprised, on the one hand, politically powerful and highly industrialized nations, and, on the other hand, colonial or semicolonial countries with sparse populations and specific conditions of expansion. The position of Jews in all of these countries remained generally the same as in the liberal 19th century.

Under Soviet socialism, with the elimination of private enterprise, class antagonisms, and economic competition among national groups, the Jews' economic differences from the general population tended to grow less and less; although the number of Jews in the clerical occupations, in certain traditionally "Jewish trades" (needle, leather, printing, and food), and in the liberal professions was still disproportionately high. At the outset of the Russian Revolution, about half of the middle-class Jews became victims of nationalization, and for some 15 years could not adapt themselves to the new social system. This group was the main reservoir of the agrarian movement that set in among Soviet Jews—a movement that reached its peak in 1932-1933, when the land provided some 250,000 Jews (about 8 per cent of Soviet Jewry) with a livelihood. In later years, however, under the impact of the intense industrialization of the country, a considerable percentage of Jewish farmers returned to urban centers; by 1939 the number of Soviet Jews engaged in agriculture did not exceed 125,000.

The third group of countries comprised, on the one hand, those highly developed economically (such as Germany and Austria), and on the other hand, agrarian and semiagrarian nations (Poland, Rumania, Hungary, Lithuania, and Latvia), whose tardy industrial development was cramped from the outset by the narrow confines of poor and limited domestic markets. All of these countries had recourse to autarchy, economic self-sufficiency, and extreme nationalism. They were dominated politically by their middle classes with narrow horizons, and by their extremely nationalistic intelligentsia. These middle classes found a temporary solution of their problems in the expropriation of the Jewish minority.

The creation of several small independent states out of the two multinational empires (Russia and Austria-Hungary) following World War I had deep repercussions upon the position of the Jews of eastern Europe. Under the Hapsburgs and Romanovs, the Jews had performed the function of a connecting link between the advanced, industrialized sections of the empires and the agrarian, subject peoples. As a go-between group, the Jews were naturally concentrated in the towns and engaged in urban occupations. When the non-Jewish majority became the ruling nationality in the new independent states, it rapidly began, with the aid of the state, to create its own urban middle class. The new, non-Jewish town-dwellers increasingly aspired to a place in commerce and the liberal professions, and became strong competitors of the Jews.

The elimination of Jews from the liberal professions was effected by a rapid decrease in the numbers of Jewish students in the universities of central and eastern European countries. At the University of Budapest the percentage of Jews fell from 34.4 in 1914, to 4.1 in 1939; in the Polish universities the number dropped from 24.6 per cent of all students in 1922, to 8.2 per cent in 1939 (a development frequently marked by bloody anti-Jewish riots); in the university at Riga the Jews constituted, in 1921, 24.0 per cent of the student body, and in 1936 only 6.6 per cent. The declines in the medical and law schools in all of these countries were especially great.

A powerful factor in the process of dislodging the Jewish population from its economic positions was the intervention of the state. In several countries the state apparatus was placed at the service of the majority elements organizing themselves for competition with ethnic minorities. Moreover, the state directly assumed charge of wresting from those ethnic minorities, especially Jews, as many of their economic positions as possible. In Poland, Lithuania, Rumania, Latvia, and Hungary, it became a common practice for state banks to favor non-Jewish businessmen in the granting of credits, at the same time refusing credit to old, solidly established Jewish firms. Still more dangerous for the Jews was the direct struggle of the state machinery against them. In many of these countries the state became the largest employer and the largest customer, and then proceeded to exclude Jews from its economic activities. Jews were not only barred from state and municipal offices, but also from state-owned or state-controlled enterprises.

The second great factor which had a most unfavorable effect on the position of the Jewish masses was the marked reduction of overseas migration from Europe in the period between the two world wars. Poland, for example, provided

an annual average of 140,000 emigrants from 1895 to 1913; but from 1924 to 1934 the average dropped to only 49,000. Between 1901 and 1914 the annual average of Jewish emigration from Europe was 114,000; in the 1926-1935 period it was only 41,000. At the same time, as a result of population increases in central and eastern Europe, there occurred a mighty rush of peasant masses to the cities and toward every sort of urban occupation.

Period of Catastrophe, 1933-1945.—From the viewpoint of German Jewry, the period of catastrophe commenced in 1933, with Hitler's advent to power. For the bulk of European Jews, however, the tragic era began with the outbreak of World War II. In addition to the millions of Jews put to death by the Nazis, an estimated eight to nine billion dollars worth of Jewish property was plundered, including about 404,000 Jewish industrial and trade enterprises of varying sizes, some handed down from father to son for centuries and representing the energies, sweat, and toil of generations. Also plundered or destroyed were some 476,000 Jewish commercial enterprises, chiefly retail and wholesale stores varying in size from small shops to large establishments. Many Jewish cultural and welfare institutions were pillaged, including thousands of Jewish schools, libraries, newspapers, museums, hospitals, homes for the aged, orphan asylums, and other establishments.

In the years immediately following World War II, it soon became evident that the reconstitution of the Jewish communities in central and eastern Europe was impossible on anything like the prewar economic and social bases. Of those Jews who had escaped Hitler's gas chambers, many migrated to the growing Jewish community in Palestine as soon as they were able. By 1950 there were only three eastern European nations (exclusive of Soviet Russia) with any sizable Jewish population—Rumania, with an estimated 300,000 Jews; Hungary, with about 125,000; and Poland, with about 70,000. In all of the Communist-led countries, the growing nationalization of business and trade affected those Jewish businessmen who had somehow managed to retain or restore their businesses. These Jews were faced with the same problems of readjustment that had confronted the Jewish middle classes of Russia after the revolution of 1917. Some were able to obtain employment as managers or supervisors in the expanding state industries. Others became workers, some in special Jewish producers' co-operatives, as in Poland. Many, however, shifted about for some time, selling personal belongings or depending upon Jewish welfare agencies, and hoping to emigrate as soon as the bars placed upon their emigration were removed.

The Jewish Working Class.—There were in 1935-1939 nearly three million Jewish workers throughout the world, representing about 44 per cent of all gainfully employed Jews. Some characteristic features of the Jewish working class were as follows: (1) In 1939 about 600,000 Jews throughout the world lived by agricultural labor. With the exception of Palestine, the ratio of Jewish farm labor to the Jewish working class as a whole was comparatively small. (2) White-collar employees represented a much higher percentage of the working class among Jews than among non-Jews. (3) Domestic workers, the most depressed group of urban labor, occupied a much smaller place among Jews than in the non-Jewish

population. (4) Jewish industrial labor was concentrated in branches which have a more artisan character, consequently in smaller enterprises. (5) Among Jews, women workers represented a much smaller percentage of the working population than among non-Jews.

Author; Associate Editor, "Universal Jewish Encyclopedia."

23. JEWS IN THE UNITED STATES.

The history of the Jews in the Americas begins with major events in the discovery of the New World and is rooted in the westward geographical expansion and migrations of European Jewry during the 17th century. However, for most of the approximately five million Jews who are now an integral part of the United States population, their story more closely belongs to the great movement of peoples across the Atlantic during the 19th and 20th centuries, which brought over 38 million immigrants. This brief survey traces the historical sequences of Jewish immigration and discusses the social and economic pattern of Jewish settlement in the United States.

The New World and the Jews of Europe.

—The European background of the migration to the New World were wars and political upheavals, religious dissents and persecutions, economic crises and poverty. The Jews, on the whole, came to America for the same reasons as the Protestant dissenters or Catholics. If the first Jewish immigrants did not yet have universal religious freedom, they at least found no denomination numerically strong enough to force a single religion on all the inhabitants. They found sufficient freedom of economic enterprise, even when Protestants almost monopolized the offices of government. Like the Huguenots, Quakers, and other settlers, the Jews could breathe the air of a continent which had comparatively little of the Old World heritage of fierce intolerance and vested privilege, and which gave promise to fulfill the liberal ideas of John Locke, William Penn, Roger Williams, James Madison, and Thomas Jefferson.

About the middle of the 17th century, the Jews, confined for generations to a relatively small area in central and east-central Europe, entered upon a brighter era of geographic and economic expansion. They moved eastward to the Ukraine, White Russia, Poland, Rumania, Lithuania, Latvia, Slovakia, and Carpathian Ruthenia; westward to Holland, Belgium, Germany, France, England, and across the Atlantic. In the western countries of Europe, the source of the first Jewish settlers in America, there began a mingling of Ashkenazic Jews from eastern Europe and Sephardic Jews from Spain and Portugal, the latter group including also the Marranos, who

had adopted Christianity under terror and threat of expulsion. For the establishment of modern Jewish communities in Holland, England, France, and the New World, credit must be given to the Sephardic Jews and reformed Marranos, whose enterprise and worldly culture conquered the prejudices of the West against them.

For direct and indirect services in the discovery of America, not a little credit must be given to Jewish contemporaries of Columbus and to those Marranos who assisted in major phases of his career. Jewish scholars and scientists contributed to the improvements in the compass and the application of astronomy to navigation. Jews served as mariners, pilots, and interpreters in this period of great voyages and discoveries. Among the chief promoters of the momentous expedition of Columbus were men like Luis de Santangel, the Marrano royal chancellor; Gabriel Sanchez, the chief treasurer of Aragon; and Juar Cabrero, King Ferdinand's chamberlain. First among the Spaniards to tread American soil was a Marrano, Luis de Torres. Indeed, the fact that wealth stolen from the Jewish exiles of Spain had gone to fill the treasury of Aragon, has prompted one American historian who penetrated behind the schoolbook legend of Queen Isabella's crown jewels, to observe that "not jewels, but Jews" were the material basis of the great expedition. With singular irony, the vessels transporting Jews into exile passed by the little fleet which was stumbling into a new world.

For a century and a half between the discovery of the New World and the rise of New Amsterdam, scattered Jewish migrations took place to Spanish and Portuguese America, chiefly by Marrano refugees from the persecutions of the Inquisition. This powerful institution soon made itself felt in the New World: the West Indies in 1511; South America in 1516; and Mexico in 1571. Among other activities against heretics the Inquisition sought to root out Jewish practices by secret Jews, and duly eradicated such relapses by terror, torture, or the stake. Exiled and voluntary Marrano settlers in Brazil (some of whom, in 1548, had transplanted sugar cane from Madeira) had found a comparative security in their greater numbers. Many openly declared themselves Jews when Brazil came under tolerant Dutch rule about 1620. The first short-lived Jewish congregation in the New World was established in Recife (Pernambuco); its recapture by the Portuguese in 1654 dispersed the Jewish community to Holland, Surinam (site of the oldest Jewish community in the Americas), the West Indies, and New Amsterdam. Henceforth, migrating Jews would find the main center of Jewish life in the more economically and politically tolerant British colonies of the north.

The earliest identified Jewish settler within the present limits of New York was Jacob Barsimson, an Ashkenazic Jew, who arrived in New Amsterdam, probably from Holland, in 1654. He was followed in the same year by a group of 23 Sephardim from Brazil or the West Indies, thus opening the history of the Jewish community in the United States. The growth of the Jewish population in the United States has been conveniently divided into three cycles: the earliest settlements, consisting chiefly of Sephardic or Spanish-Portuguese Jews; the expansion of the community with the arrival of German Jews after 1840; and the great immigration from eastern Europe after 1880. Notwithstanding the early Sephardic

adlership, however, the Jewish community of New York after 1750 was already overwhelmingly Ashkenazic by virtue of arrivals from England, Holland, Germany, and Poland.

Americanization of the immigrants began in the seaboard towns, the first natural points of settlement. The course of cultural interaction continued for two centuries, with each succeeding wave of new arrivals, and involved many subtle and complex processes. The often painful emotional reorientation in a new land accompanied a rapid modification of the Jewish cultural and religious pattern under American law and freedom of thought. The newcomers' desire for social position on a par with established native-born Jews and Christians was sometimes won at the price of gross imitation. Of diverse groups themselves, the new arrivals soon discovered that in the free American society no one could force an individual to conform to a sectarian group and control ritual or belief. The realization by many immigrants of lingual and social disabilities resulted in the spontaneous formation of ghettos to gain cohesiveness and security. To aid in the adjustment and Americanization of the newcomers there took place a significant expansion in Jewish welfare activities and communal agencies. The influx of Jews from many diverse sources resulted in a stabilization of broad, fundamental Jewish ideals and customs held in common by all Jews. However, neither a Sephardic, nor a German, nor an east European, nor a predominantly traditional Jewish community emerged from the unique combination of forces in the American environment.

Migrations and Settlement.—New Amsterdam (later New York) was the site of the first Jewish community of what is now the United States. It first attracted individuals, then families, and eventually masses of Jewish immigrants—the tailors, shoemakers, smiths, merchants, and brokers of the 18th century. Then, in the 19th century, came the peddlers, petty traders, and diverse industrial workers, most of whom, reluctant to move inland and away from the protective homogeneity of an urban Jewish quarter, remained to swell the growing community.

The second settlement took prosperous root in Newport, Rhode Island. Thanks to the enlightened charter of Roger Williams, Rhode Island became a dissenters' refuge and the only New England colony of the 17th century to tolerate a permanent Jewish community. By 1658, the Jews of Newport had built the first synagogue in North America.

More Jewish communities were organized in the early 18th century in Philadelphia (chiefly between 1726 and 1745) and other towns of Pennsylvania, a commonwealth permeated by the generous Quaker spirit of William Penn. Another Jewish community was established in 1733 at Savannah, Georgia, a philanthropic refuge granting liberty of conscience, but administered, curiously, by trustees who were prejudiced against "papists," rum, and even lawyers. Although many of the settlers were rather scandalized by the unexpected arrival of poor Jews, Governor James Oglethorpe extended the newcomers their protection. Still another community rose in 1750 at Charleston, in Carolina, whose constitution had long before been drafted by the liberal genius of John Locke to refuse no "Jews, heathens, and other dissenters."

In the initial period of the young republic, the

Jewish communities comprised between two and three thousand persons in a total population of about four million. Concentrated in a half dozen seaboard cities, the Jews had been absorbed within the commercial and social life of the colonies. They were active in the manual crafts, in trade—intercolonial, Indian, and foreign—and in shipping. To the growth of the new nation they provided the services of talented merchant pioneers, public officers, revolutionary patriots, enlisted soldiers, and devoted financiers (among them the self-sacrificing Haym Salomon, who helped to tide over an impoverished Continental Congress).

Adventurous and enterprising individual Jews and small groups established scattered bases for future Jewish communities in the south and west, founding another congregation at Richmond, Va., in 1790. An Indian trader who was a Jew set up the first cotton gin in Alabama, on the site of Montgomery. Jews were among those who pushed out into the wilderness of Kentucky. Jews as Indian traders and traders in fur and land penetrated beyond the reaches of the Ohio River, north as far as Michigan and Wisconsin, and west to Illinois, leaving the memory of Jewish pioneers on places bearing the names of Franks, Gratz, and Harris. As part of the continuing urban expansion in the east; as part of the great westward trek across mountains, valleys, and plains; and at one time attracted—as their contemporaries—by the gold discoveries of California (there were two Jewish congregations in San Francisco in 1850), Jews formed a component of the irrepressible tide that opened up the virgin territories west of the Mississippi, as they later were elements of a steadier flow toward youthful Cincinnati, Chicago, Detroit, and other rising centers.

In the 40-year period of geographical and economic expansion following 1840, the general population of the United States increased from about 17 million to 50 million, and the Jews from about 15 thousand to 250 thousand. As part of the general migration from Germany to the farmlands and towns of the United States in the 19th century, some 200,000 Jews fled to the middlemen's positions of trading and peddling in the coastal cities and to such growing midwestern centers as Cincinnati, Chicago, St. Paul, and Minneapolis. They had run from the prejudices, poverty, and post-revolutionary reaction in the German states, and, to cite one example, from such a degrading disability as the limitation on the number of Jewish marriages.

The American Sephardic element was comfortably adjusted in the native scene, but already numerically overwhelmed in the Jewish community, when many German Jews began their striking economic rise which, for some, led from itinerant peddler to department store pioneer and established merchant. Having most courageously scattered in little groups beyond the limited opportunities of the concentrated Jewish communities, the German Jews became more rapidly Americanized. Though they successfully absorbed the American middle-class social pattern, the German Jews retained their profound concern with Jewish communal conditions. They founded lasting institutions, such as the Young Men's Hebrew Association (YMHA) and B'nai B'rith, and forged localized social services into federations on a national scale. They were liberal in culture and reformist in religion. As a group, however, they kept themselves aloof from the

proletarian masses of new Jewish arrivals from eastern Europe, whose outlandish ways embarrassed them as much as they themselves had once embarrassed the Spanish-Portuguese group.

From 1880 to 1920, the period of greatest immigration to the United States, nearly 24 million persons entered the country, including some 2 million Jews. By 1920 the Jewish community had increased to approximately 3.5 million in a total population of about 106 million.

Brutal economic, political, and cultural realities drove most of these Jews out of eastern Europe. They fled from official anti-Semitic policies implemented by inspired pogroms and the outbursts of deluded and oppressed mobs. In the starving towns of Galicia, where a doctor's customary prescription to Jewish patients was simply food; in Rumania, where Jews were driven from itinerant trade with the villages; and everywhere in central and eastern Europe, where the new industrialization and growth of state monopolies were ruining petty shopkeepers and displacing craftsmen, masses of Jews were torn from their ancestral moorings. That these wretched and impoverished families, attached to orthodoxy, Yiddish, and their folkways, managed to transplant themselves successfully to a strange and distant land was due chiefly to the climate of freedom in the United States and the great industrial expansion underway there.

For many years, most of those who settled in the eastern metropolitan centers went through a gruelling process of social transformation. The old craftsmen, petty shopkeepers, tradesmen, and the sprinkling of professionals and intellectuals were proletarianized by the sweatshop. For a time, this harsh urban school of Americanization converted the heterogeneous masses from Russia, Poland, Galicia, and Rumania into a fairly uniform society of manual laborers—something unprecedented in modern Jewish society. Out of the economic warfare waged by the shop workers in New York, Baltimore, Philadelphia, Boston, and Chicago, emerged a proletariat fermenting with uplift and progressive ideas, and led by self-educated workers or transplanted young socialist leaders. From the struggles of these workers rose the militant and socially-minded needle trades unions. However, adherence to religious orthodoxy, Sabbath observance, and traditional folkways kept many Jewish workers concentrated in a few relatively independent trades outside the non-Jewish employment market. Besides the cleavage between those who maintained strict religious fidelity and those who discarded much of the traditional pattern, there also developed a differentiation in terms of language and culture. For the broad masses, however, Yiddish remained the instrument of a flourishing press, literature, and theater—and thus, a mode of life.

Adaptation to the new environment did not proceed without considerable personal maladjustment and family demoralization. In addition to economic difficulties, there was the painful psychological isolation of a minority group. Competition between varying mores produced confusions and uncertainties. Out of these conditions developed the unhappy fissure between immigrant parents and their American-born children, and between the established groups in the Jewish community and the later comers.

However, with the rise of the younger generations into the middle classes and their growing participation in the political and social life of the

country, the economic and social homogeneity of the immigrant group was broken up. In their turn, the Jews from eastern Europe organized fraternal societies, social welfare agencies, synagogues, schools, and cultural and study circles. In a manner characteristic of their ideology, they set up bodies to meet the needs of Jews as a national-cultural group, rather than as mere co-religionists. They also developed Zionist organizations—of middle-class, orthodox, and laborite persuasion—to assist in the growth of the Jewish national homeland in Palestine. On the whole the mass immigration of Jews from eastern Europe resulted not only in the multiplication of communal institutions, but in the extension of Jewish group life, in the cohesion and intensification of traditional Jewish culture, and in many significant contributions to liberal practices of the American labor movement and political life.

Economic Structure of the Jewish Community.—The pattern of economic opportunity for Jews in the United States has changed markedly since the 1880's. The determining factors in this transformation lie within the general development of the American economy and the specific nature of the Jewish background and adjustment. Among the important determinants have been the traditional Jewish respect for literacy and higher education, and the historically developed Jewish urban aptitudes, special skills, and occupational preferences. These factors favorably coincided with the rapid expansion in the American economy of clerical work, commerce, and the professions. Other factors have been the attraction of the immigrants to established Jewish communities in the largest cities, and the comparatively firmer determination of Jewish immigrants to establish themselves permanently in the United States (only 4.6 per cent of Jewish immigrants returned to countries of origin between 1908 and 1943, as compared with 37.8 per cent of other immigrants). Anti-Jewish discrimination has been a considerable force in shaping the economic structure of the Jewish community. In the 1930's, for example, discrimination was intensified by the economic crisis and the growth of anti-Semitism, resulting in a downward trend in employment opportunities for Jews and an increase in discriminatory practices in the professional schools.

A major characteristic of the Jewish community in the United States is its predominantly urban nature. More than 80 per cent of the estimated five million Jews in the United States (1948) lived in cities of 100,000 and over. The Jewish community has also shown a tendency toward occupational concentration in relatively few fields of economic enterprise. Thus, the Jews of New York, who constituted about 30 per cent of the city's population in 1937, formed more than 30 per cent of the workers in trade, manufacturing, professional services, and amusements; but less than 30 per cent in construction and transportation, finance, and public utilities. Late studies of urban centers other than New York indicate that the prewar concentration of Jews in trade, white collar, and professional occupations continued after World War II. Among Jews the trade group is almost three times as large as among the general population; in the professions about twice as large; but in manufacturing it is less than among the general population. In New York City the main concentration of Jews in the retail trades is in food stores, apparel, furniture, and drug stores; in the manufacturing industries,

chiefly clothing, furs, printing, and food; in the professions, mainly law, medicine, pharmacy, and dentistry.

Although Jews loom large in tobacco buying, cigar (but not cigarette) manufacturing, distilleries, moving pictures, the boot and shoe industries, and independent retail trades (but decidedly not the chain-store field), the only industries in which they have attained dominant ownership on a national scale are the garment industries. The percentage of Jewish ownership is small in wool and cotton textiles. Jewish participation in insurance is limited almost entirely to selling personnel. Jews constitute a fraction of one per cent of agricultural personnel and are found hardly at all in such capital goods industries as coal, chemicals, steel, transportation, electrical goods, oil, rubber, and automobiles; nor are Jews significantly present in the public utilities.

The traditional urban position of Jews; their concentration within occupations which have brought them into direct contact with the consuming public; the increased importance of cities under modern industrialism—have all helped sustain the myth that Jews have monopolized economic opportunity. A survey in 1936 by *Fortune* magazine helped to discredit this notion. This study confirmed the fact that Jews have a decidedly subordinate role in American finance and an even more inconspicuous place in heavy industry. It found that Jews play little or no part in the great commercial houses, that they do not control the instruments of opinion, and that there are vast industrial fields in which Jews play so inconsiderable a part as not to count in the total picture. Nevertheless, the myth of Jewish economic power has been used to foment anti-Semitism among the ignorant and uninformed, sometimes, as in Europe, with tragic consequences.

The Jewish community has manifested a growing concern over the occupational shift to the clerical and professional fields. To offset this trend, many Jewish leaders have advocated a broader occupational distribution through the vocational adjustment of young people. However desirable this may be as a social corrective, the problem of Jewish vocational adjustment is not only a Jewish but a general problem. The phenomenon of national, religious, or ethnic concentration in the American economy has been no less characteristic of other immigrant groups; for example, of those who had applied their group skills largely to mining or construction. All groups, including the Jewish, have responded naturally to the requirements and opportunities of expanding fields in modern American economic activity, as they must to changing economic conditions. Thus, the long-range problem of the Jewish community has derived from a general economic trend affecting all Americans: the narrowing range of small-scale enterprise and the growth of corporations and government agencies as employers. For Jews, as for other ethnic or religious minorities, this development may, to an extent, have intensified employment discrimination, though not in the field of public employment with its civil service safeguards and generally democratic tradition. But the success of the struggle against discrimination in the placement policies of large private business organizations, agencies, labor unions, and institutions, has depended at least as much on voluntary cooperation and on a democratic public opinion as on legisla-

tive and administrative attempts to enforce laws of fair employment practices.

Note: The foregoing 23 articles on Jewish history and society were prepared under the direction of Mr. Isidore Abramowitz in cooperation with the editors of the *ENCYCLOPEDIA AMERICANA*.

JEW'S HARP, a small musical instrument held between the lips, the sound coming from the vibrations of a tongue of metal, bent at a right angle, which is set in motion by being twitched with the forefinger. The sound is increased in intensity by the breath, and altered in pitch by the shape of the cavity of the mouth, which acts as a reflector. The older name of the instrument is "Jew's trumpet," possibly a corruption of the Dutch *Jedugtromp* (child's trumpet). Known for centuries in Europe, the Jew's harp is also found in eastern Asia and Oceania. Early 19th century virtuosi, such as Heinrich Scheibler, combined a number of Jew's harps into one instrument, obtaining remarkable effects.

JEW'S' MALLOW, a pot-herb. See **CORCHORUS**.

JEWSBURY, Geraldine Endsor, English novelist: b. Measham, Derbyshire, 1812; d. London, Sept. 23, 1880. She was brought up under the care of her brilliant elder sister, Maria Jane Jewsbury (q.v.), and is chiefly remembered for her friendship with Thomas Carlyle and his wife, although her writings were popular in her lifetime. She possessed a wide circle of friends, among them W. E. Forster, Thomas Huxley and James Froude. She met the Carlyles in 1841 and the friendship then formed lasted through Mrs. Carlyle's and Miss Jewsbury's lifetimes. Her account of Mrs. Carlyle's early life is printed in Carlyle's *Reminiscences*. She wrote for Charles Dickens' *Household Words* at his solicitation, and also contributed to the *Athenaeum* and to the *Westminster Review*. Author of the novels *Zoe* (1845); *The Half Sisters* (1848); *Marian Withers* (1851); *Constance Herbert* (1855); *The Sorrows of Gentility* (1856); *Right or Wrong* (1859).

JEWSBURY, Maria Jane (Mrs. WILLIAM K. FLETCHER), English author, sister of the preceding: b. Measham, Derbyshire, Oct. 25, 1800; d. Poonah, India, Oct. 4, 1833. She lost her mother at the age of 18 and thereupon as-

sumed the care of her younger sister Geraldine, and three brothers. Her first published verse appeared when she was about 18, and in 1824 she adopted literature as a profession. She held the admiring friendship of William Wordsworth, Letitia Elizabeth Landon, and other notables, and her works were well received. She married William Kew Fletcher, a chaplain in the service of the East India Company, Aug. 1, 1832, accompanied him to India, and died of cholera 14 months later.

She was the author of *Phantasmagoria, or Sketches of Life and Character* (2 vols., 1824); *Letters to the Young* (1828); *Lays of Leisure Hours* (1829); and *Three Histories: The History of an Enthusiast, The History of a Nonchalant, The History of a Realist* (1829).

JEX-BLAKE, jěks' blāk', Sophia Louisa, English physician; b. Hastings, Sussex, Jan. 21, 1840; d. Rotherfield, Sussex, Jan. 7, 1912. She was the daughter of a physician, and in 1865 went to Boston where she worked with Dr. Lucy Sewall for two years. In 1868 she began her studies with Dr. Elizabeth Blackwell in New York, but upon her father's death returned to England in the same year. Refused admittance to the University of London because of her sex, she was admitted to the University of Edinburgh in 1869, but in 1872 was refused permission to graduate. Subsequently she graduated at the University of Berne, although this did not entitle her to practice in Great Britain.

Devoting herself to pioneering the advancement of women in the British medical profession, she founded the London School of Medicine for Women, which opened in 1874, and worked to achieve her ends through Parliament. With the passage of the Russell Gurney Enabling Act (1876), she was finally admitted to practice in 1877, practicing from 1878 until her retirement in 1899 in Edinburgh, where she founded the Edinburgh School of Medicine for Women in 1886.

JEZEBEL, jěz'ě-běl (in the Douay Bible JEZABEL), the wife of Ahab, king of Israel: fl. 9th century B.C. The daughter of Ethbaal, king of Sidon (I Kings 16:31), according to the Bible she was the evil genius of her husband, favored the idolatrous worship of Baal in Palestine, and persecuted the prophets of Jehovah. Her name left a dark stain upon the annals of Israel and survived to the later dispensation where it occurs in the Book of Revelation (Revelation 2:20) as a symbol of feminine depravity and impiety. She outlived Ahab by 14 years (II Kings 9:30-37), and was finally murdered by Jehu at Jezreel, when he captured the throne of the northern kingdom (about 843 B.C.).

JEZREEL, jěz'rě-ěl, ancient town, Palestine, in the Valley of Jezreel, Plain of Esdraelon. It became the residence of Ahab, king of Israel, (I Kings 21:1) and was the scene of the murders of Naboth (I Kings 21:1-16) and Jezebel (II Kings 9:30-37). In modern times it was the Arab village of Zir'in until 1948, when it was occupied by Jewish settlers.

JHALAWAR, jā'lā-wār, former princely state, India; one of the Eastern Rajputana States of Rajputana. Its capital was Jhalrapatan. Jhalawar was created in 1838 upon the dismem-

berment of Kotah and was ruled by the Jha Rajputs. In 1896 Zalim Singh was deposed by the British for misrule and most of his domain were restored to Kotah; a new state of Jhalawar being formed in two separate sections, Shahabada and the Chaumahla. On March 25, 1948 the state was merged with the Union of Rajasthan which merged with the Indian Union in 1949. Area 824 square miles; pop. (1941) 122,299.

JHANSI, jän'si, district, India; in Uttar Pradesh; until 1950 a district of the United Provinces. Its principal river is the Betwa, the valley of which has long been important as a route between the Deccan plateau and the region of the Ganges and Jumna rivers. The Betwa provides irrigation, but Jhansi is nevertheless dependent on summer rains, and drought often leads to famine.

It was ruled by the Chandel kings (from about the 11th century) and the Bundela Rajputs (from about the 14th century), but in 1742 was annexed by the Mahrattas, who established an independent state in 1770. Jhansi came under British protection in 1805. Mahratta rule lasted until 1853, when the last maharaja died without issue and the state was escheated to the East India Company. The rani of Jhansi, Lakshmi Bai, widow of the maharaja, joined the native forces in the Indian Mutiny of 1857 and was killed in the defense of Gwalior against Sir Hugh Rose in the same year.

The area (3,606 square miles) and population (773,002) of 1941 were slightly enlarged by territorial additions in 1950 to about 3,670 square miles and about 784,700 respectively.

The former JHANSI DIVISION of the United Provinces comprised the districts of Jhansi, Jalaun, Hamirpur, and Banda. Area 10,553 square miles; pop. (1941) 2,553,492.

JHANSI, city, India; in southern Uttar Pradesh; capital of Jhansi District. It is situated 130 miles south of Agra. Walled for the most part, and dominated by a fort on high rock, it is a rail junction and the trading center for an extensive agricultural region. There are railway workshops, rolling mills, and manufactures of rugs, silk, and brassware.

In 1613 a fort was built here by the Bundela Rajputs, but the city dates from 1742 when it came under Mahratta rule and was settled by immigrants from Orchha. The fort was further strengthened until it was perhaps the strongest fortification in central India. The city was the scene of a massacre of Europeans in 1857 during the India Mutiny and was besieged from March 20 to April 3, 1858 by Sir Hugh Rose, being stormed on the latter date in spite of efforts at relief by Tantia Topi. Pop. including cantonment (1941) 103,254.

JHELUM, jā'lūm (ancient HYDASPES), river, India and Pakistan; most westerly of the "Five Rivers" of the Punjab. It rises in Kashmir. Into an octagonal tank at Vernag flow springs from the western Himalayas, which form the headwaters of the Jhelum. The river flows northwest through the Vale of Kashmir, passing Srinagar and Wular Lake; then southwest and northwest past Baramula to Muzaffarabad, where it turns south, and flows along the boundary between Kashmir and the North-West Frontier Province of Pakistan, a distance of about 100 miles. Leaving the boundary at the town of Jhelum, it flows

outhwest and south into the Chenab River. Its whole course is about 480 miles, nearly all of which is navigable.

JICARILLA, *hē-kā-rēl'yā*, a tribe of North American Indians of Athapaskan stock, one of the tribes of the Querechos or eastern Apaches, originally of the mountains of Arizona and New Mexico and ranging eastward, but now settled on a reservation near Tierra Amarilla in northern New Mexico. The tribe at one time comprised two bands, the Llanero and the Ollero, ranging on different banks of the Rio Grande. The name Jicarilla is supposed to be of Spanish origin, from *jicara*, a basket tray, the tribe being famed for its skill in basket weaving. At one time they were the terror of their district, but they now live quietly although they remain uncivilized. Their language is similar to that of the Mescalero Apaches.

JIDDA, *jīd'ā*, or **JEDDA**, *jēd'ā* (also **JEDDAH** or **GEDDA**), city, Saudi Arabia; the chief seaport of the Hejaz. It is situated on the Red Sea, about 46 miles west of Mecca, with which it is connected by a road. Jidda is the principal port of entry for Moslem pilgrims, upwards of 75,000 of whom pass through the port each year on their way to Mecca. It also has an airport. Jidda is a walled city, with houses built chiefly of coral rock. The residential section on the northern side contains the embassies to Saudi Arabia and the buildings of foreign firms. There is a large bazaar, but few manufactures, which include rugs, religious articles, and pottery. Food must be imported; water is obtained mostly from an apparatus which distills sea water. The climate is hot and humid.

The site of an early settlement, probably established by Persian traders, is 12 miles south of the present city. Jidda became important as a port in which goods from India destined for the Mediterranean were transhipped from India to Egyptian vessels. Although this declined with improved shipping methods, Jidda was compensated by its development as a pilgrimage center in the 17th century. Upon the proclamation of Arab independence from the Turks in 1916, Jidda became part of the Kingdom of the Hejaz of Faisal ibn-Ali. On Dec. 23, 1925, after being besieged by the Wahhabi forces of King ibn-Saud since November of 1924, it surrendered to the latter. The famous reputed tomb of Eve just outside the walls was demolished by the Wahhabis in 1927.

The population of Jidda, mainly Arab, Iranian, Indian, and Negro, was estimated at 60,000 in 1950.

JIG, in music, originally a lively English dance, the music for which was usually but by no means exclusively in 6-8 time. It became popular in the 16th century and survives, with local changes, chiefly in the music of Ireland and Scotland. The tune usually has two or three parts. In the middle of the 17th century the jig spread to the Continent, where it was adapted to local usages, particularly in France and Italy.

As a GIGUE, the French form of the word, or a GIGA, the Italian form, the jig is found in the instrumental suites and solos of Arcangelo Corelli, Johann Sebastian Bach, George Frederick Handel, and other composers of the period, most frequently to conclude the composition. The time

varies greatly. Usually in two parts, the second part of the gigue or giga begins conventionally with an inversion of the theme of the first part.

JIGGER (also **CHIGGER** or **CHIGOE**), the name of a flea (*Tunga penetrans*) of tropical America, which bores under the skin or toenails

Jigger (*Tunga penetrans*)
Left: mature jigger. Center: after eating. Right: larva.

and produces pustulous sores. The name is also applied to larval forms of mites of the family Trombiculidae which also bore under the skin.

JIHAD or **JEHAD**, *jê-hād'* (Arabic *jihād*, endeavor or exertion), the holy war as undertaken by Moslems to spread the domain of Islam. Originally, Mohammed forbade reprisals against unbelievers, although self-defense was encouraged (Koran 22:39-42). But during the struggle between Mecca and the Moslems at Medina, the jihad came to be prescribed as a duty of all able-bodied men (Koran 2:212-213). Those who could not take part were to contribute money according to their means. The wars which accompanied the great expansion of Islam after the death of Mohammed were not primarily religious wars, however, although the appeal to religion was always made, just as in the Christian West. Only among the Kharijites, regarded as heretical by other Moslems, did the jihad become a commandment, being added, as a sixth, to the "five pillars" of Islam.

Rules for the conduct of warfare and the humane treatment of the conquered were prescribed, as were those for the division of booty (Koran 8:42). Unbelievers in conquered countries, although reduced to political impotence, were allowed considerable freedom of worship, provided they paid tribute. Thus it will be seen that the object of the jihad was not to make individual conversions so much as to extend the domain of Islam.

In modern times the jihad has been interpreted not as physical combat, but as a spiritual one. The jihad proclaimed by the Turkish sultan at the beginning of World War I was a failure, meeting with little response in the Moslem world generally.

JIHLAVA, *y'hlá-vá* (known also by its German name, IGLAU, *é'glou*), city, Czechoslovakia; capital of Jihlava Province in western Moravia. It is situated on the Jihlava River, in the Bohemian-Moravian Highlands which separate Bohemia from Moravia, 82 miles southeast of Prague. A rail junction, and on the Brno-Prague highway, Jihlava is the market center for an agricultural and lumbering region. It manufactures woolen textiles, shoes and gloves, furniture, pianos, automobile bodies, and tools, and has breweries and sawmills.

Jihlava was a famous silver-mining center in medieval times, from perhaps the 9th century until the Thirty Years' War, when it suffered greatly, and was occupied by the Swedes, 1645-

1647. It has Gothic churches of the 13th and 16th centuries, and a Rathaus (town hall) of the 16th century.

The Compact of Jihlava, signed here July 5, 1436, brought to an end the Hussite Wars by accepting the stipulations of the moderate Hussites (Calixtines) on the basis of the conciliation offered by the Council of Basel in 1431. After having defeated several crusades sent against them and having raided deep into Germany, the Hussites were divided when the Calixtines accepted the Compact of Prague, Nov. 20, 1433, which was rejected by the more extreme Hussites (Taborites and Orphans). In the struggle which followed, the Taborites and Orphans were crushed by the Calixtines and Catholics at Český-Brod (or Böhmisch-Brod), May 30, 1434, and a settlement imposed on them. The Emperor Sigismund was recognized as king of Bohemia at the same time.

After World War I, Jihlava remained predominantly German, and was a center of Nazi agitation until Adolf Hitler assumed control of Czechoslovakia in 1938-1939.

The area of the province is 2,568 square miles; pop. (1947) 422,533; pop. of the city (1947), 23,413.

JIMENEZ (also **XIMÉNEZ**) **DE CISNEROS**, *hē-mā'nāth thā thēs-nārōs*, **Francisco**, Spanish prelate and statesman: b. Torrelaguna, Madrid Province, 1436; d. Roa, Burgos Province, Nov. 8, 1517. He was graduated in civil and canon law at Salamanca in 1456, became a priest, and going to Rome, practiced in the courts of the consistory, 1459-1465. He obtained the promise of Pope Sixtus IV to secure for him the first vacant benefice in Spain. Upon his return in 1465, however, the archbishop of Toledo refused to give him a place, and Jiménez having taken possession of a vacant benefice, the archbishop had him imprisoned. He recovered his freedom in 1480, and Cardinal Pedro González de Mendoza, bishop of Sigüenza, appointed him his vicar general. Nevertheless, Jiménez abandoned his benefices soon after and entered the Franciscan order, practicing the rigid asceticism which marked the rest of his life.

In 1492 Jiménez became confessor to Queen Isabella of Castile, to whose notice he had been recommended by Cardinal Mendoza, archbishop of Toledo since 1482, and in 1495 succeeded the latter as archbishop of Toledo and primate of Spain. Jiménez would not accept this dignity until at length he received an express command from the pope. As the Spanish primate, a position which carried with it the chancellorship of Castile, he abolished a multitude of abuses and adhered steadfastly to his resolution that public offices be filled with honorable and well-qualified men. Jiménez founded the celebrated university at Alcalá de Henares (moved to Madrid in 1836), and undertook in 1502 the Complutensian polyglot Bible, completed in 1517.

In 1504, Juana, the daughter of Isabella and Ferdinand II of Aragon, and her husband, Philip, archduke of Austria, succeeded to the throne of Castile. Following the death of Philip in 1506, Juana became incurably insane, and Jiménez was regent until the return of Ferdinand from Naples in 1507. In the same year he became cardinal, and inquisitor general of Castile and León.

The double aim of Spanish expansion and the conversion of the Moors now occupied his atten-

tion. With this in view, he formed the project of crossing over to Africa in order to take the fortress of Oran. In 1509 he landed on the coast of Africa with an army provided at his own expense, and after a defeat of the Moors near Oran the fortress was captured. Jiménez had Oran refortified, changed the mosques into churches and returned to Spain.

When Ferdinand died in 1516, Jiménez became regent of Spain until the arrival of Charles I (later the emperor Charles V) late in 1517, when Jiménez was dismissed, dying soon after.

JIMENEZ DE QUESADA, *ká-sā'thā* **Gonzalo**, Spanish explorer and conqueror: b. Granada, about 1500; d. Mariquita, New Granada (now in Colombia), Feb. 16, 1579. Educated as a lawyer, he went to America in 1535 as a judicial functionary in the suite of Pedro Fernández de Lugo, governor of the province of Santa Marta, who chose him to lead an expedition in search of the legendary country of El Dorado, thought to be near the headwaters of the Magdalena River. Actually, the expedition encountered the Chibchas, an Indian people whose chief cities were Hunsá (now Tunja in Boyacá Department, Colombia) and Bogotá (or Bacatá; now capital of Colombia).

Jiménez set out from Santa Marta on April 6, 1536, but at the end of eight months had made no more than 450 miles. After great hardships the expedition reached the mountains and in the following March progress was resumed.

The first Indians he met were so terrified by the sight of his horses that they instantly submitted. Approaching, at Hunsá, the court of one of the great chiefs of the Chibchas, he was allowed to enter the palace, but was treacherously attacked as he was about to embrace the chief. The latter was captured, after much slaughter, and Jiménez took possession of the town.

The chieftain of Bogotá fled at the approach of the Spaniards, and on Aug. 6, 1538, Jiménez founded a new city, Santa Fé (de Bogotá), near the site of the old.

He was presently joined by two rival expeditions, under Francisco Pizarro's lieutenant, Sebastián de Belalcázar (Benalcázar), and the German adventurer Nikolaus Federmann. The three then returned to Europe to lay their claims before Charles V, but while Balalcázar was made governor of Popayán (in 1538), Jiménez and Federmann gained nothing.

In 1550, however, Jiménez was belatedly made marshal of New Granada, and returning to Bogotá in 1551, seems to have protected the people against the rapacity of the Spanish officials.

Still searching for the land of El Dorado, in 1569 he spent immense sums in fitting out an expedition to the confluence of the Orinoco and Guaviare rivers. Setting out with 500 followers, he returned three years later with only 25 men. When he died (perhaps of leprosy), by his will he declared himself poor and forbade the erection of any but the simplest monument over his grave. His remains were removed to Bogotá in 1598.

Consult Cunninghamham Graham, R. G. B., *The Conquest of New Granada* (Boston 1922); Arciniegas, G., *The Knight of El Dorado*, tr. by M. Adams (New York 1942).

JIMENEZ DE RADA, *rā'thā*, **Rodrigo**, Spanish archbishop and historian: b. probably Puente la Reina, Navarre, about 1170; d. 1247. He studied at Paris, entered the Franciscan order and became archbishop of Toledo in 1208 or

1210. He was a dominant figure of his time, a learned writer, statesman, warrior and counsellor of kings. In 1212 he served at the battle of Las Navas de Tolosa; he commenced the building of the cathedral at Toledo, and founded the first general schools there. His work as a historian was of great importance and influence. He wrote *Historia Gothica*, better known as (*Chronica Rerum Gestarum in Hispania*, which he translated into Castilian, *Historia de los Godos* (1241).

JIMMU, legendary first ruler of Japan and founder of the Japanese imperial line. According to two official records of the 8th century A.D., the *Kojiki* (*Record of Ancient Things*) and the *Nihon-shoki* (*Chronicles of Japan*), Jimmu was a direct descendant of the sun goddess Amaterasu. He set out from Hyūga in southern Kyushu and, defeating the tribes he met on his way, reached Yamato in southern Honshu, which he conquered in 660 B.C. He is supposed to have reigned over Yamato until 585 B.C., when he died at his palace of Kashiwa-bara. Although it is possible that clans from Kyushu conquered Yamato, the conquest, if it took place, probably occurred in the 1st century B.C. By the time the chronicles were set down, however, the Yamato sovereigns controlled a large part of Japan, and the account of Jimmu's conquest and divine origin seems to have been compiled to give official backing to their dynasty. After the Meiji restoration in 1868, the legend of the divine origin of the imperial family and of an unbroken succession was incorporated in the Japanese constitution, and a specific day—Feb. 11, 660 B.C.—was assigned to Jimmu's conquest. The Japanese calendar begins with this date.

JINGO, legendary empress of Japan, wife of Chūai, the 14th emperor listed in the early chronicles. Chūai is supposed to have reigned from 191 to 200 A.D., but probably actually flourished around 340 A.D. According to the chronicles, he died leading an expedition against the Kumaso, warlike tribes of Kyushu. His wife, who succeeded him, is supposed to have led an army which conquered the Korean kingdom of Silla in 200 A.D. Korean accounts mention Japanese invasions in the 3d and 4th centuries, and one of these may refer to Jingo's expedition. After her victorious return, her son, Jin, 15th emperor, was born and Jingo continued to reign as regent. While there is little doubt that the conquest of Silla is largely mythical, there are references in Chinese history, usually more accurate, which indicate the existence of this empress, who probably reigned about 60 A.D., and there were contacts between Japan and the Korean kingdoms of Silla, Paekche, and Goguryu at about this period.

JINGO, word used in Britain, during the Russo-Turkish War of 1877–1878, to designate those who urged intervention in the conflict against Russia. The word was adopted from a song popular in London music halls at the period:

We don't want to fight, but, by Jingo! if we do,
We've got the ships, we've got the men,
We've got the money, too.

The word was first known in England about 1670 as a piece of conjurer's inarticulate nonsense; it was used by Peter Anthony Motteux in

1694 in his translation of book IV of Rabelais as substitution for *par Dieu*. In the United States, an equivalent to jingoism is spread-eagleism; and in France, chauvinism.

JINN, DJINN, or GENII, a class of spirits in Arabian folklore and mythology. They are lower than the angels and are made of fire, but are capable of appearing in both human and animal form; and if good are beautiful, while if bad they are hideous. They are supposed to exercise supernatural influence, which may be either good or bad. While supernatural, they are supposed to live, propagate their kind, and die as humans do, except that the duration of their lives is greater. Their home is the mountain Kaf, and their rulers are kings named Suleyman, or Solomon, one of whom is supposed with their aid to have built the Pyramids. In translations of the *Arabian Nights* they are called "genii"; but this does not mean that they are identical with the genii of Roman mythology.

JINNAH, jin'nā, Mohammed Ali, founder of Pakistan: b. Karachi, Dec. 25, 1876; d. there, Sept. 11, 1948. Born a Moslem, in a Moslem family, he adopted the name of Jinnah (Lean One). He qualified as a barrister in London, and in 1896 commenced law practice in Bombay, where he became an advocate in the high court. His political career began as an eager worker for the Congress Party, at that period not predominantly Hindu in membership, and from 1910 to 1919 he was a member of the Imperial Legislative Council of British India. He joined the Moslem League in 1913, served as its president in 1916 and 1920, and was permanent president from 1934. In 1921 he severed his connection with the Congress Party, and from that time he led a radical group in the Moslem League until the organization became split in 1929. For the next two years he was in Europe, during 1930–1931 attending the Round Table Conferences in London at which a solution of India's problems was sought. There he demanded political equality between Hindus and Moslems, and after the provincial elections of 1937 had given an overwhelming victory to the Congress Party he launched a campaign for creation of a Moslem state free of domination by the more numerous Hindu communities. With most Hindu leaders imprisoned during World War II (which he did not oppose) his political prestige grew, and in the subsequent negotiations which ended with Great Britain relinquishing her Indian Empire, he secured the reluctant consent of the Hindus for establishment of the separate Moslem state of Pakistan (q.v.). When that dominion came into being on Aug. 15, 1947, he became its first governor general, but he did not long survive to guide its destinies.

JINRIKISHA, jin-rīk'i-shā, a small two-wheeled vehicle, with a hood, drawn by one or more men. Invented in Japan, it was first used as a public passenger conveyance in 1871; subsequently it came into use in other parts of Asia, and in Africa. Credit for its invention has been given to Jonathan Goble (d. 1898), an American Baptist missionary.

JIUJITSU, jōō'jīt'sōō (written also jujutsu and jujitsu), Japanese method of self-defense without weapons; literally, the art of

making one's opponent use his strength to his own disadvantage. There are many methods, but only one is recognized as official, that devised by Prof. Jiguro Kano, principal of the High Normal School of Tokio, and is taught to every officer and enlisted man of the Japanese army, navy and police departments. Included in the 160 feats of the Kano system are the "serious tricks," by which death may be caused at the will of the adept, and the process of Kuatsu or revivification, by which the apparently lifeless victim is restored to the full use of his functional powers. Jiu jitsu is not a system of muscle building by physical training, but rather a means of offsetting the effectiveness of powerful muscles, by performing the most skilful yet simple manœuvres. The United States government has recognized its importance as science by having it taught at West Point and Annapolis as a special training. It is a scientific application of the knowledge of the weaker spots in the human anatomy to offense and defense. Such spots as the "funny bone" are utilized to down an adversary; fingers are bent backward; an opponent's onward rush is utilized to trip him; he is encouraged to uncover an armpit; he is pressed in the gland below and back of the ear; in short every trick that would be accounted "foul" in wrestling and boxing is the height of excellence in jiu jitsu. The study and practice of this art has been recommended to slight men and to women as a protection in case of assault. In professional jiu jitsu bouts the contestants avoid being injured by rapping the floor with hand or foot, and thus acknowledging defeat when an adversary has one in a position where he could inflict serious hurt. Consult Skinner, 'Jiu Jitsu' (New York 1904).

JIVARO, JIBAROS, GIVAROS, or **XIVAROS**, South American Indian race living in Ecuador and northern Peru about the tributaries of the upper Amazon. They are divided into numerous small tribes with individual names, are wholly savage and their language has never been classified. They live chiefly by hunting and warfare, their weapons being lances and bow guns with poisoned arrows. They are head hunters, drying and preserving their enemies' heads and also those of their own chiefs. Spanish settlements were made in their territory in the 16th century and missionaries established themselves there, but all were driven out by an uprising against them in 1599. They live in wooden houses, constructed with considerable skill, raise corn, beans and bananas, and possess the art of weaving.

JOAB, jō'āb, the son of King David's sister Zeruah, and commander-in-chief of David's army. He is first mentioned as the leader of David's men in an expedition against Abner. When Joab treacherously murdered Abner in revenge for the death of Asahel, David dared not punish the deed, and thus showed the ascendancy which Joab had acquired over him. After David had been established king in Jerusalem, Joab conducted all his wars with uniform success. He remained faithful to him during the rebellion of Absalom. When he had slain that ungrateful son, David made a weak attempt to supersede him in favor of Amasa, the general of Absalom. Joab slew Amasa and

resumed his post, a proceeding in which the king tacitly acquiesced. He further supported David by assisting in the murder of Uriah the Hittite. Toward the close of David's reign he joined in the rebellion of Adonijah, for which Solomon, by the advice of David, put him to death (1 Kings ii, 28-34).

JOACHIM, yō'a-hīm, **Joseph**, Hungarian violinist: b. Kittsee, near Presburg, 28 June 1831; d. Berlin, 15 Aug. 1907. He was of Jewish parentage and studied under Szervaczinsky at Budapest, with Böhm at Vienna and Hauptmann at the Vienna Conservatory, and after appearances in concert continued his studies at Leipzig. He played in England in 1844. In 1849 he became concert-meister of the Weimar grand-ducal orchestra, of which Liszt was then conductor, in 1854-66 was solo-violinist and conductor of concerts to the king of Hanover, and in 1868 became director of the Hochschule für ausübende Tonkunst at Berlin. He became known, both as an interpreter of the best music and as an executant, as the greatest violinist of his time, and particularly as a quartette player gained an almost classic reputation. His compositions include the 'Hungarian Concerto' in D-minor for violin and orchestra, his most important works; ballads, trios, overtures, marches and works for violin and pianoforte. He played also in the famous quartette which included De Ahna, second violin; Hausmann, 'cello, and Wirth, viola. Consult Moser, A. 'Joseph Joachim' (Berlin 1904); and Bickley, Nora, 'Letters from and to Joseph Joachim' (London 1914).

JOACHIM, jō'a-kīm, **Saint**, Order of, an order of knighthood founded 20 June 1755, under the title "Order of Jonathan for the purpose of defending the honor of Divine Providence." It consisted of 14 dukes, princes, counts and nobles, and its grand master was Prince Franz Christian of Saxe-Coburg. Its object was by the establishment of commanderies to stir up the rich to philanthropic work among the lower classes. This order was still in existence in 1820, but it has since then been dissolved.

JOACHIM DE FLORIS, Italian mystic theologian: b. Celico, near Cosenza, Calabria, about 1145; d. Monte Nero, 20 March 1202. Of noble birth he was brought up at the court of Duke Roger of Apulia and in his youth visited the holy places of the East. Soon after his return he resolved to alter his manner of life and entered the Cistercian order at Casamari. In 1177 we find mention of him as abbot of the monastery of Corazzo. He visited Pope Lucius III at Veroli in 1183, and Urban III at Verona two years later. He soon became dissatisfied with the lax discipline of the monastery and retired to the solitudes of Pietralata, where with some followers he founded the abbey of San Giovanni in Fiore, on Monte Nero. He was befriended by the Pope and emperor and branch houses were established. He is best known however as the author of prophetic and polemical works, although in the 13th and succeeding centuries many such works were put out under his name. Only those enumerated in his will can be deemed absolutely authentic. These are 'Concordia Novi ac Veteris Testamenti' (first printed at Venice 1519); 'Expositio Apocalypsis' (Venice 1527); 'Psalter-

ium decem chordarum (Venice 1527) and various "libelli" against the adversaries of the Christian name and faith. He divides the history of mankind into three periods, which in the *Expositio* he calls the Age of Law, or of the Father, the Age of the Gospel, or of the Son, and the Age of the Spirit, which will witness the consummation of all things. His ideas soon spread in Italy and France, and many interpolations were made in his works. Some of the opinions attributed to him were condemned at the Lateran Council of 1215. In 1255 others similarly attributed to him were censured by Pope Alexander IV, but the orthodoxy of Joachim was affirmed.

Consult *Acta Sanctorum* (Antwerp 1643–1686); Fourmer, P. E. L., *Etudes sur Joachim de Fiore* (Paris 1909).

JOACHIMSTAL'S, yō'-ā-kims-tālz (geometrical) **THEOREM** is as follows: If a line of curvature of a given surface is plane, then its plane forms a constant angle with the planes tangent to the surface (along the line). It was first stated in 1846 by F. Joachimstal (1818–1861).

JOACHIMSTHAL, Czechoslovakia. See JACHYMOV.

JOAD, jōd, Cyril Edwin Mitchinson, English philosopher and author: b. Aug. 12, 1891. He was educated at Blundell's School, Tiverton, and Balliol College, Oxford. From 1914–1930 he was a member of the staff of the Ministry of Labour. Since then he has been head of the department of philosophy at Birkbeck College, University of London. He became a successful lecturer and writer. Some of his books are *Common Sense Ethics* (1920); *Common Sense Theology* (1922); *The Book of Joad* (1935); *Return to Philosophy* (1936); *About Education* (1945); *The Untutored Townsman's Invasion of the Country* (1946); and *Decadence: a Philosophical Enquiry* (1948).

JOAN or **JOANNA**, queen of Sicily: b. Angers, October 1165; d. Rouen, September 1199. The third daughter of Henry II of England and Eleanor of Aquitaine, she married William II of Sicily in 1177. He died in 1189, and in 1191 she accompanied Berengaria, wise and beautiful fiancée of her brother Richard, to Palestine, returning to Europe a year later. Richard arranged her marriage with Count Raymond VI of Toulouse (1196); their son, another Raymond, was born in July 1197. Dying in childbirth, she asked to be veiled as a nun of Fontevrault and was buried in the abbey there at the feet of her father and beside her favorite brother Richard.

JOAN, mythical female pope, supposed to have occupied the papal chair in the guise of a man as Pope John VIII, 855–858. As there was no interregnum between Pope Leo IV, 847–855 and Pope Benedict III, 855–858, the story is undoubtedly pure fable; and moreover no mention is made of the supposed popess until the middle of the 13th century, contemporary history being entirely silent on the matter. The legend runs that Joan was of English descent but born at Ingelheim or Mainz, and that she loved a Benedictine monk with whom she fled to Athens disguised as a man. She attained great learning and after the death of her lover went to Rome, still in male attire, rose to be cardinal, and finally

was elected pope. She died in childbirth during a papal procession, one legend having it that in a vision she was given choice between temporal disgrace and eternal punishment. The story was widely current from the 13th to the 17th centuries and was first definitely refuted by a French Calvinist, David Blondel, in *Eclaircissement de la question si une femme a été assise au siège papal de Rome* (1647) and in *De Joanna Papissa* (1657). These volumes were ably supplemented by Johann Dollinger, *Papstfabeln des Mittelalters* (1863; Eng. trans., 1872).

JOAN OF ARC (JEANNE D'ARC), the Maid of Orleans, heroine of France: b. Domrémy en Barrois, on the borders of Champagne and Lorraine, now in the Department of Vosges, Jan. 6, 1412; d. Rouen, May 30, 1431. A humble and deeply religious shepherdess, Joan was profoundly moved by the sad plight of France. The country had been invaded by the English and most of it was occupied by the conquerors and their Burgundian allies. To make matters worse, France was in the throes of an economic crisis while widespread doubts of the legitimacy of the uncrowned Charles VII paralyzed the popular will. A patriot and mystic, Joan heard the voices of saints assuring her of Charles' right to rule and commanding her to expel the enemy. She journeyed to Chinon, obtained an interview with the prince and convinced him of her divinely-inspired mission. Armed and placed at the head of 10,000 men, she raised the siege of Orléans (May 8, 1429), defeated Lord John Talbot and the reinforcements under Sir John Fastolf at Patay (June 18), and electrified the men-at-arms and their commanders, raising their spirits from black despair to wild enthusiasm. On July 17 she stood at Charles' side at the anointing and coronation ceremonies in Reims Cathedral. The new-crowned sovereign denying her adequate military support, she failed in the attempt to liberate Paris (September 8). On May 24, 1430 she was taken prisoner under the walls of Compiègne. Accused of sorcery, she was delivered to an inquisitorial tribunal presided over by Bishop Pierre Cauchon. The University of Paris, under English pressure, supported the charge of sorcery. Joan was condemned and burned alive at Rouen. However, before her death she made a public declaration, reiterating her belief in Charles' royal authority, the justice of France's cause, and the authenticity of her "Voices." The ashes of the patriot martyr were cast into the Seine; but the people believed her a saint and her prophecies divinely inspired revelations. In fact, they were realized by the recovery of Paris and final expulsion of the English. A quarter of a century after her death legal proceedings were undertaken to clear her name; these were successful and her condemnation was annulled on July 7, 1456. The question of her canonization was first discussed at Rome in 1875. In 1902 she was pronounced "venerable," and in 1909 she was beatified. She was canonized by Benedict XV on May 9, 1920. The French government, on July 10, 1920, declared Joan of Arc's fête day (May 30) a national holiday.

Among the many literary works inspired by Joan, the celebrated drama of Schiller, *Die Jungfrau von Orleans*, is particularly noteworthy.

JOSEPH CALMETTE,
The University of Toulouse.

JOAN OF ARC, Personal Recollections of, a historical novel by "Mark Twain" (Samuel L. Clemens, q.v.), published anonymously in *Harper's Magazine* during 1895 and as a book in 1896. It is purportedly a translation of a biography of Joan written by her page, the Sieur Louis de Conte. Although the earlier parts are embellished with fictional characters and incidents, in the main the story closely follows history. Revealing Mark Twain's life-long reverence for Joan and his characteristic hatred of injustice, this fictional biography also shows him in temporary reaction against his growing despair of mankind as he emphasizes the unselfish singleness of purpose of one individual whom he considered near perfection. It was dedicated to his wife.

HAZEN C. CARPENTER,
Assistant Professor of English, Western Reserve University.

JOANNESIA, a genus of plants of the family Euphorbiaceae. *J. princeps*, the single species, is an inhabitant of Brazil. The wood is spongy and light, the flower yellow and large, and the fruit a gray nut which encloses two kernels in a double rind. The fruit is strongly purgative and is used by Brazilians as a remedy in cases of indigestion, jaundice and other diseases. Oil is pressed from these kernels, with which the natives anoint their limbs. It is said to be a good drying oil and excellent for painting. The rinds of the fruits, thrown into ponds, destroy the fish.

JOASH or JEHOASH, as it is sometimes written, was the name of two kings in the Old Testament.

(1) King of Judah (r. 844-798 B.C.), son of Ahaziah and grandson of the wicked Athaliah. He was placed on the throne at the age of seven under the leadership of the priestly party. On the whole his reign was a good one. Hazael, king of Damascus, invaded his kingdom but was bought off with large bribes including temple treasures. He was finally assassinated.

(2) King of Israel (r. 840-825 B.C.) and son of Jehoahaz, recovered cities his father lost to Syria and won war with Amaziah, king of Judah.

JOB, a legendary character of Hebrew literature whose history is poetically treated in the Book of Job. He is said to have been a sheik of the patriarchal age who lived near the Arabian Desert on the eastern boundary of Palestine. After repeated disaster and ruin, suddenly stripped of his possessions, bereaved of his children, himself smitten with leprosy, and his wife advising him "to curse God and die," he gives way to despair, his friends giving him only critical, philosophical advice. Finally, however, by force of character he rises superior to circumstances, and regains health, wealth, and honor. The traditions handed down, according to early custom, in oral form, were committed to MS. about the 5th century B.C. While they have their origin in historical tradition, the events describing the life

of Job are not regarded as literal history. Some authorities contend that the book is purely a literary invention, a rabbi as early as the Talmud *Baba Bathra* (15:1), writing "Job was not, and was not created, but is an allegory." See *Job, Book of*.

JOB, Book of, the supreme masterpiece of ancient Hebrew literature, is one of the small group of world poems that live as universal expressions of the human spirit. The book takes its name from its hero, who is pictured as an ancient sheik living to the eastward of Palestine, on the borders of the Arabian Desert. Already in the time of Ezekiel (Ezekiel 14:14, 20), the name was famous as that of a righteous man. It was perhaps two and a half centuries later than Ezekiel's reference that the unnamed author of the book made the ancient, traditional figure the hero of his great poem. The exact date of the author and his work is undetermined, but the relation of the poem to the general development of Jewish literature places it most naturally in the last century of Persian rule or even shortly after Alexander's conquest.

In orderly structure, Job resembles Greek and other Western literary works much more closely than do most examples of ancient Semitic literature. The poem is framed by a prologue and epilogue in prose. These, presumably, give the substance of the ancient traditional story as it had come to the author. It may be that their present artistic form is due to his genius, but the explanation of Job's sufferings given in the prologue is so foreign to the body of the poem, and the restoration of double the material blessings, in the epilogue, is so far below and so inconsistent with the thought of the poem that it seems as though the tradition was already too firmly established for the author greatly to modify its substance. The prose sections, when taken together, give a dramatic account of a series of misfortunes that fell on Job in order to prove to the Satan, "the Adversary," that disinterested righteousness does exist in man. Having endured the test with complete devotion to God, Job was rewarded with material prosperity twice as great as he had before. The prologue closes with the visit of Job's three friends who come to comfort him, but sit by him in silence for seven days. The great poem, inserted between the two parts of the prose narrative, itself falls into three main divisions: (1) the discourses of Job and his three friends (Job 3-31), (2) the speeches of Elihu (Job 32-37), (3) the words of Jehovah and Job (Job 38-42:6). The Elihu section is best regarded as a later addition, made by some one who felt that the author had failed to present the orthodox point of view maintained by the friends with enough strength. The original poem would then be made up of the two great divisions—the debate between Job and his friends and the interposition of Jehovah when the friends have been silenced. The poem is much more impressive in this briefer form. The first section is subdivided into Job's curse and three cycles of debate. In each cycle the friends speak in turn, followed in every case by Job, except that in the third cycle the third friend, Zophar, does not appear. Some of the words ascribed to Job in this section probably belonged originally to Zophar (Job 27:7-11, 13-23) so that the three cycles were complete. The notable poem on the unsearchableness of wis-

dom, near the close of the third cycle (chap. xxviii), belongs to no one of the speakers in the original debate and was probably introduced by some later hand.

In sharpest contrast to the prologue, the poem begins with Job vehemently cursing the day of his birth and longing for death. The friends are greatly shocked at Job's words. Eliphaz urges that confession of sin would be appropriate; Job is no doubt a great sinner for trouble does not come without a cause. He exhorts the sufferer to seek unto God, who will greatly bless if Job accepts correction and does not despise the chastening of the Almighty. Job admits that his words have been rash under his great calamity and again longs for death. He adds pertinently that when one is ready to faint and is forsaking the fear of the Almighty, kindness should be shown him from a friend; but his friends have proved as deceitful as the mountain torrents of Palestine which vanish under the summer's heat. He describes the horror of the disease with which he has been smitten, which gives him no respite day or night and then turns to bitter words toward the watcher of men who has set him up as a mark. Bildad now speaks, and more bluntly than Eliphaz had done, even suggesting that Job's children may have met their sudden, tragic death because of their sin. At the close, he too holds out hope; but Job now sees his hopeless case with his friends. If it is true, as they believe, that God gives prosperity to the righteous and sends suffering to the wicked, then he is proven guilty, yet his conscience acquits him. His own suffering has opened his eyes to the fact that the time-honored dogma of material rewards and punishments is not true to the facts; rather wickedness prospers and it must be God who is responsible. If it be not He, who then is it? Returning at length to his longing for final release, he pleads with God for a little merry before he goes to the land of the shadow of death. Zophar, untouched by the pathos of Job's plea, charges that God is exacting less than Job's iniquity deserves. In this first cycle of the discussion, the point of view of the friends becomes clear. They have inherited the noble faith bequeathed by the prophets and are earnest defenders of God's justice and mercy. The prophetic doctrine that sin brings suffering to the sinner may be supported with much evidence. Job has had a personal experience, however, which has made clear to him the fact that material benefits are not always apportioned on the basis of merit. In closing this cycle of the debate, Job sarcastically scorns the friends' traditional wisdom with which he is as familiar as they. They draw their wisdom from the ancients; he tells them that wisdom is with God and power too; but Divine justice he cannot find in human affairs. From man he turns to God, longing to speak directly with Him; he will take his life in his hand and appear before the Almighty. Then the strength of the sick man fails. God's hand is upon him so that he cannot argue his case. He prays that he may be hidden in the grave till the wrath is past and then may have a hearing. Thus Job is brought to the question: If a man die, shall he live again? If Job could believe in a life after death, he could wait, but he sees only oblivion and sinks back in despair.

Already before this first cycle ends, the

interest of the sympathetic reader has insensibly passed from the argument of the debate to the unfolding of Job's inner life. In the following cycles the accusations of the friends become more direct, but they are able to add little that is new in support of their contention that all suffering is sent for sin. In the second cycle it becomes clear that all Job really asks of his friends is sympathy while he pursues his lonely quest through the darkness. It is God, not the friends, with whom he is really concerned. Once and again he rises to the momentary faith that his case is clear in heaven and that he will ultimately see God and find vindication. Under all his doubts there is the conviction that God must be just as well as powerful. Job's real quest is for a satisfying view of God which the current theology could not afford him. The friends who represent this theology are silenced but not convinced. The debate closes with a long discourse of Job in which he tells how in his former honored condition he had been accustomed to give sympathy to the wretched and defends himself against the charges of sin. Then he realizes that his defense is hopeless; God does not hear and he is speaking in ignorance of the charge against him.

Omitting the Elihu speeches as an intrusion on the original complete poem, Job's wish is suddenly granted. Jehovah speaks out of the whirlwind, telling of his wisdom and power in the creation and control of the mighty forces of nature. In this section many feel that an interpolator had added the semi-mythical behemoth and leviathan (xl, 15 — xli, 34). Without these the section contains the wonders of both the inanimate and animal worlds. In the speeches of the Almighty no really new thought is added to the faith that the Hebrew prophets had attained before the book of Job was written; but a splendid, dramatic presentation of the Divine wisdom and power seen in nature humbles Job; he feels that he had heard of God by the hearing of the ear but that he now sees Him. In this vision he rests humbled and content, not even thinking of arguing his case as he had hoped to do.

Like every great work of literature, the book of Job is a transcript from life as it is. It reveals the negative power and the limitations of the critical intellect, the positive power and outreach of vision and faith. The classification of the poem has been the subject of much debate. That it is dramatic is obvious; it may even be presented with some effective power upon the modern stage; yet the theory that the poem is a genuine drama, designed for action, is now generally abandoned. It is recognized, indeed, that the ancient Semites did not develop any true drama, so far as our knowledge of their life and literature extends. The work has in recent years been styled an epic, "the epic of the inner life," telling the story of the perilous quest and brave deeds of a typical Jewish hero whose exploits were in the sphere of the spirit. In external form it resembles epic rather less than drama, yet the recognition of the fact that the search for God is the essence of the poem is vital to its right understanding. Exact classification of ancient Semitic writings under our categories of Indo-European literature is not possible. The divisions of epic and dramatic poetry were made

for the description of Greek not Hebrew poetry. That has its own forms, usually less rigid than those of Western writings. As yet they have defied thoroughly satisfactory definition. Although Job is a supreme world poem revealing "the essentials of life in its greatness," true alike to the 4th century B.C. and the 20th century A.D., in external form it is Semitic poetry, not Occidental. This statement is just as true of its general structure as it is of its genuinely Hebrew rhythm and metre.

HENRY THATCHER FOWLER,
Professor Emeritus of Biblical Literature and History, Brown University.

JOBERT DE LAMBALLE, zhō'hār dē lān'bal, Antoine Joseph, French surgeon: b. Matignon, 17 Dec. 1799; d. Passy, 25 April 1867. In 1825 he was made assistant in anatomy for the faculty of Paris, then doctor of medicine and supplementary professor at the École de Médecine, next surgeon for the central bureau of hospitals. In 1830 he became surgeon at the Saint Louis Hospital, and in his later years he worked in the Hotel Dieu Hospital, and was made professor of the external clinic of the Paris faculty. In 1854 he was appointed surgeon to the emperor and was made member of the Academy of Sciences in 1856. He did valuable service in uterine diseases and invented *cystoplastie* by use of healthy tissue in the cure of vesico-vaginal fistula. His best-known works are 'Traité des plaies d'armes à feu' (Paris 1833); 'Recherches sur les appareils électriques des poissons' (ib. 1858); 'Études sur le système nerveux' (ib. 1838); 'Traité de chirurgie plastique' (ib. 1849); 'De la Réunion en chirurgie' (1864).

JOB'S TEAR, a stout grass (*Coix lachry-majobi*), allied to maize, and sometimes six or eight feet in height. It is a native of tropical Asia and Africa, is naturalized in Spain and in other countries, and is sometimes grown in hothouses. The hard, round, shining seed-capsules, from whose fanciful resemblance to tears the plant derives its name, are used in making rosaries and ornamental articles, as medicine by the Chinese, and as a staple food among some of the hill-tribes of northern India. See also GRASSES in THE UNITED STATES.

JOBSON, Frederick James, English Wesleyan clergyman: b. Northwich, Cheshire,

6 July 1812; d. London, 4 Jan. 1881. After serving as apprentice to a Norwich architect he entered (1834) the Wesleyan ministry preaching at Patrington, Yorkshire (1834), and Manchester (1835-37), when he became assistant at City Road Chapel, London. He was a delegate (1856) of the British conference to the Methodist Episcopal Conference held at Indianapolis, Ind., and to the Sydney, Australia (1860), conference. He advanced the publishing business of his denomination as book steward (1864-79) and superintended the issue of the *Methodist Magazine* for 12 years. At the Wesleyan Methodist Conference (1869) he was elected president. His best-known works are 'Chapel and School Architecture' (London 1850); 'America and American Methodism' (1857); 'Australia; with Notes by the way on Egypt, Ceylon, Bombay and the Holy Land' (1862); 'Perfect Love for Christian Believers' (1864); 'Serious Truths for Consideration' (1864). In B. Gregory's 'Life of F. J. Jobson' (London 1884) are a number of his sermons.

JOCELYN, Nathaniel, American portrait painter: b. New Haven, Conn., 31 Jan. 1796; d. there, 13 Jan. 1881. At 18 he was apprenticed to an engraver, but after three years his early love for painting asserted itself and he established himself as a portrait painter at New Haven in 1820. He was for some time resident in Savannah, where he painted many portraits, but returned to his native town where his work was very popular and where from 1825 to 1835 he painted the portraits of many notables, not a few of which are preserved in Alumni Hall at Yale. His fame extended beyond the limits of his State and he exhibited at the Academy of Design on several occasions. At the age of 80 he painted 'Ocean Breezes,' a successful work of fancy, and his only one. His portraits have been greatly prized by critics. Jocelyn was a staunch anti-slavery man, and his home in New Haven was long one of the stations on the underground railroad. He was for many years the senior partner of a bank-note engraving company in New York which subsequently became the American Bank Note Company, resigning from the latter in 1867.

JODHPUR, India, capital city of the Rajput state Marwar or Jodhpur, in lat. 26° 17' N and long. 73° 4' E. It was built by Rao Jodha 1459 A.D., and is located on the Luni, constructed like an amphitheatre and surrounded by a strong wall. On a high rock is the fort which contains the palace of the maharajah. The sacred suburb Mahamandil lies somewhat apart and is also fortified and is ruled over by the high priest of the empire. To the north are the magnificent ruins of the forsaken (1459) capital Mandor. This city is the seat of government and the buildings are of good architecture and substantial construction as the neighborhood has a large stone supply. Here are located a high school, college, two hospitals, etc. It is an important commercial centre and has a wheat market and electric-lighting plant. Among its manufactures are beans, ivory, lacquer wares, vegetable dyes, etc. Pop. 94,736.

JODHPUR, or **MARWAR**, India. tributary state of the British East Indian province Rajputana. It is bordered on the east by the Aravalli Mountains whose watershed feeds the

river Luni which flows through the entire state, ending in the Great Rann. To the west it is bordered by the Indian Desert. The climate runs to great extremes, frost often appearing in the winter season. There are several salt lakes from which salt is extracted in commercial quantities. In the irrigated sections are grown wheat and cotton. The best camels of India are raised here besides fine cattle, horses and sheep. Its exports also include wool, iron and zinc. Sugar, rice and cotton goods are the chief imports. The railway from Sindh to Agra bisects the state from west to east. Its maharajah has great governing power and receives a big income from taxation and sustains a considerable army. Pop. 2,125,892.

JOE PYE WEED. See EUPATORIUM.

JOEL, one of the minor Hebrew prophets who lived in the 5th century B.C., a predecessor by a few years of Amos and Hosea, whose writings are very similar in character. Outside of his writings, nothing is known of the author. His style is that of a clear, calm, logical mind free from the doubts and struggles that distract the minds of other Hebrew poets and prophets. Without the strain and abruptness that characterize the writings of Hosea and Jeremiah, his language is smooth and flowing, the imagery is gorgeous in its profusion, and metaphor and hyperbole have to be interpreted to discern fact amid the maze of imagination and fancy. See **JOEL**, **BOOK OF**.

JOEL, Book of. The book consists of two parts, which differ materially from each other in thought. Chapters i and ii, 1-27, except for possible later additions, were written in the midst of a plague of locusts and drought, regarded as a punishment upon Israel; while chapter ii, 28-32 and chapter iii (chapters iii and iv in the Hebrew), make no mention of these circumstances but are dealing with the coming day of Yahweh, the final judgment on the nations. Until recently the whole book, or the most of it, has been regarded as the work of a single author; but now some maintain that the second part, or the most of it, is not by the author of the first part. This is on grounds of thought and style, neither reason, however, giving a sufficient warrant for this conclusion. The probable view is that the most of the book was by a single author, the two portions, however, being written at different times. There are a few later additions. These in the first portion are i, 15; ii, 1b, 2, 10-11, 20. All these were designed to connect the first part with the thought of the second, in each case they are inappropriate in the context and interrupt the thought. In the second part iii, 4-8 interrupts the connection, and is to be regarded as a later addition.

Concerning the prophet, nothing is known outside of the book. His name means: "Yahweh is God." In earlier times the date was often thought to be pre-exilic. It is now generally recognized, however, that it is post-exilic. This is evident from iii, 2, from which it appears that the people are scattered among the nations. There is no mention of a king, which points to the same period. The emphasis on the importance of the Temple services also strongly suggests the post-exilic period. Chapter ii, 32 is a direct allusion to Obadiah xvii, which was written after the exile. The allusions to

foreign nations make no mention of Assyria or Babylonia, one of which is mentioned in every pre-exilic prophet except Amos, and doubtless alluded to there. Further, there is no mention of the northern kingdom, Israel, which excludes the pre-exilic period except the last part. The Temple is standing, as appears from frequent references, such as i, 13, hence it is after 516 B.C. Probably ii, 9 indicates that the wall of Jerusalem has been built, thus indicating the time after Nehemiah. The date about 400 B.C. seems, therefore, most probable.

The thought of the book is in accord with the general teaching of the prophets, although it makes no material advance upon the messages given earlier. The author prizes more highly than most of the prophets the external worship, yet this is regarded as an expression of the realities of the inner life, ii, 13. He connects sin and punishment, repentance and national prosperity. He looks forward to the coming day of Yahweh, a general judgment upon the nations for their sins. In this time the true Israel, the faithful who call upon Yahweh, will be delivered, ii, 32, iii, 16; and will receive abundant blessing, iii, 18-21. The conception of God emphasizes his power and his justice.

GEORGE RICKER BERRY,
Professor of Old Testament Interpretation and Semitic Languages, Colgate University.

JOFFRE, zhō'fr', Joseph Jacques Césaire, marshal of France: b. Rivesaltes, Pyrénées, 4 Jan. 1852; d. Paris, France, 3 Jan. 1931. He was educated at the College of Perpignan and in 1868 was enrolled at the École Polytechnique. He joined the French army as second lieutenant during the Franco-Prussian War of 1870-71, and was in command of a battery during the siege of Paris. He returned to the Polytechnique after the war, was made a lieutenant in 1872, helped in the defense of Pontarlier in 1874 and became captain in 1876. He served in Tonking under Courbet in 1883-84, and under Dodds in Dahomey 10 years later. He took part in the occupation of Timbuctoo in 1894 and in the Madagascar campaign of 1897; was appointed on his return professor at the Higher War School and in 1901 was made brigadier-general of a division. He organized the defenses of Formosa and in 1911 while in command of the Second Army corps at Amiens was made commander of all the French forces. The Three Years' Service Law for the French army was largely due to his efforts. He was a distinguished mathematician. At the outbreak of the war in Europe in 1914 he was chief of the general staff. He was placed in supreme command of all forces, both British and French, on the western front. History will in all probability laud him as the hero of the Marne. With Von Kluck battering his way to Paris, Joffre doggedly refused to give battle, announcing that at his own time and on his own ground, and not before, would he make his stand. But when, finally, he issued his memorable orders on the eve of Lafayette's birthday, in that gloomy September of 1914, "Troops unable to advance should die where they stand rather

than give ground to the enemy." the Germans were thrown back on the Somme front and Paris was saved. In December 1915 Joffre became supreme commander of all French armies, including the forces then at Salonika. Subsequently he was blamed when the German attack on Verdun nearly succeeded in February-March, 1916. The French government relieved him of command in December 1916, his place being taken by Gen. Robert Georges Nivelle (q.v.), and Joffre was called to Paris as technical adviser for nearly a year, after which he was virtually retired with the rank of marshal of France.

JOGUES, zhôg, SAINT Isaac, French Jesuit missionary among the North American Indians: b. Orléans, Jan. 10, 1607; d. Ossernenon (later Auriesville, N. Y.), Oct. 18, 1646. He became a Jesuit at Rouen in 1624, and, after some years passed in study and teaching, was ordained in 1636. Arriving in Quebec, Canada, the same year, he was sent to work among the Indians south of Lake Huron. He was the first missionary to reach Michigan; in 1641, accompanied by Raymbault, he traveled as far as Sault Sainte Marie, that strait being so named by him. In 1642 he visited Quebec to procure supplies for the Huron mission, and while returning his party was attacked by the Iroquois. He was captured and tortured, and was held captive until the summer of 1643, when he was ransomed by the Dutch at Fort Orange (Albany, N. Y.). By way of New Amsterdam (New York) he returned to France and thence to Canada, and in 1646 he was sent on another mission to the Iroquois; he discovered Lake George, which he christened "Lake of the Blessed Sacrament." The Mohawks captured him and put him to death. Pope Pius XI canonized him on June 29, 1930. See **JESUITS**.

JOHANNESBURG, jô-hân'is-bûrg, or yô-han'ës-bûrg, the Golden City, largest city in the Union of South Africa, latitude 26°11'S., longitude 28°03'E., situated 5,740 feet above sea level on the Witwatersrand (q.v.). Founded as a mining camp in September 1886, it has become the center of the most extensive gold deposit in the world. It has an area of 89.6 square miles, ratable value of £335 million, annual revenue of £12 million, more than 1,000 miles of roads, 85,000 motor cars, and over 900 buses. Including a zoo of 144 acres with more than 2,600 animals and birds, its parks and open spaces cover over 6,060 acres.

The University of Witwatersrand (founded 1903) with campus of 96 acres and over 3,000 students is associated with the government's Department of Health and Interior, which staffs the university's Departments of Public Health and Forensic Medicine. Other institutions associated with the university are: the Bernard Price Institute of Geophysical Research; the Carnegie-Price Chair of Geophysics; the Mines Department Minerals Research Laboratory; the Bureau of Archaeology; and the world renowned Institute for Medical Research. The main library of 480,000 volumes, reference library of 130,000 volumes, and Africana and Geological Museums are in one building. Free hospitals with over 3,750 beds treat 60,000 in-patients and more than 750,000 out-patients yearly. There are more than 200 churches and over 100 nursery, primary, and high schools; an art gallery; a

civic orchestra; the usual cultural societies, clubs, theaters, skating rink, race tracks, and other sports facilities. The climate is invigorating, with mean maximum and minimum shade temperatures of 71 and 49 degrees, a daily average of 8.7 hours of sunshine, and rainfall of 30 inches in 96 days of the year. Johannesburg is the headquarters of the Chamber of Mines and Mining Groups controlling 60 gold mines in the Transvaal and Orange Free State (q.v.). Thirteen engineering and technical societies with 8,000 members are at Kelvin House. The Witwatersrand Technical Institute provides technical, art, and commercial education up to university standard. Leiden Observatory, Netherlands, cooperating with Union Observatory, operates a twin 16-inch photographic telescope in a building on the Union Observatory grounds. The Yale University Observatory's southern station is situated on the university grounds. Direct scheduled air communication with America and Europe is maintained.

Becoming a municipality in 1896, it was occupied by British forces in 1900 and administered by the military until an elected council assumed local government in December 1903. It received a city charter on Sept. 5, 1928. Radio broadcasting is in both English and Afrikaans on a number of wave lengths. The water supply (about 90 million gallons of water per day) is pumped from the Vaal River, 36 miles away. The city has its own gas and electrical departments, the latter of 200,000 kw. capacity, which it was planned to double (1950). Pop. (1949) 839,154, including 343,192 Europeans, 452,310 natives, 26,850 Eurafricans (or colored), and 16,802 Asiatics.

JOHN DOLAN,
Electrical and Mechanical Department, The Central Mining and Investment Corp. Limited, Johannesburg.

JOHN, the name of 23 popes, as follows:

JOHN I, Saint: b. Tuscany, 470?; d. May 18, 526. He succeeded Hormisdas in 523. Theodoric sent him to Constantinople in 525 to obtain toleration for the Arians from Justin. Because his mission was only partly successful, Theodoric imprisoned him at Ravenna where he died.

JOHN II (MERCURIUS): d. Rome, May 27, 535. He was a Roman, and was surnamed Mercurius by reason of his eloquence. He became pope in 533. He obtained from Athalaric, the Ostrogoth king, a decree condemning simony and assuring the regularity of papal elections. In 534 he approved the profession of faith of Emperor Justinian.

JOHN III: d. Rome, July 12, 572. He was a Roman, and became pope in July 561. During his time the Lombards frequently ravaged Italy.

JOHN IV: b. Salona in Dalmatia; d. Rome, Oct. 11, 642. He was elevated to the papal chair in December 640, and was noted for zeal and orthodoxy. He formally condemned the Monothelitic statement of faith which Sergius had drawn up at the desire of the Emperor Heraclius.

JOHN V: b. Antioch, Syria; d. Rome, Aug. 2, 686. He was the earliest of several pontiffs of Oriental origin and had been sent to

the Sixth General Council by Pope Agatho as legate. He became Pope 24 July 685.

JOHN VI: he was a Greek by birth; d. Rome, 9 Jan. 705. He became Pope in 701, and when appealed to with reference to the long dispute between Saint Wilfred of York and the archiepiscopal see of Canterbury, decided in favor of the latter.

JOHN VII, a Greek: d. Rome, 17 Oct. 707. He became Pope 1 March 705.

JOHN VIII, a Roman: d. Rome, 15 Dec. 882. He became Pope in 872. The Saracens during his pontificate pushed their ravages to the gates of Rome and he was compelled in 877 to pay them tribute. He crowned three emperors, Charles the Bald, 875; Louis the Stammerer, 878; and Charles the Fat, 881. He attempted, but unsuccessfully, to unite the Greek and Latin churches.

JOHN IX: b. Tibur; d. May 900. He belonged to the Benedictine order and became Pope, as the choice of the Frankish party, in June 898.

JOHN X: b. Romagna; d. July 929. He was a man of great ability and of virtuous character notwithstanding the aspersions Liutprand casts upon him. He was archbishop of Ravenna in 905 and became Pope in 914. He placed himself at the head of an army and drove the Saracens from Italy, but his determination to rule independently of any faction aroused the anger of his opponents and he was imprisoned, and at length murdered, by Theodora's daughter, Marozia, whose ambitions he had thwarted.

JOHN XI: b. 906; d. 936. He was the son of Marozia (q.v.) and Guy, Duke of Spoleto. He was elected Pope while under age in 931, and governed through the influence of his mother. His brother Alberic II revolted and imprisoned the Pope and his mother in the castle of San Angelo, where John died.

JOHN XII (OCTAVIAN): d. Rome, 14 May 964. He was the son of Alberic and grandson of Marozia. He became Pope in 956, after the death of Agapetus II, though only 18, and was the first Pope who changed his name on accession to the papal dignity. He applied to the Emperor Otho I for assistance against Berengar II, crowned the emperor 962, and swore allegiance to him, but soon after revolted against Otho who caused him to be deposed by a council, in 963, and Leo VIII to be elected. On Otho's departure for Germany, John returned and excommunicated his rival.

JOHN XIII, a Roman: d. Rome, 6 Sept. 972. He was bishop of Narni, was made Pope in 965 by the influence of the Emperor Otho I and was expelled by the Roman nobles. Otho II restored him to Rome and was crowned by him. The Poles and Hungarians were converted during his pontificate.

JOHN XIV (PETER): b. Pavia; d. Rome, 20 Aug. 984. He was bishop of Pavia and had been chancellor to Otho II who made him Pope in November 983, in place of the anti-pope Boniface VII. The latter had seized the papacy after the death of Otho I. Boniface now returned from Constantinople and imprisoned John in the castle of San Angelo, where he died soon after.

JOHN XV: d. Rome, April 996. He was the choice of Crescentius and his party, under

whose influence he remained throughout his reign (985-996).

JOHN XVI (PHILAGATHUS), a Greek of Calabria: d. probably April 1013. He became Pope in 997. A native of Rossano, Calabria, he became a monk and from Otto II received the abbey of Nonantola. In 988 he was promoted to the see of Piacenza. Crescentius placed him on the papal throne in 997 which he occupied about a year before he was thrown into prison by Otto III, and subsequently removed to a monastery. His nose and ears were cut off and his eyes gouged out.

JOHN XVII (SICCO): b. Ripa Jani; d. Rome, 6 Nov. 1003. An anti-pope intruded during the pontificate of Gregory V. He reigned only a few months, from 13 June 1003 to 6 November.

JOHN XVIII (PHASIANUS). He became Pope on Christmas Day 1003, and in May 1009 resigned his office and entered a monastery. His pontificate was marked by strict attention to ecclesiastical administration.

JOHN XIX, a Roman: d. January 1033. He succeeded his brother, Benedict VIII. He was disposed to concede the title Ecumenical to the patriarch of Constantinople, but this met with so much opposition from the Latin Church that he was obliged to withdraw the concession. He crowned the Emperor Conrad II in the presence of Rudolph of Burgundy and King Canute of Denmark and England.

JOHN XX, frequently called **JOHN XXI (PEDRO):** b. Lisbon, Portugal; d. Viterbo, Italy, 20 May 1277. He became in 1273 cardinal-bishop of Frascati and Pope in September 1276. He was learned in philosophy and medicine and wrote several treatises still of interest as showing the status of mediæval medicine.

JOHN XXI. See **JOHN XX.**

JOHN XXII (JACQUES D'EUSE): b. Cahors, about 1244; d. Avignon, 4 Dec. 1334. He was archbishop of Avignon, cardinal-bishop of Porto (1312) and was elected Pope at Lyons 1316, two years after the death of Clement V. He resided at Avignon, but had many adherents in Italy. He is important in German history on account of the active part he took in the disputes of the Emperors Louis of Bavaria and Frederick of Austria. Louis intruded the anti-pope Nicholas V and declared John XXII deposed. Several theological controversies filled his pontificate with ecclesiastical strife, the most notable being the question of absolute evangelical poverty raised by the Franciscans and that of hominalism led by William Occam (q.v.). He published in 1317 the 'Constitutions of Clement V,' a manual of canon law, since known by the title 'Clementines' (q.v.). He was also the author of the decretals called 'Extravagantes.'

JOHN XXIII (BALDASSARE COSSA): b. Naples; d. Florence, 22 Dec. 1419. He was elected Pope in 1410, by the Council of Pisa, after the death of Alexander V, on condition that, if Gregory XII and Benedict XIII would resign, he would also retire to end the schism. He summoned the Council of Constance, demanded by the Emperor Sigismund, in 1415, where he confirmed his resignation 2 March; but 20 March he fled secretly from Constance to Schaffhausen and revoked his resignation. He was cited before the council, but not ap-

pearing, he was suspended and finally deposed. He was imprisoned four years. Pope Martin V pardoned him and made him cardinal-bishop of Tuscoli and dean of the college of cardinals.

JOHN, king of England: b. Oxford, Dec. 24, 1167; d. Newark, Nottinghamshire, Oct. 19, 1216. He was the youngest son of Henry II, by Eleanor of Guienne. Being left without any particular provision he received the name of *Sans Terre* or Lackland; but his brother, Richard I, on his accession conferred large possessions on him. He obtained the crown on the death of Richard in 1199, although the French provinces of Anjou, Touraine and Maine declared for his nephew, Arthur, Duke of Brittany (q.v.), who was lineally the rightful heir, then with the king of France. A war ensued, in which John recovered the revolted provinces and received homage from Arthur. In 1201 disturbances again broke out in France, and Arthur, who had joined the malcontents, was captured and confined in the castle of Rouen, and never heard of more. John was universally suspected of his nephew's death, and in the war which followed he lost Normandy, Anjou, Maine and Touraine. In 1205 his quarrel with Pope Innocent III began regarding the election to the see of Canterbury, to which the pope had nominated Stephen Langton (q.v.). The result was that the pope laid the whole kingdom under an interdict, and 1211 issued a bull deposing John. Thereupon John made abject submission to the pope, even agreeing to hold his kingdom as a vassal of the pope (1213). His arbitrary proceedings led to a rising of his nobles, and he was compelled to sign the *Magna Charta* (q.v.) or Great Charter, June 15, 1215. But he did not mean to keep the agreement, and obtaining a bull from the pope annulling the charter, raised an army of mercenaries and commenced war. The barons, in despair, offered the crown of England to the Dauphin Louis, who accordingly landed at Sandwich, May 30, 1216, and was received as lawful sovereign. The issue was still in doubt when John died.

JOHN II, king of France, surnamed the "Good": b. about 1319; d. London, April 8, 1364. He was the son of Philip VI of Valois and was a monarch distinguished alike for his incapacity and his misfortunes. In 1356 he was defeated and taken prisoner by the Black Prince at the battle of Poitiers, and detained at Bordeaux and at London till released at a heavy expense to his country by the Peace of Bretigny in 1360. On learning that his son, the Duke of Anjou who had been left as a hostage in England, had effected his escape, he returned to London, where he died.

JOHN II CASIMIR, king of Poland, sometimes known as **CASIMIR V**: b. 1609; d. 1672. He was the son of Sigismund III. Prior to becoming king in 1648, he had been a priest in France, having been made a cardinal in 1640. Soon after ascending the throne he was forced to compromise the revolt headed by Bogdan Chmielnicki (q.v.), whose Cossacks had invaded the kingdom. From 1654 to 1667 he was involved in the "Thirteen Years' War" with Russia, which was concluded by the disastrous Treaty of Andrusovo. In addition, during 1655-60 his country was also at war with Sweden, and

by the Treaty of Oliva he was compelled to cede Livonia and renounce claims to the Swedish crown. Embittered by the ill success of his reign, the king fled to Silesia and, in 1668, resigned the crown. Returning to France, he became abbot of Saint-Germain.

JOHN III (SOBIESKI), king of Poland: b. Olesko, Galicia, June 2, 1624; d. June 17, 1696. After receiving his education at home he traveled in France, England, Italy and Germany with his brother, returning in 1648 on his father's death. John II Casimir appointed him standard-bearer to the crown, and he distinguished himself in the wars against the Russians and Swedes. In 1669 Michael Koribut was chosen king, following the resignation of John II Casimir, against a party who preferred Sobieski. On the death of Michael he was chosen king, May 21, 1674. A new war with the Turks was concluded after varying success by a peace, Oct. 27, 1676. The anarchy in which Poland was constantly kept by the turbulence of its aristocracy was aggravated during the reign of Sobieski by the intrigues of his wife, and his own talent for administration was not equal to his capacity as a general. Besides internal troubles, European politics at this time occupied the attention of Sobieski, whose alliance was solicited both by Louis XIV and the emperor. He at length concluded (March 31, 1683) an alliance with the latter against the Turks, who had allied themselves with the malcontents in Hungary and threatened a most formidable invasion of the empire. Uniting with the Austrian forces, Sept. 9, at the head of a combined force of 83,000 men, he inflicted a decisive defeat on the Turks, and compelled them to raise the siege of Vienna, Sept. 12, 1683. He terminated the campaign with the capture of Gran (October 27), which had been in the possession of the Turks for nearly a century and a half.

JOHN, Augustus Edwin, British painter and etcher: b. Tenby, Wales, Jan. 4, 1879. He studied at the Slade School of Art, London, and in Paris, and became one of the leaders of impressionism in Britain. He painted several fine scenes from gypsy life, notably *Spanish Flower Girl*. His portraits were decorative in treatment, the line flowing, the color bright and attractive. He painted portraits of the principal figures at the Paris Peace Conference of 1919, notably one of David Lloyd George. Among other distinguished sitters were Lord Fisher, George Bernard Shaw, Princess Elizabeth Bibesco (the daughter of Herbert Henry Asquith), and Lord Sumner. The best of his etchings were *Coster Girl*, *Quarry Folk*, *The Valley of Time*, and *Maggie and Lucy*. Specimens of his art were acquired by the Metropolitan Museum, New York City. During the First World War he was official artist to the Canadian forces in Europe. In 1942 he was awarded the Order of Merit, one of Britain's highest decorations.

JOHN, yōn, Eugenie (pseudonym **E. MARLITT**), German novelist: b. Arnstadt, Thuringia, Germany, Dec. 5, 1825; d. there, June 22, 1887. She was the daughter of a portrait painter, and after pursuing the study of music at Vienna, lived at court for some years. She then returned to her native town and began writing novels, using the pseudonym "E. Marlitt." Her works, which were very numerous, have

been translated into English by Mrs. A. L. Wistar, and have been very popular in this country. Among them are 'Gold Elsie' (1868); 'Old Mamselle's Secret' (1868); 'Countess Gisela' (1870); 'Princess of the Moor' (1872); 'The Second Wife'; 'In the Counsellor's House.'

JOHN, Griffith, Welsh Congregational missionary: b. Swansea, 14 Dec. 1831; d. 1912. He studied at Brecon College (1850-54), then at the Missionary College, Bedford, England. He was assigned to China (1855) by the London Missionary Society, residing, till 1861, at or near Shanghai, moving then to Hankow and becoming the first Protestant missionary in central China. He made numerous trips through the contiguous country, establishing a number of churches and mission stations. With the exception of two furloughs to Great Britain (1870-73 and 1881-82), visiting the United States during the latter, he continued his services in China till 1906, when his declining health forced him resigning from missionary work.

JOHN, Sir William Goscombe, Welsh sculptor: b. Cardiff, 1860. He studied at the City of London School of Art, Kensington and the Royal Academy Schools, taking the Royal Academy gold medal and traveling studentship (1889), when he went to Paris to study (1890-91), taking the gold medal at the Paris Salon (1901). A few of his principal works are statues of King Edward VII, at Cape Town; Prince Christian Victor, at Windsor; 7th Duke of Devonshire, at Eastbourne; the historian W. E. H. Lecky, at Trinity College, Dublin; equestrian statue of the Earl of Minto, at Calcutta. Among his best-known memorials are the Marquis of Salisbury, at Westminster Abbey and in Hatfield Church; Bishop Lewis and Dean Vaughan, in Llandaff Cathedral; Sir Arthur Sullivan, in Saint Paul's Cathedral; that dedicated to the Coldstream Guards and War Correspondents, in Saint Paul's Cathedral. His works in a lighter vein contain 'A Boy at Play,' in Tate Gallery; 'The Elf,' in Cardiff Art Gallery; 'Morpheus' and 'Saint John the Baptist,' in Liverpool Art Gallery. He was created a knight in 1911 and is a corresponding member of the Institute of France, and Royal Academician since 1909.

JOHN, Epistles of. Three short epistles in the New Testament traditionally assigned to the Apostle John. The first and longest contains no definite indication as to its author or destination. It lacks the usual epistolary introduction and closing salutation. Nevertheless, it is a genuine letter and from one author, on his own sole responsibility, in spite of the occasional use of the first person plural (e.g., in chap. i). Though the author speaks with authority on matters of the Christian faith, it is the authority of fatherly affection, rather than of official position, that is felt and asserted. The inference is that the author was an old man writing to a church or group of churches whose members looked to him for spiritual guidance and regarded him with deep affection. The general purpose of the letter was to urge and lead those addressed to a fuller realization of their fellowship with God through His Son Jesus Christ, the Word of Life. He argues and pleads for the *sinless* life (confession of sin,

trust in the Divine grace, positive "walking in the light"), with special emphasis on love as absolutely essential. This can be realized only through a full acceptance of the great redemptive work of God in Christ and therefore a full confession of Jesus Christ, son of God, "come in the flesh" is indispensable. The letter aims at countervailing certain docetic and antinomian tendencies that were threatening to subvert the faith of those addressed. Linguistically and doctrinally 1 John has so much in common with the Fourth Gospel that the prevailing opinion is that it was from the same hand and for the same circle of readers. Evidence of its use from Polycarp (c. 110 A.D.) down is abundant and trustworthy.

The second and third epistles are very short letters and belong together. 2 John, addressed to a church (called "lady," Greek *κυρία*), is a message of affectionate admonition, warning against erroneous teachers ("anti-Christ"). 3 John, to Gaius, a member of the church addressed in 2 John, is of a more private and confidential character. Gaius is commended for his hospitality to itinerant missionaries. Diotrophes was probably the leading member of the church addressed in 2 John. The author, in both letters, calls himself "the elder," but does not give his name. Stylistically and doctrinally the relation of 2 and 3 John to 1 John is close, and identity of authorship is the most probable view. For literature see article on JOHN, GOSPEL OF.

EDWARD E. NOURSE.

JOHN, Gospel of. The fourth Gospel in the usual order of the New Testament writings. According to tradition, this gospel was written by the beloved disciple, John, in his old age, at Ephesus in Asia, near the end of the 1st century (90-100 A.D.). On this view, the gospel embodies the personal testimony of one of Jesus' most intimate disciples, and consequently is the most reliable and valuable of all the gospels.

To-day this traditional view is strenuously disputed. While the great spiritual value of the book is conceded, its apostolic authorship and independent or primary authority for the events of Jesus' ministry or for His teaching are denied. It is assigned to an unknown, though highly gifted, author, a Christian of Asia, who wrote in the early years of the 2d century, and was familiar with the earlier Christian literature (e.g., Paul's letters, and the Synoptics), but who felt that a new formulation of Christian truth was called for in view of the various doctrinal complications that threatened to undermine the faith of the Church. He therefore composed this "spiritual" gospel, in reality a profound doctrinal treatise rather than a gospel. The following discussion will attempt to set forth, as fully as space permits, the character of this gospel and the problem it presents for solution.

I. Contents.—Formally, at least, the plan of the gospel is simple. The purpose of the writer is plainly stated in xx, 30-31, and the book was planned to accomplish a result, namely, a *faith* in Jesus that issues in *life*. The writer sought to show why and how it is that belief in Jesus gives life, and unbelief results in death. The contents unfold simply and

naturally according to this ruling motive, as can be seen from the following brief outline:

Introductory section (the Prologue). The fact and significance of the incarnation of the Word (i, 1-18).

I. The Beginnings of Faith. How Jesus won the first believers (i, 19-iv, 54).

1. The witness of John and the first followers from John's disciples (i, 19-51).
2. The first "sign" at Cana (ii, 1-12).
3. Manifestation of His authority at Jerusalem and Judea, resulting in (imperfect) faith on the part of many. The case of Nicodemus and additional testimony of John (ii, 13-iii, 36).
4. The faith of the woman of Samaria and of the Samaritans (iv, 1-42).
5. Return to Galilee. The second "sign" and its resultant faith (iv, 43-54).

II. The Manifestations of Unbelief, culminating in the decision of the Jewish authorities to put Jesus to death (v-xii).

1. Jesus in Jerusalem cures a cripple on the Sabbath, and arouses the hostility of the Jews (v).
2. In Galilee, at a Passover season, 5,000 fed. The day following the Jews refuse to believe Jesus' claim to be the Bread of Life. Many desert Him, but the Twelve remain faithful (vi).
3. Again in Jerusalem, at Feast of Tabernacles, Jesus' claims rejected in extended debate by the Jews who are severely condemned for their unbelief (vii, 1-x, 21).
4. In Jerusalem, at a Feast of Dedication, another instance of unbelief and hostility (x, 22-42).
5. The Raising of Lazarus. In itself this was full proof of Jesus as "the resurrection and the life," but its effect on the Jews was to decide them to put Jesus to death (xi, 1-57).
6. The final public presentation of Himself at the last Passover season. Incidents of belief and welcome. The author's reflections on the great act of unbelief, the rejection of Jesus by the Jews (xii, 1-50).

III. Jesus' more complete and confidential revelation of Himself to His own (xiii-xvii).

1. The footwashing at the Supper and teaching based upon it (xiii, 1-20).
2. Disclosure of the impending betrayal and of his separation from them (xiii, 21-38).
3. Fuller teaching concerning His departure and concerning Himself and the Paraclete (xiv-xvi).
4. The great intercessory prayer (xvii).

IV. The Culmination of Unbelief, The Arrest, Trial, Condemnation, Crucifixion, Death and Burial of Jesus (xviii-xix).

V. The Victory—the raised and living Lord. Various appearances of the risen Jesus confirming the faith of the Disciples (xx, 1-29).

Conclusion (xx, 30-31).

Appendix—The reinstatement of Peter and Jesus' saying concerning the beloved disciple (xxi).

The author states (xx, 30-31) that out of the many "signs" which Jesus did he had selected certain as calculated to produce faith. It is noteworthy that there are just seven such signs ((1) ii, 1-12; (2) iv, 43-54; (3) v, 1-10; (4) vi, 1-10; (5) vi, 16-21; (6) ix, 1-12; (7) xi, 1-44). That the author intended this number to be noticed and a *symbolic significance* to be attached to it is nowhere stated. If such a symbolic principle is assumed as intentional the book at once becomes full of subtle allusions, each alleged concrete fact being intended to suggest or teach some profound spiritual truth. On this principle the entire outline of the gospel can be converted into a theological program, the key to which is furnished by the prologue. This principle is accepted by many critics and dominates most of the modern critical interpretations of the gospel.

II. Relation to the Synoptics.—The contrast between the Fourth Gospel and the Synoptics is striking. There is a marked difference not only in respect to the general plan, but as to the details of Jesus' ministry, the style of His discourses and the content of His teaching.

Instead of an account of Jesus' birth and childhood, as in Matthew and Luke, we find the profound statement of the incarnation of the Word as the introductory section. In the Synoptics we have a narrative of the work of John the Baptist, his popular preaching, his prediction of the coming One, his baptism of Jesus. In our gospel John's testimony is the all important thing, testimony given to the official representatives of the Jews or to his followers. There is no account of John's ministry as such. Our gospel omits all reference to Jesus' temptation, but devotes considerable space to the way Jesus gained His first disciples and to a ministry in Jerusalem and Judea about which the Synoptics say nothing. The great popular ministry in Galilee to which the Synoptic account is chiefly devoted is all but omitted in our gospel. It is there as an indistinct background, while in bold relief we have the two visits to Jerusalem (ch. v and vii, 2-x, 21) of which the Synoptic account says nothing. Only in the case of the feeding of the 5,000 do the two accounts meet on common ground and here the differences are as prominent as the resemblances. While the Fourth Gospel, like the Synoptics, thinks of a ministry in Perea (cf. x, 40) and also, like them, follows this with an account of the events of Passion Week and of the resurrection appearances, it relates an almost entirely different set of incidents, and in the few identical cases the account itself is characteristically different.

The Synoptic account reflects the popular tradition, of a broad and general character, of Jesus' ministry. Our gospel covers only a few selected incidents and deals with these in a very intensive and personal way. The incidents are largely of a more private nature. Note, for example, chs. xiii-xvii, devoted entirely to one evening's intimate fellowship of Jesus with His disciples.

It would seem that the author of our gospel used the Synoptic outline, assuming it to be

well known, as a working basis, and tried to adjust his own very different account to this in such a way as to cause the reader, already familiar with the Synoptic account, no serious disturbance of mind. That he succeeded admirably everyone must admit. On points of chronology he was particular. The indeterminate length of the ministry in the Synoptic account is corrected by noting the feasts—specially three Passovers—which show that the ministry covered more than two years. The cleansing of the Temple is placed at the beginning instead of the end of the ministry. The opening of the ministry in Galilee did not follow immediately upon the recognition of Jesus by John (cf. i, 35ff., and iii, 24, with Mark i, 13, 4). The last supper was on the night before the Passover and Jesus was crucified on the feast-day itself, not a day later, as in the Synoptics.

As to the *style* of Jesus' discourse there is a very remarkable difference between our gospel and the Synoptics. The parables are absent, although Jesus speaks in figures. In the Synoptics Jesus usually talks in a popular, simple, straightforward way and the common people hear Him gladly or with interest. In our gospel Jesus' speech is allusive, obscure, figurative, perpetually provoking question as to His meaning, even when speaking most confidentially to His disciples. The subjects of His discourse are not the same. In the Synoptics Jesus talks only rarely about Himself, mainly about conduct, morality, religion in the broad sense and the life it calls for. In our gospel His subject is mainly Himself: His significance, His relation to the Father, belief in Him, etc. In the Synoptics, His audience is usually the masses—the common people to whom He ministered as a physician to the sick with His "good news" of the Kingdom. In our gospel His audience is usually either some isolated individual, or the (hostile) "Jews," or His disciples.

Finally, our gospel differs from the Synoptics in that it is very definitely a *theological* writing, which cannot be said of the other gospels. The gospel opens with a section that is doctrinal in the fullest sense, a section which no one but a profound theologian could have composed. And throughout the work, in apparently simple language, doctrines of highest importance are set forth. Nothing like this is found in the Synoptics.

The facts mentioned thus far are patent to all. No theory of the gospel's origin can be accepted that fails to give a reasonable explanation of them.

III. Internal Evidence as to Authorship.

—Turning now to the question of authorship, we shall consider first the *internal* evidence. That is, what evidence, explicit or unintentional, does the book furnish as to its author, or the time and place of its composition.

Explicit statements are few and not definite. Such are i, 14f, "*we* beheld his glory," "of his fulness have *we* all received," and xix, 35, "He that hath seen (the blood and water) hath borne witness." To whom do "*we*" and "*he*" refer? Is there here a claim or assertion by the author that he was a personal disciple of Jesus? Such seems to be the view of xxi, 24, but this is in the appendix, the authorship and date of which is a problem by itself. We also find hints concerning a disciple, indefinitely in-

dicated as present (i. 35-42), at other times designated as the disciple "whom Jesus loved" (xiii, 23; xix, 26; xx, 2), or simply as "the other disciple" (xviii, 15; xx, 4, 8). So far as our limited knowledge of the Apostolic Age permits a judgment, these allusions can refer to but one individual, the Apostle John, one of the three "pillars" (Gal. ii, 9) and one of the three disciples closest to Jesus (Mark ix, 2ff. and ||s; xiv, 32ff. and ||s). In the passages cited it is not expressly claimed that the unnamed disciple was the author of the gospel or the main source of its contents, but xix, 35, taken in connection with verses 25 and 26, implies this, and such is the view of ch. xxi (cf. v. 24).

It is entirely in harmony with such a claim that our gospel assumes an intimate acquaintance with the minute details of Jesus' ministry,—the very hour when events took place, how He sat "thus" on the well-curb, details of topography, etc.,—and with the Judaism of the time when Jesus lived. It will probably be conceded by every impartial critic that no serious error has been proved against the gospel. The alleged anachronism in the name "sea of Tiberias" collapses in view of Josephus' similar, although not exactly identical, expression in his history of the Jewish War (iii, 3, 5; iv, 8, 2) written between 75 and 79 A.D. The alleged scientific objection to the "blood and water" (xix, 34) is shown to be baseless by Sir A. R. Simpson, M.D., in 'The Expositor,' 1911, Vol. II, pp. 300 ff. Many apparent improbabilities, indeed, suggest themselves, but these are not proofs that the work does not rest upon the testimony of an apostle or eyewitness.

Such, in general, seems to be the claim or assumption of the book itself, and it has been commonly received for centuries as guaranteeing apostolic authorship. But the book also gives other evidence regarding itself on which the chief stress is laid to-day by many critics and which, it is claimed, makes it impossible to hold to apostolic authorship, and necessitates a date not earlier than the first decade of the 2d century. Very briefly stated this evidence consists in the distinctly *theological* character of the Fourth Gospel and especially in the mature and developed type of its theological conceptions. The use made explicitly in the prologue of the Logos-idea and implicitly (it is claimed) throughout the book, which ever has in mind the Logos-Christ; the central significance assigned to the person of Christ, the (Logos) Son, the revealer of the Father and impartor of eternal life to those who come to know Him; the highly spiritualized eschatology in contrast to the realistic type of the Synoptics; and in general the indications that the author was familiar with and had assimilated the main Pauline doctrines, but had sought to modify or complete them in certain important respects,—such facts, it is claimed, point decisively to some one of the post-apostolic generation as the author. It is also claimed, and not without reason, that the author had in mind certain Docetic and Gnostic errors which he attempted to refute, errors that were particularly prevalent and dangerous in the first decades of the 2d century. Admitting the correctness of these observations, the problem is, do they *decisively prove* that the gospel could not have been written by the Apostle John?

Arguments drawn from the *structure* of the book are of uncertain value. In both style and structure the gospel is unique and amenable to no rule. Certain sections, as chs. v and vi and chs. xv and xvi, appear to have been shifted from their original positions, but minute study reveals so many instances of abrupt transitions, of broken or interrupted narrative or discourse, and of unexplained situations that the simple hypothesis of misplaced sheets (of the original MS.) will not suffice. It is a case either of extensive editing by a later hand of a document originally shorter and more orderly than our present gospel, or of a work unique in character and quite careless of ordinary rules of composition. If it is a case of editing, the task of ascertaining the scope and order of the original (apostolic?) material is a hopeless one.

One must admit, therefore, that the internal evidence, drawn from the book itself, is not clear, either as to its date or author. It seems to claim an eyewitness of Jesus' ministry, even a "beloved disciple," as its author. On the other hand, the quality of its theology and the stage of theological development and the character of the theological controversies presupposed in the book seem to indicate a date when authorship by an apostle becomes very questionable. Its other internal characteristics are not decisive.

IV. The External Evidence.—The testimony of early Christian writers after about 160 A.D. is practically unanimous as to the early date and Johannine authorship of the gospel. Even the sole known exception, the small and obscure group in Asia Minor, later called the Alogi, with possibly the Roman presbyter Gaius, did not dispute the early date, though they asserted that the gnostic Cerinthus was its author. Such writers as Theophilus of Antioch, Irenæus of Lyons, Clement of Alexandria and Tertullian of Carthage assumed that the Johannine authorship was indisputable. They knew of no other tradition. But as our inquiry is pushed back toward the beginning of the 2d century traces of the use or knowledge of the gospel become increasingly uncertain. It must be remembered, however, that the same thing is measurably true of each one of the Synoptics, especially Mark, the oldest gospel of all. Justin Martyr (140-50 A.D.) almost certainly used our gospel as the work of the Apostle John. Ignatius of Antioch (110-17 A.D.) was acquainted with its type of thought and may have read it. Both Papias (c. 140 A.D.) and Polycarp (110-17 A.D.) made use of 1 John, which speaks for rather than against their knowledge of the gospel, but this is all that can be said with confidence. The evidence that Basilides, the Egyptian Gnostic (c. 130), used our gospel is strong, though not free from uncertainty. That I Clement, written in the West, at Rome, about 96 A.D. contains no allusion to this gospel is not surprising. In case the gospel was written in Asia between 90 and 100 A.D. a reasonable time must be allowed for it to have become generally circulated and known as familiarly as the older gospels were. When this is taken into consideration the evidence for the gospel compares very favorably with that in favor of Mark, for example.

The reliability of the tradition that the Apostle John lived "to the times of Trajan" (98-117), as it is expressed by Irenæus, and that the later part of his life was spent in

Asia (Ephesus) has been emphatically disputed by many critics, especially since DeBoor proved from newly-discovered evidence that Papias probably said something about John being put to death by the Jews. But the exact wording of Papias' statement has not been recovered, nor the context to which it belonged. Until we have more than only a few fragments of Papias' work in our hands, we shall not be able to base any conclusions on what he may have said or meant. Irenæus' testimony as to how he himself, in his youth, heard Polycarp of Asia speak of his intercourse with the Apostle John is positive and cannot easily be brushed aside. Then there is the obscure figure of an "Elder" named John, spoken of by Papias, who may have become confused, even as early as c. 140-50 A.D., with the Apostle John.

V. Conclusions.—The decision of the critical question is, it is evident, beset by great difficulties. The external evidence, while on the whole favorable to Johannine authorship, is not strong enough to be considered decisive. The internal evidence is conflicting. It is both for and against the traditional view. Each of the opposing views can be supported with forcible arguments, and a decision will probably be found to rest mainly on one's personal equation.

No one knows (historically) when the Apostle John died, nor where or how he spent his last years. No one knows what were his mental and spiritual gifts. No one can say that he could or could not have written such a book as the Fourth Gospel. But these things are practically certain: the Fourth Gospel must have been composed *after* the Synoptic tradition was generally accepted. It was composed by one who was richly endowed with spiritual insight, who had a profound Christian experience, and who had thought deeply on some of the greatest problems of theology and was able to discuss or state them in marvelously simple and concise language. Can any one say positively that an aged apostle could not have planned deliberately a "spiritual" gospel in which the words and deeds of Jesus were to be treated symbolically rather than literally?

However the problem of authorship may eventually be solved, the fact remains that in the Fourth Gospel the Christian Church possesses a treasure of priceless worth. To the spiritually minded of all the Christian centuries this gospel has ministered more effectively, probably, than any other New Testament Book. It has spoken untold comfort to the troubled and sorrowing. A mystic influence emanates from it and under its spell God and eternal life become realities of experience. Whoever wrote it had sounded the depths of the revelation of Christ. Through its influence the early Church was enabled to clarify and unify its faith, and realize the full significance of the gospel in an age when subtle speculations threatened to strangle its life and confuse its mind.

Bibliography.—The literature on the Fourth Gospel (including usually a consideration of the Epistle of John) is extraordinarily extensive and cannot be listed here. The most serviceable recent list will be found in Moffat's 'Introduction to the Literature of the New Testament' (New York 1915). Of special importance are the following: Zahn, 'Introduction to the New Testament' (Vol. III, Edinburgh

1909; Bacon, B. W., *The Fourth Gospel in Literature and Debate* (1910); Brooke, A. E., *Critical and Exegetical Commentary on the Johannine Epistles*, in *International Commentary* (1912); Carpenter, J. E., *Johannine Writings* (1927); Bernard, J. H., *Critical and Exegetical Commentary on the Gospel According to St. John*, 2 vols., in *International Critical Commentary* (1929); Dodd, C. H., *Background of the Fourth Gospel* (1935); Strachan, R. H., *Fourth Gospel* (1943); Howard, W. F., *Fourth Gospel in Recent Criticism and Interpretation*, 3rd ed. (1915); Dodd, C. H., *Johannine Epistles*, in *Moffatt New Testament Commentary* (1946).

JOHN, Order of Saint, a military religious order, once a great power in Europe and the Near East. First known as Knights Hospitallers of St. John, its members were subsequently called Knights of Rhodes and at a more recent epoch Knights of Malta. About 1048 merchants of Amalfi founded a monastery for Benedictine monks in Jerusalem near the Holy Sepulcher, with an attached hospital. During the First Crusade Godfrey of Bouillon having made large donations to the hospital, its director Gérard detached it (1099) from Benedictine tutelage and initiated a new religious congregation, the Hospitallers of St. John or Brothers of St. John of Jerusalem. His successor Raymond du Puy gave the order a constitution, confirmed by Pope Paschal II in 1113. During the 12th century military obligations were added to hospital duties and the principal object of the knights became the armed defense of Christians against the infidels. After Saladin's conquest of Jerusalem (1187) the knights seized Acre (1191) which they held for a century, retiring to Cyprus in 1291. They conquered the island of Rhodes in 1310 and for two centuries called themselves Knights of Rhodes, until expelled by Suleiman the Magnificent in 1522, after a heroic defense. The Emperor Charles V established them at Malta in 1530; since then they have been called Knights of Malta. In 1565 their grand master Jean de La Valette repulsed an attack of Suleiman in a bitterly fought action.

At the height of its power in the 16th century the Order of Malta, headed by a grand master, was divided into eight "languages" or nations: Provence, Auvergne, France, Italy, Aragon, Germany, Castile, and England. Each nation was subdivided into commanderies, priories and bailiwicks. To the three monastic vows members added that of caring for and defending pilgrims. They were divided into three classes: the nobles or knights; the priests or chaplains; and the serving brothers who cared for hospitalized sick but also at need served as soldiers. Knights wore on the left breast a white Maltese cross, its eight points signifying the beatitudes to which they aspired.

The knights surrendered Malta to Napoleon in 1798. England's capture of the island in 1800 forced their withdrawal to France and Italy, Rome thenceforth becoming their headquarters. Pius VII reduced the languages to Italian and German and provisionally placed a lieutenant master in command. Pius IX in 1854 modified the statutes of the order, and in 1880 Leo XIII gave it the Church of St. Basil and the Mount Aventine priory. France severed official relations with the knights during the French Revolution but resumed them in 1924. In addition to commanderies in Italy the order maintains priories in Silesia and Bohemia, also associations of knights elsewhere. It supports numerous hospitals and in wartime organizes, equips and staffs ambulances, hospitals and hospital trains.

Protestant associations not recognized by the Roman Catholic order but having similar humanitarian aims are the Grand Priory of the Venerable Order of the Hospital of St. John of Jerusalem in the British Realm (1831, incorporated 1888) of which King George VI is sovereign head, and the Bailiwick of Brandenburg (1852) with branches in various parts of Germany. In the United States and Canada there are several organizations, both Protestant and Catholic, including the Association of Master Knights of Malta chartered by the Sovereign Order (Rome) in 1929.

JOHN, Saint. See SAINT JOHN.

JOHN B. STETSON UNIVERSITY, a coeducational school founded as De Land Academy in 1883 at De Land, Fla., under the auspices of the Baptist denomination. The institution became De Land University in 1887, but in honor of John Batterson Stetson (q.v.), who bestowed large gifts on the university, nearly all of the buildings and the campus, the name was changed in 1889. In 1953-1954 the institution comprised colleges of arts and sciences, law, music, and business. Total enrollment of graduate and undergraduate students in 1952-1953 was 1,756.

JOHN BROWN'S BODY, a narrative poem by Stephen Vincent Benét published in 1928 and awarded the Pulitzer Prize for poetry in the following year. It is a ballad-epic of the American Civil War.

After an invocation to the American spirit, and a prelude ("The Slaver"), the poem is divided into eight books. Book One narrates John Brown's raid on Harpers Ferry, and introduces the fictitious characters—Jack Ellyat, of Connecticut, and Clay Wingate, of Wingate Hall, Georgia—who as representatives of North and South are to furnish continuity in the story. Book Two opens with the fall of Fort Sumter, and centers on the Battle of Bull Run. Book Three centers on Shiloh; Book Four, on McClellan's campaign in the Peninsula. Book Five is devoted to symbolic figures, from Lincoln meditating in the White House to a runaway Negro named Spade, and to the exchange of sick and wounded prisoners. Book Six is Chancellorville; Book Seven, Vicksburg and Gettysburg; and Book Eight summarizes the falling action in the last two years of the war.

The poem is written in a variety of meters, including irregular blank verse with occasional prose passages of summary. Though five of the eight books center on major campaigns, it is not primarily a military epic. Its dominant motif is the power of ideas and of personalities. The leaders on both sides are drawn with penetrating insight; some of them—Lincoln, Davis, Lee, Grant, Jackson—at full length, minor characters in vivid thumbnail sketches of a line or two. The central theme is the saving of the Union and the freeing of the slaves, but to preserve the human scale the figures of Jack Ellyat and Clay Wingate recur, with their fighting, their wounds, and their love affairs. Wingate loves Sally Dupré, and finds her at last amid the ruins of his home and his cause; Ellyat is reunited with Melora Vilas, the Tennessee mountain girl who had succored him after Shiloh, and who had borne his child.

To some contemporary critics, the poem is

suspect because it is lucid. But its lucidity is not shallowness; through it the reader discerns profound emotional and artistic insight infused with an almost mystical patriotism.

DELANCEY FERGUSON,
Professor of English, Brooklyn College.

JOHN BROWN'S BODY, a popular marching song of the American Civil War. Its tune came from that of a hymn known to have been sung in the South in the late 1850's. The hymn, which had a "Glory, glory, hallelujah" refrain, was written by William Steffe in an indeterminate year. It was sung by the glee club of the "Tigers," a battalion of Massachusetts Infantry stationed at Fort Warren in the Harbor of Boston, Mass.; and after the hanging of John Brown, the abolitionist, the glee club improvised the words of *John Brown's Body* to the melody. The "Glory, glory, hallelujah" refrain was kept. The song was taken up by other regiments, and on the march south its fame spread. In December 1861, Julia Ward Howe wrote the words of *The Battle Hymn of the Republic* to the song after hearing troops singing it while going into battle near Washington, D.C. Popularly the song is often known by its opening words, "John Brown's body lies a-mouldering in the grave." Thomas Brigham Bishop of Portland, Me., is sometimes given as the composer.

JOHN BULL, a popular nickname applied to England or its citizens. See **NICKNAMES**, **NATIONAL** AND **POPULAR**.

JOHN CRERAR LIBRARY, The. See **LIBRARIES—UNITED STATES**.

JOHN DAMASCENE, Saint. See **JOHN** OF **DAMASCUS**.

JOHN FREDERICK (called the **MAGNANIMOUS**; Ger. DER GROSSMÜTIGE, dër grös'-mü'ti-gë), elector of Saxony: b. Torgau, Saxony, Germany, June 30, 1503; d. Weimar, Thuringia, Germany, March 3, 1554. A member of the Ernestine line, he was the eldest son of John the Constant. He succeeded him as elector in 1532, and became one of the leaders of the Schmalkaldic League. He wavered in his loyalty to Emperor Charles V, but in 1546-1547 was forced into war with his cousin of the Albertine line, Maurice, duke of Saxony, who sought the electorate for himself. In the Battle of Mühlberg (1547) he was taken prisoner, and was forced to renounce the electorate in favor of Maurice. Released in 1552, he failed to regain the electorate thereafter.

JOHN GILPIN, or in full *The Diverting History of John Gilpin, showing how he went farther than he intended and came safe home again*, a famous humorous ballad by William Cowper, written about October 1782 and printed anonymously the next month in the *Public Advertiser*. The runaway adventure it describes is said to have happened to a certain John Beyer, linen draper, and the name John Gilpin is thought to have been taken from a tombstone in Saint Margaret's, Westminster. It is more certain that the story was told Cowper by his friend, Lady Austen, in order that she might relieve him in one of his periods of gloom. He is said to have been so amused that he could not sleep until

he had got out of bed and written down some of the stanzas as they had come to him. Then he polished and added, sending portions across the street for the approval of a jocular barber friend. When published, the poem made its way fairly well, but it broke away like Gilpin's horse and got its great start toward its unbounded popularity through the recitations of it given in 1785 by the actor Henderson. The same year it was included in the same volume with *The Task*, and doubtless helped to make that a success. It has never since declined in popularity, and one fails to see how it ever can, so long as people display a propensity to laugh at the not clearly dangerous misadventures of others, and so long as a free natural style and a genuine fund of humor varying from arch to almost rollicking are as rare as they seem to be among literary gifts.

WILLIAM P. TRENT.

JOHN HALIFAX, GENTLEMAN, a novel by Dinah Maria Craik, in which the hero, John Halifax, one of "nature's noblemen," beginning life as a poor boy, works his way up to prosperity and happiness, by means of his high principles, undaunted courage, and nobility of character. The heroine is Ursula March, and the simple domestic story includes few minor characters. The interest lies in the development of character. The author's assertion is that true nobility is of the soul and does not inhere in wealth, in learning, or in position; and that integrity and loftiness of purpose form the character of a true gentleman.

JOHN HENRY, American Negro folk hero, celebrated in stories, in a ballad of the same name, and in other songs. The real John Henry is said to have been a hammer man who died in a cave-in while he was helping to dig the Big Bend Tunnel of the Chesapeake and Ohio Railroad through the West Virginia hills in about 1873. According to legend, however, he outdrove a steam drill with hammer and steel, and, exerting himself too much, "died with his hammer in his hand." The other tales and songs about John Henry, some of which originated before the contest with the steam drill, celebrate his strength and his prowess with women. The stories told about him were combined and reconciled by Roark Bradford in *John Henry* (1931), dramatized by Bradford in 1939 and produced in the following year, with music by Jacques Wolfe.

JOHN INGLESANT, by J. Henry Short-house, a well-known novel first published in 1881 belonging to the type of fiction represented by Kingsley's *Hyppatia* and Pater's *Marius the Epicurean*. The author called it a philosophical romance, designing it to be a means of presenting philosophy under the guise of fiction. The method is generally that of Reade's *The Cloister and the Hearth*, by which is unrolled a panorama of the life of a period in various lands. *John Inglesant* is, however, concerned far less with a brilliant picture of personalities and customs in many countries than with expositions of dominant religious and political ideas. The hero from whom the book takes its name is the descendant of a family established and enriched during the religious transformations of Henry VIII, but his own time is that of the Commonwealth. Educated under the influence of a Jesuit

with a view to future services to the Roman Church, he becomes an important member of King Charles's entourage and as such not only sheds his blood in the Royalist cause but meets representatives of nearly all the English factions and sects. As a confidential emissary of the king, he barely escapes suffering his master's fate. On his release from two years' imprisonment he goes to France, where he mingles with the Royalist refugees and becomes acquainted with important types of French religious thought. An important mission leads him to Italy, where he remains for several years, influenced by and influencing, as well as merely observing, the intricate play of religious politics and faiths, of character and custom, until his final return to England. Throughout, the chief end of the novel is to represent a cross section in several countries of a dominant interest and to expand various views, to such a degree, indeed, that the personal characters are very much obscured and the people become rather types and mouthpieces than individuals.

WILLIAM T. BREWSTER.

JOHN NEPOMUK SALVATOR, nă'pō-mōk zal vā'tōr, archduke of Austria and prince of Tuscany: b. Nov. 25, 1852, Florence, Italy; d. probably 1891. The youngest son of Grand Duke Leopold II of Tuscany, he entered military service and rose to command of a brigade (1878). His publication of *Drill oder Erziehung* (1883) brought him into disfavor for criticizing military authority. In 1887 he sought unsuccessfully to gain the Bulgarian throne for himself, and was deprived of his military command. Resigning his title, he took the name Johann Orth in 1889. In 1890 he sailed in command of the *Sankt Margaretha* for South America, and is thought to have died in a shipwreck in 1891. Besides other military publications, he wrote the libretto for a ballet, *Die Assassinen*.

JOHN OF AUSTRIA (Span. *Juan de Austria*; commonly known as DON JOHN), Spanish general and admiral: b. Regensburg, Bavaria, Germany, Feb. 24, 1547; d. near Namur, Belgium, Oct. 1, 1578. He was an illegitimate son of the Emperor Charles V by Barbara Blomberg, and in 1550 was sent to Spain, where he was reared. The will of Charles V recognized him as his son, and recommended him to Philip II, who created him a prince of Austria. In 1568 he commanded a squadron which fought the Barbary pirates, and in 1569–1570 suppressed the Morisco rebellion in Granada. As admiral of the combined fleets of the Holy League he won the great naval battle of Lepanto over the Turks (Oct. 7, 1571). In 1576 he was named governor general of the Netherlands. He made concessions to the rebellious Dutch provinces, but resumed hostilities and had won, with Alessandro Farnese, the victory of Gembloux (1578) over William the Silent when he died suddenly.

JOHN OF BRIENNE, brē'en', titular king of Jerusalem: b. about 1148; d. 1237. He became king in 1210, when he married Marie de Montferrat, Queen of Jerusalem. Upon her death in 1212, he became regent for their daughter, Yolande. During the Fifth Crusade he besieged Damietta. In Europe from 1223 to 1229, he arranged his daughter's marriage to Emperor Frederick II (1225). When Frederick claimed

the throne of Jerusalem he led the papal armies against him in Italy, but was defeated. He was elected emperor in 1229 by the barons of Constantinople to serve during the minority of Baldwin II, and in that capacity repelled troops of the Greeks and Bulgars.

JOHN OF DAMASCUS, dā-mās'kūs, or **JOHANNES DAMASCENUS**, jō-hān'ēz dām'a-sē'nūs, or **JOHN DAMASCENE**, dām'-ā-sēn, Saint, theologian and doctor of the Eastern Church: b. Damascus, Syria, about 675; d. probably 749. The son of a Christian who held a government office under the Saracen caliph, he received an education in theology and philosophy from an Italian monk named Cosmas. He fell heir to his father's office, but resigned it and entered the monastery of St. Sabas, near Jerusalem, in Palestine, where he was later ordained priest. His three treatises defending orthodoxy against iconoclasm were influential, and his hymns rank high in Eastern hymnody. He is said to have taken part in the composition of the *Octoechus*, a liturgical book of hymns for certain ferial offices. He is chiefly known, however, for *The Fountain of Wisdom*, an encyclopedic work in three parts (including, as part 3, *Exposition of the Orthodox Faith*), systematizing and defending Eastern dogma. It influenced the scholastics. The epithet Chrysorroas (gold-streaming) was given him as a tribute to his eloquence. He was canonized by both Greek and Latin churches.

JOHN OF GAUNT, gōnt, DUKE OF LANCASTER, English statesman: b. Ghent, Belgium, March 1340; d. London, Feb. 3, 1399. The fourth son of Edward III, he married Blanche of Lancaster in 1359, and through his marriage to her succeeded to the dukedom of Lancaster in 1362. He accompanied his brother Edward, Prince of Wales, on the unsuccessful expedition to aid Pedro el Cruel. After the death of Blanche (1369) he married Constance, Pedro el Cruel's daughter (1372), and took, in her right, the title of king of Castile and Léon. He led armies of the English invading forces in France in 1369 and 1370. It is thought that he had hopes of seizing his Spanish kingdom from Henry II of Castile when he led the futile expedition from Calais to Bordeaux in 1373. Meanwhile, he became increasingly unpopular in England.

His political power, however, increased, and following the death of the Prince of Wales in 1376 he virtually ruled England until the death of the senile Edward III (1377). He led the barons' party against the clerical party, and supported John Wycliffe in his struggle with the latter, although he did not share Wycliffe's religious views. During much of the minority of his nephew, Richard II, he was the dominant royal administrator. Richard distrusted him, suspecting him of designs on the succession, and gave him every assistance in 1386, when he left England to attempt the taking of his Spanish throne. Though defeated militarily, he had a diplomatic success, for the result was the transferring of the claim to one of his daughters by Constance, Catherine, and her marriage to Prince Henry (later King Henry III) of Castile (1388). He returned to England in 1389, and thereafter exerted his influence in Richard II's behalf. He brought about a reconciliation of his brother, Thomas of Woodstock, Duke of

Gloucester, with the king, and in 1390 the king created John of Gaunt duke of Aquitaine. He took a leading part in the conclusion of a truce with France in 1394. During his absence Constance died. He married Catherine Swynford, his mistress, in 1396, and secured the legitimization of his four children by her, known as the Beauforts. In 1397 his predominance was challenged by Thomas of Woodstock and others, and John of Gaunt and his family took leading parts in the prosecution of Richard Fitzalan 4th earl of Arundel.

John of Gaunt was a patron of Chaucer, and appears as a character in Shakespeare's *Richard II*. The House of Lancaster, which gave several kings to England, was founded by him. His eldest son, Henry Bolingbroke, his son by his first wife, Blanche, became King Henry IV. The exiling of Bolingbroke in 1398 broke his father's spirit. The eldest Beaufort was an ancestor of Henry VII.

JOHN OF LANCASTER, DUKE OF BEDFORD, English nobleman: b. June 20, 1389; d. Rouen, Sept. 14, 1435. He was the third son of Henry IV of England. His brother, Henry V, created him duke in 1414. In 1416 he commanded the fleet which defeated the French in the English Channel, and in 1417, at the head of an army, he brought about the retreat of Scottish raiders. After the death of Henry V in 1422, he became regent for Henry VI, whom he had proclaimed king of France as well as England, Charles VI of France having died in the same year. He commanded the English army against Charles VII, defeated the French at Verneuil (1424), and had other successes, but the siege of Orléans (1428-1429) and the appearance of Joan of Arc (1429) marked the end of his triumphs. He permitted Joan's execution as a witch in 1431. His first wife, Anne of Burgundy, died in 1432, and his remarriage (1433) is said to have helped bring about the breaking of Philip of Burgundy's alliance with England. Shortly before Lancaster's death Philip became an ally of Charles VII, and thus brought to an end English control over France.

JOHN OF LEYDEN. See ANABAPTISTS—*Münster Anabaptists*.

JOHN OF NEPOMUK, ně'pò-mòók, or **POMUK**, pò'mòók, **Saint**, patron saint of Bohemia: b. Nepomuk, Bohemia, about 1340; d. March 20, 1393. Vicar general of the Archdiocese of Prague in 1393, he was thrown into the Moldau River at the command of Wenceslaus IV of Bohemia, and drowned. He was canonized in 1729. According to one story, he incurred the king's displeasure by opposing his attempt to transform an abbey into a cathedral; according to another story, he incurred displeasure by refusing to reveal to the king the content of the queen's confession. As a result of the different stories, some scholars have entertained the idea that there were two clerics by the same name and that both of them were murdered at the command of Wenceslaus.

JOHN OF SALISBURY, English scholar and prelate: b. Salisbury, England, about 1115; d. Chartres, France, Oct. 25, 1180. He studied at Paris under Peter Abelard, and laid the basis for his classical scholarship while studying at

Chartres. He seems to have been attached to the papal court beginning in about 1148. He served as secretary to two archbishops of Canterbury, Theobald and Thomas à Becket. A supporter of Becket's cause, he was with him in France from 1164 to 1170, and after their return was a witness to his assassination. He was appointed bishop of Chartres in 1176, and occupied this see until his death. As prelate, philosopher, theologian, jurist, and historian he was honored by his contemporaries. In 1159 he completed his two principal works: *Polycraticus*, a treatise on church and state government, setting forth a society in which temporal power is delegated by the church to the prince, who holds it as long as he rules by law; and *Metalogicus*, sharply censuring formal scholasticism and providing a view of the intellectual life of the time. He also wrote *Historia Pontificalis*, *Entheticus de dogmate philosophorum*, and lives of Anselm and Thomas à Becket. His letters shed important light on contemporary history. His collected works, in five volumes, were edited by J. A. Giles (1848).

JOHN OF THE CROSS, **Saint** (Span. SAN JUAN DE LA CRUZ), Spanish mystic and poet: b. Fontiveros, Avila Province, Spain, June 24, 1542; d. Úbeda, Jaén Province, Spain, Dec. 14, 1591. He was a Carmelite friar, and his real name was Juan de Yepes y Alvarez. He attended the poor school at Medina del Campo, studied with the Jesuits, and in 1563 became a Carmelite. In 1567, after four years of study at Salamanca, he was ordained priest. He concerned himself with promoting among friars the Carmelite reforms of St. Teresa, and founded monasteries of the Discalced Carmelites. Imprisoned by the unreformed Carmelites in December 1577, he escaped in August 1578. Later, having supported a defeated faction among the Discalced Carmelites, he was deprived of his offices in that order, and at the time of his death, in a remote spot in Andalusia, was out of favor. He was canonized in 1726, and made a doctor of the church in 1926.

His *Obras espirituales* (1618) includes the great mystical poems *Noche oscura del alma* ("Dark Night of the Soul"), *La Llama de amor viva* ("Flame of Divine Love"), and *El cántico espiritual* ("Spiritual Canticle"). The commentaries which he wrote to accompany the poems give clear explanations, and are important documents in the history of mysticism. A revised edition of his complete works, in three volumes, translated and edited by E. Ellison Peers, appeared in 1953.

JOHN O'GROAT'S HOUSE, a spot on the northern coast of Scotland, in Caithness County, 17 miles north of Wick and 2 miles west of Duncansby Head. It is a terminus for "end to end" races, either within Scotland or covering the whole length of Great Britain. The phrase "from John O'Groat's to Land's End" is a term long used to represent the entire length of Great Britain, although the actual northernmost point is Dunnet Head, several miles from John O'Groat's. The John O'Groat's site is said to have been occupied by an octagonal house supposedly erected for the annual meeting of de-

scendants of John de Groot, a Dutchman who came to Scotland to settle in the reign of James IV of Scotland. The octagonal shape of the house is accounted for variously. One story relates that the house was built as an octagon to solve a problem of precedence among the descendants, each of whom was thereby enabled to enter the house by his own door and sit at the head of the table, which too was octagonal.

JOHN PAW, a large and beautiful grouper (*Epinephelus drummond-hayi*), which is umber brown densely covered with small white spots. It inhabits the Gulf of Mexico, and is also known in Bermuda. It is sometimes called the speckled hind.

JOHN THE BAPTIST, the "forerunner" of Jesus Christ. He was the son of Zacharias, a Jewish priest, whose wife, Elizabeth, was also of a priestly family. The dates neither of his birth nor of his entrance on his public work can be fixed with unmistakable certainty. For his birth, dates varying from 8 to 4 B.C. have been proposed, and the beginning of his ministry must have been about 26 to 28 A.D. According to Luke he was born when his parents were extremely old, and the evangelist adds a story of great beauty about the vision of Zacharias while engaged in his priestly duties in the temple, and the visit to Elizabeth of her relative Mary, the Virgin Mother of Jesus. Of the life of John before he steps out into public activities we know little. The home of his parents was in one of the hill towns of Judea, but there is no good ground for naming any particular city, as has sometimes been done. From his birth he had been dedicated as a "Nazarete," that is, he was under obligation to allow his hair and beard to grow untrimmed, to refrain from all use of wine and other intoxicants, and especially to avoid every contact with dead body. He seems while still young to have eschewed not to take the honored office of priest which would have been his by hereditary right and to have withdrawn to the desolate and lonely desert of Judea, which the presumably early death of his parents would leave him quite free to do. There he lived with the utmost simplicity, dressed in a robe of coarse camel's hair cloth and eating the locusts and wild honey which abounded in that wild region to the west of the Dead Sea. The notion that he was associated with the Essenes, ascetics dwelling in communities in the desert, though earlier held by some, has nothing in its favor and has now scarcely any advocates. It is not surprising that when John suddenly began to preach he aroused wide and deep interest amounting to general enthusiasm at first throughout Judea, and then elsewhere as he extended his ministry along the whole Jordan Valley. The very figure of the gaunt and meanly clad desert dweller must have been striking; his vehement warnings against sin and demands for thoroughgoing repentance were most impressive, and these were reinforced by the assertion that the prophecies of the King and divine kingdom to which he had so long sustained the faith and kindled the hopes of Israel were now near to fulfillment. Never had the summons to repentance been so vehement, and never had it been reinforced with such a motive, "The expected King will speedily set up his promised kingdom of righteousness: repent, therefore, that by righteousness the nation may become fit to receive its

King." Throngs of all classes of society flocked to listen to hear the trumpet message of the desert evangelist, and multitudes were plunged in baptism beneath the waters of the Jordan in token of their obedience to his message, pledging themselves as penitents to the service of the "One who was to Come."

But the most significant point in the ministry of John was reached when Jesus came from Nazareth and in spite of protestations insisted on baptism at his hands. The details of the event are not fully recorded. The later statement of the Baptist that he had not known Jesus before his baptism may mean only that before that he had no grounds for definitely recognizing him as the Messiah whose coming he was foretelling, or it may mean that in spite of their possibly remote cousinship John and Jesus had had no previous personal acquaintance at all. The hesitation of John to baptize Jesus may have rested on earlier knowledge of his character, but it may also have developed at the first interview. It is frequently assumed that the heavenly sight and sound which we are told accompanied the baptism were shared by the crowds who are supposed to have been present, but this is nowhere asserted, nor indeed is it necessarily implied that any others than John and Jesus were present at the time. The Synoptic Gospels deal chiefly with the work of John up to the baptism of Jesus, while the Fourth Gospel gives his testimony to Jesus afterward, and so there is no such inconsistency between the reports as is sometimes said to exist. According to the Fourth Gospel, which purports to be by the Apostle John, possibly a relative of the Baptist and at any rate one of his followers, the impression made by the baptismal scene was such that he was convinced that the Messiah had now come, and while he did not modify his preaching, leaving it to Jesus to reveal himself in his own way, he privately pointed him out as "The Lamb of God who should bear away the sin of the world," and some of his disciples consequently at once transferred their allegiance to Jesus.

That after this clear recognition John sent some of his disciples to seek from Jesus an explicit assertion of his Messiahship has sometimes been explained as due to a desire to obtain confirmation of the faith of these disciples, but the answer of Jesus makes it probable that it was due to some lack, at the time at least, of positive conviction in John's own mind, perhaps because the method of Jesus in presenting himself to the nation was not what John had expected, an uncertainty very probably intensified by the depression which his imprisonment may be presumed to have caused or intensified. But in the discourse which followed Jesus took occasion to eulogize John as greater than any of the prophets, as the greatest man who had ever lived.

After his recognition of Jesus as the One for whom he was preparing the way, John continued his work for a time, perhaps for some months, presumably with the feeling that the people still needed in mind and life the work which he had been doing. But his fidelity to his mission as a preacher of repentance and right living soon cost him his liberty and in the end his life. Herod Antipas, the ruler under Rome of Galilee and Perea, had taken to himself the wife of his brother Herod Philip. This doubly adulterous connection John denounced openly and apparently to Herod's own face, having perhaps been summoned by him to preach at court. This

aroused such a fury of hate, especially in Herodias, the woman in the case, that John was imprisoned in the fortress of Machaerus near the Dead Sea, in the ruins of which marks of fetters may still be traced on the walls of the dungeons. Finally after perhaps months of hesitation on the part of Herod, by the shameful artifice of allowing her daughter Salome actually to appear as a dancing girl before Herod and his guests at a feast, he was induced to swear that he would give the girl whatever she asked, and when she demanded in fulfillment of this rash promise, "The head of John the Baptist on a platter at once," he was beheaded in the prison and the head was carried to Herodias, who is said to have wreaked her fury on the inanimate object of her hate. There seem to have been for years groups of men who were known as disciples of John the Baptist, but with this tragedy his great influence ended, for though, as Jesus called him, he was "a light that burned and shone," yet as he himself said in his forecast of his relation to Jesus, "He must increase, but I must decrease."

DAVID F. ESTES,

Late Professor of New Testament Interpretation,
Colgate University.

JOHN THE CONSTANT, Elector of Saxony: b. Meissen, Saxony, June 30, 1468; d. Schweinitz, near Wittenberg, Germany, Aug. 16, 1532. He was the fourth son of Elector Ernest. He succeeded his brother Frederick III as elector in 1525, and declared himself emphatically in favor of the Reformation. In 1526 he joined the Alliance of Torgau, hindering the agitation of the followers of the old faith and placing his coreligionists in a position to form a unanimous party at the Diet of Spires of that year. He was a leader of the princes who protested the measures taken by the Diet of Spires of 1529 (thus becoming one of the first to be named Protestant). He signed the Augsburg Confession (1530), and helped organize the Schmalkaldic League (1530-1531). He was succeeded as elector by his son, John Frederick.

JOHN WOOLMAN'S JOURNAL, the autobiography of the American Quaker minister first published in 1774 and subsequently often reprinted. Charles Lamb's advice, "Get the writings of John Woolman by heart," is well known, and other sensitive and idealistic critics, English and American, have been equally enthusiastic over Woolman's chief work, his *Journal*; but among practical Americans of today it is to be feared that the book is oftener praised than read. It was begun when Woolman was 35 years old, and was continued until his death, in 1772, at the age of 52. Though it is called a journal, it goes back to recount the events of his whole life, particularly his spiritual experiences. It is notable that among the few American classics that have come down from the 18th century are the autobiographies of two men who represent opposed tendencies in American thought—Franklin and Woolman. In contrast with Franklin's extreme practicality stands Woolman's disregard of worldly things, and his readiness to sacrifice property, convenience, and bodily comfort for the sake of principle, and

even for reasons of conscience so slight as to seem almost whims. Thus, on his trip to Europe he endured all the hardships of the steerage for the reason, as he says, "that on the outside of that part of the ship where the cabin was I observed sundry sorts of carved work and imagery; that in the cabin I observed some superfluity of workmanship of several sorts," and he felt a scruple against paying a passage rate that was greater because of these worldly adornments. Woolman was, however, no ordinary crank or eccentric reformer. The genuineness and sweetness of his character impel us to respect him when he goes to the greatest extremes in matters of conscience. He did not, like Franklin, pay deliberate attention to the mastery of style, but his singularly pure and limpid prose seems a natural expression of the man himself.

WILLIAM B. CAIRNS.

JOHNNY REB, in United States history, a nickname given to the Confederates by the Federals during the American Civil War, when they were usually termed rebels in the Northern states. Confederate soldiers called their adversaries Yankee, Yanks, or Blue-bellies, alluding to the color of their uniforms, which contrasted with the Confederate gray.

JOHNNY VERDE, or **JUAN VERDE**, a fish belonging to the genus *Paralabrax*, confined to the coasts of tropical America. The species *Paralabrax nebulifer*, known locally as the johnny verde, frequents the Pacific coast from Monterey to Lower California, where it is an important food fish. It is usually found in shallow water, grows to 18 inches length, and is of a greenish color with mottlings irregularly pale and dark. The spotted *cabrilla*, *Paralabrax maculatofasciatus*, of this genus is found from San Pedro, Calif. to Mazatlan.

JOHN'S, Eve of Saint. See EVE OF SAINT JOHN'S FEAST.

JOHNS HOPKINS UNIVERSITY, a university at Baltimore, Md., founded by Johns Hopkins (q.v.), who was born in Maryland and amassed a fortune in Baltimore. He died in 1873 and bequeathed \$3,500,000 to found a university. Opened in 1876, it is now one of the foremost universities in the United States. In 1902 a large tract of land in the suburbs of the city, comprising 176 acres (56 of which have been deeded to the city for a public park), was presented by several friends as a future site for the university. This noteworthy gift was followed within a few months by a generous contribution from alumni and citizens of Baltimore of \$1,000,000 toward the permanent endowment of the institution. In the summer of 1916 the university began to move to the new Homewood campus. One of the first buildings completed was Gilman Hall (named for the university's first president), which houses the main library and provides seminary and classrooms for non-laboratory subjects. Two others were erected to house the School of Engineering, which had been established in 1912 with funds appropriated by the Maryland Legislature. Since 1916 a number of new buildings have been erected on the Homewood site, including laboratories for physics, chemistry, aeronautics, biology, and sanitary engineering, a dormitory, and a gymnasium.

A most important part of the university is the medical school—opened in 1893—occupying several buildings in the immediate vicinity of Johns Hopkins Hospital. The names of Sir William Osler, Dr. William H. Welch, Dr. William S. Halstead, and Dr. Howard A. Kelly will always be associated with the founding and development of this great school. The School of Hygiene and Public Health, a monument to the great abilities of Doctor Welch, and established by the Rockefeller Foundation, was opened in 1917. During 1924-1925 a department of ophthalmology and an ophthalmological clinic were established in connection with the medical school. This was brought about by the combined efforts of the university authorities and the friends of Dr. William Holland Wilmer, who three years before had established the Wilmer Foundation for the purpose of increasing Dr. Wilmer's facilities for work in ophthalmology.

The university proper now comprises (1) a College of Arts and Sciences for men only, leading to the A.B. degree; (2) a School of Higher Studies for both men and women, open to college graduates and to the best students of the college at the close of their second year, properly qualified persons becoming candidates for the M.A., Ed.M., Ed.D., or the Ph.D. degrees in the faculty of philosophy; (3) a School of Medicine, open to properly qualified men and women and granting the M.D. degree; (4) a School of Engineering for men, with courses leading to the Dr. Eng., M.E., and B.E. degrees; (5) a School of Hygiene and Public Health, open to properly qualified men and women and granting the degrees Dr. P.H., Sc.D. in Hyg., S.M. in Hyg., and M.P.H.; (6) a School of Business for men, leading to the B.S. in business degree; (7) A Summer School whose courses are accepted in partial fulfillment for several degrees; (8) the Walter Hines Page School of International Relations, for persons qualified to carry on research in international law; (9) McCoy College, devoted to the field of adult education, offering degrees of B.S., B.S. in Eng., and B.S. in nursing, and giving courses of current interest which are in addition to degree credit courses; (10) the Institute for Cooperative Research, in which Hopkins scientists carry on fundamental research sponsored by industry and government; (11) the Chesapeake Bay Institute, for study of the physical and chemical-biological behavior of the waters in such estuaries as the Chesapeake Bay; and (12) the Bowman School of Geography, named for Dr. Isaiah Bowman, the distinguished president of Johns Hopkins who retired Jan. 1, 1949.

After World War II the university established the departments of writing, speech, and drama; aeronautics; biophysics; and industrial engineering. Johns Hopkins offers a large number of fellowships and scholarships for the encouragement of promising or needy students. The productive funds of the university approximate \$30,000,000, while the university plant is valued at about half that sum. The university enrolls annually, in all departments, about 7,000 students.

When, in 1876, Daniel Coit Gilman left his post as head of the University of California, and assumed the first presidency of Johns Hopkins University, he gathered to that institution men of great productive and original research, whose scholastic work brought distinction not

only to one of the first great graduate schools of our generation, but which influenced higher education everywhere in the United States. Over half a century of service has multiplied manifold that influence.

JOHNSON, Alvin Saunders, American economist: b. near Homer, Nebr., Dec. 18, 1874. He studied at the University of Nebraska, took the degree of Ph.D. (1902) at Columbia, and was appointed (1901) reader in economics at Bryn Mawr College. He became instructor and adjunct professor of economics (1902-1906) at Columbia, professor of economics, University of Nebraska (1906-1908) and at the University of Texas (1908). He was acting associate professor at the University of Chicago (1909) and associate professor (1910-1911), professor of economics at Leland Stanford, Jr. University (1911-1912), Cornell University (1912-1916), then professor of political science, Stanford University (1916-1918). From 1902 to 1904 he was editor of economics for *New International Encyclopedia*, and editor of political science for the American edition of *Nelson's Encyclopedia*. From 1917 until 1923 he was an editor of the *New Republic*. He then became director of New York's New School for Social Research. In the mid-1930's he established its university in exile—the Graduate Faculty of Political and Social Science—as a refuge for scholars driven from Axis-dominated parts of Europe. From 1927 to 1934 he was an associate editor of the *Encyclopedia of the Social Sciences*. On Sept. 1, 1945 he retired as director of the New School. Of Danish parentage, his father John Johnson Deyrup, on coming to the United States, dropped his unusual family name. An ardent opponent of discrimination against minority groups, Dr. Johnson was chairman of the commission which in 1944 drafted New York State's Ives-Quinn Law to penalize discrimination against Jews and Negroes. His publications include *Rent in Modern Economic Theory* (1903); *Introduction to Economics* (1909); *John Stuyvesant, Ancestor* (1919); *Deliver us from Dogma* (1934); *Spring Storm* (1936); *The Public Library—a People's University* (1938); *The Clock of History* (1946).

JOHNSON, Andrew, 17th president of the United States: b. Raleigh, N. C., Dec. 29, 1808; d. Carter's Station, Tenn., July 31, 1875. Johnson's father died when the boy was 5 years old, and at 10 he was apprenticed to a tailor in his native town. While at work, Johnson gained the first rudiments of an education from a gentleman who often visited the tailor's shop and read aloud to the journeymen and the apprentices from a volume of speeches of eminent British orators. Johnson became interested and received the book as a gift from the owner and learned to read and spell at the same time. In 1824, having completed his apprenticeship, he left Raleigh and went to Laurens Courthouse, S. C. In 1826 he returned to Raleigh, but in September of the same year he left with his mother, for whom he always showed the greatest solicitude, for Greenville, Tenn. The following year he married. Encouraged and aided by his wife, he learned to write and figure. Becoming interested in the problems of his fellow-workers, he was elected alderman (1828), to which office he was twice re-elected. In 1830 he was elected mayor, and held the posi-

tion for three terms. He was also chosen by the County Court as trustee of Rhea Academy, which he held until he entered the State legislature. In 1839 he took an active part in the adoption of a new State constitution which greatly enlarged the freedom of the masses and guaranteed freedom of speech and of the press. The next year he was elected to the State legislature from the counties of Washington and Green where he was especially pronounced in his opposition to the wild schemes of internal improvements then in vogue. Defeated in 1837 for re-election, he was returned in 1839 when the State realized the justice of his position in view of the crisis of 1837. Johnson canvassed eastern Tennessee for the Democratic candidate in 1840, and served as presidential elector-at-large. In the following year he entered the State senate, signaling his advent by the introduction of a judicious measure for internal improvements. In 1843 he was nominated from the first district for Congress, and in December took his seat in the national House of Representatives, which he continued to hold for 10 years. While in the lower house he supported a bill for refunding the fine imposed on General Jackson, the annexation of Texas, the war measures of Polk's administration, and a homestead measure, and opposed all schemes of internal improvement when local in scope and the tariff of 1842. On 2 Aug. 1848, he made a speech setting forth his ideas with regard to the President's veto power. "A veto as exercised by the executive," he declared, "is conservative and enables the people through their tribunician officer, the President, to arrest or suspend for the time being unconstitutional, hasty and improvident legislation until the people, the sovereigns in this country, have time and opportunity to consider its propriety." This utterance was made the theme of an interesting article in the *Democratic Review* in its January issue. Returning to his own State he was chosen for governor in 1853. His inaugural excited much criticism for its ultra radical statements. Two years later he was elected to the United States Senate. As senator he gained special distinction in advocating a homestead measure, only to see his efforts thwarted by President Buchanan.

By this time the slavery problem was the real issue of the nation. Johnson, a Southern Democrat, himself the owner of slaves "acquired by the toil of his hands," mildly upheld slavery, but he did not believe in compromises nor in agitating the slavery controversy, deeming all such discussions as futile. For this reason he disbelieved in the right of petition but supported the Compromise of 1850 because he thought each resolution embodied his views. Nevertheless he did not sanction the Southern attitude of threatening the national government. In the National Democratic Convention at Charleston in 1860, Johnson was a candidate, but in the election he supported the Breckenridge ticket. When he saw the determination of the South to secede, he alone of the Southern members refused "to go with his State" when it withdrew. In 1861 he returned to Tennessee and often at the risk of his life worked in behalf of the Union. In 1862 he became military governor of that part of Tennessee under the control of the Northern forces

and began organizing a Union government. Two years later Johnson was placed on the ticket with Lincoln in order to secure the votes of the border States and the Democrats.

At the sudden death of Lincoln, Johnson undertook the difficult problem of reconstruction left unfinished by his predecessor. Perhaps no man in the Union was so unfitted for this task as the President. Egotistical, tactless, self-confident, fond of making extravagant speeches, radical by nature, and uneducated, Johnson was incapable of grasping the subject. Where Lincoln by his skill could have molded opinion to his view, Johnson aroused a storm of opposition. Yet, to the radical Republicans, Johnson's succession to the mild Lincoln was received with acclaim, for the new incumbent had always displayed himself as a vigorous prosecutor of the recalcitrant Southerners. But no sooner was Johnson in office than he began to change, probably due to Seward's influence and the added responsibility of his new office. In so doing, Johnson soon found himself in opposition to the legislative branch of the government.

Two possible agencies were available to handle the new situation. One, the executive branch, working on the theory that the President as commander-in-chief of the army had the power to establish military rule and withdraw it; the other, the legislative body, on the assumption that restoration was a part of the lawmaking function. Lincoln, in dealing with the parts of Tennessee, Arkansas and Louisiana recovered from the Confederacy, had undertaken the task of reconstruction by issuing his Amnesty Proclamation (8 Dec. 1863), in which he had declared that when a number of citizens of the State equal to one-tenth of the vote of that particular State in 1860 had taken the prescribed presidential oath, they might establish a civil government; but the President had definitely stated that the admission of their senators and representatives to Congress would rest entirely with the legislative branch. Congress showed its opposition to this scheme by hastily passing the Wade-Davis Bill (2 July 1864). Lincoln "pocket vetoed" the bill, but the significance of the struggle demonstrated the determination of Congress to exert its full prerogatives.

Notwithstanding this warning from Congress, Johnson embarked on the same policy at his succession, and on 29 May 1865 issued a similar Amnesty Proclamation, excluding, however, more classes than Lincoln had done. Immediately the work of creating provisional government in the seceded States began, and by October six Southern States had carried out Johnson's ideas by denying the right of secession and abolishing slavery. Three circumstances, however, contributed to destroy the efficacy of his plan; (1) the South adopted harsh "black codes" which, by prescribing severe restrictions covering apprenticeship, vagrancy and employment of the freedmen, led the North to suspect the new establishments of good faith; (2) the selection of old secession leaders as new representatives, Georgia even going so far as to choose Stephens, the ex-Vice-President of the Confederacy, as one of her United States senators; (3) the determination of the radicals in Congress to exclude the Southern leaders and

give the Negro political rights, thereby assuring the supremacy of the Republican Party. Accordingly, a bitter contest began between the president and Congress, led by Thaddeus Stevens and Charles Sumner (qq.v.), over the question of reconstruction. On Dec. 4, 1865, Stevens introduced a resolution creating a Reconstruction Committee composed of nine representatives and six senators. This started the conflict. Johnson replied by vetoing (Feb. 19, 1866) the Freedmen's Bureau Bill intended to aid the Negro; and three days later he delivered a public address to a serenading party in which he charged Stevens, Sumner, and Wendell Phillips with trying to destroy the principles of the government.

From this time on the breach was irreparable. Congress passed over the president's veto the Civil Rights Bill and a new Freedmen's Bureau Bill, and submitted the 14th Amendment to the states. Both parties appealed to the people in the fall election of 1866 for vindication; owing to Johnson's lack of tact and decorum in the campaign, and an unfortunate riot in New Orleans with its accompanying evil effects on opinion in the North as to the South's good intentions, the radicals carried the election. Therefore in 1867 Congress set forth the Congressional plan of reconstruction which meant the disfranchisement of the ex-Confederates and the enfranchisement of the Negro. Johnson faithfully carried out these laws, but the final test came with the removal of Edwin M. Stanton as secretary of war in violation of the Tenure of Office Act (March 2, 1867). This act forbade the president to dismiss any officer without the consent of the Senate. Counseled by his attorney general, Henry Stanbery, that the act was unconstitutional,¹ Johnson dismissed Stanton, now in open accord with the radicals, for whose protection the law had been enacted. In refusing to reinstate Stanton, Johnson broke with Ulysses S. Grant (who had been given the office *ad interim*) over a question of veracity, and thereby gave Congress an opportunity.

In February 1868 the House of Representatives voted to impeach the president. The main charges brought against him were (1) his dismissal of Stanton; (2) his declarations that certain laws were unconstitutional; (3) his speeches in the campaign of 1866; (4) his opposition to Congressional reconstruction. The trial was poorly conducted; the evidence showed much humor; and the fear that Benjamin F. Wade, president of the senate, would succeed, combined with the happy appointment of Gen. John McA. Schofield as secretary of war, turned the tide in favor of the president. Thus on the final vote he was acquitted 35 to 19, the requisite two thirds for conviction not having been obtained.

1868 Johnson was a candidate in the Democratic National Convention, but failed to secure the nomination. He returned to Greenville, and after several unsuccessful attempts was elected senator in 1875. His triumph was short, for he died in July.

K., *The Critical Year: a Study of Andrew Johnson* (New York 1930); Stryker, Lloyd P., *Andrew Johnson: a Study in Courage* (New York 1936); Flanagan, George L., *Andrew Johnson—Not Guilty* (New York 1954).

his was confirmed by the Supreme Court in 1926.

JOHNSON, Burges, American author, publisher, and educator: b. Rutland, Vt., Nov. 9, 1877. A graduate of Amherst College (1899), he became president of the publishing house of Thompson, Brown Co. in 1909, and from 1913 to 1919 served as manager of the educational department of E. P. Dutton & Co. He was professor of English at Vassar College (1915–1926) and Syracuse University (1926–1934), and chairman of the English department at Union College from 1935 to 1944. Johnson published many volumes of humorous poems for adults and children; *As Much as I Dare* (1944), an autobiography; *Campus versus Classroom* (1946); and *The Lost Art of Profanity* (1948).

JOHNSON, Bushrod Rust, American Confederate general and educator: b. Belmont County, Ohio, Oct. 7, 1817; d. Brighton, Macoupin County, Ill., Sept. 12, 1880. He graduated from the United States Military Academy in 1840, saw service in the Mexican War in 1846–1847, and in the latter year joined the faculty of the Western Military Institute at Georgetown, Ky., as instructor in philosophy and chemistry. Four years later he was named superintendent of the institution and when, in 1855, it was merged with the University of Nashville, remained as superintendent of the military college there and professor of civil engineering. During the Civil War he joined the Confederate Army and rose to the rank of major general, taking part in many important actions. Later he served as chancellor of the University of Nashville (1870–1874).

JOHNSON, Byron Bancroft (known as BAN JOHNSON), American baseball executive: b. Norwalk, Ohio, Jan. 6, 1864; d. St. Louis, Mo., March 28, 1931. He began his career as a reporter on the Cincinnati *Commercial Gazette* in 1885 and later became sports editor of the paper. In 1893 he was chosen president of the Western League of baseball clubs which, having expanded eastward, became the American League in 1900, with a status equal to that of the National League. Johnson remained president of the new organization until 1927. On his initiative the first of the modern World Series contests was held in 1903 and became a regular post-season feature from 1905.

JOHNSON, Byron Ingemar, Canadian statesman: b. Victoria, British Columbia, Canada, Dec. 10, 1890. After a successful early career in industry and commerce, he was elected to the provincial legislature of British Columbia in 1933, and in 1947 became leader of the Liberal Party in the province. Late in the same year, and again in 1949, he accepted office as premier of British Columbia with a coalition government of Liberals and Conservatives. The Conservative Party left the coalition in 1952, and Premier Johnson's Liberal government was defeated in the general election, after which he retired from the Liberal leadership.

JOHNSON, Cave, American political leader: b. Robertson County, Tenn., Jan. 11, 1793; d. Clarksville, Nov. 23, 1866. After military service under Gen. Andrew Jackson, Johnson practiced law and was elected to Congress in 1829–1837, and as a Jacksonian Democrat in 1839–1845. In the presidential campaign of 1844 he

supported James Knox Polk, who made him postmaster general in his cabinet (1845-1849). During his administration the use of postage stamps was begun in the United States.

JOHNSON, Clifton, American author and illustrator: b. Hadley, Mass., Jan. 25, 1865; d. Jan. 22, 1940. He obtained a secondary education, worked on a farm, was clerk in a bookshop and school teacher, studied in the New York art schools, published in 1892 *The New England Country*, an illustrated study of farm folk, and later was much abroad obtaining notes and pictures for works on foreign life. More recently he visited every nook and corner of the United States in gathering material for an *American Highways and Byways* series in seven volumes. He edited a considerable number of books for school use and illustrated a long list of others by famous authors.

Among the volumes of which he is author and illustrator are *The Country School* (1893); *The Farmer's Boy* (1894); *What They Say in New England* (1896); *Among English Hedgerows* (1899); *Along French Byways* (1900); *The Isle of the Shamrock* (1901); *The Land of Heather* (1903); *Old Time Schools* (1904); *The Picturesque Hudson* (1909); *The Picturesque Saint Lawrence* (1910); *American Highways and Byways*, 7 vols. (1904-1915); *Battle Adventures in the Civil War* (1915); *New England* (1917); *Highways and Byways of Florida* (1918); *What to See in America* (1919); *John Burroughs' Talks* (1922); *Hudson Maxim* (1924). He also edited or illustrated about 50 juveniles and other books.

JOHNSON, Douglas Wilson, American geologist: b. Parkersburg, W. Va., Nov. 30, 1878; d. Sebring, Fla., Feb. 24, 1944. He was educated at Denison University, Ohio, and the University of New Mexico, receiving his Ph.D. at Columbia University in 1903. He taught geology at Massachusetts Institute of Technology (1903-1907); physiography at Harvard (1906-1912); and from 1912 until his death, taught geology at Columbia University, becoming executive officer of his department in 1937. He was the chief of the division of boundary geography, American Commission to Negotiate Peace, Paris (1918-1919). He was also a member of numerous geological societies, and won many medals and honors in his field. His writings include *Topography and Strategy in the War* (1917); *Shore Processes and Shoreland Development* (1919); *Stream Sculpture on the Atlantic Slope* (1931); *The Origin of Submarine Canyons* (1939); and *Origin of the Carolina Bays* (1942).

JOHNSON, Duncan Starr, American botanist: b. Cromwell, Conn., July 21, 1867; d. Baltimore, Md., Feb. 16, 1937. He took the degree of B.S. (1892) at Wesleyan University and Ph.D. at Johns Hopkins (1897), then studied at Munich (1901). He was appointed assistant in botany (1898), associate (1899), associate professor (1901), professor in 1906 and director, botanical garden, 1913, Johns Hopkins University. From 1896-1900 he had charge of botany work and of cryptogamic botany from 1902-1911 at Cold Spring Harbor, L. I. He worked on botanical exploration and investigation (1903, 1906, 1910, 1919) at Jamaica, West Indies, and was special investigator at Carnegie Institution, Wash-

ington (1912 and 1915). He wrote *The Relation of Plants to Tide Levels* (1915) in collaboration with H. H. York.

JOHNSON, Eastman, American painter: b. Lowell, Me., July 29, 1824; d. New York City, April 5, 1906. He began his art studies at the Royal Academy, Düsseldorf (1849-1851), and developed a distinct talent for genre. He afterward traveled in France, Italy and Holland, and spent four years at The Hague. Among his pictures painted in Europe are the *Savoyard* and the *Card Players*, in which he showed the influence of the Dutch school. He returned to the United States in 1856 and devoted himself for some years to the study of rustic and Negro life and he painted some of the most popular pictures ever produced by a native painter; many of them have been engraved and chromolithographed. The best known are *Old Kentucky Home*; *Husking Bee*; and the *Boyhood of Abraham Lincoln*. He also produced excellent likenesses of Grover Cleveland, Benjamin Harrison, John D. Rockefeller, William H. Vanderbilt, Cornelius Vanderbilt, Mrs. August Belmont and Mrs. Alexander Hamilton.

JOHNSON, Edward, American colonial historian: b. Herne Hill, Kent, England, about 1599; d. Woburn, Mass., April 23, 1672. He emigrated to America probably with Governor Winthrop in 1630. In 1632 he was engaged in trade at Merrimack, and was on the committee appointed to superintend the foundation of a new town and church at the place now called Woburn. In 1643 he was elected by the town of Woburn a member of the legislature of Massachusetts, in which he continued to sit till 1671, with the exception of 1648. In 1655 he was chosen speaker of the house. He was recorder of Woburn from the time of its incorporation till his death. In 1665 he was one of the members deputed to hold conference with the commissioners sent from England by Charles II. He wrote a *History of New England from the English Planting in 1628 till 1652, or Wonder-Working Providence of Zion's Saviour* (1654).

JOHNSON, Edward, American soldier: b. Chesterfield County, Va., April 16, 1816; d. Richmond, Va., Feb. 22, 1873. After being graduated from the United States Military Academy in 1837, he fought in the Florida wars, for his services in which he was brevetted captain, and subsequently in the Mexican War, being brevetted major for his conduct at Chapultepec. He received his captain's commission in 1851, but in 1861 resigned to enter the army of the Confederate States as colonel of the 12th Georgia Volunteers. He was promoted brigadier-general in 1862 and major-general in 1863. At Gettysburg he commanded a division. He was captured with his entire force at Spottsylvania (May 12, 1864) and retaken in the following December. Subsequent to the war he was a farmer in Chesterfield County, Va.

JOHNSON, Edward, American tenor and general manager of the Metropolitan Opera Association (1935-1950): b. Guelph, Ontario, Aug. 22, 1881. After a musical education at home and at the University of Toronto, he went to New York City and in 1908 appeared in the tenor role in Oskar Straus' operetta, *Walzertraum*. In 1912 he made his European operatic debut in

adua, Italy, after living alternately in Europe and the United States, and followed this with a long season engagement at La Scala, Milan, singing leading tenor roles. He joined the Chicago Opera Company in 1919, and in 1922 joined the Metropolitan Opera Company, with which he has been associated since. After 13 years of leading tenor romantic parts, he became general manager of the Metropolitan Opera Association. He served as manager from 1935 to 1950, when he was succeeded by Rudolf Bing (q.v.).

JOHNSON, Emily Pauline, Canadian poetess: b. Chiefwood, Ontario, 1862; d. Vancouver, B. C., March 7, 1913; the daughter of George Johnson, head chief of the Mohawk Indians, and of his English wife. Her poems on Indian subjects are full of dramatic force and intensity. Her works include *The White Wampum* (1894); *Canadian Born* (1903); and *Flint and Feathers* (1912).

JOHNSON, Emory Richard, American economist: b. Waupun, Wis., March 22, 1864; d. Philadelphia, Pa., Mar. 6, 1950. He studied at University of Wisconsin (1888) and University of Pennsylvania (1893), taking the degree of Sc.D. (1913). He was instructor of economics at Haverford College (1893-1896), professor of transportation and commerce at University of Pennsylvania (1896), and dean of the Wharton School of Finance and Commerce (1919-1933). He served on the United States Industrial Commission, and valued railway property for the U.S. Census Bureau (1904-1905), and as expert on traffic on the National Waterways Commission (1909). In 1911 he furnished a report on Panama Canal traffic, etc., for President Taft, and arbitrated the dispute (1907) between the South-Pacific Company and the Order of Railroad Telegraphers. His important works include: *Inland Waterways: Their Relation to Transportation* (1893); *American Railway Transportation* (1903); *Elements of Transportation* (1909); *Railroad Traffic and Rates* (1911); *Panama Canal Traffic and Tolls* (1912); *The Panama Canal and Commerce* (1916); *Principles of Railroad Transportation* (1916), and *Principles of Ocean Transportation* (1917); *Interpretative Essays on China and England* (1927).

JOHNSON, Franklin, American Baptist clergyman and educator: b. Frankfort, Ohio, Nov. 2, 1836; d. Oct. 7, 1916. He was graduated from Colgate Seminary in 1861; was ordained a Baptist minister in 1862, and was pastor at Bay City, Mich., 1861-1863; Lambertville, N. J., 1864-1866; Passaic, N. J., 1866-1872; Newark, N. J., 1872-1874; and Cambridge, Mass., 1874-1888. He studied at German universities and traveled in Europe, Egypt and Palestine in 1868-1869. He was made D.D. by the University of Jena, Germany, in 1869, and LL.D. by Ottawa University, Ottawa, Kans., 1898. After his pastorate in Cambridge he traveled in Greece and spent the winter of 1888-1889 in Athens. He was president of Ottawa University, 1890-1892. The remainder of his public life was in connection with the University of Chicago, where he was assistant professor of church history and homiletics 1892-1894; associate professor 1894-1895; professor 1895-1908; and professor emeritus after 1908. Thus his public life was divided into two almost equal parts, the first in the pastorate and the second in university administration and teaching.

While laboring as pastor at Cambridge he was also editor of *The Watchman*, 1876-1877. The following are his principal published writings: *The Gospel According to Matthew*, with notes (1873); *Moses and Israel* (1874); *Heroes and Judges from the Lawgiver to the King* (1875); *True Womanhood; Hints on the Formation of Womanly Character* (1884); and *Romance in Song*, a translation of Heine's *Lyrical Interlude* (1884); *The New Psychic Studies in their Relation to Christian Thought* (1886); *The Quotations of the New Testament from the Old Considered in the Light of General Literature* (1896); *The Home Missionaries*, a poem (1899); *Have We the Likeness of Christ?* (1902); *The Christian's Relation to Evolution* (1904).

JOHNSON, Helen Kendrick, American author: b. Hamilton, N. Y., Jan. 4, 1844; d. Jan. 3, 1917. She was the daughter of A. C. Kendrick (q.v.) and was married to Rossiter Johnson (q.v.) in 1869. Besides editing several compilations of verse she published *The Roddy Books*, popular juvenile tales (1874-1876); *Our Familiar Songs* (1881); *Raleigh Westgate* (1889); *Woman and the Republic* (1897). She was an active member of the Association Opposed to the Extension of Suffrage to Women and wrote much on woman suffrage.

JOHNSON, Herman Merrill, American educator: b. Butternuts, N. Y., Nov. 15, 1815; d. Carlisle, Pa., April 5, 1868. He was graduated (1839) at Wesleyan University, Connecticut, and appointed professor of ancient languages at St. Charles College, Missouri. He accepted a similar position (1842) at Augusta College, Kentucky, which he left (1844) when called to the chair of ancient languages and literature at Ohio Wesleyan University. In 1850 he became professor of philosophy and English literature at Dickinson College and was called to the chair of moral science in 1860, accepting in the same year the presidency, which he held until his death. Ohio Wesleyan University conferred on him (1852) the degree of D.D. He edited *Orientalia Antiquaria Herodoti*, published an edition of the *Clio* of Herodotus (1850) and was a regular contributor to the *Methodist Quarterly Review* and the religious periodicals.

JOHNSON, Herrick, American clergyman and educator: b. Caughnewaga, N. Y., Sept. 22, 1832; d. Nov. 20, 1913. He was graduated (1857) at Hamilton College and (1860) Auburn Theological Seminary, and became associate pastor (1860-1862) at the First Presbyterian Church, Troy, N. Y., then pastor (1862-1867) at the Third Presbyterian Church, Pittsburgh, Pa. He was pastor (1868-1873) of the First Presbyterian Church, Philadelphia, and was then made professor of homiletics and pastoral theology at Auburn Theological Seminary (1874-1880), becoming next pastor at the Fourth Presbyterian Church, Chicago, until 1883. From 1880-1906 he was teaching at McCormick Theological Seminary, Chicago. He was president of the Presbyterian Board of Ministerial Education (1869-1873) and of the Presbyterian Board of Aid (1883-1903), and moderator of the Springfield, Ill., General Assembly (1882). He wrote *Christianity's Challenge* (1880); *Plain Talks about the Theatre* (1882); *Revivals, Their Place and Power* (1883); *Presbyterian Bulwarks* (1887); *Pres-*

byterian Book of Forms (Philadelphia 1889).

JOHNSON, Herschel Vespasian, American jurist and political leader: b. Burke County, Ga., Sept. 18, 1812; d. Jefferson County, Aug. 16, 1880. He graduated from the University of Georgia in 1834, studied law, and in 1849 was appointed a judge of the Georgia Superior Court. In 1853 he was elected governor of Georgia, and held that office for two terms until 1857. He was the nominee of the Democratic National Convention (1860) for vice president on the ticket with Stephen A. Douglas. After Lincoln's election he opposed secession, but ultimately supported the Confederacy and in 1862 entered the Confederate Senate. He was elected to the United States Senate in 1866 but was refused his seat because of his part in the rebellion. Again appointed to the Georgia Superior Court, he served on the bench from 1873 until his death.

JOHNSON, Hiram Warren, American lawyer and politician: b. Sacramento, Calif., Sept. 2, 1866; d. Bethesda, Md., Aug. 6, 1945. He attended the University of California, and was admitted to the bar in 1888. In San Francisco, in 1908, he took part in proceedings involving the bribery of public officials by utilities corporations, and secured the conviction of Abe Ruef after Francis J. Heney, the chief prosecutor, had been shot in the courtroom. He was elected governor by the Progressive Republicans in 1910, and re-elected in 1914 to complete the enactment of a reform program, including regulation of railroads, conservation and labor measures. In 1913 he signed the controversial Webb Anti-Alien Bill excluding Asiatics from land ownership. Meanwhile, in 1912, he had been the vice presidential nominee of the Progressive Party, of which he was a founder, with Theodore Roosevelt as candidate for president. In his second term as governor he resigned (1917) to enter the United States Senate, where at his death he was serving his fifth term. A leading isolationist, he joined with Senators William E. Borah and Henry Cabot Lodge to defeat President Woodrow Wilson on the League of Nations issue, and later opposed the adherence of the United States to the United Nations Charter.

JOHNSON, Hugh Samuel, United States army officer, lawyer, and administrator: b. Fort Scott, Kansas, Aug. 5, 1882; d. Washington, D.C., April 15, 1942. He graduated from the United States Military Academy in 1903, and in 1916 accompanied General John J. Pershing's punitive expedition into Mexico with the rank of judge advocate. In World War I he originated the plan for the draft, helped to write the Selective Service Act, and was executive in charge of its operation (1917-1918). Promoted brigadier general in the latter year, he was also made chief of the Purchase and Supply Bureau of the General Staff and a member of the War Industries Board. He resigned from the army in 1919, and remained in private business until he was appointed administrator of the National Recovery Administration (1933-1934), which he described in *The Blue Eagle from Egg to Earth* (1935). He also served briefly as Works Progress Administration director for New York City (1935). From 1934 he was a columnist for the Scripps-Howard newspapers and a radio commentator.

JOHNSON, Jack (full name JOHN ARTHUR JOHNSON), American Negro pugilist: b. Galveston, Texas, March 31, 1878; d. Raleigh, N. C., June 10, 1946. Defeating Tommy Burns at Sydney, Australia, Dec. 26, 1908, in 14 rounds, he became the first American Negro to hold the world heavyweight boxing championship. He defended his title by knocking out a former champion, James J. Jeffries, at Reno, Nev., July 4, 1910, in the 15th round, but lost the championship to Jess Willard in 26 rounds at Havana, Cuba, April 5, 1915.

JOHNSON, James Weldon, American Negro author: b. Jacksonville, Fla., June 17, 1871; d. near Wiscasset, Me., June 26, 1938. He graduated from the Atlanta University (1894) and was the first Negro to be admitted to the Florida bar. He practiced at Jacksonville (1897-1901) before moving to New York, where in collaboration with his brother, John Rosamond Johnson, he wrote for the light opera stage and composed several popular songs. He was appointed United States consul (1906) at Puerto Cabello, Venezuela, and afterwards was consul (1909-1912) at Corinto, Nicaragua. A founder of the National Association for the Advancement of Colored People, he was its field secretary from 1916 to 1920 and executive secretary from 1920 to 1930. Johnson was awarded the Spingarn Medal in 1925 for his services to Negroes, and from 1930 served as professor of creative literature at Fisk University. His novel, *The Autobiography of an Ex-Colored Man*, first published anonymously (1912), was reissued in his own name in 1927. He was also the author of *Fifty Years and Other Poems* (1917); *God's Trombones* (1927); *Black Manhattan* (1930); *Along This Way*, an autobiography (1933); *Negro Americans, What Now?* (1934); and editor of *The Book of American Negro Poetry* (1921); and *The Book of American Negro Spirituals*, with J. R. Johnson (2 vols., 1925-1926). See also NEGRO IN AMERICA.

JOHNSON, Sir John, American Loyalist officer: b. near Johnstown, N. Y., Nov. 5, 1742; d. Montreal, Canada, Jan. 4, 1830. An officer in the New York militia from 1760, he was knighted in 1765, and in 1774 succeeded to the baronetcy and most of the estates of his father, Sir William Johnson (q.v.), in the Mohawk Valley. At the outbreak of the American Revolution he evaded General Philip John Schuyler's forces, and escaped with a group of other Loyalists to Canada, there raising the Queen's Own American Regiment (popularly known as the Royal Greens), of which he was made colonel. Serving with Barry St. Leger, he took part in the siege of Fort Stanwix (renamed Fort Schuyler), N. Y., in August 1777, and commanded a detachment at Oriskany, where an American relief force under Gen. Nicholas Herkimer was ambushed. During 1778-1780, Johnson organized and led a series of damaging Indian raids into the Mohawk Valley, despite a decisive defeat by General John Sullivan at Newtown (now Elmira), Aug. 29, 1779. In England in 1781, he was made a colonel in the Regular Army and commissioned superintendent general of the Six Nations Indians and those of Quebec Province. His New York estates were confiscated in 1779, but he was given money and grants of land in Canada, where he lived from the close of the American Revolution.

JOHNSON, John Butler, American civil engineer and educator: b. Marlboro, Ohio, June 1, 1850; d. Madison, Wis., June 23, 1902. He graduated as a civil engineer (1878) at the University of Michigan and was appointed assistant engineer in the United States Lake and Mississippi River surveys. In 1883 he accepted the chair of civil engineering at Washington University, Saint Louis, Mo., in which vocation he became noted among educators. He was chosen dean of the College of Mechanics and Engineering (1898), at the University of Wisconsin, where he taught till his death. He wrote *Materials of Construction*, 1st ed. (1897); *Engineering Contracts and Specifications*, 3d ed. (1904); *Theory and Practice of Surveying*, 8th ed. (1904). In 1884 he directed the *Index to current literature in the Journal of the Association of Engineering Societies*, and (1891) he United States Department of Agriculture placed him in charge of the extensive tests of American timbers.

JOHNSON, Joseph French, American economist: b. Hardwick, Mass., Aug. 24, 1853; d. Newfoundland, N. J., Jan. 22, 1925. Graduated from Harvard in 1878, he studied political economy and history for a year in Germany, and joined the staff of the *Springfield Republican*, then the *Chicago Tribune* as financial editor. He founded the *Spokane, Wash., Spokesman* (1890), selling out in 1893 to become professor at Wharton School of Commerce, University of Pennsylvania (1893-1901). From 1899-1903 he was lecturer on finance at Columbia University. From 1901, he was professor of political economy, and from 1903 dean of the School of Commerce, Accounts and Finance at New York University. Hobart College, Geneva, N. Y., conferred an LL.D. degree (1915). He was a member of the Commission on New Sources of Revenue for New York City (1912) and of the commission to revise the banking laws of New York State (1913). He wrote *Syllabus of Money and Banking* (1899); *Money and Currency* (1905); *Report on the Canadian Banking System for the National Monetary Commission* (1910); *We and Our Work* (1922); *Organized Business Knowledge* (1923).

JOHNSON, Louis Arthur, American government official: b. Roanoke, Va., Jan. 10, 1891. After receiving a law degree from the University of Virginia in 1912, he entered law practice in Clarksburg, W. Va., and in 1917 was elected to the state House of Representatives for one term, during which he was majority floor leader. He served in the army in World War I, after which, in addition to returning to his law practice, he figured prominently in activities of the American Legion, of which he was national commander 1932, and of the Democratic Party. From June 28, 1937, to July 25, 1940, he served as assistant secretary of war and was given much credit for the degree of military preparedness achieved before the Pearl Harbor attack. Later he was President Roosevelt's personal representative to India during most of 1942. He was appointed secretary of defense on March 3, 1949, and among other proposals advocated the effective unification of the armed forces and the building of long-range bombers. He left this post on Sept. 19, 1950, and resumed law practice with the West Virginia firm of Steptoe and Johnson.

JOHNSON, Manuel John, English astronomer: b. Macao, China, May 23, 1805; d. Feb. 28, 1859. After attending Addiscombe College, England, he served in the artillery at Saint Helena. He founded an observatory on that island, and compiled *A Catalogue of 606 Principal Fixed Stars in the Southern Hemisphere*, which was printed in 1835 by the East India Company. In 1839 he was appointed to take charge of the Radcliffe Observatory, where he conducted extensive research on the redetermination of Groombridge's circumpolar stars. The results of his work were published in 18 volumes of the *Radcliffe Observations*. Using the best scientific equipment then available, he observed 26 important double stars, measured the chief stars of the Pleiades, and carried on many other observations. He was a fellow of the Royal Society, and president of the Royal Astronomical Society in 1857-1858.

JOHNSON, Owen, American author: b. New York, Aug. 27, 1878; d. Vineyard Haven, Mass., Jan. 27, 1952. He was educated at the Lawrenceville School in New Jersey and Yale (B.A. 1901). His stories of school life, *The Eternal Boy* (1909), *The Varmint* (1910), and successive books, are generally acknowledged to be his best work. *Stover at Yale* (1911), a college story, frank in its criticisms of certain phases of life at Yale, aroused a storm of controversy. Among his other works are *Arrows of the Almighty* (1901); *The Comet* (play, 1908); *The Humming Bird* (1910); *The Tennessee Shad* (1911); *A Comedy for Wives* (play, 1911); *The Salamander* (1913); *The Wasted Generation* (1921); *Skippy Bedelle* (1923); *The Coming of the Amazons* (1931).

JOHNSON, Reverdy, American jurist: b. Annapolis, Md., May 21, 1796; d. there, Feb. 10, 1876. He was educated at Saint John's College in that city, and at 17 began to study law. In 1815 he was admitted to the bar, in 1817 removed to Baltimore and subsequently devoted his time mainly to the arguing of cases before the United States Supreme Court. He reported seven volumes of the decisions of the Maryland Court of Appeals. In 1821 he was elected a state senator, and at the expiration of his term in 1826 was re-elected for a second term. In 1845 he was chosen a United States senator, resigning in 1849 on being appointed attorney general of the United States. On the succession of Millard Fillmore, after the death of President Zachary Taylor, he resigned that office, and resumed the practice of law in Baltimore. He was United States senator 1863-1868, and succeeding Charles Francis Adams as minister to England in 1868 negotiated the treaty for the adjustment of the *Alabama* claims, afterward rejected by the Senate. He was recalled in 1869. He prepared an argument in defense of Mrs. Mary E. Surratt, accused of complicity in the assassination of Lincoln, but it was refused a hearing by the military court.

JOHNSON, Richard Mentor, American statesman and soldier: b. Floyd's Station, near Louisville, Ky., Oct. 17, 1780; d. Frankfort, Ky., Nov. 19, 1850. He was educated at Transylvania University, and subsequently studied law and practiced with success. He commenced his public career as a member of the Kentucky

legislature, to which he was elected at the age of 24, and in 1807 was elected to Congress, and remained a member of the House until 1819. He was a firm supporter of the administration of Madison, and upon the commencement of the War of 1812, raised a body of Kentucky mounted riflemen, whom he commanded, on the Canadian frontier. The decisive charge of his mounted volunteers contributed greatly to the brilliant victory gained over the British and Indians at the Battle of the Thames, Oct. 5, 1813, and it was by his hand that the Indian leader Tecumseh is commonly supposed to have fallen. In 1819 he was elected to fill a vacancy in the United States Senate, of which he continued a member until 1829, when he was again returned to the House of Representatives. He remained a member until his election by the Senate in March, 1837, as vice president of the United States, no candidate having gained a majority in the electoral college. He discharged the duties of presiding officer of the Senate for four years, and in the presidential election of 1840 was an unsuccessful candidate of the Democratic Party for vice president. He thenceforth lived chiefly in retirement. He was, however, serving a term in the state legislature at the time of his death. In Congress he was active in securing pension legislation for soldiers of the American Revolution and of the War of 1812. He was the author of the law abolishing imprisonment for debt in Kentucky.

JOHNSON, Richard W., American military officer: b. near Smithland, Ky., Feb. 7, 1827; d. St. Paul, Minn., April 21, 1897. He was graduated at West Point in 1849, was employed chiefly on frontier service until 1861, when he became colonel of the 3d Kentucky Cavalry. On October 11 he was appointed brigadier general of volunteers, and later commanded a division at Murfreesboro, and with his division fought under Thomas at Chickamauga (Sept. 19-21, 1863). He commanded the 12th division of the Army of the Cumberland in the invasion of Georgia and a division of cavalry at Nashville, was brevetted brigadier general, United States Army, for his services (March 13, 1865), and, having been mustered out of the volunteer service, became provost marshal of the military division of the Tennessee. In 1867 he resigned from the service with rank of major general, changed by act of Congress (1875) to brigadier.

Among his published works are: *A Memoir of Maj.-Gen. George H. Thomas* (1881); *A Soldier's Reminiscences in Peace and War* (1886).

JOHNSON, Robert Underwood, American editor: b. Washington, D.C., Jan. 12, 1853; d. Oct. 14, 1937. He was educated at Earlham College, Indiana, and joined the staff of the *Century Magazine* (then known as *Scribner's Monthly*) in 1873. He was associate editor from 1881 to 1909, and in the latter year, on the death of Richard Watson Gilder, succeeded to the editorial chair, which he occupied until May 1913. He early became noted for his services in behalf of international copyright, as secretary of the American Copyright League doing much to secure the passage of the law of 1891, for which he was decorated by the French and Italian governments. With Clarence Clough Buel he had charge of editing the *Century War Series*, afterward published as *Battles and Leaders of the Civil War* (1887-1888). He induced General

Grant to write his *Memoirs*, half of which appeared in the series. With John Muir, he set on foot the movement resulting in the creation of the Yosemite National Park. He was the originator of the American Poets Ambulances in Italy in 1917, and was active in many national movements, notably the forest conservation movement. He became permanent secretary of the American Academy of Arts and Letters. From 1920 to 1921 he was ambassador to Italy. His writings include *The Winter Hour and Other Poems* (1891) and *Songs of Liberty and Other Poems* (1897); *Collected Poems, 1881-1919* (1923); *Remembered Yesterdays* (1923); *Poems of Fifty Years* (1931); and *Aftermath* (1933).

JOHNSON, Robert Ward, American lawyer and senator: b. Scott County, Ky., July 22, 1814; d. July 26, 1879. After receiving academic training at St. Joseph's College, Bardstown, Ky., he studied law and in 1835 opened an office in Little Rock, Ark. In 1840 he was appointed prosecuting attorney for the Little Rock district, becoming, *ex officio*, attorney general for the state. Elected to Congress as a Democrat in 1846, he was twice re-elected. Gov. J. S. Conway in 1853 appointed him to fill out the vacancy of a resigned senator; he was elected by the legislature and re-elected for the following term, serving until March 3, 1861. In Congress he opposed the Wilmot Proviso, Clay's 1850 compromise plan, admission of California, and the compromise with Texas. He supported the fugitive slave law and Douglas' Kansas-Nebraska bill. He obtained large land grants for Arkansas railways. He did not seek re-election in 1860, but the next year stumped the state for secession and was a delegate to the Confederate Provisional Congress. Later elected to the Confederate Senate, he served to the end of the Civil War. After surrendering his estate to his creditors he went to Washington to practice law. Seeking a seat in the Senate in 1878, he was defeated. The "Johnson family," including his brother Richard H. Johnson, their brother-in-law Ambrose H. Sevier (the state's first senator), and other relatives were credited with ruling Arkansas from 1836 to 1860. The "family" returned to power in 1862, but the end of the war saw its eclipse. R. W. Johnson was regarded as a man of highest integrity who ably served his state except, perhaps, in sponsoring a bill to relieve it of the obligation to improve its swamp lands.

JOHNSON, Rossiter, American author and editor: b. Rochester, N. Y., Jan. 27, 1840; d. Oct. 3, 1931. He was graduated from the University of Rochester in 1863 and was associate editor of the *Rochester Democrat* 1864-1868. From 1869 to 1872 he edited the *Concord (N. H.) Statesman*; and in 1873-1877 was associated with George Ripley and Charles A. Dana in editing the *American Cyclopaedia*, while in 1879-1880 he aided Sydney Howard Gay in his *History of the United States*. In 1883-1902 he was editor of the *Annual Cyclopaedia*, and in 1900-1904 was editor of the *Universal Cyclopaedia*. He edited the series of *Little Classics*, 18 vols. (1875-1880); *Liber Scriptorum* (1893, 1921), and was editor in chief of the *World's Great Books*, 40 vols. (1898-1901); *Great Events by Famous Historians*, 20 vols. (1905), and of *The Authors' Digest*, 20 vols. (1908). In 1906, in collaboration with Dora Knowlton Ranous, he edited *The*

Literature of Italy, 16 vols. (1907). His original works include *Idler and Poet*, verse (1883); *History of the War of Secession* (1888); *Morning Lights and Evening Shadows*, poems (1902, 918); *The Alphabet of Rhetoric* (1903); *The Story of the Constitution of the United States* (1906); and *Captain John Smith* (1915).

JOHNSON, Samuel, American clergyman and educator, first president of King's College (now Columbia University); b. Guilford, Conn., Oct. 14, 1696; d. Stratford, Conn., Jan. 6, 1772. He was graduated from the Collegiate School which later became Yale College and in 1716 became a tutor there. In 1718 he resigned to receive ordination as a Congregational minister, and settled at West Haven. He relinquished his charge in 1722 to join the Church of England and soon after sailed for England, where he received Episcopal ordination in 1723. Shortly after he returned to America, bearing a commission as missionary of the Society for the Propagation of the Gospel in Foreign Parts, and settled in Stratford, Conn., as rector of an Episcopal church there. In 1743 he received the degree of D.D. from the University of Oxford. In 1746 he published *Ethices Elementa, or the First Principles of Moral Philosophy*, and in 1752 Benjamin Franklin reprinted it along with a new section on logic and metaphysics. In 1749 Johnson was offered the presidency of the University of Pennsylvania, but declined it. In 1754 he assumed presidency of the newly founded King's College in New York, on all the plans for which he had been consulted. In 1763 he resigned and returned to Stratford, where he resumed his parochial duties until his death. He was twice married to widows who both died of smallpox. Johnson carried on long controversies upholding apostolic succession and divine sovereignty.

Consult F. E. Beardsley, *Life and Correspondence of Samuel Johnson* (1874); L. W. Riley, *American Philosophy: The Early Schools* (1907); Herbert and Carol Schneider, *Samuel Johnson, President of King's College: His Career and Writings*, 4 vols. (1929).

JOHNSON, Samuel, American preacher and author; b. Salem, Mass., Oct. 10, 1822; d. North Andover, Feb. 19, 1882. He was graduated from Harvard in 1842, and from the Harvard Divinity School in 1846. He joined no religious denomination, and except for one year with a Unitarian church in Dorchester was not settled as a minister until 1853, when he established in Lynn, Mass., an independent society, in which he remained until 1870, then withdrew to complete studies of many years, the results of which appeared later in his publications. With Samuel Longfellow (q.v.) he compiled a *Book of Hymns* (1846) and *Hymns of the Spirit* (1864). Some of his own inspiring hymns in these books are now found in the collections of various denominations. His critical study *The Worship of Jesus* (1868), written in accordance with his views of universal religion, is described by O. B. Frothingham as "perhaps the most penetrating and uplifting essay on that subject in any language." He printed notable essays on religion and reforms in *The Radical* and other periodicals. His great work *Oriental Religions*, including *India* (1872), *China* (1877) and *Persia* (1885)—the last containing an introduction and a critical estimate of Johnson by O. B. Frothingham—represents what Johnson himself calls his "purely humanistic point of

view." His philosophy was highly transcendental; but being versed in many languages, he was acquainted with all schools, and with the results of history, literature, science, and criticism in every department. Prof. E. J. Eitel, the German Orientalist, wrote of "Johnson's pre-eminent merits as the historian of universal religion," and F. Max Müller paid him tribute as the finder of "a religion behind all religions."

Consult Longfellow, Samuel, *Lectures, Essays and Sermons by Samuel Johnson, with a Memoir* (Boston 1883). This volume contains some of Johnson's best papers, including brilliant lectures on *Switzerland and Florence*, the outgrowth of searching observations in Europe, *Equal Opportunity for Women*, *Labor Parties and Labor Reform*, and an essay on *Transcendentalism*.

JOHNSON, Samuel, English man of letters; b. Lichfield, Sept. 18, (N.S.) 1709; d. London, Dec. 13, 1784. He was the son of Michael Johnson, a learned bookseller, and his wife, Sarah Ford. The father was a Jacobitical, High Church Tory, somewhat given to melancholy, and not methodical in habits. The son took after him in these particulars. Of the mother little is known. They had another son, Nathaniel, born in 1712, who died at 25. The elder Johnson was a man

Samuel Johnson

of some local importance, church warden, sheriff and bailiff, but before his death in 1731 his business had declined until he was nearly bankrupt.

Samuel is said to have been a very precocious child, but his mental forwardness could not compensate for his bodily defects. His face was deeply marked by scrofula and one eye was permanently injured, Queen Anne's "touch" profiting him nothing, but leaving in his loyal memory a vague picture of a "lady in diamonds and a long black hood." He was first taught by a dame, later at the Lichfield school. Being lazy and lumbering he early exerted his powers of command upon his fellows by making three of his mates carry him to school. In 1726, he was sent to school at Stourbridge for a year. Then he remained for two years at home, where he did little except to read widely among his father's books. His talents impressed a neighboring gentleman, who offered to send him to Oxford. Johnson entered Pembroke College as a commoner on Oct. 31, 1728, remained in continuous residence a little over a year, and returned for brief periods, until the autumn of 1731. He was wretchedly poor during his college residence, and he left without a degree because of his father's business troubles. The stories of his haranguing

students in a tattered gown and flinging away in a passion a pair of shoes left at his door are well known. His unusual learning seems to have impressed the college authorities from the beginning, and his Latin translation of Alexander Pope's *Messiah*, printed in 1731 in a "miscellany," pleased that famous poet. But Johnson was too indolent and hypochondriacal to profit greatly from the college routine, and the cutting short of his academic career is thus not specially to be regretted.

After his father's death he found himself obliged to earn his living by teaching school and acting as chaplain to a baronet, who did not treat him kindly. He soon gave up the place and removed to Birmingham, where he lived with an old schoolmate named Hector and became a bookseller's hack. The only fairly important work of these years was his translation in 1735 of the French version of *Voyage to Abyssinia*, a travel journal written by the Portuguese missionary Jerônimo Lobo. Johnson is said to have walked to Oxford to get a copy of the French version, which never yet has found its way back to the shelves of the Pembroke College library.

In 1735 he made a marriage which has afforded posterity a great deal of amusement. Among his acquaintances in Birmingham was a mercer named Henry Porter, who died in 1734, leaving a widow and three children. In a little less than a year Johnson married the widow, who was about 20 years his senior. Johnson declared that it was a love match on both sides, and his own constancy to her throughout her life and his devotion to her memory prove that for himself at least he did not exaggerate. Despite his uncouth appearance, his eccentricities, his visionary and morbid qualities which made some people think him insane, the widow is said to have recognized that he was at bottom one of the most sensible of men. According to David Garrick he showed no sense of the beautiful in choosing a fat, painted and affected old woman. She showed no prudence in placing her small fortune under the control of a poor young man with apparently slim prospects. Yet as Johnson was nearsighted and could see but little of what shocked others in his wife—if indeed the report of Garrick was not purposely exaggerated—and as he undoubtedly made her a good husband, there seems to be little reason to waste sympathy on either party to the match.

After his marriage Johnson set up a boarding school at Edial near Lichfield. His peculiarities naturally prevented him from succeeding. He may have had only three pupils; but one of these, David Garrick, combines with the master himself to make the short-lived school a very famous one. Early in 1737 the two set out together to seek their fortunes in London. Mrs. Johnson being left in Lichfield. They had little money, and Johnson's chief baggage seems to have consisted of part of his tragedy *Irene* and a few letters of introduction.

The literary adventurer spent his first months in London seeking employment from the booksellers. He lived prudently and seems to have been aided by Henry Hervey, a son of the earl of Bristol. In the summer he returned to Lichfield and finished *Irene*; in the autumn he removed permanently to London with his wife.

Thomas Babington Macaulay, in an excellent paragraph of his admirable essay on Johnson, describes the desperate state of authors at the time.

In 1736 the day of the patron was drawing to a close, but, although Pope had succeeded in making the public his patron, it was too early for other men to hope to rival him. Writers who under Queen Anne might have received money and political positions were now rather happy when they were sure of their meals. Booksellers kept them under by sweatshop methods. Johnson took his place in the toiling ranks, but, because of his pride, suffered more than most of his brother hacks. His never polished manners deteriorated in cellar restaurants; he became a sloven in his dress and, as all the world knows, he never got over his acquired aversion to clean linen. Much of the brutality of manners for which he was afterward reproached is accounted for by the rough treatment to which he was subjected at this period of his career.

The details which James Boswell was able to gather with regard to the early life of his hero are not very ample. After *Irene* was refused by a manager, Johnson secured employment with the printer Edward Cave in 1738, revising for *The Gentleman's Magazine* the parliamentary debates, which could be published only as if they had just occurred in the senate of Liliput. From July 1741 to March 1744 he wrote the debates, making use of notes taken by others. They were often regarded as genuine, few readers knowing that the writer, to use his own words, had taken care that the Whig dogs should not have the best of it.

Meanwhile in 1738 Johnson had published through Robert Dodsley his first important piece of work, the satire entitled *London* in which he imitated Juvenal's third satire as Nicolas Boileau-Despréaux and John Oldham had done before him. Being a strong, manly spirit and having his own sufferings and indignities to spur him on, he produced a poem which seemed so good to his contemporaries that the first edition was exhausted in a week. Pope inquired who the author was and endeavored to have him elected to the mastership of a school. The project failed and Johnson remained in London gathering the knowledge of writers and life that stood him in such good stead in his later criticism.

This knowledge was first displayed on a considerable scale in his *Life of Richard Savage*, which appeared in February 1744. Johnson, who had been much thrown with Savage, took that curious personage far too seriously; but his small biography is not only valuable as an excellent description of the literary Bohemianism of the day, but is important as one of the first books of its kind to abandon a stiff and formal or a stately tone, and to present a life simply and vividly. When we praise Boswell as a biographer, we ought not to forget that his great subject gave him instructions which the Scotsman bettered.

Little is heard of Johnson for the next two or three years, but his fame must have grown, for in 1747 he was employed by a sort of booksellers' syndicate to prepare an English dictionary, this project superseding that of an edition of Shakespeare, which he contemplated in 1745. The dictionary was to be in two folio volumes for which he was to receive £1,575. The entire cost of preparing copy fell on him, however, hence the bargain was not a profitable one to the needy scholar except insofar as it enhanced his reputation. He issued a plan of his work dedicated to Lord Chesterfield; did a amount of reading to secure quotations; em-

employed six amanuenses to copy such citations as he had marked; supplied etymologies and definitions; and finally on April 15, 1755 stood forth to the world as "the great lexicographer." All things considered, it was a monument of scholarship despite its compiler's ignorance of the history of the language. Of its definitions, excellent as a rule, the humorous ones, such as "oats is a grain used for horses in England but for people in Scotland," are mainly remembered; but it would not be forgotten that Johnson not only surpassed his predecessors, but also laid the foundations on which subsequent lexicographers have reared more imposing structures. The *Dictionary* is also remembered as the occasion of Johnson's writing one of the most famous of all letters—that to Lord Chesterfield, who had neglected him for years but on the eve of the publication of the great work wrote flattering notices of it in the hope that it might be dedicated to him. Johnson's letter of Feb. 7, 1755 is remarkable not merely for the dignity with which he refused to be encumbered with help after he had safely reached the shore unassisted, but also for the touching pathos with which he referred to his disillusionment and his loneliness. His "Tetty," or whose sake he had labored so heroically, was not by his side to share his rewards. She had died in March 1752.

The completion of the *Dictionary* in eight years would have been sufficient work and glory for a more than ordinary man of letters; but between 1747 and 1755 Johnson added greatly to his reputation in other ways. In January 1749 the second of his celebrated satires appeared, *The Vanity of Human Wishes*, based upon the tenth satire of Juvenal. It is better than the *London*, indeed it is one of the best sententious pieces of moralizing in verse to be found in English literature. It brought Johnson only 15 guineas. He received nearly £300 in benefits and copyright for his tragedy *Irene* which Garrick produced in February 1749 at Drury Lane Theatre. Even Garrick's acting and Johnson's appearance in a box clad in a gold-laced hat and a gold-laced scarlet waistcoat could not save so undramatic a performance. It ran nine nights; the person who has read it nine times has probably never existed.

More important than his reappearance as a poet was his assumption of the role of periodical essayist. His famous semiweekly imitation of *The Spectator*, entitled *The Rambler*, which ran from March 20, 1750 to March 14, 1752, was not so successful as a journal, but when the numbers were gathered into volumes, which Johnson most carefully revised, the work became very popular. That it was the equal of *The Spectator*, the novelist Samuel Richardson, who wrote "only really popular number, and other contemporaries declared, nobody now believes. That should have held its own against so formidable a rival, when so many other attempts had failed, is a clear proof that it had genuine merits. It is certainly established Johnson's fame as a moralist, and if we omit the papers in which he clumsily attempted to be entertaining as well as some of his specifically critical essays, we can still find its pages more sound thought and feeling with regard to human life in its lights and shadows than can be discovered in the pages of most of the essayists we actually read. Johnson's contemporaries were also greatly impressed by his elaborate, balanced, Latinistic prose style. The

effects of this both upon the prose of his period and upon his own reputation were injurious. Even to this day most people think of Dr. Johnson (he was not yet M.A., that degree coming to him from Oxford, partly in reward for *The Rambler*, in time to be printed on the title page of the *Dictionary*) as a pompous affected writer who never used a short English word, if he could find a long Latin one to put in its place. *The Rambler* and other works produced when he was about 40 give a basis of truth to this opinion; but we should remember that as he grew older and after he had had much practice as a racy talker, his style became simpler and stronger.

The last number of *The Rambler* was written when Mrs. Johnson was dying. He mourned her loss sincerely through 32 years of widowhood. He did not see her painted cheeks or hear her affected giggles; he saw only an ideal being whose death left him desolate. No one can read the numerous references to her in his *Prayers and Meditations* (1785) without feeling a profound respect for the blinded man.

During the years between 1752 and 1759, that is, between *The Rambler* and *Rasselas, Prince of Abyssinia*, Johnson not only published the *Dictionary*, wrote essays for *The Adventurer* (1753-1754), a publication of his friend John Hawkesworth, and edited and contributed to the *Literary Magazine, or Universal Review* (1756-1758), but also issued proposals for the edition of Shakespeare he had long contemplated (1756), and began a new series of essays, *The Idler*. He lazily put off the Shakespeare until a taunt by the satirist, Charles Churchill, in *The Ghost*, to the effect that he was cheating the subscribers who had paid in their money forced him to go to work on the promised edition, which finally appeared in 1765. Naturally, it was not a monument of scholarship, but it contained some sound criticism, and its preface has long been regarded as one of the most sensible introductions to the reading of Shakespeare that we possess. *The Idler* ran in weekly numbers from April 15, 1758 to April 5, 1760 on Saturdays in John Newbery's *Universal Chronicle*. It was collected in two volumes in 1761 and in part deserved its title, for it was distinctly less ponderous than *The Rambler*.

It is at this period that the Johnson who has impressed the world's imagination as a man begins clearly to emerge. He was still the old impecunious Johnson, for the year after the *Dictionary* appeared he was twice arrested for debt. But he was slowly improving his finances, and he was gathering around him friends who were better than riches. He had long delighted in tavern clubs where he met queer characters, such as the forger, George Psalmanazer. In 1749 he organized a club of his own at the King's Head, which included Allen Bathurst, Hawkesworth, and his future biographer, Sir John Hawkins. Then he formed friendships—destined to become more famous because they figured so frequently in Boswell—with the accomplished Grecian Bennet Langton, with the gay, fashionable Topham Beauclerk, with Sir Joshua Reynolds and Dr. Charles Burney, and, a trifle later, with Oliver Goldsmith and Edmund Burke. A humbler circle of friends is still more picturesque—to wit, the unfortunates he received into his gloomy house after his wife died—blind Miss Anna Williams, good talker but peevish. Robert Levett, the self-educated physician of the poor, to whose memory

Johnson consecrated one of the most pathetic of English elegies—and later, Mrs. Desmoulins and Miss Carmichael. These dependents, as was natural, quarreled among themselves and harassed their benefactor. Another inmate of his house, of whom we frequently hear, was his black servant, Francis Barber.

In January 1759, Johnson's old mother died at Lichfield. The story that he wrote *Rasselas, Prince of Abyssinia*, in a week, to pay her funeral expenses is, as is usual, not altogether accurate. It seems to have been begun before her death, mainly in order to defray the cost of a visit to her. When published, it became the most popular of his writings, and it still has readers and ranks as a classic, although a ponderous one. It has little narrative interest, lacks the atmosphere of the East, presents us with personages rather than with persons, and makes them talk in an impossibly magniloquent style; yet, when all deductions are made, it remains not only a strong attack upon the fashionable, shallow optimism of the day which Johnson detested, but also one of the most manly utterances on the evils of life and the courage needed to combat them that has ever been heard from an English moralist. In literary ability Johnson was inferior to Voltaire, whose witty *Candide*, by a curious coincidence, attacked the optimists almost contemporaneously with *Rasselas*, but in moral force the advantage was entirely on Johnson's side.

Three years after *Rasselas* began its long life in numerous editions and translations, Johnson's own life was almost entirely changed. In July 1762, despite his famous uncomplimentary definition of "pension," he accepted one of £300 per annum. He was independent enough to be able to afford being slightly inconsistent, and he did not promise to support the Tory government in return for its favors. Pensioned or unpensioned he would have taken his reactionary position on American affairs, whether or not he would have written his unfortunate *Taxation no Tyranny* (1775), just as naturally as he took part in exposing the Cock Lane Ghost (1762).

His pension gave Johnson full opportunity to indulge his constitutional sluggishness. He could afford to write only now and then, to lie in bed until the afternoon, to spend the evening at a tavern laying down the law to his hearers. Thanks partly to his genius for conversation and friendship, partly to his rooted dislike of solitude, he grew to be more and more of a clubman, as the word was then understood, and it was in this capacity rather than as a productive man of letters that he became the literary dictator of his time. As Macaulay remarks, between 1765 and 1775, Johnson published only what it would scarcely have taken him a week to write if he had been working at his old rate of speed. Instead of writing he talked, and when he came forward again as an author, the vigorous English of his conversation got the better of the stately Latin of his pen. About the beginning of 1764 he became the chief figure of the famous club which for nearly 20 years held weekly or fortnightly meetings at the Turk's Head, Soho. Besides Johnson, its chief members were Reynolds, Burke, Goldsmith, Edward Gibbon, Garrick, Sir William Jones, and, last but not least, James Boswell, whom Johnson caused to be elected early in 1773. Langton, Beauclerk, Bishop Thomas Percy, Charles J. Fox, and others nearly or quite as distinguished, were also members. It is per-

haps not so surprising that these men admitted Boswell at Johnson's solicitation as that Johnson should have tolerated the bibulous, gossiping little man, who hailed from a part of Great Britain for which the sturdy English moralist had always professed a great dislike. The matter can no more be settled by explanation than Johnson's infatuation with Mrs. Porter. Boswell, with all his faults, must have been amusing, and his devotion to his master doubtless touched that essentially kind, though rough, personage. At any rate posterity, which owes so much to Boswell, has no occasion to criticize harshly either of the apparently ill-assorted friends. It is better to remember that, although several other members of the club wrote books that have stood the wear and tear of time more successfully than most of Johnson's writings have done—Burke, Goldsmith and Gibbon, for example, and Boswell himself—the fact that Johnson dominated such men speaks volumes for his essential greatness as a man. Mere dictatorial rudeness and other qualities natural to an *Ursa Major*, as the poet Thomas Gray used to denominate him, are not sufficient to explain the phenomenon.

Boswell is not the only person who lives in literature because he was once associated with Johnson. Henry Thrale, the brewer, and his bright, gay wife are mainly remembered, because, after 1764, Johnson passed much of his time at the brewery in Southwark and at their villa at Streatham, leaving his new house in Fleet Street to be occupied in the main by the queer recipients of his bounty already mentioned. He now became somewhat more polished in his manners and enjoyed the society of such interesting women as Fanny Burney, Hannah More, and Mrs. Elizabeth Carter (qq.v.). The literary lion in such company presents a picture very different from that of the adventurer wandering the streets with Richard Savage. Boswell gives so many interesting pictures of the later Johnson that it is difficult to select the most striking. The interview with George III was a great event in the life of so loyal a subject. It took place in February 1767. His softening down in the presence of that amusing radical, John Wilkes, showed him in a still happier light. His excursions, whether with Boswell or the Thrales (Henry and Hester, qq.v.), to the Hebrides (1773), to Wales (1774) and to France (1775)—to say nothing of visits to his old friends at Oxford and elsewhere—had their share with time in mellowing his character and widening his outlook upon men and institutions. *A Journey to the Western Isles of Scotland*, the account he gave of his visit to Scotland with Boswell, upon which the latter wrote a most sprightly book, would have given far more offense to the Scots if it had been written two decades earlier. It was published in 1775, the year Oxford, following Dublin by 10 years, made him a doctor, and is a dignified and worthy book; but it is probably chiefly remembered because in it Johnson severely handled James Macpherson's Ossian fame, a fact which led to Macpherson's challenging him, and to Johnson's purchasing stout stick, which he did not have occasion to use on his challenger.

Two years later—Easter Eve 1777—a committee representing many of the best London booksellers called upon Johnson to ask him to furnish introductions to a proposed series of works of the English poets since the Restoration. The project pleased him, he named a compen-

on far too low (200 guineas, subsequently increased by £200 by the booksellers), shook off its lethargy, and by 1781 had finished the most famous of his books, the *Lives of the English Poets*, which appeared (collected) in 10 small volumes (1779, 1781). This latest work was in terary merit by far his best. He was in sympathy with most of the poets he had to treat, he had amassed through reading and gossip much information about them, he had mellowed with age, the common sense and sound morality, which are the best features of his criticism, had full chance to display themselves, and his style was no longer ponderous and unidiomatic. The life of John Milton was marred by prejudice, religious and political, as well as by lack of appreciation of such a poem as *Lycidas*, the life of Gray was unsympathetic and inadequate; but the chief lives, such as those of Abraham Cowley, Joseph Addison, John Dryden, Jonathan Swift, Pope, and Savage, left little to be desired, and many of the minor sketches were intelligent, to the point, and, not infrequently, humorous in a somewhat grim fashion. In short, the book well deserved the place it has secured as an 18th century classic.

After its publication Johnson aged rapidly, and what with the loss of friends (like Thrale in 1781, and Robert Levett in 1782), and with his dread of death and his increasing infirmities of gout and asthma, the last three years of his life were very painful. A break with Mrs. Thrale in consequence of her attachment to the Italian musician, Gabriel Piozzi, whom she married in 1784, led to his going back to his house in Fleet Street, to recriminations and bad temper trying both to him and to her, and finally to his last letter to her, which is pathetic in the extreme. In the summer of 1783 he had a paralytic stroke; recovering, he tried, more or less in vain, to forget his miseries in his clubs, old and new. He visited Oxford with Boswell; plans were formed to get him to Italy, but failed; and in November 1784 he entered upon his last illness. Physicians and friends served him with the utmost kindness, his fears of death subsided, and after bravely undergoing operations and giving many proofs of his unfeigned piety, he died peacefully on Dec. 13, 1784. Seven days later he was buried in Westminster Abbey.

Johnson's massive figure and disfigured face, his swaying backward and forward, his muttering prayers to himself, his touching all the posts he passed, his bad manners at table, his 25 and less cups of tea, his slovenliness, his nearsightedness—all his moral and physical peculiarities—are known wherever Boswell is read. We do not frequently recall his generosity in making advances after a quarrel, his love of children, his rivalry toward women, his loyalty to his friends, his charity to the poor, his hatred of tyranny in every form. We remember his prejudices and superstitions without recalling the fact that he inherited them in large measure. By insisting on his eccentricities we tend to overlook his splendid triumph over bodily infirmities and social drawbacks that would have quelled a less resolute spirit. Johnson at bottom was of heroic mold—courageous, tender, large-minded, sound-hearted. His peculiarities make him picturesque; study of his character and his career reveals him to have been truly great as a man. As a man of letters he is also great, through his influence upon the literature of his period, through his services to

lexicography, through the solid intelligence and morality of his essays and *Rasselas*, through the sanity of his best criticism, and through the vitality of his biographical sketches. But as a writer of books that are judged solely on their intrinsic merits of style and substance Johnson can scarcely be termed great. His complete works have been but rarely reprinted in the past 80 years and are little read. As an essayist and letter writer, and poet, he is not in the highest class; *Rasselas* is found to be heavy reading by most people; the *Lives of the Poets* are perused in their entirety by but few. Boswell does much more to preserve Johnson's fame than the great Doctor's own writings; but the value of these is easily underestimated, and Boswell's biography would not have been such a great book if Johnson had not been such a great man. See also BOSWELL, JAMES; LIFE OF SAMUEL JOHNSON, LL.D.; LIVES OF THE POETS; RAMBLER, THE; RASSELAS; VANITY OF HUMAN WISHES, THE.

Bibliography.—Good editions of Boswell's *Life of Samuel Johnson* are by G. Birkbeck Hill, 6 vols. (Oxford 1887) and by Roger Ingpen, 2 vols. (New York 1909; new ed. Boston 1925). Other editions of importance are those by Edmund Malone (6th ed. of the work, 1811), John W. Croker (11th ed., 1831; revised, 1835), Percy Fitzgerald (1874), Rev. Alexander Napier (1884). Other sources of information are the biography by Sir John Hawkins (1787), Arthur Murphy's *Essay on the Life and Genius*, etc. (1792), Mrs. Gabriel Piozzi's *Anecdotes of the Late Samuel Johnson* (1786; new ed. 1925), and *The Autobiography, Letters, and Literary Remains of Mrs. Piozzi*, edited by A. Howard (1861), and, in general, books dealing with the chief men of the time, Goldsmith, Reynolds, and Burke.

Consult also the short biography by Leslie Stephen (London 1878), and Col. F. Grant's *Life and Writings of Samuel Johnson in Great Writers Series* (London 1887); Raleigh, W. A., *Six Essays on Johnson* (Oxford 1910); Tinker, C. B., *Dr. Johnson and Fanny Burney* (New York 1912); Lynd, R., *Dr. Johnson and his Company* (1928). The chief critical essays are by Matthew Arnold, Augustine Birrell, Carlyle, Macaulay and Leslie Stephen.

Consult also Birkbeck Hill's *Dr. Johnson, His Friends, and His Critics* (London 1878), and *Johnsonian Miscellanies* (New York 1897), and Whitwell Elwin's *Some Eighteenth Century Men of Letters*, 2 vols. (1902). Johnson's works were edited by Hawkins in 1787 in 11 volumes (to which two volumes edited by Stockdale were added later). Several editions by Arthur Murphy followed (1792, 1796, etc.), then two by Alexander Chalmers (1810, 1816), and finally in 1825 came the best, the Oxford edition in 11 volumes, edited by F. P. Walsby and containing the Parliamentary Debates. Johnson's *Letters*, save those included in Boswell's, were edited by Birkbeck Hill in 1892 (2 vols.). Reprints of separate works have been very numerous, of late chiefly for school use. The best editions of *Rasselas* are those by Birkbeck Hill (1887), and R. W. Chapman (1927). The *Lives of the Poets* were edited by Peter Cunningham in 1854, by Mrs. Napier in 1890, and by Arthur Waugh in 1896; but these have been superseded by the monumental edition of Birkbeck Hill, 3 vols. (1905). Matthew Arnold edited six of the lives in 1878.

WILLIAM P. TRENT,
Late Professor Emeritus of English Literature,
Columbia University.

JOHNSON, Samuel William, American chemist: b. Kingsboro, N. Y., July 3, 1830; d. July 21, 1909. He studied at Yale College and the universities at Leipzig and Munich. In 1856 he became professor of analytical chemistry in the Yale Scientific School, taught agricultural chemistry there 1857-1875, and from 1875 to 1896 was professor of theoretical and agricultural chemistry, becoming in 1896 professor emeritus. He was director of the Connecticut Agricultural Experiment Station from 1877 to 1899. In 1856 he was made chemist to the Connecticut State Agricultural Society, in which capacity he issued an important series of papers on commercial fertilizers and allied subjects. He was elected to the National Academy of Sciences in 1866. He wrote

Essays on Peat Muck and Commerical Manures (1859); *How Crops Feed* (1870); *Peat and Its Uses* (1866); *How Crops Grow* (1868), and edited Fresenius' *Quantitative Chemical Analysis* (1864, 1875, 1883).

JOHNSON, Thomas Cary, American theologian: b. Fishbok Hill, Va., July 19, 1859; d. Feb. 15, 1936. He was graduated at Hampden-Sidney College (1882) and took diplomas in Latin, Greek and mathematics (1883-1884) at the University of Virginia, then graduating in theology (1887) at Union Theological Seminary, Virginia. He was appointed professor of Old and New Testament exegesis at Austin (Tex.) Theological School (1889-1890), and was ordained to the ministry in 1890, becoming pastor-elect of the Third Church, Louisville, Ky. (1890-1901). He was made a member of the faculty of Union Theological Seminary, Richmond, Va., filling chairs of English Bible and pastoral theology (1891-1892), ecclesiastical history and polity (1892-1913), systematic theology since 1913. He wrote *History of the Southern Presbyterian Church* (1894); *John Calvin and the Geneva Reformation* (1900); *Life and Letters of Robert Lewis Dabney* (1903); *The Life and Letters of Benjamin Morgan Palmer* (1906); *Virginia Presbyterianism and Religious Liberty* (1907); *Baptism in the Apostolic Age* (1912); *Some Modern Isms* (1919); *God's Answer to Evolution* (1924).

JOHNSON, Tom Loftin, American capitalist and municipal reformer: b. Blue Spring, near Georgetown, Ky., July 18, 1854; d. Cleveland, Ohio, April 10, 1911. He was clerk in a street railway office (1869-1875), and invented several street railway devices, including the "trilby" rail and a fare box; became owner of a street railway in Indianapolis and later acquired large interests in Cleveland, Detroit and Brooklyn; he was also interested in iron manufacture in Cleveland. He disposed of his railway properties and became prominent in politics as a member of the Democratic Party, and known as an advocate of the single tax and public ownership of public utilities. His plans for municipal ownership attracted nation-wide attention. Though opposed to the free coinage of silver, he supported Bryan in 1896 and 1900, and the state convention which he controlled unanimously endorsed the Kansas City platform. He was a member of Congress, 1891-1895. In 1901 he was elected mayor of Cleveland, and was re-elected 1903, 1905 and 1907. He transformed the city government by introducing several radical reforms. He was an advocate of three-cent street railway fares. He left public life in 1910.

JOHNSON, Virginia Wales, American novelist: b. Brooklyn, N. Y., Dec. 28, 1849; d. Jan. 16, 1916. After 1875 she lived in Florence, Italy. Her publications, mainly for young folk, include the "Kettle Club Series" (1860-1870); the "Doll's Club Series" (1871); *Joseph the Jew* (1874); *A Sack of Gold* (1874); *The Catskill Fairies* (1876); *The Calderwood Secret* (1875); *A Foreign Marriage* (1880); *The Neptune Vase*, her finest work (1881); *The Fainalls of Tipton* (1884); *Tulip Place* (1886); *The House of the Musician* (1887); *A World's Shrine* (1902); *Summer Days at Vallombrosa* (1911); *Two Quaint Republics, Andorra and San Marino*

(1913); and other fiction and several descriptive works, such as *Genoa, the Superb* (1892); *The Lily of the Arno* (1891); *Many Years of a Florentine Balcony* (1911).

JOHNSON, Sir William, British superintendent-general of Indian affairs in North America: b. Smithtown, County Meath, Ireland, 1715; d. near Johnstown, N. Y., July 11, 1774. His uncle, Sir Peter Warren, offered his nephew the management of his entire property in New York, if the latter would undertake its improvement and settlement. Johnson accepted the offer and in 1738 established himself upon a tract of land on the south side of the Mohawk, about 25 miles from Schenectady, which Sir Peter had called Warrensburgh. In addition to the settling and improving of the country, he embarked in trade with the Indians, whom he always treated with perfect honesty and justice. He became a master of their language, speaking many of their dialects as fluently as they did themselves and was thoroughly acquainted with their beliefs and customs. He was adopted by the Mohawks as one of their own tribe, chosen a sachem and named Waraghiyaghey, "he who has charge of affairs." In 1744 he was appointed colonel of the Six Nations, in 1746 commissioner of New York for Indian affairs. In 1750 he became a member of the provincial council. In 1754 he attended as one of the delegates from New York the congress of Albany and also the great council held with the Indians on that occasion, at which they strongly urged his reappointment as their superintendent. At the council of Alexandria, April 14, 1755, he was sent for by Braddock and commissioned by him "sole superintendent of the affairs of the Six United Nations, their allies and dependents." He was also, pursuant to the determination of that council, created a major-general and commander-in-chief of the provincial forces destined for the expedition against Crown Point. At the head of these forces, in September 1755, he defeated Gen. Ludwig Dieskau at Lake George. This victory saved the colony from the French and Johnson received the thanks of Parliament for his victory, was voted £5,000 and on Nov. 27, 1755, created a baronet of Great Britain. On his arrival at Lac Saint Sacrement a few days before this battle, he gave to it the name of Lake George, "not only in honor of his majesty, but to assert his undoubted dominion here." In March 1756 he received from George II a commission as "colonel, agent, and sole superintendent of the affairs of the Six Nations, and other northern Indians." He held this office for the rest of his life. In 1758 he was present with James Abercrombie at Ticonderoga. General Prideaux led the expedition against Fort Niagara in 1759. Johnson was second in command and upon the death of Prideaux, before that fort, succeeded to the command in chief. With upward of 1,000 Indians allies he continued the siege with great vigor and cut to pieces the French army. He led the same Indian allies the following year in the Canadian expedition of Amherst and was present at the capitulation of Montreal and the surrender of Canada to the British arms in 1760. The war was now at an end and the king granted to Sir William for his services a tract of about 100,000 acres of land, north of the Mohawk. In 1762, the country being at peace and the Indians perfectly contented, Sir William erected John-

on Hall, a large wooden edifice still standing. The village of Johnstown, with stores, an inn, a courthouse and an Episcopal church, was soon laid out. In 1772 it became the shire town of Tryon County. Johnson lived in the style of an old English baron of former days and exercised liberal hospitality. In 1768 he concluded the treaty of Fort Stanwix. He was commissioned major general in 1772. He wrote *The Language, Customs and Manners of the Six Nations*, in *Proceedings of the American Philosophical Society of Philadelphia* (1772), and his letters have great historical value.

Consult *Calendar of the Sir William Johnson Manuscripts*, compiled by R. E. Day (Albany 1909); Buell, A. C., *Sir William Johnson* (New York 1903); Pound, A., and Day, R. E., *Johnson of the Mohawks* (New York 1930); Stone, W. L., *The Life and Times of Sir William Johnson, Bart.*, 2 vols. (Albany 1865).

JOHNSON, William, American jurist: b. Charleston, S. C., Dec. 27, 1771; d. Brooklyn, N. Y., Aug. 4, 1834. He was graduated (1790) from Princeton, then entered the law office of the celebrated Charles Cotesworth Pinckney and was admitted (1793) to the bar. He represented Charleston in the lower house of the state legislature from 1794 to 1798, when he was appointed judge of the court of common pleas. In 1804 Thomas Jefferson appointed him associate justice of the Supreme Court of the United States. He was an adherent to the Jefferson political principles but was firm in all matters respecting his reading of the law. This brought him into collision with the president in the celebrated Embargo act, which he declared illegal. He belonged to the minority who strongly opposed nullification in South Carolina. He found opposition to him so strong that he had to leave the state for a time, going (1833) to western Pennsylvania, then to Brooklyn, N. Y., where he died. He wrote *Sketches of the Life and Correspondence of Nathaniel Greene* (1822), and in 1826 he published a *Eulogy of Thomas Jefferson*.

JOHNSON, William Samuel, American jurist and educator: b. Stratford, Conn., Oct. 7, 1727; d. there, Nov. 14, 1819. He was the son of the Rev. Samuel Johnson (q.v.), first president of King's College (Columbia University), New York. He was graduated from Yale in 1744, was admitted to the bar, practiced in the New York and Connecticut courts, in 1761 and 1765 represented Stratford in the Connecticut general assembly, or lower house, and in the latter year was a Connecticut delegate to the Stamp Act Congress at New York. In 1766 he became a member of the governor's council or upper house of the Connecticut legislature, in 1766-1771 was in England as special agent for the colony in defense of its title to land obtained from the Mohican Indians, in 1771 re-entered the council, and for a time in 1772 was a judge of the Superior Court of the colony. After Lexington, he was a member of a committee sent to Gen. Thomas Gage on the unsuccessful mission of inquiring into possible means of peace. Opposed to the Revolution, he remained in private life during its progress, but in 1784-1787 was a member of the Continental Congress, in 1787-1789 sat in the Connecticut assembly, in 1787-1800 was president of Columbia College, and from 1789 to 1791, when he resigned, was the first United States senator from Connecticut. He resigned the college presidency in 1800 because of failing

health and retired to Stratford. Oxford conferred on him the degree of D.C.L. in 1766. He made the acquaintance of Dr. Samuel Johnson during his stay in London, and later corresponded with him. His letters to the governors of Connecticut during his residence in Great Britain have been published in the *Collections of the Massachusetts Historical Society*, 5th series, vol. 9 (Boston 1885).

JOHNSON, William Woolsey, American mathematician: b. Owego, N. Y., June 23, 1841; d. Baltimore, Md., May 14, 1927. He was graduated from Yale, 1862; M.A. 1868, and served on the staff of the United States Nautical Almanac office (1862-1864), at Cambridge, Mass. He was appointed assistant professor of mathematics at the United States Naval Academy, Newport, R. I., and at Annapolis (1865-1870), and professor of mathematics at Kenyon College, Ohio (1870-1872), and St. John's College, Maryland (1872-1881), returning to the United States Naval Academy in 1881. He was commissioned lieutenant and made professor of mathematics in the navy in 1913. He retired in 1921 with the rank of commodore. He published *An Elementary Treatise on the Integral Calculus Founded on the Method of Rates or Fluxions* (1874-1876); *Curve Tracing in Cartesian Coordinates* (1884); *The Theory of Errors and Method of Least Squares* (1890); *A Treatise of Ordinary and Partial Differential Equations* (1889); *An Elementary Treatise on Theoretical Mechanics* (1900-1901); *Treatise on Differential Calculus* (1904); *Differential Equations* (1906); monographs on mathematics; *Treatise on Integral Calculus* (1907); *An Elementary Treatise on the Differential Calculus* (1908).

JOHNSON CITY, village, New York, in Broome County; altitude 846 feet; on state highway 17C; 3 miles west of Binghamton; on the Erie, and the Delaware, Lackawanna and Western railroads. It is served by the Tri-Cities Airport at Endicott, and has good bus connections. Johnson City has close interrelation with the neighboring cities of Endicott and Binghamton. The Endicott-Johnson Corporation has shoe factories in each of the three places. The village is named for George F. Johnson, born in Massachusetts in 1857, who began working in a boot factory at the age of thirteen. In 1881 he was employed in a shoe factory in Binghamton and later induced his employer to build a new factory which, with the assistance of Henry B. Endicott, developed into the present factory in Johnson City. This manufactory operates, with its employees, a profit-sharing and home-owning program. Johnson City's industries are lumber and coal-loading equipment; the General Electric Company has a plant here. It also manufactures candy; photographic paper; felt articles; wooden heels and lasts, and foundry castings. It has a Bible seminary and training school, and a school for nurses. Pop. (1940) 18,039; (1950) 19,563.

JOHNSON CITY, city, Tennessee, in Washington County; altitude 1,717 feet; 106 miles north of Knoxville; on the Southern; Clinchfield; East Tennessee and Western North Carolina railroads. It shares a tri-city airport with Bristol and Kingsport. It is in a farming and lumbering area, is one of the nation's largest hardwood flooring centers, has iron foundries, and manu-

factures of textiles and textile mill supplies, gloves, pants, hosiery, furniture, brick, flour, and dairy products. Here are East Tennessee State College (coeducational) and Mountain Home Veterans Administration Hospital. Nearby is Milligan College (q.v.). First settled in 1777 and called Blue Plum; later called Haynesville; chartered 1869; rechartered 1885; and named for Henry Johnson, its first mayor. Pop. (1940) 25,332; (1950) 27,778.

JOHNSON'S ISLAND, Ohio, an island located at the mouth of Sandusky Bay, overlooking Lake Erie, and about a mile long and a mile and a half wide. It was used during the Civil War as a prison for captured Confederates; almost exclusively for officers.

JOHNSTON, Albert Sidney, American army officer: b. Washington, Mason County, Ky., Feb. 2, 1803; d. Shiloh, Miss., April 6, 1862. General Johnston had but a brief career in the Confederate Army and the first part of that career was one of great disaster and consequently of severe criticism; but he fell "on the field of glory" at Shiloh, and not a few endorse the opinion of President Davis that he was the greatest general whom the war produced. Descended from a long line of illustrious ancestors, he obtained his literary education at Transylvania University and was graduated at West Point, June 30, 1826, being number eight in a brilliant class of which S. P. Heintzelman was a member. He was brevetted second lieutenant in the 2d Infantry, transferred to the 6th Infantry in 1827, was regimental adjutant from 1828 to 1832, aide to General Atkinson a year, and acting assistant adjutant general to Illinois volunteers during the Black Hawk War—in all of which positions he showed the qualities of an accomplished soldier. He resigned his commission in the United States Army, May 31, 1834, having determined to settle in Texas and cast in his fortunes with the "Lone Star" Republic.

The battle of San Jacinto was fought April 21, 1836, and soon after Johnston arrived in Texas and enlisted as a private soldier in the Texan army. His merit soon brought him promotion and he was made adjutant general of the Army of Texas and not long after brigadier general and chief commander of the army in the place of Gen. Felix Huston. As a result of jealousy growing out of this promotion there was an unfortunate duel between Huston and Johnston, in which the latter was wounded. He continued in command of the Texan army until 1838, when he was made secretary of war for the Republic of Texas. In 1839 he led an expedition against the hostile Cherokee Indians and in a battle on the Neches defeated and routed them with great slaughter. He used all of his abilities and wide influence in bringing about the annexation of Texas to the United States, and promptly enlisted when the Mexican War broke out, being colonel of the First Texas Rifle Volunteers. He was distinguished in various battles, especially at Monterey, where he had three horses shot from under him and was highly complimented by General Butler, on whose staff he was serving.

On Oct. 31, 1849 he was appointed by President Taylor paymaster in the United States Army, with the rank of major and when the 2d Cavalry Regiment was formed he was appointed. March 3, 1855, its colonel on the recommendation

of his old classmate and lifelong friend, Jefferson Davis, who was at that time the able and efficient secretary of war. In 1858 he was put in command of an expedition to Utah to force the Mormons to submit to the laws of the United States government and overcame great difficulties and showed such ability and tact in the delicate mission that he was made brevet brigadier general. When the Civil War broke out General Johnston was in command of the Department of the Pacific, but he very promptly resigned his commission and with a small party made his way across the plains, passing through New Orleans and reached Richmond on September 2, where he had a cordial reception and was made a full general and assigned to the command of the Department of Kentucky, whither he went at once, beginning the able and efficient discharge of his duties there.

It could not be published at the time that he had a force barely 20,000 to defend that long line against overwhelming numbers of the enemy, and he was severely criticized in the newspapers for not being more aggressive and when Forts Henry and Donelson fell and he was compelled to fall back and abandon to the enemy so large a section of Confederate territory that abuse and severest criticism were heaped upon him, he was denounced as incompetent and his removal from command was demanded. President Davis calmly said: "If Albert Sidney Johnston is not a general, then I have none to put in his place." He wrote his old friend a noble letter, and Johnston replied in the same spirit, concluding with this sentiment: "The test of merit in my profession, with the people, is success. *It is a hard rule, but I think it right.* If I join this corps to the forces of General Beauregard (I confess a hazardous experiment), then those who are now exclaiming against me will be without an argument." He alluded to his plan of uniting with Beauregard to strike Grant before Buell and Mitchel could join him, and in pursuance of which plan he marched from Corinth, Miss., on April 3, intending to attack Grant at Pittsburgh Landing, or Shiloh Church, 20 miles off on April 4. There was delay on the part of some of the troops so that the attack could not be made until the morning of the 6th, but with his 40,000 men Johnston attacked Grant's 50,000 with such impetuosity, skill and dash that the Federals were driven back at every point, were huddled together at Pittsburgh Landing and there seemed to be lacking at 2:30 p.m. only one more vigorous advance to annihilate Grant's army. But just at this moment the great commander who had just remarked to one of his staff: "The victory is ours. We shall soon water our horses in the Tennessee River," was struck by a Minié ball in his leg, and bled to death in 15 minutes. In the confusion which followed, the advance was not made. Beauregard (who had been ill in his ambulance all day and did not appreciate the real situation) ordered the Confederate lines to fall back. Buell and Mitchel came up that night with 55,000 fresh troops, and thus the fruits of Johnston's great victory were lost and the next day the Confederates were compelled to fall back to Corinth.

No nobler eulogy could be pronounced on Albert Sidney Johnston than that of President Davis in a special message to the Confederate Congress, in which he said: "Without doing injustice to the living, it may safely be said that

our loss is irreparable. Among the shining hosts of the great and good who now cluster around the banner of our country, there exists no purer spirit, no more heroic soul than that of the illustrious man whose death I join you in lamenting. In his death he has illustrated the character for which, through life, he was conspicuous—that of singleness of purpose and devotion to duty with his whole energies. Bent on obtaining the victory which he deemed essential to his country's cause, he rode on to the accomplishment of his object, forgetful of self, while his very life blood was fast ebbing away. His last breath cheered his comrades on to victory. The last sound he heard was their shout of victory. His last thought was his country, and long and deeply did his country mourn its loss."

It is scarcely extravagant to say that had Albert Sidney Johnston lived the victory at Shiloh would have been complete, the whole character of the campaign in the West would have been changed, and with Lee in Virginia and Johnston in the West, the result of the war might have been different. The monument to Albert Sidney Johnston in New Orleans is one of the most beautiful in the country; he is buried in Austin, the capital of his adopted state.

Consult the biography by his son, W. P. Johnston, *Life of Albert Sidney Johnston* (New York 1878).

J. WM. JONES,
Author and Lecturer.

JOHNSTON, Alexander, American historian: b. Brooklyn, N. Y., April 29, 1849; d. Princeton, N. J., July 20, 1889. He was graduated from Rutgers College, New Jersey, in 1870, studied law, and was admitted to the bar in 1876. He did not practice, however, and was professor of jurisprudence and political economy at Princeton University from 1883 till his death. He was the author of *History of American Politics* (1879); *Connecticut: a Study of a Commonwealth-Democracy* (1887); *History of the United States for Schools* (1885); and *The United States; its History and Constitution*, reprinted from the *Encyclopaedia Britannica* (1889).

JOHNSTON, Alexander Keith, Scottish cartographer: b. Kirkhill, near Edinburgh, Scotland, Dec. 28, 1804; d. Ben Rhydding, Yorkshire, July 9, 1871. His first important work, the *National Atlas*, was published in 1843. He visited Germany and gathered material for *The Royal Atlas of Modern Geography* (1861), one of the most beautiful and minutely accurate atlases published up to that time. His son of the same name (1844-1879), continued his father's enterprises; and died while leading an important exploring expedition to the head of Lake Nyasa in Africa.

JOHNSTON, Annie Fellows, American author: b. Evansville, Ind., May 15, 1863; d. Pewee Valley, Ky., Oct. 5, 1931. She was a sister of Albion Fellows Bacon, and a daughter of Rev. Albion Fellows. She was educated at the University of Iowa (1881-1882), early engaged in literature and became known as a writer of stories for young people. Her husband, William L. Johnston, dying in 1892, she was thrown upon the resources of her pen, and thereafter she produced in rapid succession juvenile stories that became very popular and are still extensively read.

Among these stories are *Big Brother* (1893); *The Little Colonel* (1895), which later, on account of its popularity, gave its name to a long series; *Joel: A Boy of Galilee* (1895); *The Little Colonel in Arizona* (1904); *In the Desert of Waiting* (1905); *Mary Ware* (1908); and *Mary Ware in Texas* (1910).

JOHNSTON, Eric Allen, United States government official and business executive: b. Washington, D.C., Dec. 21, 1895. When he was six years old, his family moved to Spokane, Wash. He was graduated in 1917 from the University of Washington and then served until 1922 in the U.S. Marine Corps, at one time being stationed as an assistant naval attaché at Peking, China. In 1923, at Spokane, he organized and headed the Brown-Johnston Company, and in 1933 also founded and became president of the Columbia Electric and Manufacturing Company. These firms became respectively the largest northwestern United States operators in the fields of electrical contracting and electrical equipment manufacturing.

From 1934 to 1941 Eric Johnston served as national director of the U.S. Chamber of Commerce, and represented liberal business elements favoring greater cooperation among private industry, the government, and labor. In 1942 he was advanced to the presidency of that organization, to which post he was annually re-elected until May 1946. On Sept. 19, 1945, he had become president of the Motion Picture Producers and Distributors of America, Inc., succeeding Will H. Hays as head of the two billion dollar motion picture industry. He was redesignated president on Feb. 6, 1951.

In 1931 Johnston had entered the federal government as chairman of the U.S. Commission on Inter-American Economic Development, and in 1943 returned to the government to serve with several wartime agencies, including the Economic Stabilization Board and the War Manpower Commission; in 1948 he was appointed to the advisory board of the Economic Cooperation Administration. On Jan. 19, 1951, President Truman named him administrator of the Economic Stabilization Agency. He resigned in November 1951 to return to his motion picture post, but on Jan. 23, 1952, accepted appointment to serve additionally as chairman of the International Development Advisory Board.

JOHNSTON, Gabriel, American colonial governor of North Carolina: b. Scotland, 1699; d. July 17, 1752. Very little is known of his personal history. He was educated at the University of St. Andrew's, with a view to the medical profession, which he seems not to have entered. He was for a while professor of Oriental languages at St. Andrew's, and then removed to London, where he was engaged with Pulteney and Lord Bolingbroke in writing for *The Craftsman*. By the influence of Lord Wilmington he was appointed governor of North Carolina, and took the oath of office at Brunswick, Nov. 2, 1734. He was the ablest and most successful of all the colonial governors, holding the reins of power up to the time of his death. Consult Ashe, S. A., *History of North Carolina*, vol. 1 (Greensboro, N. C., 1908).

JOHNSTON, George Ben, American surgeon: b. Tazewell, Va., July 25, 1853; d. Rich-

mond, Dec. 20, 1916. He studied at the University of Virginia (1870-1875) and took his degree (M.D.) at University Medical College, New York University (1876). He became professor of surgery at the Medical College of Virginia; surgeon at the Memorial Hospital, Richmond; at Johnston-Willis Sanitarium; and at the Abingdon Hospital, Abingdon, Va. He was president of the American Surgical Association; of the Medical Society of Virginia; of the Southern Surgical and Gynecological Association; and of Richmond Academy of Medicine and Surgery.

JOHNSTON, Sir Harry Hamilton, English traveler: b. London, June 12, 1858; d. July 31, 1929. He was educated at King's College, London, and the Royal Academy of Arts; traveled in North Africa (1879-1880), and Portuguese West Africa and the Congo region, 1882-1883. He commanded a scientific expedition to Mount Kilimanjaro in 1884, and held various consular posts in Africa. He published *British Central Africa* (1897); *The Colonisation of Africa* (1899); *The Uganda Protectorate* (1902); *Liberia* (1906); *The Story of My Life* (1923).

JOHNSTON, Joseph Eggleston, American Confederate soldier: b. Cherry Grove, Va., Feb. 3, 1807; d. Washington, D.C., March 21, 1891. He was graduated at West Point in 1829; and served with distinction in the Black Hawk and Seminole wars. In the Mexican War he distinguished himself also and was brevetted major and colonel United States Army for bravery at Cerro Gordo. He was promoted quartermaster general of the army with the rank of brigadier general in June 1860, but resigned his commission when Virginia seceded. He was then made major general of Virginia volunteers and later full general in the Confederate service, taking an active part in the first Battle of Bull Run, July 21, 1861, where he personally led a charge with the colors of the 4th Alabama Regiment in his hands. At the battle of Fair Oaks, May 31, 1862, Johnston was severely wounded and was disabled for service for several months. In November he again reported for duty and was assigned to the Military Department of Tennessee. In the operations of Grant before Vicksburg he did everything possible to prevent the shutting up of General Pemberton in Vicksburg, telegraphing him May 2: "If Grant crosses, unite all your troops to beat him. Success will give back what was abandoned to win it." Although similar orders were repeatedly sent to Pemberton, they were disregarded; Pemberton allowed himself to be shut up in Vicksburg and the siege and surrender on July 4 followed. In December of the same year he took command of Bragg's army at Dalton, Ga., and by the spring of 1864 brought it to a state of efficiency which it had not previously had, though it contained only 45,000 men against Sherman's 98,797. The campaign from Dalton to Atlanta, a distance of 100 miles, was a series of severe engagements without a general battle, Johnston's friends claiming "the retreat had been the masterpiece of Johnston's life and one of the most skillful and successful that had ever been executed." On July 17, 1864 Johnston was superseded in this command by General Hood. In the early part of 1865 he was several times defeated by Sherman, to whom he surrendered at Durham Station, N. C., on April 26, the terms of capitulation resembling those granted

to Lee at Appomattox. After the war Johnston engaged in business, and was member of Congress 1876-1878. He was a pallbearer at the funerals of Grant and Sherman. He was United States commissioner of railways 1885-1889 and the author of *Narrative of Military Operations* (1874).

JOHNSTON, Mary, American novelist: b. Buchanan, Va., Nov. 21, 1870; d. Warm Springs, Va., May 9, 1936. In 1898 she became suddenly famous through her *Prisoners of Hope: a Tale of Colonial Virginia* (1898), and her next book, *To Have and to Hold* (1900), was even more popular. She later published *Audrey* (1902); *Sir Mortimer* (1904); *The Goddess of Reason* (1907); *Lewis Rand* (1908); *The Long Roll* (1911); *Cease Firing* (1912); *Hagar* (1913); *The Witch* (1914); *The Fortunes of Garin* (1915); *Foes* (1918); *Michael Forth* (1919); *Silver Cross* (1921); *1492* (1922); *Hunting Shirt* (1931); and *Miss Delicia Allen* (1932).

JOHNSTON, Richard Malcolm, American author and educator: b. Oak Grove, near Powelson, Ga., March 8, 1822; d. Baltimore, Md., Sept. 23, 1898. He was graduated at Mercer University in 1841; was admitted to the bar in 1843; and began practice in Sparta, Ga., the same year. He was professor of literature in the University of Georgia in 1857-1861, and served as colonel in the Confederate service during the Civil War. He established a boys' boarding school at Rockley, near Sparta, which he removed in 1867 to Baltimore and of which he was the head for many years. His publications include *Ogeechee Cross-Firings* (1889); *Studies, Literary and Social* (1891-1892); *The Primes and Their Neighbors* (1891); *Mr. Billy Downs and His Likes* (1892); *Autobiography of Col. Richard Malcolm Johnston* (1900).

JOHNSTON, Robert Matteson, American historian: b. Paris, France, April 11, 1867; d. Cambridge, Mass., Jan. 28, 1920. He studied in France, England, and Germany, graduating (M.A.) at Cambridge University (1889), and becoming barrister-at-law of the Inner Temple, London. He was lecturer on history at Harvard and Mount Holyoke colleges (1904), professor of history at Bryn Mawr College (1907-1908), and professor of history at Harvard after 1908. He wrote *The Roman Theocracy and the Republic* (1901); *Napoleon, a Short Biography* (1904); *The Napoleonic Empire in Southern Italy*, 2 vols. (1904); *Memoirs of "Malakoff"*, 2 vols. (1907); *Leading American Soldiers* (1907); *The French Revolution* (1909); *The Corsican* (1910); *Holy Christian Church* (1912); *Mémoire de Marie Caroline, Reine de Naples* (1912); *Bull Run* (1913); *Arms and the Race* (1915); and *First Reflections on the Campaign of 1918* (1920).

JOHNSTON, Samuel, American lawyer and statesman, nephew of Gabriel Johnston (q.v.): b. Dundee, Scotland, Dec. 15, 1733; d. near Edenton, N. C., Aug. 17, 1816. His father, Samuel, came to North Carolina in 1736, became surveyor general and acquired large landed estates. The son chose the profession of the law, and was clerk of the Superior Court in Chowan County for five years from 1767, and served there also as naval officer under the Crown. Elected to the assembly in 1769, from the first he espoused the popular side, and in the year

773 the assembly placed him on its standing committee of inquiry and correspondence, the organ by which it sought to cooperate with the other provinces. This was the first decisive step toward revolution taken by the legislature of North Carolina. He was an active member of the first two provincial congresses in this province. The 3d and 4th met at his summons, and he presided over the deliberations of both. In the fall, August 1775, the political organization of the province was decided on and the supreme executive authority was entrusted to a provincial council, of which he was made the chairman, and he virtually the governor of the province. In September 1775 he was chosen treasurer for the northern district of North Carolina. In 1781-1782 he was a member of the Continental Congress; in 1787 he was elected governor of the state; and in 1788 he presided over the convention which rejected the federal Constitution, which, however, he supported with all his influence. He was United States senator from 1789 to 1793; and judge of the Superior Court in 1800-1803.

JOHNSTON, William Preston, American educator: b. Louisville, Ky., Jan. 5, 1831; d. Lexington, Va., July 16, 1899. A son of Albert Sidney Johnston (q.v.), he was graduated from Yale in 1852 and took a degree at Louisville Law School the following year. During the American Civil War he served in the Confederate Army as aide-de-camp to Jefferson Davis. Soon thereafter he became professor of history and literature at Washington and Lee University, remaining there until 1877. In 1880 he was appointed resident of Louisiana State University; and after its merger in 1884 with Tulane University he headed the latter institution until his death. He published a biography of his father in 1878, and wrote *The Prototype of Hamlet and Other Shakespearean Problems* (1890).

JOHNSTON, town, Rhode Island, in Providence County; 5 miles southwest of Providence, with no rail connection. This is a busy textile town, surrounded by farmlands. The major industrial establishments are worsted mills, manufacturing yarns. First settlement on this site was in 1650. Originally a part of Providence, Johnston became a separate community in 1759. It was named for Augustus Johnston (c.1730-c.1790) of Newport, attorney general of Rhode Island colony, 1757-1766. Pop. (1950) 12,725.

JOHNSTON ISLAND, an atoll in the North Pacific, 800 miles southwest of Honolulu, possession of the United States. A reef 12 miles in circumference encloses two barren coral islets—Johnston and, northwest of it, Sand Island. There is no permanent population. The atoll was discovered in 1807 by the British warship *Cornwallis*, commanded by Capt. Charles Mervyn Johnston, and originally was named for the vessel rather than for its commander. Claims to ownership were put forward in 1858 by both the kingdom of Hawaii and the United States, nationals of both countries at that period being interested in its guano deposits; annexation of Hawaii in 1898 confirmed American sovereignty. The atoll was used as a native bird sanctuary, and administration of it was entrusted to the Navy Department by Executive Order No. 6935, dated Dec. 29, 1934. Because of its value as a landing place for planes, in 1941 it was pro-

claimed a naval defense area, foreign visitors being forbidden approach.

JOHNSTOWN, city, New York, Fulton County seat, altitude 660 feet, eleven miles west-northwest of Amsterdam, on highways 29, 67, and 148, served by Fonda, Johnstown and Gloversville bus connecting at Fonda with the New York Central Railroad. Situated on the fertile Cayadutta Plateau, Johnstown is a city of fine residences and is an important glove manufacturing center with trade traditions reaching back to the 1760's when a group of glovers from Scotland settled here to make gloves for local sale. Johnstown's other industries include knit goods, leather and gelatin. There are also textile mills, lumber mills, machine shops and tanneries. Johnstown was founded by Sir William Johnson (q.v.) about 1760. His baronial mansion, built by him in 1761-1762, is a colonial type structure which has a tunnel connecting with a heavy stone blockhouse. This Manor House was purchased by the state in 1907 and is now a regional museum managed by the Johnstown Historical Society. The Tryon County Court House erected by Sir William in 1772 is still in use as the Fulton County Court House. Johnstown was incorporated as a village in 1808, and was made a city in 1895. Pop. (1950) 10,923.

JOHNSTOWN, city, Pennsylvania, in Cambria County, altitude 1,170 feet, on the Conemaugh River at the mouth of Stonycreek, about 76 miles southeast of Pittsburgh; it is served by the Pennsylvania and the Baltimore and Ohio railroads. The city lies in a picturesque valley about five square miles in extent which is closely surrounded by steep mountain ranges. It is the center of an important iron ore and bituminous coal mining region; and there are limestone quarries, clay pits, and abundant water power.

The city is a notable industrial center, with iron and steel plants extending for many miles along the river; numerous other manufactures include radiators, mining equipment, chemicals, textiles, stoves, bricks, cement blocks, glass, furniture, and soap.

Johnstown Center, a junior college of the University of Pittsburgh, is here, and the city has art and music associations. Nearby points of interest include the Gallitzin State Forest; Conemaugh Gap, in Laurel Mountain; Stackhouse Park, a bird sanctuary and recreational center; and the immense Quemahoning Reservoir.

Johnstown attained its high civic and industrial development despite repeated ravage by disastrous floods. The most tragic of the city's floods occurred May 31, 1889, resulting from the destruction of a dam across South Fork (a tributary of Conemaugh River) under the pressure of the rain-swollen waters of the three-mile-long Lake Conemaugh. The second most disastrous of Johnstown's floods was in 1936. In the 1936 flood Johnstown's famous Inclined Plane 895 feet long and 504 feet high, which connects the city with its suburban heights, was used effectively in rescue work; its two counterbalanced cable cars are capable of carrying 80 passengers and two automobiles each. During 1938-1942 U.S. Army engineers undertook a flood control project at Johnstown at a cost of \$7,610,000. Johnstown was laid out in 1800 by Joseph Schantz, or Johns, a Swiss. First called Conemaugh and later named for Johns, it was

incorporated as a village in 1800, borough in 1831, and city in 1889. Pop. (1950) 62,723.

JOHORE, jô-hôr', state, Federation of Malaya, at the southern extremity of the Malay Peninsula. It is bounded on the northeast by Pahang, on the northwest by Negri Sembilan and Malacca, and on the west and east coasts by the Straits of Malacca and the South China Sea, respectively; at the extreme south is Johore Strait, $\frac{3}{4}$ mile wide and 32 miles long, across which lies the British island colony of Singapore. Johore has an area of 7,500 square miles, and the population in 1948 numbered 753,891. The capital is Johore Bahru (pop. 38,849), on Johore Strait. Other towns include Bandar Maharani (or Muar), Bandat Penggaram, and Kluang. The highest point is Mount Ophir (Gunong Ledang), 4,186 feet in height, in the northwest part of the state close to the border of Malacca. The principal rivers are the Muar (100 miles long), in the northwest, and the Endau (80 miles), in the northeast. Tin and iron ores are mined, but plantations of rubber constitute Johore's greatest economic asset. There are also oil palm plantations, as well as large areas devoted to coconuts and rice. The Malayan Railway traverses the state. The sultan of Malacca, expelled by the Portuguese in 1511, fled southward and founded the state of Johore. In 1819 Johore ceded Singapore to the East India Company, and, in 1885, the state came under British protection. A rail and road causeway across Johore Strait, completed in 1923-1924, links the state with the colony of Singapore. In common with the other states of the peninsula, in 1946 Johore entered the Malayan Union; this was reorganized in 1948 as the Federation of Malaya.

JOINERY, the industry and art of joining wood, stone, or metal-work by sawing, planing, crosscutting, and the like, connecting by means of glue, framing, nails, cement, or bolts, and fitting the construction for the internal and external furnishings of buildings and ships and for various articles of furniture. In woodwork, grooving, tonguing, mitering, mortising, molding and beading, wedge-cutting, and boring are performed by means of a power tool with different attachments called the joiner. See also BALL and SOCKET; CABINETMAKING; CARPENTRY.

JOINT, in anatomy, an articulation or connection between bones. Many of the immovable joints are so close in their union that the two bones practically become one, as in the dovetailed sutures of the skull. In the make-up of a movable joint there are the two bones, and covering the surface of each a layer of tissue of rubbery consistency called cartilage; binding the bones together are firm inelastic bands of tissue called ligaments. Over the surface of the cartilage and the inner surfaces of the ligaments there is a thin, smooth layer of tissue, the synovial membrane, which is kept constantly moist with an oily fluid to prevent friction. Joints are classified according to the variety of motions they allow: the freest is the ball-and-socket joint, as seen in the hip and shoulder.

Diseases of Joints.—Joint diseases are distinguished by names that indicate the principal structure involved and the causes of disease. Where the cause is a specific disorder, as tuberculosis, rheumatism, syphilis, or gonorrhoea, the

name of that particular malady is given to the inflammation. The only structure of a joint that is apt to be involved alone is the synovial membrane, and inflammation of this structure is called synovitis. Inflammation of all the joint structures is called arthritis, and, where the bone is the primary seat of the trouble, or is principally involved, the name osteoarthritis is used.

Synovitis.—This condition results from injuries (sprains, bruises, and wounds), from overuse acting as an injury, and from poisons circulating in the blood. The joint is painful, moves with greater pain and may be red outside. Blood serum is poured out and the synovial sac is distended. (This condition constitutes "water on the knee.") The general symptoms and severity depend on the cause of the trouble. Absolute rest of the joint and pressure by a snug bandage hasten recovery. When such injuries are repeated, or when the inflammation is slight but persistent, painting with iodine tincture may be of value. When the condition of inflammation reaches the suppurative stage all the structures of the joint are involved and the condition is considered under the term arthritis.

Arthritis (Nonspecific).—This is due to the extension of disease of contiguous bone, or it may result from wounds or in the course of various diseases. The joint becomes swollen, red, and very painful, and the general symptoms are severe. When the poison is sufficiently virulent suppurative arthritis results and the pus collects in the synovial sac. (See INFLAMMATION.) In this condition the joint becomes "boggy," and the poisoning of the entire system is so severe as to warrant the most radical measures for relief. Opening the joint and allowing the escape of the pus, with thorough cleansing, may be sufficient or the limb may have to be sacrificed. See ARTHRITIS; ARTHRITIS, RHEUMATOID; GOUT SYPHILIS.

Bursitis.—An inflammation of a bursa, a serous, lined sac or space situated in a part of the body where there is likely to be increased friction from the movement of adjacent parts. The commonest localities are the shoulder, elbow, knee, hip, and the Achilles tendon. Symptoms are pain on movement of a joint or muscle, and swelling occasionally with an evidence of fluid within the bursa.

Knock-knee.—This is a deformity of the legs consisting in the angular projection of the knees inward, and is sometimes called in-knee. It arises in children learning to walk who are affected with rickets. The deformity is due to the faulty growth of the bones which enter into the joint. In early life, correction of it may be secured by splints and braces; but when the bones become less pliable, the femur, the tibia, or both, may have to be severed by chiseling and the bones held in the normal line by plaster casts until union has taken place. See also RICKETS.

Charcot's Disease.—The peculiar form of arthritis thus named occurs in the course of locomotor ataxia, the knee joint usually being the one affected. The joint swells painlessly, the structures are worn away, and the function of the joint is lost.

Sprains.—These are wrenches resulting in more or less stretching or laceration of ligaments, hemorrhage in and around the joint, and sometimes the displacement of tendons. The part usually swells at once and movement causes severe pain. An injury of this nature may closely re-

semble a joint-fracture. Absolute rest of the joint must be insisted upon, as synovitis may follow. Alternating hot and cold applications, if started early, lessen the damage. The joint should then be snugly bandaged and kept so until swelling and tenderness disappear.

Wounds of Joints.—Injuries of this nature may cause damage directly to the structures or by infecting the joint and producing arthritis. Penetration into the synovial sac is indicated by an escape of the viscid fluid.

Floating Cartilages.—These are rarely seen except in the knee-joint, where they are ordinarily due to a small portion of cartilage being bitten off between the bones; this piece then floats around in the synovial sac and causes trouble when the bones lock together on it. When this occurs, the patient falls to the ground because of the severe pain. The synovial membrane is injured and is apt to be mildly inflamed. These bodies may sometimes be felt through the skin and can be held, by holding the joint in the same position, until an opening is made; but ordinarily when the attacks become so frequent as to be unbearable the joint has to be opened and searched.

JOINT-SNAKE. See GLASS-SNAKE.

JOINT STOCK BANKS. See BANKS AND BANKING — WORLD'S SYSTEMS

JOINT STOCK COMPANY, or ASSOCIATION. The usual definition in law of this term is that a joint stock company is an association of individuals for the purposes of profit, possessing a common capital, being divided into shares, of which each member possesses one or more, and which are transferable by the owner. It is distinguished from ordinary partnerships in that the death or withdrawal of an ordinary partner brings a dissolution of the firm, whereas in the case of joint stock companies death or withdrawal of interest does not involve dissolution. The members of a joint stock company, contrary legislation absent, are liable for all debts of the association the same as partnership members, and a similarity exists respecting other essential features. The joint stock company is distinguished from a corporation inasmuch as in the latter case its shareholders are liable for the debts of the company only to the extent of the share of the capital stock actually contributed by them, whereas members of a joint stock company are liable to contribute to the debts of the company. With these exceptions both forms of association are similar. Statutory enactments in England and the United States have been passed regulating their government. In England the Companies Act of 1862 provides "any seven or more persons associated for any lawful purpose may, by subscribing their names to a memorandum of association, and otherwise complying with the requisitions of the act in respect to registration, form an incorporated company, with or without limited liability." In cases where the intention of the company is that its members shall be subject only to limited liability the word "Limited" has to be stated in the company's title. Joint stock companies have been formed in large numbers under this law and have become one of the most important forms of commercial exploitation in England. In the United States statutes have

been passed regulating the organization, government and management of joint stock companies, fixing the minimum number of members, authorizing the companies to sue or be sued in their own name, providing for the methods of management and establishing the extent of the liability of the members. The usual requirements mentioned in these statutes are that they record articles of association together with names of the members, amount of capital, name of company and character and location of the business. In general it may be asserted that at least one meeting of the members each year is provided by law or the articles of the association, timely notice being given the members as to time and place of said annual meeting. At this annual meeting the stockholders elect their officers by vote. A statute securing to minority stockholders in corporations the power of electing a representative in the board of directors does not apply to joint stock associations unless so incorporated in its articles. Contracts with joint stock associations can be made only with the officers or managers as stated in the associations' articles or as contained in the statute. As a joint stock company has the character and power, substantially, of a corporation, it may be served with process in a foreign jurisdiction. All the members, statutory regulation being absent, are parties to an action either by or against a joint stock association. While suit against members or officers individually is not valid, statutes generally provide that suits may be instituted in the name of a designated officer, as the president or treasurer of the company. But if judgment is properly rendered against a president as such, it does not bind his individual property. Dissolution is usually by consent of the members mutually, but the consent must be unanimous if the association is formed for a special period. Joint stock companies have not gained such popularity here as in England, the laws of corporations being less drastic in the United States than in England. Consult Birdseye, 'New York Statutes,' article 'Joint Stock Associations' (New York 1901); Hurrell and Hyde, 'Law of Joint Stock Companies' (London 1898); Lindley, 'The Law of Companies' (ib. 1889); Scott, 'The Constitution and Finance of English, Scottish and Irish Joint Stock Companies to 1720, Vols. I-III' (Cambridge 1910-12); Lomnitz, H., 'Die Systematische Beurteilung der Veröffentlichungen von aktiengesellschaften' (Leipzig 1908). See CORPORATIONS, HISTORY; CORPORATIONS, LEGAL.

JOINT TENANTS, persons who hold or own lands jointly, by title created expressly by one and the same deed or will. It has been uniformly held by the courts that a unity of possession derived by several and distinct conveyances does not constitute a joint tenancy, but rather a tenancy in common. Joint tenants must have the same interest, derived from the same conveyance, commencing at one and the same time, and held by a united possession. The duration of the estates must be alike in both and also the interest. Should one hold under the conveyance for a term of years, and the other for life, the possession even for a term of years would not be a joint tenancy. The estate must vest in each tenant at the same time. In the case of a will which gives one an

interest to commence at a day named and another an interest to commence a year later, no joint tenancy is created thereby. Should one receive an interest absolute and another an interest for life, the relation of joint tenants would not be created. The doctrine of survivorship is the distinguishing incident of title by joint tenancy. In the event of the death of one of the joint tenants, the survivor is entitled to the whole property, and the full title immediately vests in him. This is not an incident of tenancy in common. Many of the States of the Union have abolished title by survivorship in joint tenancy by constitutional provisions or by express statute enactments. In other States acts have been passed abrogating the distinction between joint tenants and tenants in common; and inheritance by survivorship not being an incident of tenancy in common, such acts are construed by the courts as abolishing such inheritance. Such acts do not apply to existing joint tenancies, but only to such as may be created after the enactment. Consult Kent, J., 'Commentary on American Law' (14th ed., 4 vols., Boston 1896); Blackstone, W., 'Commentaries' (4th ed., 2 vols., Chicago 1899).

JOINT-WORM. See CHALCIS FLIES; WHEAT INSECT-PESTS.

JOINTS, breaks or fractures in the rocks of the earth's crust, dividing them into larger or smaller blocks. They differ from faults (q.v.) only in that the latter have undergone relative slipping of one wall past the other. Joints may be produced either by tension or compression. Columnar jointing (q.v.) in basalts is a good illustration of the former. The latter usually occurs in regions of folding. Joints when very small and closely spaced produce fracture cleavage (q.v.) in rocks. When a large number of joints are parallel they form a joint system. In sedimentary rocks two prominent systems often occur nearly at right angles to each other causing the rock to break in nearly rectangular blocks. When joints become filled with mineral matter they form veins (q.v.). Jointing aids in ground water circulation, particularly in non-porous rocks like granite. It is also an aid in quarrying, unless the joints are too closely spaced, in which case they destroy the value of the rock.

JOINTURE, join'tür, a settlement of lands and tenements made to a woman in consideration of marriage, as a substitute for dower. Originally it was a joint estate limited to both husband and wife as a joint tenancy and subjected to survivorship. The wife takes nothing under the settlement until after the death of the husband, unless special provisions are incorporated, which in reality modifies the effect of a regular jointure. In some settlements, denominated jointures, provisions are inserted to the effect that they are not to exclude enjoyment of dower; but such provisions are an innovation upon the established province of jointures. A good jointure must provide that it shall take effect, in possession and profit, immediately after the death of the husband; that it shall be for the life of the wife herself, and cannot be left in trust for her use and benefit. It should be provided that it is in settlement of all dower interest, in order to maintain its distinctive features of jointure. The settlement must be executed before marriage, as marriage

constitutes the entire consideration for the jointure. Such an instrument properly executed before marriage is binding on the wife and a complete bar to dower in any dowerable lands owned or conveyed by the husband during the marital relations. Without the intervention and assistance of legislative action, no other form of agreement is effectual to bar dower. It sometimes happens that the wife is deprived of her jointure by lawful acts to which she is not a party, as by the lands being taken for public purposes, or in some other manner equally legitimate. In such a case the settlement does not bar her claim against the husband's estate to the extent to which she is deprived of her jointure.

JOINVILLE, zhwăn'vèl', François Ferdinand Philippe Louis Marie d'Orléans, PRINCE DE, third son of Louis Philippe: b. Neuilly, 14 Aug. 1818; d. Paris, 16 June 1900. He entered the naval school at Brest and was made lieutenant in 1836. He distinguished himself (1838) outside Vera Cruz when the war was declared against Mexico. In 1843 he married Princess Francesca of Braganza, sister of Don Pedro II, and he was created vice-admiral in 1845, sitting meanwhile in the Chamber of Peers. The Revolution of 1848 forced his exile to England, leaving, in 1861, for the United States accompanied by his son, the Duc de Penthièvre, and his nephews, the Comte de Paris and the Duc de Chartres. They entered the service under General McClellan. In 1870 he was again in France and, as Colonel Lothérod, was actively present in the 15th Corps before Orléans. He was arrested under instructions of Gambetta and interned five days at the prefecture of Mans and then returned to exile in England. At the 1871 elections he was chosen as representative of both La Manche and Haute-Marne and took the latter seat in the assembly. He retired from politics, but (1886) had to return to exile when the law again banished the royal families. Returning to France in 1895 he died there. He wrote numerous articles on history and the navy which appeared in the *Revue de Deux Mondes* signed as manager or director of that publication; they have since been published in collective form under the title 'Essais sur la marine française: L'escadre de la Méditerranée' (Paris 1853), and 'Études sur la marine et récits de guerre.' His 'La guerre d'Amérique, campagne du Potomac' had its second edition in 1872. In 1894 he published some of his interesting memories of the year 1848 in 'Vieux souvenirs, 1818-1848.'

JOINVILLE, zhwăn-vèl', Jean, STRE DE, French historian: b. Champagne, 1224; d. 24 Dec. 1317. He early entered the service of Thibaut, king of Navarre, and in 1248 raised a troop of 9 knights and 700 armed soldiers, and accompanied Louis IX in his first crusade to the Holy Land. He rose high in favor with Louis, shared his captivity, returned with him to France in 1254 and spent much of his time at court. In 1283 he became governor of Champagne during the minority of Jeanne de Navarre. In 1315 he volunteered to accompany Louis X in his expedition against Flanders. His 'Histoire de Saint Louis,' is one of the most valuable specimens of early French prose. It consists of an elaboration of scattered notes

aken during his military expeditions, combined with hearsay and tradition. It gives a lavish account of King Louis, relating his heroic deeds and his many meritorious qualities. His papers of chancellery are annotated with various remarks of historical interest. The *Histoire* has survived in three manuscripts, first edited in 1546. The best edition with a translation into later French is by N. de Wailly in *Société de l'histoire de France*, 4 vols. (1874). In addition to this work, Joinville is also credited with a *Credo* first reproduced in facsimile in *Mélanges de la société des bibliophiles français* (1837). His chancellery reports are edited in *Bibliothèque de l'école des Chartes* (1867).

JOKAI, yō'koi, Maurus, mou'rōos, or Mór, Hungarian novelist; b. Komárno, Feb. 19, 1825; d. Budapest, May 5, 1904. In 1846 he received his advocate's diploma, but from an early age devoted himself to literary work. In 1842 he produced a drama, *The Jew Boy*; in 1846 his first novel, *Workingdays*, was published; and in 1847 he issued a collection of stories entitled *Flowers of the Desert*. He served the cause of Hungarian independence in the revolutionary movement of 1848, and after its failure was a political suspect during the period of his greatest literary productivity. His *Revolution and Battle Pictures* appeared in 1849. He devoted himself with extraordinary energy to journalistic and literary work, producing in all more than 300 volumes. He was a member of the Hungarian Parliament and the recognized leader of the Liberal opposition after the restoration of the constitution; and in 1897 was appointed a life member of the House of Magnates. He was a successful newspaper editor continuously from 1858 until his death, his last paper being the *Nemzet* (Nation).

He is best known for his numerous romances and novels. Among the latter are *Transylvania's Golden Age* (1851); *The Man with Two Horns* (1852); *The Turks in Hungary* (1852); *A Hungarian Nabob* (1854); *Kárpáthy Zoltan* (1855); *Political Fashions* (1861); *The New Landlord* (1862); *The Romance of the Next Century* (1874); *Our Days* (1881); *The Man of Gold or A Modern Midas* (1886); *There is no Devil* (1891); *Dr. Dumany's Wife* (Eng. trans. 1891); *In Love With the Caarina* (Eng. trans. 1894); *The Nameless Castle* (Eng. trans. 1891); *The Green Book* (Eng. trans. 1897); *The Lion of Janina* (Eng. trans. 1897); *The Poor Plutocrats* (Eng. trans. 1899); *Debts of Honor* (Eng. trans. 1900); *The Baron's Son* (Eng. trans. 1900); *The Day of Wrath* (Eng. trans. 1900). His best plays are *King Kolomon* (1855); *Manlius Sinister* (1856); *Georg Dósa* (1858); *The Martyrs of Szigetvár* (1859), and *Milton* (1878). His *Political Poems* appeared in 1880.

Consult Névy, László, *M. Jokai* (1894), and Temperley, H. W., "Maurus Jokai and the Historical Novel," in the *Contemporary Review*, July 1904; and biographies by Szigmond, F. (1924), and Gál, T. (1925).

JOKJAKARTA, variant of Djokjakarta (q.v.).

JOKULSA, yū'küls-ou, the name of three rivers in Iceland, the largest of which flows north into the Arctic Ocean and contains the Dettifoss, a waterfall 257 feet high. The other two rivers flow into the Skaga Fjord and the Norwegian Sea respectively.

JOLIBA, jōl'ī-bā, a native African name for

the upper Niger River from its source to the northernmost point of the bend.

JOLIET, zhō-lyé', Charles, French journalist; b. St. Hippolyte-sur-le-Doubs, Aug. 8, 1832; d. March 1910. He received his education at the College of Chartres and the Versailles Lyceum. He secured a place in the civil service in 1854, meanwhile writing occasionally for the newspapers. He published *L'Esprit de Diderot* in 1859. After 1864 he devoted himself exclusively to journalistic and literary pursuits. His *Le roman de deux jeunes mariés* (1866) and *Mademoiselle Chérubin* (1870) were very successful. He became known especially for his novels treating incidents of the Franco-Prussian War, among them *Les romans patriotiques* (1871); *Le train des maris* (1872); *Trois uhlands* (1872). Other well-known works were *Le crime du pont de Chatou* (1882); *Violette* (1890).

JOLIET, jō'li-et, city, Illinois, Will County seat; altitude 607 feet; on the Des Plaines River, and the Great Lakes-Gulf Waterway; on the Alton; Michigan Central; Chicago, Rock Island and Pacific; Atchison, Topeka and Santa Fe; Elgin, Joliet and Eastern; and Chicago, Milwaukee, St. Paul and Pacific railroads; 40 miles southwest of Chicago. The region roundabout is fertile farmland while near the city are coal deposits and limestone quarries. The city is a railroad and industrial center with railroad shops, steel mills, automobile factories, oil refineries; and has manufactures of wall paper; wire and wire products; roofing materials, horseshoes, chemicals, art calendars, stoves and furnaces. There is a junior college here and the College of St. Francis, for women. Joliet has a public library, parks, playgrounds, and recreational centers. Pilcher Park Arboretum is planted with wild flowers, shrubs, and a large variety of trees. Bird Haven affords sanctuary to birds of many kinds. It also contains a greenhouse with a desert room for a collection of cactus. Two state penitentiaries are located here. Prominent among engineering projects in the vicinity is the Great Lakes-Gulf Waterway. Two locks and dams were constructed, one having a lift of 41 feet and the other 31. For two miles within the city the waterway is contained within concrete walls. First settlement of the site was made in 1831. It was chartered as a city in 1859, and named for the French-Canadian explorer, Louis Jolliet (q.v.), who with Marquette visited the site in 1673. Joliet's government is administered by a commission. Pop. (1940) 42,365; (1950) 51,601.

JOLIETTE, zhō-lyét', city, Canada, Province of Quebec, county town of Joliette County, on L'Assomption River, 36 miles north of Montreal, on the Canadian National and Canadian Pacific railways. Its industries include lumber, grist, woollen and paper mills; chemical, textile, clothing, confectionery, leather and other factories. Joliette has a Roman Catholic cathedral, a classical college, a normal school for girls, 2 academies, 7 public schools, a hospital (Roman Catholic, 185 beds) and 2 orphanages. The city owns and operates its light and water systems. It was founded in 1841, incorporated in 1863. Pop. (1951) 16,064.

JOLIN, yōō-lēn', Johan Kristofer, Swedish dramatist; b. Stockholm, 1818; d. 1884. He was

engaged as actor at the Stockholm Theatre in 1845–1868 and for part of that time also served as reader and director of the dramatic school. He wrote a number of clever, witty plays, and some novels and sketches. His plays are *Mäster Smith* (1847); *Barnhusbarnen* (1849); *Mjöl-narfröken* (1865); *En man af verld och en man af värde* (1846); *Min hustru vill ha roligt* (1868) and *Smdlands-Petter* (1883). Jolin's complete works were issued in 15 volumes (1872–1888).

JOLINE, Adrian Hoffman, American lawyer: b. Sing Sing (now Ossining), N. Y., June 30, 1850; d. Oct. 15, 1912. In 1870 he was graduated at Princeton University and in 1872 was graduated in law at Columbia University and was admitted to the bar in the same year. At the time of his death he was senior member of the firm of Joline, Larkin and Rathbone. He acquired vast transportation interests; was president of the Missouri, Kansas and Texas Railroad and also the Texas company of the same name from 1906 to 1909; was director of the Albany and Susquehanna Railroad Company, the American and Foreign Marine Insurance Company, the National Surety Company, the United Traction and Electric Company and the Chatham Phenix National Bank. After 1907 he acted as receiver of the Metropolitan Street Railway Company of New York, and he was also known as an expert on railroad legislation and corporation law in general. Mr. Joline was a great booklover and collector of rare works. He wrote *Meditations of an Autograph Collector* (1902); *Diversions of a Book Lover* (1903); *At the Library Table* (1909); *Edgehill Essays* (1910); *Rambles in Autograph Land* (1913).

JOLIOT-CURIE, zhô-lyô' kû-rê' (originally Joliot), **Frédéric and Irène**, French physicists. M. Joliot was born in Paris, France, on March 19, 1900. He was educated at the Paris Institute for Physics and Chemistry and at the Paris Radium Institute. As a preparator to Mme. Marie Curie at the latter place, he met his future wife who also held the same position. Mme. Joliot-Curie (daughter of Pierre and Marie Curie) was born in Paris on Sept. 12, 1897 and was also educated there, receiving the doctor's degree at her mother's institute in 1925. She succeeded to her mother's position there in 1932. The theses of both husband and wife were concerned with alpha-particles. Much of their later work has been done together. They have studied neutron reactions of nuclei, positron emission and the nuclear photoelectric effect. Their alpha-particle studies led to the discovery of artificial radioactivity and the chemical identification of the reaction products. For this work they received the Nobel Prize in 1935. Their early work on the uranium reaction helped to an understanding of the fission process. Mme. Joliot-Curie was undersecretary for scientific research in the cabinet of Léon Blum in 1936, the first woman to hold such a post. M. Joliot was appointed alternate delegate and scientific adviser to the French member of the International Atomic Energy Commission of the United Nations (1946). A Communist Party member since 1946, he was dismissed from his post of French high commissioner for atomic energy in 1950, and a year later received the Stalin Peace Prize. His wife was dropped from the French atomic energy commission in January 1951.

JOLLIET, jôl-y-ét', Fr. zhô-lyé'; or JO-LIET, jô-li-ét', Louis, Canadian explorer: b. Quebec, Sept. 21, 1645; d. Canada, May 1700. He was educated at the Jesuit College of Quebec, and subsequently engaged in the fur trade on the western frontier, thereby becoming familiar with the missionaries and tribes. He was selected by the governor, Louis de Buade, Comte de Palluau et de Frontenac, to ascertain the direction and mouth of the Mississippi, a few of whose affluents had already been visited by missionaries and traders. Starting with his companion, the illustrious Father Jacques Marquette (q.v.), and five other Frenchmen, from Green Bay in June 1673, he ascended the Fox River, portaged to the Wisconsin and descended it to the Mississippi. Canoeing downstream they attained the mouth of the Arkansas.

Having ascertained with tolerable accuracy the general course of the stream, and that it emptied into the Gulf of Mexico, they returned to Green Bay by way of the Illinois River and Chicago portage and Lake Michigan. They had traveled some 2,500 miles. Jolliet went on to Quebec, but lost his journal and other papers when his canoe overturned in the rapids above Montreal. He wrote out from memory a brief description of the voyage, which agrees with the narrative of Marquette, and also prepared a map of the region explored. The French government rewarded him for his services with the island of Anticosti at the mouth of the St. Lawrence, where he built a house and fort for his family. He made further exploratory journeys to Hudson Bay, the St. Lawrence estuary, and charted the coasts of Labrador. In 1691 his island was taken by the British and his property destroyed. In 1697 a seignory was given him, and he was made Canadian royal hydrographer.

Consult Parkman, F., *La Salle or the Discovery of the Great West* (1869); Gagnon, E., *Louis Jolliet, découvreur du Mississippi* (1913); Kellogg, L. P., *The French Regime in the Northwest* (1925).

JOLLY BALANCE, a spring balance devised by Prof. Philipp von Jolly, of the University of Munich, for determining the specific gravities of small objects. In its usual form it consists essentially of a long spiral spring of fine wire, to the lower end of which two pans are attached, one above the other. The lower pan is kept immersed in water, while the upper one remains in the air. The object whose specific gravity is to be determined is placed in the upper pan first, and the extension of the spring due to the weight of the object in the air is noted. The specimen is then transferred to the lower pan (where it will be under water), and the extension of the spring under these new conditions is also noted. The specific gravity of the specimen is then obtained by dividing the extension of the spring when the object is in the air by the difference between the two extensions as observed for air and water, respectively. The extension of the spring is observed by means of a graduated scale engraved upon a mirror that is placed back of the spring, and parallel to it. In taking a reading, the eye is brought into such a position that the image of the pupil is seen in the mirror directly behind the image of the pointer at the lower end of the spring. In this way errors of parallax are avoided in the readings. The Jolly balance is chiefly used for the rapid determination of the specific gravities of minerals at

similar objects, where great precision is not essential.

JOLLY BEGGARS, The. This poem is one of many instances of Robert Burns' range of gifts and interests. He had always had a taste, he says in a letter, for the company of blackguards, though he had no ambition to become one. The poem is called a cantata; and is, indeed, an opera of beggary, with the scene laid in Poosie Nansie's hedge alehouse; and the characters, all noisy vagrants from roaming the world, rising one after another, with short introductions of them in recitativo, to sing of their braveries and loves, lusts, debaucheries, of the highways, the hedges, of old days, and soldier boys and youth. The whole piece is done in the manner of Jan Steen and Ostade among the painters; and in literature, of the folk ballads, of Swift, Rabelais, Fielding, and Shakespeare's Falstaff.

The frequent tendencies in later decades to something of the broad realism of earlier periods, help clear the way for *The Jolly Beggars* of the apologetic types of criticism from which it has often suffered, and make possible a more honest and direct approach. The chief excellence of the work lies in its power of minstrelsy, which here takes the direction of coarse, carousing, bludgeoning humor, genuine balladry of the highway people: one of the best pieces in English of genre, it is kept perfectly to one key.

The Jolly Beggars was written in 1785, after a visit to an alehouse where a party of vagrants were carousing; but out of consideration for his public's sense of propriety, Burns excluded it from his published work. So that the poem was first printed, though only in part, in 1799, from a manuscript given to friends. In 1801 another manuscript was added to the first, making the poem complete as it now stands.

STARK YOUNG.

JOLO, hō'lō, or SULU, sōō'lōō, seaport, Philippine Islands, capital of Sulu Province, located on the northwest coast of Jolo Island, the principal island of the Sulu Archipelago. The island, 345 square miles in area, lies between the Sulu Sea and Celebes Sea, southwest of Basilan Island. Three parallel mountain chains cross the island, the highest peak being 2,894 feet above sea level. Most of the inhabitants are Moros; they raise stock and engage in fishing, and to a lesser extent cultivate the rich volcanic soil. The seaport is a center of the pearl fishing industry and has a considerable transshipment trade with Zamboanga, Manila, and Singapore. The sultans of Sulu formerly resided at Jolo. The modern town was founded by the Spaniards in 1878. On April 9, 1945, during World War II, United States forces reoccupied Jolo and thus secured complete control of the Sulu Archipelago. Pop. of municipality (1948) 18,202.

JOLY, jōl'i, John, Irish physicist: b. Holly-wood, Ireland, 1857; d. Dublin, Dec. 8, 1933. He was educated at Trinity College, Dublin, and in 1882 joined the faculty as demonstrator in civil engineering. In 1893 he was appointed demonstrator in experimental physics, and in 1897 he became professor of geology and mineralogy at the University of Dublin. Instruments devised by him included a diffusion photometer which was named for him. He was also a pioneer in

color photography, perfecting a method which was used in 1897 for making lantern slides. Other inventions included a melometer, to determine the melting points of minerals, and a steam calorimeter. With Walter Clegg Stevenson (1877-1931), a Dublin surgeon, he perfected a method in radium therapeutics for securing uniform radiation which was used in the treatment of cancer. He also conducted researches on the crust formation of the earth. In 1911 he was awarded the Boyle medal of the Royal Dublin Society. He was one of the editors of the *Philosophical Magazine*, and he published *Radioactivity and Geology* (1915); *Synchronous Signalling in Navigation* (1920); *The Surface History of the Earth* (1925).

JOLY DE LOTBINIERE, zhō-lē dē lō-bēnyār, Sir Henri Gustave, Canadian politician: b. Epernay, France, Dec. 5, 1829; d. Quebec, Nov. 15, 1908. In 1888 he changed his surname from Gustave to Joly de Lotbinière—his mother's family name. He was called to the bar of Lower Canada in 1855, and he first entered the provincial house of assembly in 1861. From 1867 to 1874 he served as a Liberal in the House of Commons, at Ottawa, and in the provincial legislative assembly, at Quebec. During 1878-1879 he was provincial premier of Quebec, and thereafter he led the opposition until 1883. He received a knighthood in 1895, and from 1897 until 1900 he was minister of inland revenue. He was lieutenant governor of British Columbia, 1900-1906.

JOMARD, zhō-mār', Edmé François, French geographer and Egyptologist: b. Versailles, Nov. 27, 1777; d. Paris, Sept. 23, 1862. In 1798 he went to Egypt with the French army as a member of the scientific commission. Returning to France in 1802, he was appointed secretary of the commission, and in this capacity he edited for 20 years the *Description de l'Égypte*. He was one of the founders in 1821 of the Geographical Society of Paris, and in 1828 he was appointed curator-director of the Royal Library. On his advice, Mehemet Ali, viceroy of Egypt, sent several Egyptian youths to be educated under him in France, and in this way the Institut des Égyptiens was established. He published *Remarques sur les rapports de l'Éthiopie et l'Égypte* (1822) and *Voyage à l'Oasis de Syouah* (1823).

JOMINI, zhō-mē-né', BARON (Antoine) Henri, soldier and writer on military affairs: b. Payerne, Vaud, Switzerland, March 6, 1779; d. Passy, France, March 24, 1869. His military career began in a Swiss regiment in French service. Between 1801 and 1805 he gave much of his time to writing the *Traité des grandes opérations militaires*, on which his fame rests, and one result of which was that he entered the French army as aide to Marshal Ney. He fought at Austerlitz in 1805 and Jena in 1806; and in 1807, after the Treaty of Tilsit, he became chief of staff to Ney and was created baron. In 1813 he withdrew from the French army and entered the service of Russia, being appointed lieutenant general and aide-de-camp to Emperor Alexander I; in 1837 he became military instructor to the cesarevitch (later Alexander II). Beside the work already mentioned, his *Histoire critique et militaire des campagnes de la Révolution*, 15 vols. (1819-1824), and

'*Précis de l'art de la guerre*' (1836) are still of interest and value. Consult Lecomte, '*Le général Jomini*' (3d ed., Lausanne 1888).

JOMMELLI, yō-mēl'ī, Nicolò, Italian composer, b. Naples, 11 Sept. 1714; d. 28 Aug. 1774. He studied music with Muzillo, Prota, Mancini and Leonardo Leo; first composed cantatas, then applied himself to dramatic music, produced his first opera, '*Errore amoroso*,' at Naples, in 1737, and his first serious opera, '*Odoardo*,' in 1738, and the fame achieved by these works led to his being invited to Rome in 1740. There, under the patronage of Cardinal York, he composed two new operas, and in 1741 went to Bologna and composed '*Ezio*' and studied with Padre Martini. He then made a tour of the chief cities of Italy; produced '*Didone*' in Rome, '*Merope*' for the theatre and a '*Laudate*' for the church of San Marco, Venice, and '*Eumene*' in Naples. He spent two years in Vienna giving instruction in music to the empress; and in 1748 was recalled to Rome, where he composed '*Artaserse*' and the oratorio '*La Passione*' and was appointed chapel-master of Saint Peter's Church. He resigned this office in 1754 and was chapel-master and court-composer at Stuttgart till 1772, when he returned to Naples. His last, and believed by many his greatest, work, the '*Miserere*,' was composed after he had been paralyzed. His works comprise 40 operas, 5 cantatas, 4 oratorios and 34 church compositions. Consult Albert, H., '*Niccolo Jommelli als Opernkomponist*' (Halle 1908).

JONAH, a Hebrew prophet: b. Gath-hepher, Zebulun, c. 781 to 741 B.C. The son of Amittai, he lived in the early years of the reign of Jeroboam II, king of Israel, who acceded to the throne in 781 B.C. He foretold the victories of Jeroboam over the Syrians, as related in 2 Kings xiv, 25. The book of Jonah, written some three centuries later, describing his mission to Nineveh to warn the inhabitants of the destruction of their city within 40 days tells all that is known of his subsequent life. See **JONAH, BOOK OF**.

JONAH, Book of. The book of Jonah is written concerning a prophet, Jonah, the son of Amittai, doubtless to be identified with the prophet of that name whose prediction in the time of Jeroboam II is recorded in 2 Kings xiv, 25. The book was written much later than the lifetime of the prophet, however. The language of the book is particularly decisive, for Aramaisms and other late words afford clear evidence that it was written after the exile. The thought of the book makes it probable that it was intended as a protest against the narrowness of postexilic Judaism, which was most conspicuous after the time of Ezra and Nehemiah. It is probable, therefore, that the book is not earlier than 400 B.C., and may be somewhat later than that. The phrase "the king of Nineveh," iii, 6, is in accord with this dating, since it is one which would not have been used until some time after the end of the kingdom of Assyria, in 606. Concerning the personality of the author, or authors, nothing is known outside of the book itself.

The nature of the book is much disputed. It has in the past often been considered to be historical, but various features of the book are

against that, of which the swallowing of Jonah by the fish and his later deliverance unhurt, and the repentance of the whole city of Nineveh at the call of an unknown foreign prophet are but more conspicuous features among many improbabilities. It is a book of wonders, not of history. Some have given it an allegorical interpretation, Jonah representing the nation Israel and Babylon being the fish which swallowed the nation during the exile. But the details of the treatment do not yield themselves readily to an allegorical interpretation. It is to be regarded as a story designed to teach a lesson, a romance. The story as such is doubtless the creation of the author. It may be based upon some current story or stories. Similar stories of the swallowing of a man by a monster and later deliverance are common among many ancient peoples. The somewhat similar story of Perseus and Andromeda is located at Joppa, the port from which Jonah embarked.

There has been some question whether the book is all by one author. With the exception of a few words here and there, however, there seems no reason for question except in reference to the psalm in ii, 2-9. That is undoubtedly not by the author of the remainder of the book. First of all, it is inappropriate at this point, Jonah can hardly have been thought to utter this while within the whale, and in its nature it is a thanksgiving for deliverance and not a prayer for such deliverance. It would be more appropriate if put after verse 10. But even then it would be in some measure inappropriate. The psalm presupposes no such experience as Jonah's but only drowning. The drowning, in accordance with the usage of the psalms of the Old Testament, is more probably figurative, as a description of extreme trials, than literal. The psalm was doubtless composed independently and probably in use in some collection of psalms, it being similar to those in the Book of Psalms. Nothing definitely indicates whether the psalm was added by the author or by a later reader or editor. In any case it is more probable that it was originally designed to be after verse 10, but was accidentally transposed. If added later, it was probably written on the margin, so that its transposition would be easy. The psalm consists largely of reminiscences of other psalms, and hence is probably postexilic.

In literary form the book excels; as a romance it is very artistically worked out.

There are two principal thoughts in the book. The first concerns the nature of the prophet's work, particularly in prediction. The purpose of the prophet is a practical one, to affect the lives of the hearers; not to present a program of the future, but so to present that future as to influence the lives of those addressed. This influence may so change their lives that the prediction of punishment will not be fulfilled. The prediction is conditional, as had been stated by earlier prophets. The other thought, and the principal one, concerns the character of God and his plans for men. The thought of God is not limited to the nation Israel, but is concerned with mankind generally. Even the great oppressor of Israel, Assyria, is the object of God's loving care; the people of that nation may find mercy from God if they repent. It is God's world-wide plans of mercy for men that are here presented, quite in the spirit of Deuteronomy.

Isaiah. It is one of the most exalted messages in the Old Testament.

GEORGE RICKER BERRY.

JONAS, yō'nās, **Justus** (originally **JOSEPH**), German Protestant reformer: b. Nordhausen, Germany, June 5, 1493; d. Eisleben, Oct. 9, 1556. He studied at the University of Erfurt, of which he was elected rector in 1519. A leader of the Reformation, he accompanied Martin Luther to the Diet of Worms (1521), and assisted him in translating the Old Testament. From 1521 to 1541 he was professor of canon law at Wittenberg. He was at Luther's deathbed at Eisleben (Feb. 18, 1546) and preached his funeral sermon.

JONATHAN, jōn'ā-thān, eldest son of Saul, king of Israel. He aided Saul in repelling the Philistines from Israel, but met his death with his father and two brothers at the Battle of Gilboa, about 1000 B.C. (1 Samuel 31). The friendship between Jonathan and David, Saul's successor as king of Israel, is one of the most famous in all literature. Despite his own claim to succession as Saul's eldest son, Jonathan refused to agree to the murder of David, suggested by Saul, and aided his friend to escape from the king's wrath (1 Samuel 19-20). Their friendship is immortalized in the lamentation over Saul and Jonathan composed by David at their deaths (II Samuel 1:19-27).

JONATHAN MACCABAEUS. See **MACCABEES**.

JONES, jōnz, **Alfred**, American engraver: b. Liverpool, England, April 7, 1819; d. New York, N. Y., April 28, 1900. Coming to the United States when a young man, he worked as an apprentice engraver in Albany, N. Y., and New York City, studying art in his leisure time at the National Academy of Design. He won the academy's first prize in 1839 and was elected an associate two years later. His engravings of *The Farmer's Evening*, after W. S. Mount, and *The Image Breaker*, after E. Leutze, were popular favorites, as were many of his engravings in *Godey's Lady's Book* and *Graham's Magazine*. After further studies in Paris in 1846, he set up his own business in New York. Jones devised a method which anticipated the photographic halftone, preparing the plate from a glass negative, on which a screen was formed by mechanical ruling. He was elected a full member of the National Academy in 1851, and was its secretary and treasurer for many years.

JONES, **Anson**, last president of the Republic of Texas: b. Great Barrington, Mass., Jan. 20, 1798; d. Houston, Texas, Jan. 9, 1858. He received a medical degree from Jefferson College, Canonsburg, Pa., in 1827 and, after practicing for several years in Philadelphia, moved to New Orleans and thence to Brazoria, Texas (1833), where he quickly became a leader in the pioneer community. One of the early advocates of Texan independence, he left his medical practice to serve in the war with Mexico (1836) and fought as a private in the Battle of San Jacinto. Afterward he was elected a representative of Brazoria County (1837-1838) in the Texas Congress. In 1838 he was appointed minister to Washington, and the following year was elected to the Texas Senate. He became secretary of state after the

re-election of President Sam Houston in 1841, and served in that office until Sept. 2, 1844, when he was elected president of Texas for three years from the ensuing December. After Texas decided, on July 4, 1845, in favor of annexation, Jones relinquished his authority (Feb. 19, 1846) to James Pinckney Henderson, newly elected governor of the state. He took his own life 12 years later. Jones County and Anson, its county seat, were named after him.

Consult Jones, Anson, *Memoranda and Official Correspondence Relating to the Republic of Texas, Its History and Annexation* (New York 1859), which contains an autobiography; Gambrell, Herbert P., *Anson Jones, The Last President of Texas* (New York 1948).

JONES, **Arthur Edward**, Canadian priest and archaeologist: b. Brockville, Ontario, Canada, Nov. 17, 1838; d. Montreal, Quebec, Jan. 19, 1918. Educated at St. Mary's College, Montreal, he entered the Jesuit Order in 1857, and served as professor of literature, rhetoric, and geometry at St. John's College (now Fordham University) in New York City before being ordained to the priesthood in 1873. On returning to Canada he taught English literature and geometry at St. Mary's College, and after 1882 was archivist there. An authority on the early Huron villages of Canada, he lectured extensively on this subject, and at the St. Louis Exposition of 1904 won the grand prize for his archaeological exhibit and a medal for his work as an archivist. Besides some controversial pamphlets dealing with the Jesuits, he edited Pierre Laure's *Mission du Saguenay* (1889); and published the *Aulneau Collection: Rare or Unpublished Documents* (1893), and *Old Huronia* (1908).

JONES, **Casey** (real name **JOHN LUTHER JONES**), American railroad engineer: b. near Cayce, Ky., March 14, 1864; d. near Vaughan, Miss., April 30, 1900. A railroad worker from the age of 16, he became an engineer on the Illinois Central line about 1890. His death in a collision with a freight train has been immortalized in a ballad originally composed by Wallace Saunders, a Negro roundhouse worker, and since revamped in many versions. According to one tradition, Casey had completed his regular run on the Cannonball Express to Memphis, Tenn., and was acting as a substitute for another engineer when the fatal accident occurred. In 1938 a bronze tablet in his honor was dedicated at Cayce, Ky., his home in early life and the source of his nickname.

Consult Lee, Fred J., *Casey Jones, Epic of the American Railroad* (Kingsport, Tenn., 1939).

JONES, **Catesby ap Roger**, American Confederate naval officer: b. Fairfield, Va., April 15, 1821; d. Selma, Ala., June 20, 1877. He was appointed a midshipman by President Andrew Jackson in 1836, advanced to lieutenant in 1849, and in 1853 assisted Lieutenant John A. B. Dahlgren (q.v.) at the Washington Navy Yard in the development of the Dahlgren gun. At the outbreak of the Civil War he joined the Confederate Navy with the rank of lieutenant, and became executive officer of the rebuilt ironclad *Merrimac* (named the *Virginia* by the Confederates). Following the battle of March 8, 1862, in which the *Merrimac* destroyed the Union ships *Cumberland* and *Congress*, Jones replaced the wounded Capt. Franklin Buchanan, and the next day commanded the *Merrimac* in the famous duel with the *Monitor*.

Promoted in 1863 to commander, he was put in charge of ordnance production for the Confederate Army and Navy at Selma, Ala. He met his death by shooting, in a quarrel with a neighbor at Selma.

JONES, Daniel, English phonetician: b. Sept. 12, 1881. Lecturer in phonetics at University College, London, from 1907 and professor from 1921 until his retirement in 1949, he served also as assistant secretary (1907-1927), and as secretary (1928-1950) of the International Phonetic Association, and as assistant editor (1907-1940) and editor (1941-1950) of its organ *Le maître phonétique*. Besides works in collaboration with Russian, Indian, Chinese, and Italian authorities, he published *Outline of English Phonetics* (8th ed., 1954); *English Pronouncing Dictionary* (12th ed., 1955); and *The Pronunciation of English* (1950).

JONES, Ebenezer, English poet: b. London, England, Jan. 20, 1820; d. Brentwood, Essex, Sept. 14, 1860. An obscure, overworked clerk in the office of a tea merchant, his writings attracted little attention in his lifetime but won him posthumous fame, largely because of the praise given by Dante Gabriel Rossetti and Theodore Watts-Dunton to his three remarkable poems—*Winter Hymn to the Snow*, *When the World is Burning*, and *To Death*—written when he was dying of consumption. Earlier he had published *Studies of Sensation and Event* (1843) and a pamphlet, *The Land Monopoly* (1849), which anticipated the land nationalization proposals of Henry George.

JONES, Sir Edward Burne-. See **BURNE-JONES, Sir Edward Coley**.

JONES, Francis Coates, American artist: b. Baltimore, Md., July 25, 1857; d. New York, N. Y., May 27, 1932. He studied at the École des beaux-arts in Paris, and opened a studio in New York City in 1882, specializing in figure painting. He received the Clark Prize of the National Academy of Design in 1885 and was elected a member nine years later. Medals were awarded his canvases at the Pan-American Exposition (1901) and the St. Louis Exposition (1904). His paintings of children are particularly well regarded.

JONES, George, American newspaper publisher: b. Poughkeepsie, N. Y., Aug. 16, 1811; d. Poland Springs, Me., Aug. 12, 1891. When Horace Greeley, a boyhood friend, founded the *New York Tribune* in 1841, Jones became a member of the business staff, declining Greeley's offer of a partnership in the enterprise. Ten years later he joined Henry J. Raymond, formerly assistant editor of the *Tribune*, in founding the *New York Times*, of which he became business manager in 1856 and publisher in 1869, when Raymond died. Jones' most notable achievement was the exposure (1870-1871) of "Boss" William M. Tweed, Tammany leader, who was finally convicted of grand larceny in 1873, largely because of the *Times* campaign. Jones' regime at the *Times* marked the beginning of the end of the traditional view of a newspaper as the personal organ of its publisher. He preferred to remain in the background, delegating wide discretion to his editors in matters of policy though retaining the final say on major issues.

JONES, George Heber, American missionary: b. Mohawk, N. Y., Aug. 14, 1867; d. Miami, Fla., May 11, 1919. In 1887 he was appointed a missionary in Korea by the Methodist Episcopal Church and stationed at Seoul, where he became principal of the Pai Chai English School. While presiding elder of the Chemulpo District (1893-1903), he founded 44 churches and converted some 2,800 Koreans to Christianity. After four years in the United States, during which he aided in translating the Bible into Korean, he returned to Korea to become president (1907-1911) of the Biblical Institute and the Union Theological School there. He served as editorial secretary to the Board of Foreign Missions from 1913 to 1919, and during part of that time was special lecturer on missions at the Boston University School of Theology. He published *Korea: the Land, People and Customs* (1907), and *English-Korean Dictionary of Scientific and Technical Terms* (1910).

JONES, George Wallace, American pioneer and legislator: b. Vincennes, Ind., April 12, 1804; d. Dubuque, Iowa, July 22, 1896. He graduated (1825) from Transylvania University in Kentucky, where he came under the influence of Henry Clay and formed a long friendship with Jefferson Davis. Moving afterward to Sinsinawa Mound, Wis., then a Michigan Territory mining community, he took a prominent part in frontier affairs, served in the Black Hawk War (1832), and was elected to Congress from the Michigan Territory in 1835. When, chiefly through his efforts, the Wisconsin Territory was formed in 1836, Jones became its delegate to Congress, where he also secured the organization of the Iowa Territory (1838). He was appointed surveyor general of Iowa and Wisconsin in 1840 and, after the admission of Iowa to statehood (1846), became one of the state's first United States senators (1848-1859). In the latter year he was made United States minister to New Granada (Colombia). On his return to the United States in 1861, he was arrested for corresponding with Jefferson Davis, but was released on the order of President Abraham Lincoln. His lukewarm attitude toward the Civil War brought about his political eclipse thereafter.

JONES, Sir Harold Spencer, English astronomer: b. London, England, March 29, 1890. He was educated at Jesus College, Cambridge, and from 1923 to 1933 was government astronomer at the Cape of Good Hope. In 1933 he became astronomer royal at the Greenwich Observatory. Besides important research on the motion of the earth's poles, he computed more accurate values for the mass of the moon. He has been president of the British Horological Institute since 1939. His principal published works are *General Astronomy* (1922); *Worlds Without End* (1935); *Life on Other Worlds* (1940).

JONES, Harry Clary, American chemist: b. New London, Md., Nov. 11, 1865; d. Baltimore, Md., April 9, 1916. He took his Ph.D. at Johns Hopkins University in 1892 and after two years' study in Europe, returned to the university in 1895 to found its department of physical chemistry, the first such department in the United States. He remained a member of the Johns Hopkins faculty until his death. His *Elements of Physical Chemistry* (1902) went through four American

ditions and was translated into Italian and Russian.

JONES, Henry (pseudonym **CAVENDISH**), English physician and whist expert: b. London, England, Nov. 2, 1831; d. there, Feb. 10, 1899. While practicing medicine in London (1852-1869), he became an expert on whist and, under the nom de plume "Cavendish" (the name of the whist club to which he belonged), published *Principles of Whist* (1862), which soon became the standard authority on the game. By 1863 it had reached a fifth edition, retitled *The Laws and Principles of Whist*. Jones also wrote manuals on many other card and board games, as well as on billiards, lawn tennis, and croquet.

JONES, Henry Arthur, English playwright: b. Grandborough, Buckinghamshire, England, Sept. 20, 1851; d. London, Jan. 7, 1929. Leaving school at the age of 12, he was destined for a commercial career, and from 1869 to 1879 worked as a traveling salesman out of London. In 1878 his first play, *It's Only Around the Corner*, was produced at Exeter, and he scored his first London success with *The Silver King* (1882), a melodrama. Other outstanding successes were *Saints and Sinners* (1884), *The Dancing Girl* (1891), *The Case of Rebellious Susan* (1894), *The Masqueraders* (1894), *Michael and His Lost Angel* (1896, q.v.), *The Liars* (1897), and *Mrs. Dane's Defence* (1900). Together with Sir Arthur Wing Pinero (q.v.), Jones was one of the pioneers of modern realistic drama in England, following the path of Henrik Ibsen on the Continent. His view of the theater as an instrument of social criticism as well as an art was expounded in *The Renaissance of the English Drama* (1895).

Consult Jones, Doris A., *Taking the Curtain Call: the Life and Letters of Henry Arthur Jones* (New York 1930); and Cordell, Richard A., *Henry Arthur Jones and the Modern Drama* (New York 1932).

JONES, Hilary Pollard, United States naval officer: b. Virginia, Nov. 14, 1863; d. Washington, D.C., Jan. 1, 1938. He graduated from the United States Naval Academy in 1884, served in the Spanish-American War, and was promoted through grades to rear admiral in 1917. During World War I he commanded a cruiser division in the Atlantic Fleet. Advanced to vice admiral (1919) and to admiral two years later, he was commander in chief of the Atlantic Fleet (1921-1922) and of the United States Fleet until 1923, when he was appointed to the General Naval Board. He was a delegate to the Conference for Limitation of Naval Armaments at Geneva in 1927, and retired from active service later that year.

JONES, Howard Mumford, American educator and author: b. Saginaw, Mich., April 16, 1892. After graduating from the University of Wisconsin (1914), he taught literature at the universities of Texas, North Carolina, and Michigan, and became professor of English at Harvard in 1936. A scholar with a wide range of intellectual interests, he made a number of significant contributions to the study of American literary history. Among them are *American and French Culture, 1750-1848* (1927); *The Life of Moses Coit Tyler* (1933); *Ideas in America* (1944); and *The Theory of American Literature* (1948). He also edited *The Poems of Edgar Allan Poe* (1929) and the writings of other American authors.

JONES, Hugh Bolton, American artist: b. Baltimore, Md., Oct. 20, 1848; d. New York, N. Y., Sept. 24, 1927. He studied art in Baltimore, and later in Spain and France. Specializing in landscape painting, he received awards at the Paris expositions of 1889 and 1900; the Webb Prize of the Society of American Artists in 1902, and a gold medal at the St. Louis Exposition of 1904. His *Autumn* and *Spring* were acquired by the Metropolitan Museum, New York; other landscapes of his are in the Corcoran Gallery, Washington, D.C., and the Brooklyn Institute Museum. He was elected to the National Academy of Design in 1883, and was a member of the National Institute of Arts and Letters.

JONES, Inigo, English architect: b. London, England, July 15, 1573; d. there, June 21, 1652. The son of a clothworker, he began life as a carpenter but, securing a patron (probably William, 3d earl of Pembroke), was able to go abroad to study landscape painting. He visited France and Germany, and in Italy became absorbed in the designs and monuments of Andrea Palladio (q.v.), whose style he assimilated so completely that he became known as "the English Palladio." While still at Venice he acquired a wide reputation, and in 1604 was invited by Christian IV to Denmark. Returning the next year to England, he was made architect to Queen Anne and later appointed surveyor of works to Henry, prince of Wales. Further to secure royal patronage he undertook the designing of costumes and settings for the masques and pageants popular at the court of James I and later under Charles I. In this work he was associated unhappily with Ben Jonson (q.v.), author of the lyrics and dialogue, who made Jones the target of his satire in *A Tale of a Tub*.

After another visit to Italy (1613-1614) for the further study of Renaissance architecture, Jones was appointed royal surveyor and commissioned to prepare designs for a new palace at Whitehall, of which the banquet hall (the only part completed, 1622) is considered his masterpiece. Besides his work at Whitehall, he restored the old St. Paul's Cathedral in London, adding a new portico which was regarded as one of his finest achievements. He also built St. Paul's Church and the piazza in Covent Garden; the queen's house at Greenwich; the water gate at York House; and Ashburnham House, Westminster. In Wiltshire he constructed a portion of Wilton House, seat of Philip, 4th earl of Pembroke. During the Civil War Jones was taken prisoner by Oliver Cromwell at the marquess of Winchester's estate in 1645, and fined heavily as a royalist sympathizer.

To Jones is largely attributed the revival of classic architecture in England, and the manor-house style fully realized in the ensuing Georgian period. His notes on Stonehenge, made during his investigation of those ruins for James I in 1620, were published in 1655 as *The Most Notable Antiquity of Great Britain, Vulgarly Called Stonehenge*; they reach the unique conclusion that the pile was originally a Roman temple. Others of his published works are *The Architecture of Palladio* (4 vols., 1715), and designs for public and private buildings, which appeared in 1727. A sketch book of his was reproduced by lithography in 1832, and a volume entitled *Designs for Masques and Plays at Court* was published at Oxford in 1924.

Consult Gotch, John A., *Inigo Jones* (London 1928); Sitwell, Sacheverell, *British Architects and Craftsmen*, 3d ed. (London 1947).

JONES, Jacob, American naval officer: b. near Smyrna, Del., March 1768; d. Philadelphia, Aug. 3, 1850. He entered the United States Navy in 1799 as a midshipman, and while serving in the war with Tripoli was captured in 1803, and held a prisoner for 18 months. In 1812 he became commander of the *Wasp* and with her captured the English brig *Frolic*, Oct. 18, 1812, but on the following day encountered the English war vessel *Poictiers*, 74 guns, by which both the *Wasp* and its prize were taken. He was released on parole at Bermuda and for his victory over the *Frolic* was voted a gold medal by Congress and \$25,000 was granted to him and his crew in payment of the personal loss they had sustained. He subsequently commanded squadrons in the Mediterranean and the Pacific.

JONES, James Kimbrough, American politician: b. Love, Marshall County, Miss., Sept. 29, 1839; d. June 1, 1908. His parents were residents of Tennessee, but in 1848 removed to a plantation in Dallas County, Ark. James served in the Confederate army during the Civil War, and then engaged in planting till 1873, when he began to practise law in Dalton County, Ark. He was a member of the State senate in 1873-1877 and its president in the last-named year. In 1881-1885 he was a member of Congress, having been elected as a Democrat, and in the latter year was elected to the United States Senate. He was re-elected in 1890 and 1897, and was chairman of the Democratic National Committee, conducting the Presidential campaigns of 1896 and 1900. Jones was an ardent tariff reformer. He retired from politics in 1903 and entered on the practice of law in Washington.

JONES, Jenkin Lloyd, American Unitarian clergyman: b. Llandysil, Cardiganshire, Wales, Nov. 14, 1843; d. Sept. 12, 1918. He came to America with his parents while an infant, served in a Wisconsin regiment during the Civil War, and was graduated from the Meadville (Pa.) Theological Seminary in 1870. He was instrumental in organizing the Congress of Religion. *Unity*, the organ of the congress, was edited by him after 1879. In 1909 he was given the degree of LL.D. by the University of Wisconsin. He was pastor of All Souls Unitarian Church, Janesville, Wis., 1874-1883; was secretary of the Western Unitarian Conference for nine years, and after 1883 was pastor of All Souls Church, Chicago (independent), and after 1905 head resident of the Abraham Lincoln Centre. He was, from its inception, identified with the Peace movement, and was noted as a lecturer throughout the United States. Among his published works are *The Faith that Makes Faithful*, with W. C. Gannett (1886); *Practical Piety* (1890); *Bits of Wayside Gospel* (1899); *Love and Loyalty* (1907); and *On the Firing Line in the Battle for Sobriety* (1910).

JONES, John, American surgeon: b. Jamaica, Long Island, N. Y., 1729; d. Philadelphia, Pa., June 23, 1791. Of Welsh Quaker stock, both his grandfather Edward Jones, who came to Pennsylvania in 1682, and his father Evan Jones were physicians. After attending a private school in New York, John Jones went to Philadelphia to

begin his medical studies under his uncle Dr. Thomas Cadwalader. He completed them in London under William Hunter and Percival Pott, and in Paris under Petit and Le Dran. He also studied at Edinburgh and Leiden and finally obtained his medical degree at the University of Rheims in 1751. His graduation thesis entitled *Observations on Wounds* was published in New York in 1765. After receiving his degree he settled in New York to practice as surgeon and obstetrician. He is said to have been the first American lithotomist, sometimes performing the operation in a minute and a half. He served as surgeon in the French and Indian War and, on the organization of the medical department of King's College (Columbia University) in 1767, was appointed professor of surgery and obstetrics. In 1770 with Dr. Samuel Bard and others he founded the New York Hospital. After the capture of the city in 1776 and destruction of the hospital in the great fire, he moved to Philadelphia where he helped to organize the medical department of the Continental Army. His great work was his *Plain Concise, Practical Remarks on the Treatment of Wounds and Fractures*, published 1775, and in the following year with his translation of Van Swieten's *Diseases Incident to Armies*. He settled permanently in Philadelphia in 1780 where he was attending physician of the Pennsylvania Hospital and president of the Humane Society. A friend of Washington, he was Franklin's personal physician, attending him in his last illness.

JONES, John Paul, the first American naval officer to set a tradition of victory, was born within sight and sound of the sea in a rude cottage in the parish of Kirkbean, county of Kirkcudbright, Scotland, July 6, 1747. He died in Paris, July 18, 1792. An indomitable warrior of unique, magnetic personality, he is best known for his triumph in the battle of the *Bonhomme Richard* with the *Serapis*, but this spectacular climax of his career was in keeping with the valor and wisdom of his professional genius throughout his life.

The conditions of his birth, youth, and young manhood contributed to make him a champion of liberty. Named John Paul, he inherited from both his parents, John Paul, Sr., and Jean McDuff, the independence of the Scottish Lowlander and probably, in addition, from his mother the fighting instincts of the Highlander. When only twelve years old, he sailed as a shipboy in a merchantman to Virginia, following the Rappahannock to Fredericksburg, where his older brother William was in business. "America," he was to declare, "has been my favorite country from the age of thirteen when I first saw it."

He early served in merchant vessels, armed ships, perhaps ships of war, and slavers. In practice of his own maxim, "A warrior is always ready," his resourcefulness and skill won for him the position as master of a merchantman, the *John*, at the age of twenty-one.

In command of this vessel at Tobago in the West Indies in 1770, he punished with the cat-o'-nine-tails a negligent carpenter, Mungo Maxwell, who later died from malaria aboard another ship. Jones proved his innocence of the death of Maxwell, but suffered widespread calumny especially in the neighborhood of his Scottish home.

Several years later, at the same island, but in a different ship, the *Betsy*, when a mutineer

wung a bludgeon at him, Jones parried the blow and, in self-defense, killed his assailant. As an admiralty court was not in session at the time in Tobago, he left the island at the close of 1773, with the intention of returning for trial after a suitable period, and with the advice of friends he took, temporarily, an assumed name. According to romantic legend, he now adopted the role of a pirate, commanding a rakish *Black Buccaneer*; but the facts and the spirit of the life of Jones prove the basic falsity of such embellishments.

With only fifty pounds which he had taken with him from Tobago, Jones passed twenty months in obscurity in America, chiefly in Fredericksburg, Va. A tradition assumes he changed his name during this period from John Paul to Paul Jones and John Paul Jones in gratitude to his two brothers, Willie and Allen Jones of North Carolina. No authentic record proves that he ever met either of them or that they served him in any way. Probably after the death of the mutineer he chose for his declared anonymity the common name Jones, which best served his secrecy, and later decided to keep it. Certainly Joseph Hewes, shipowner and signer of the Declaration of Independence, was his greatest early benefactor.

Jones was among the foremost in service at the founding of the Continental Navy. Commissioned in December 1775 as the first lieutenant on the frigate *Alfred*, the flagship of the squadron, on which he hoisted the Continental flag, the old Grand Union, he and another officer, Nicholas Biddle, alone completed the first cruise of the Continental ships with honor.

As captain of the sloop of war *Providence* and as commander of both the *Alfred* and the *Providence*, he captured valuable British merchantmen; he escaped by ruse from ships faster and stronger than his own; he destroyed important fisheries and many vessels. His skill in harrying the enemy with ships of little force stood in such pronounced contrast with the incompetence of Commodore Esek Hopkins that in February, 1777, the Marine Committee directed its secretary, Robert Morris, to place the Continental fleet in his hands, but the jealousy of Hopkins thwarted these orders.

Superseded by many officers, he became, unfairly, the eighteenth captain in naval rank, and he had, in effect, no ship at all. But John Hancock, president of Congress, as well as Robert Morris recognized his abilities. Accordingly on June 14, 1777, he received the independent command of the new sloop of war *Ranger*, one of the first naval vessels to fly the Stars and Stripes, in which he sailed to France with the expectancy of having a large frigate, the *Indien*, for cruises in European waters.

His hopes for the frigate did not materialize, but he was intrepid enough to sail in the small *Ranger* to the very shores of England, and to try to burn the shipping at Whitehaven. At St. Mary's Isle, he attempted, unsuccessfully, to take the earl of Selkirk as a hostage for the exchange of prisoners. In a third attempt, he captured the *Prize* on April 24, 1778. This was the first victory of a Continental vessel over an English ship of war, even in the home waters of the enemy, and was achieved despite his cowardly and mutinous officers and men.

Upon his return to Brest, Jones was keyed to undertake more ambitious enterprises in larger ships. He found, however, at every turn political

and naval entanglements, both French and American. He ultimately appealed to the royal princess of Chartres and King Louis XVI. Even then the *Duras* which he received, (renamed the *Bonhomme Richard* in honor of Benjamin Franklin), was old and slow, ill-suited to fight or escape; the accompanying French vessels of his squadron were privateers in spirit; and an American frigate, the *Alliance*, was in command of the unscrupulous Pierre Landais.

Accordingly, Jones was able to accomplish little for the greater part of the cruise. Off Flamborough Head, the last rendezvous of the squadron, the *Richard* alone pursued and challenged to battle two British ships of war, the *Serapis* of 50, and the *Countess of Scarborough* of 22 guns.

Early in the grim struggle on September 23, 1779, Jones had to fight not only against the superior crew, armament, speed, and qualities in maneuver of the *Serapis*, and against the aid of her consort, the *Countess of Scarborough*, but also against a grave and almost fatal accident. Two of the six old 18-pounders of the *Richard* burst at their first broadside and killed or wounded many men. It became imperative for Jones to outwit Richard Pearson, the captain of the *Serapis*. An initial attempt to board the British frigate and win by sheer desperate fighting failed. In a second supreme effort he managed to lock the two ships together. The *Serapis* was beating in one of the *Richard's* sides, and blowing out the other. Most of the guns of the American ship were broken and silenced. The *Alliance* entered the battle only to fire on the two combatants indiscriminately three separate times. The *Richard* with her dry old timbers was afire again and again. The water in the hold rose ominously. The carpenter, the master gunner, and the master-at-arms became panic-stricken. In the belief that the ship was about to sink, the master-at-arms opened the hatchways and let loose several hundred British prisoners. The gunner, crediting a report that Jones and Lt. Richard Dale had been killed, called to offer surrender of the *Richard*, and Pearson loudly responded, "Do you ask for quarter?" Now Jones made his memorable reply, emphasizing it by hurling his two pistols at the head of the gunner: "I have not yet begun to fight!"

A grenade thrown from the *Richard* caused a disastrous explosion of ammunition on board the *Serapis*. Jones directed a cannonade which made the enemy's mainmast reel. After three and one-half hours of the most heroic battle in full moonlight, the *Serapis* struck her flag. Then Jones and his crew boarded the British ship and saw the *Bonhomme Richard* sink with the stern and mizzenmast uppermost, and with her colors flying.

The escape of Jones in the *Serapis* with his accompanying ships to the Texel in Holland, his conduct in the Dutch port, and his later successful dash in the *Alliance* to the open sea in the face of the British blockade attest not less to his personal honor than to his naval genius. When the French tried to induce him to accept the commission of a French privateersman so as to sail in safety from the port under a neutral flag, Jones replied, using the epithet which his enemies attached to his name, "They are not rich enough to buy 'the pirate of Paul Jones'."

In Paris, where he was sent to arrange for the overdue prize money with which he might

pay his sailors, he was acclaimed by the populace, honored by the king, feted and lionized by society. His dalliance in the French capital, his verse writing, and his romantic attachments for several Parisian ladies make a strange interlude in the doughty seaman's career.

Landais snatched the command of the *Albion* from him at L'Orient, and Jones returned to America in February 1781 in the small *Ariel*. At home, Congress passed resolutions in his honor, recommended the award of a gold medal, and gave him the command of the ship of the line *America*, which, in essence, conferred the rank of rear admiral. The war ending soon, he urged, "In time of peace . . . prepare . . . for war."

The vision of service in the Russian Navy as a rear admiral now rose. He himself described Russia in the time of Catherine the Great as a country of "the dark intrigues and mean subterfuges of Asiatic jealousy and malice." He asserted that he would never renounce the glorious title of a citizen of the United States. But men no less astute than Jefferson and Washington seemed to feel that employment in Russia, in the absence of any at home, would qualify him, in case of need, for higher professional duties in America.

His career in Russia had its prelude in an amazing dash from Sweden to St. Petersburg in April, 1788, so that he might reach the court of Catherine II at the earliest moment. In the Liman, an estuary of the Black Sea, Jones received command of a squadron for a campaign against the Turks, who held the nearby stronghold of Ochakov. He had as his colleague, the arrogant and cowardly Prince Charles Henride Nassau-Siegen; as his superior, the half-mad Trigorí Alexandrovich Potémkin; and as the power behind both of them, the guileful and despotic empress herself. It was the grim dedication of Jones to his professional duties which resulted in victories scarcely less daring and strategic than those in the American Revolution. It was primarily his operations which both saved Kherson and the Crimea, and decided the successful outcome of the war.

While he won the battles, his colleagues usurped the honors. "The first duty of a gentleman is to respect his own character," he wrote in explanation of his aloofness from the deceit which surrounded him. "I saw that I must conquer or die," he stated upon his early recognition of the ineptitude as well as the villainy to which he was exposed. The intrigue against him, both professional and personal, became incredibly fantastic, and included a baseless charge of moral turpitude. Jones left Russia, but he maintained an undue courtesy towards the empress, who, after the use of all her tricks against him, cynically remarked, "I have emptied my bag."

Progressively ill in Paris, where Jefferson sent him a commission, dated June 1, 1792, to ransom our captives in the hands of Algiers, Jones met his only conqueror, death, before its receipt.

Moral courage inspired by reverence for his country, physical boldness derived from a nature inured from youth to hardship and danger, and zeal for perfection in his profession—these qualities combined to make Jones the warrior who rose from obscurity to international eminence. He was outstanding among his more important fellow officers for never losing a ship. He was

unequaled by any one of them for vision and resourcefulness, and for his urgent recommendations for an unmatched American Navy. After lying for a hundred years in an unmarked Paris grave, he has rested in honored distinction in the chapel of the Naval Academy at Annapolis since 1905.

LINCOLN LORENZ.

JONES, John Percival, American politician: b. Herefordshire, England, Jan. 27, 1829; d. Santa Monica, Calif., Nov. 27, 1912. His parents brought him to the United States in 1831 and settled in northern Ohio. He was educated in the schools of Cleveland and in the early days of California gold mining he journeyed across the Rockies to that State, where he acquired several mining interests and was successful as an operator. He was for a time sheriff of Tuolumne County and in 1863-67 was a member of the State senate. In the latter year he removed to Nevada, where he became a proprietor of the Crown Point silver mine, through which he realized a fortune. He became powerful in State politics through his influence with the miners. He was elected to the United States Senate from Nevada in 1873, was re-elected as a Republican in 1879, 1885 and 1891 and as a "Silverite" in 1897. He was an influential member of the Senate committees on Post Roads and on Mines and Mining, in which field his experience was invaluable. After 1875 he stood forth as a champion of bimetallicism and supported W. J. Bryan in 1896. He returned to the Republican fold in 1900, but held to his free-silver coinage doctrine and retired in 1903.

JONES, John William, American clergyman and author: b. Louisa, Va., Sept. 25, 1836; d. Columbus, Ga., March 17, 1909. He was graduated from the University of Virginia in 1859 and from the Southern Baptist Theological Seminary, and during the war served as private and then chaplain in the Confederate army. He was pastor of a Baptist church in Lexington, Va., 1865-1871, and chaplain of Washington College during Lee's presidency, and since the last-named date was successively agent of various Southern institutions, chaplain of the University of Virginia and pastor of several churches. Besides editing 14 volumes of *Southern Historical Papers*, he published *Personal Reminiscences, Anecdotes and Letters of R. E. Lee* (1874); *Christ in the Camp, or Religion in Lee's Army*; *Memorial Volume of Jefferson Davis*; and *History of the United States*.

JONES, Leonard Augustus, jurist: b. Templeton, Mass., Jan. 13, 1832;

909. He was graduated from Harvard in 1855 and from Harvard Law School in 1858. He was admitted to the Suffolk bar in 1858 and practiced until 1874 when he became associate editor (1874-1904) and later editor (1904-07) of the *American Law Review*. Among his many legal works are *Law of Mortgagees and Real Property* (6th ed., 1904) *Law of Mortgages of Personal Property*, 5th ed. (1908); *Law of Easements* (1898); *Index to Legal Periodical Literature*, 2 vols. (1889); *Legal Forms* (6th ed., rev., 1909); *Real Property*, 2 vols. (1896); *Collateral Securities and Pledges*, 3d. ed. (1912); *Corporate Bonds and Mortgages* 3d ed. (1907); *Landlord and Tenant* (1906). He was appointed judge of the Court of Land Registrations in 1898.

JONES, Lewis Ralph, American botanist: b. Brandon, Wis., Dec. 5, 1864; d. Orlando, Fla., March 31, 1945. In 1883-86 he studied at Ripon College; in 1889 at the University of Michigan. From 1889 to 1910 he was professor of botany at the University of Vermont. After Feb. 1, 1910 he was professor of plant pathology at the University of Wisconsin. He carried out investigations in the laboratory of the Bureau of Plant Industry, Washington, in 1904, and was a collaborator of the Department of Agriculture. He was a member of many botanical societies and the author of botanical reports, bulletins, etc., in scientific magazines. He was editor of the *American Journal of Botany* and of the bacteriological terms of Webster's *New International Dictionary*.

JONES, Sir Lyman Melvin, Canadian capitalist: b. York County, Ontario, Sept. 21, 1843; April 15, 1917. As a youth he entered the employment of A. Harris, Son & Co., agricultural implement makers, Brantford; on the formation of the Massey-Harris Company, Toronto, in 1891, became manager of the consolidated companies, and in 1902 president and general manager. He took a considerable interest in public affairs, and while resident in Winnipeg was mayor of the city (1887-88) and treasurer in the Greenway provincial government 1888-89. He was a Liberal in politics and was called to the senate in 1901, but opposed his party during the reciprocity issue in 1911, and in that year he was sighted.

JONES, Owen, English architect: b. London, Feb. 15, 1809; d. there, April 19, 1874. In 1834 he traveled in Spain and studied the art monuments of Granada, after which he visited Egypt. On returning to England he published his great work on the Alhambra. In 1851 he undertook the decoration of the Crystal Palace at the first Universal Exhibition. He also furnished the various courts of different architecture, notably the "Alhambra Court." His researches and publications had a wonderful influence on the decorative art of England, especially his *Grammar of Ornament*, in which he illustrated the decorative devices of all nations. He published *Plans, Elevations, Sections and Details of the Alhambra* (1845).

JONES, Peter, American Indian missionary: b. Jan. 1, 1802; d. June 29, 1856. His Indian name was Kahkewaquaonaby; his father was a white man of Welsh descent named Augustus Jones, who maintained the closest friendship with Brant during the latter's life. Peter's

mother was Tuhbenahneeguay, daughter of a chief of the Mississauga on Credit River at the extreme western end of Lake Ontario. Peter remained with his tribe, following their customs and accompanying them on their excursions, until his 16th year, when his father, who was then a government surveyor, had him baptized by an English Episcopal minister. Having professed religion at a camp meeting held near Ancaster, Ontario, and taken an active part in the religious exercises of the Wesleyan Methodist Church, Peter was sent on a missionary tour, in 1827, to Lake Simcoe and other points in western Ontario, although not yet ordained. He had by this time entered on his literary work, as in this year was published a hymnbook translated by him into Chippewa. He was constituted a Wesleyan Methodist minister at the Toronto Conference of 1833. The remainder of his life was devoted chiefly to missionary work among the Mississauga and Chippewa, and to some extent among the Iroquois. His position as a Christian pastor and ruling chief of his tribe gave him great influence, not only among his own people, but among all the Chippewa tribes. He visited England and New York and made repeated journeys in behalf of his people. It was largely through his efforts that the titles of the Credit Indians to their land were perfected. A monument was erected to his memory, in 1887, at Brantford. In addition to the above-mentioned volume of hymns, Jones was author of *An Ojibway Spelling Book* (1828); translation of part of the New Testament (1829); *The First Book of Moses* (1835). He also wrote *Life and Journals of Kah-ke-wa-quo-na-by* (Rev. Peter Jones) (1860); and *History of the Ojibway Indians* (1861). Consult Pilling, *Bibliography Algonquian, Lang, Bull.* B.A.E. (1891).

JONES, Samuel Porter, commonly known as SAM JONES, American Methodist revival preacher: b. Chambers County, Ala., Oct. 16, 1847; d. Oct. 15, 1906. He was admitted to the Georgia bar in 1869 and practiced successfully for a time. His drinking habits put an end to his career as a lawyer. Becoming converted in 1872 he was admitted to the ministry of the Methodist Church South, and afterward devoted himself to evangelistic work, his marked eccentricities of speech and manner probably contributing somewhat to his popularity. His works include *Famous Stories of Sam P. Jones* (1908); *Popular Lectures of Sam P. Jones* (1909); *Sam Jones's Revival Sermons* (1912); *Lightning Flashes and Thunderbolts* (1912).

JONES, Thomas, American lawyer: b. Fort Neck, Long Island, April 30, 1731; d. Haddesdon, England, July 25, 1792. In 1750 he was graduated at Yale and in 1755 was licensed to practice law. In 1757 he was appointed clerk of Queens County (N.Y.) courts and for many years was attorney for the governors of King's College (now Columbia University). In 1769 he became recorder of New York City, retaining that office until 1773, when he was made judge of the Supreme Court in place of his father, serving until the close of the Revolutionary War, and held the last court under the crown at White Plains in April 1776. On June 27, 1776 he was arrested at the instance of the New York Provincial Congress for refusing to

obey the summons of the committee to show why he "should be considered a friend of the American cause." He was paroled but was rearrested on August 11, was detained a prisoner in Connecticut until December when he was paroled a second time. He was carried off a second time to Connecticut in 1779 and in April 1780 was exchanged for Gen. Gold S. Silliman. He went to England in 1781. The negotiations for peace in 1782 prevented his return, as he was included in the New York act of attainder, by which his life was *ipso facto* forfeited and his estate confiscated.

JONES, Thomas ap Catesby, American naval officer: b. Westmoreland County, Va., April 24, 1790; d. Fairfax County, Va., May 30, 1858. Having entered the navy in 1805, he was employed in suppressing piracy, smuggling and the slave trade in the Gulf of Mexico, and saw service in the latter part of the War of 1812 when with a squadron of five gunboats he tried to bar the passage across Lake Borgne to Vice Admiral Alexander Cochrane and his fleet. He inflicted losses on the British and was himself seriously wounded before his vessels were captured. In 1826 he was sent to the Hawaiian Islands to settle the difficulties arising through the efforts of a local party to make the islands a British dependency. Jones secured the payment of debts claimed by American citizens, presided over a meeting of the factions, and denied publicly the assertion of the British consul that the islands were a British dependency. While in command of the Pacific squadron in 1842, believing that war had been declared between Mexico and the United States, he landed at Monterey, California, and took possession in the name of the United States. Because of this imprudence he was removed temporarily from his command, but was later restored to it. He was suspended from the service in 1850 for using a fund for an unauthorized purpose, was reinstated in 1853, and placed in the reserved list in 1855.

JONES, Wesley Livsey, American legislator: b. near Bethany, Ill., Oct. 9, 1863; d. Seattle, Wash., Nov. 19, 1932. He was graduated at Southern Illinois College in 1886 and in the same year was admitted to the bar. He moved to the Territory of Washington in 1888, just before its admission to statehood, and settled at North Yakima, where he lived until 1917, when he moved to Seattle. From 1899 to 1909 Jones was a Republican member of Congress at large from Washington. In 1908 he was elected United States senator, being re-elected in 1914, 1920, and 1926, but was defeated in the elections of 1932 shortly before his death.

Jones was generally conservative and isolationist, with a strong interest in the merchant marine. He was sponsor of the Jones-Stalker law (1929) which increased the penalties of the Volstead Act.

JONES, William, American ethnologist: b. Sac and Fox Indian Reservation (in what is now Oklahoma), March 28, 1871; d. Philippine Islands, March 29, 1909. One of his great-grandfathers was Wa-shi-ho-wa, a Fox chief. Jones was brought up by his grandmother on the Fox and Sac Reservation. He was educated at Hampton Institute, Phillips Andover Academy and Harvard University, being graduated at the

last-named institution in 1900. From Columbia he obtained the degree of Ph.D. in 1904. He was employed by the American Museum of Natural History and the Bureau of American Ethnology to collect ethnological specimens of the Sac, Fox and Ojibwa tribes. He was a noted Indian linguist. From 1906 he was employed by the Field Columbian Museum of Chicago in the Philippines, where he lost his life in an attack by the Ilongots.

JONES, Sir William, English Orientalist and jurist: b. London, Sept. 28, 1746; d. Calcutta, April 27, 1794. He was educated at Harrow and Oxford and early acquired a reputation as a linguist, Hebrew, Persian, Arabic, and even Chinese, besides German, Italian, French, Spanish and Portuguese, being among his acquisitions. In 1770 his translation (in French) of the life of Nadir Shah from the Persian appeared; in 1771 his grammar of the Persian language; in 1774 his *Poeseos Asiaticae Commentariorum Libri Sex*, and in 1783 his translation of the seven Arabic poems known as the *Moallakat*; besides many other translations and works on Oriental literature, philology, and philosophy. He was also noted as a legal writer and was the author of an essay *On the Law of Bailments* (1781). Jones had been called to the bar in 1774 and in 1783 was nominated judge in the Supreme Court of Judicature, Bengal, and knighted. Here he did much for the furtherance of Oriental studies, being one of the first Europeans to study Sanskrit, and founding the Bengal Asiatic Society in 1784.

JONESBORO, jōnz'būr-ō, city, Arkansas; seat of Craighead County; altitude 300 feet. It is situated 67 miles north-northwest of Memphis, Tenn., and is served by the Missouri Pacific (nearby at Nettleton), the St. Louis Southwestern, and the St. Louis-San Francisco railroads. It has an airport with regular airline service. Jonesboro is a trading center for the surrounding agricultural region, which produces cotton, corn, rice, and livestock. Manufactures include glass, handles, shoes, and baskets; there are also rice mills and stockyards. Jonesboro has public library facilities, two radio stations, a hospital, and is the seat of Arkansas State College (coeducational), founded in 1909. The surrounding country is noted for its hunting and fishing. Named for William A. Jones, the city was founded in 1859, and incorporated in 1883. Government is by mayor and council. Pop. (1950) 16,310.

JONESBORO, city, Georgia; seat of Clayton County; altitude 920 feet. It is situated 17 miles south-southeast of Atlanta and is served by the Central of Georgia Railway. It is largely a residential city. Cotton, corn, and grains are grown in the surrounding country, and Jonesboro has sawmills and a cotton gin. Two miles north is the so-called Fair of 1850, an historical museum housed in a reconstructed southern home; the collection illustrates the weapons, agriculture, religion, industries, and other activities of the South of 1850. There is also an historical museum on the Civil War battlefield here (see JONESBORO, BATTLE OF, AND FALL OF ATLANTA). Jonesboro was settled in 1823 and incorporated in 1859. Pop. (1950) 1,741.

JONESBORO, town, Louisiana; seat of

Jackson Parish; altitude 210 feet. It is situated 41 miles west-southwest of Monroe, in an agricultural region growing cotton, corn, poultry, and potatoes, and having truck gardens. Jonesboro is served by the Chicago, Rock Island and Pacific Railroad. It has lumber mills, manufactures of wood products, and cotton gins. Pop. (1950) 3,097.

JONESBORO, town, Tennessee; seat of Washington County; altitude 1,692 feet. It is situated 7 miles west of Johnson City, and is served by the Southern Railway. Pop. (1950) 1,126.

Jonesboro is the oldest town in Tennessee, formally founded Nov. 4, 1779, as the seat of Washington County, North Carolina; the county then comprising all of present-day Tennessee. Upon the cession of this territory by North Carolina to the United States in 1784, the settlers of the Watauga Association (q.v.) assembled in Jonesboro in August and December of 1784 and organized the State of Franklin (see FRANKLIN, STATE OF). The first legislative sessions of the short-lived state were also held in Jonesboro, until 1785 when its capital was established at Greeneville.

JONESBORO, Battle of, and Fall of Atlanta. After the battle of Ezra Church (q.v.), July 28, 1864, Gen. William T. Sherman, unable fully to invest Atlanta, drew the 14th Corps and Gen. John Schofield's Army of the Ohio from the left and extended his lines on the right nearly to East Point, about six miles below Atlanta, the junction of the two railroads leading from the city, upon which the city and Gen. John Bell Hood's army depended for supplies. Hood made corresponding movement to cover the roads, meeting Sherman's advance with strong, well-entrenched lines, and, August 6, severely handling two of Schofield's brigades that had crossed Utoy Creek, killing and wounding over 300 men and losing two colors.

To compel Sherman to relinquish his movement and raise the siege of Atlanta, Hood, August 10, sent Gen. Joseph Wheeler with about 900 cavalry to operate upon his line of communication with Nashville. Wheeler moved promptly, struck and destroyed the railroad near Marietta, Calhoun, Adairsville and Dalton, captured over 1,000 head of beef cattle and other supplies, and, after demonstrating on Dalton and Marietta, was driven into East Tennessee.

Sherman had issued an order, August 16, for general movement on the 18th upon the West Point and Macon railroads, for the purpose of forcing Hood from Atlanta, but hearing of Wheeler's raid, he suspended the order and directed Gen. Hugh Judson Kilpatrick, with 5,000 cavalry, to move on the night of the 18th against the West Point and Macon roads and destroy them completely. Kilpatrick started from near Marietta, crossed the West Point road at Fairburn and struck the Macon road a short distance north of Jonesboro, some 26 miles from Atlanta, where he encountered Ross' brigade of cavalry, which was driven through Jonesboro. But little of the railroad had been destroyed when Gen. William Hicks Jackson's brigade of cavalry and an infantry brigade, coming up from the south, compelled Kilpatrick to retreat. Making a circuit, he again struck the railroad at Lovejoy's, about six miles south of Jonesboro, and encoun-

tered a Confederate force, through which he cut his way and reached Decatur, near Atlanta, on the 22d.

As Sherman was satisfied that Kilpatrick had not greatly damaged the railroad, he renewed his order for the movement of the whole army. On the night of the 25th the siege of Atlanta was raised. The sick and wounded, spare artillery and surplus transportation were sent back to the Chattahoochee bridge; Gen. David Sloane Stanley's 4th Corps drew out from the left and moved to the right, closing up with the 14th Corps near Utoy, and the 20th Corps fell back to an entrenched position covering the Chattahoochee bridge and the hospitals. On the night of the 26th the Army of the Tennessee (Gen. Oliver Otis Howard) drew out, rapidly made a wide circuit and came up on the right of the Army of the Cumberland, under Gen. George Henry Thomas, along Utoy Creek, facing south. The Army of the Ohio remained in position, now on the extreme left. On the 28th, making a general left wheel, pivoting on Schofield's army, both Thomas and Howard reached the West Point road extending from East Point to Red Oak and Fairburn, Schofield closing in upon the left of Thomas, but a short distance from the Confederate works covering the junction of the road at East Point.

The next day was devoted to the railroad, of which nearly 13 miles was destroyed, and on the 30th the entire army moved eastward for the Macon Railroad. Schofield, on the left, approached it near Rough and Ready, and presented a bold front toward East Point; Thomas, in the center, reached Couch's, on the Fayetteville and Decatur road, with but little opposition; and Howard, on the right, driving before him the enemy's cavalry, saved the bridge over Flint River after a sharp engagement; then, crossing part of his command, halted at night within half a mile of Jonesboro. On the morning of the 31st Howard, finding himself in the presence of a large force, disposed the Army of the Tennessee for battle and entrenched, Gen. John A. Logan's 15th Corps on the left, Gen. Thomas E. G. Ransom's 16th Corps on the right and Gen. Francis P. Blair's 17th Corps in rear of Logan's left.

When Sherman began his movement on the night of the 25th, Gen. Stephen D. Lee's corps of Hood's army covered the railroad from near Atlanta to a place nearly a mile south of East Point. Gen. William J. Hardee's corps was on Lee's left, while Hood held Atlanta with Gen. Alexander T. Stewart's corps and the Georgia militia. Hood had been deceived; he knew of Sherman's earlier movement, but misinterpreted it as preliminary to a retreat across the Chattahoochee; but when undeceived on the 30th, he ordered Hardee with his own corps and Lee's to move rapidly to Jonesboro and crush Howard on the morning of the 31st. Hardee, who was near Rough and Ready, four miles below East Point, began moving about 4 P.M., followed later by Lee, and at noon of the 31st both were in Howard's front. At 3 P.M. Hardee attacked with Lee's corps, and part of his own, under Gen. Patrick R. Cleburne, with the expectation of driving Howard into the river, and for two hours the fighting was severe, but Hardee was repulsed. Lee, who, on the Confederate side, bore the brunt of the fight, says: "The attack was a feeble one and a failure, with a loss to my corps of about 1,300 men killed and wounded." Hardee's entire

loss was about 1,700. The Union loss was 179 killed and wounded, almost entirely of Logan's corps.

When Sherman heard the noise of this battle he was with Thomas, who, with Schofield, had reached and was destroying the road from Rough and Ready southward. Thomas and Schofield were marched to the assistance of Howard, and Kilpatrick was sent down the western bank of the Flint to strike the road south of Jonesboro. Gen. Jefferson Columbus Davis' 14th Corps joined Howard's left at noon of September 1, relieving Blair, who was disposed to support Kilpatrick. Lee's corps had gone, but Hardee's was still in position and entrenched, covering Jonesboro on the north. At 4 P.M. Davis charged Hardee's works and, after a hard fight, carried parts of them, capturing Gen. Daniel C. Govan and the greater part of his brigade and two batteries of four guns each. Stanley and Schofield reached the field too late to take part in the engagement. During the night Hardee retreated to Lovejoy's Station, and next morning Sherman started in pursuit. The Union loss September 1 was 223 killed, 946 wounded and 105 missing. The Confederate loss is not fully known; of the three divisions engaged Cleburne's sustained a loss of 55 killed, 197 wounded and 659 missing. There is no return of losses in the other two divisions.

The result of the battle of Jonesboro was the fall of Atlanta. Six hours before Hood heard of the result of Hardee's attack, August 31, he sent an order to Lee to return in the direction of Atlanta, to make a movement on Sherman's flank or to cover the evacuation of the city. Lee received the order at midnight, and was halted next morning about six miles from Atlanta. Meanwhile Hood had heard of the result of Hardee's attack; its "failure necessitated the evacuation of Atlanta." Lee was ordered to join Hardee, which he did on the 2d, and at 5 P.M. of the 1st Hood marched out of the city with Stewart's corps on the McDonough road; the Georgia militia was sent to Covington, and at night the rear guard blew up some abandoned ammunition trains. Gen. Henry W. Slocum's 20th Corps entered the city on the morning of the 2d. Sherman received the news on the 4th, and, turning his back on the Confederates at Lovejoy's, marched his army to East Point and Atlanta.

Union losses in the entire campaign were 4,423 killed, 22,822 wounded and 4,442 missing, a grand aggregate of 31,687. The Confederate losses were 3,044 killed and 18,952 wounded. Added to this the number of prisoners captured, 12,938, makes a grand aggregate of 34,979.

Consult Bowman, S. M., *Sherman and His Campaigns* (Cincinnati 1865); Sherman, W. T., *Personal Memoirs* (New York 1875); Johnson, R. U., and Buel, C. C., *Battles and Leaders of the Civil War* (New York 1884-1888).

JONGEN, yóng'ên, Joseph, Belgian composer: b. Liège, Dec. 14, 1873. He studied in the conservatory at Liège, and in 1897 won the Belgian Prix de Rome with his cantata *Comala*, and studied abroad.

Jongen's compositions include the symphonic poems *Lalla Roukh* (1903) and *Impressions d'Ardennes* (1913); the ballet *S'Arka* (1912); the opera *Jélyane* (1907-1916); and cantatas and much chamber music.

JONGKIND, yóng'kint, Johan Barthold,

Dutch landscape painter and etcher: b. Lattrop, near Rotterdam, June 3, 1819; d. Côte-Saint-André, Isère, France, Feb. 9, 1891. He studied under Andreas Schelfhout in The Hague, and in 1846 moved to Paris where he studied under Jean Baptiste Isabey and François Édouard Picot. After living in the Netherlands, 1855-1860, he returned to Paris, and in 1878 settled at Côte-Saint-André.

Jongkind's subjects are chiefly the banks of rivers, particularly the Seine, Dutch canals, sea-coasts, and the old streets of Paris. He is noted for his moonlight scenes. His studies of the fleeting effects of light, to which he brought the traditional Dutch feeling, make Jongkind a link between impressionism and the earlier naturalism. Such leaders of the impressionistic school as Claude Monet, Camille Pissarro, and Alfred Sisley were his students.

JONGLEUR DE NOTRE-DAME, zhōng-lūr' dê nō-trê-dām', Le (THE JUGGLER OF OUR LADY), an operatic miracle play in three acts by Jules Massenet, libretto by Maurice Léna. It was first produced at Monte Carlo on Feb. 18, 1902; in New York, on Nov. 27, 1908. The story is based on one of the short stories from *Étui de nacre* (1892) by Anatole France, which was a rendering of a medieval legend.

The scene is laid at Cluny; the time, the Middle Ages. A poor young street mountebank, Jean, amuses the villagers with his tricks in front of the monastery. The prior of the abbey threatens him with eternal punishment for his ungodly trade and advises him to enter the monastery, which the boy agrees to do. Anxious to do something to please the Holy Virgin, he bemoans his inability to the cook, Boniface, who tells him a fable, *The Legend of the Sage-Brush* and assures him that every sincere offering meets with divine acceptance. In the final scene the young novice stands before the altar in the chapel, having doffed his monk's garb and resumed that of his old trade. Standing before the image of the Virgin he performs his street tricks and is surprised in this occupation by the entrance of the prior and the monks, horrified at the act of sacrilege. They attempt to seize and throw him out when the figure of the Virgin assumes life and blesses him. He falls back dying and happy.

JONKOPING, yún'chū-ping, city, Sweden: capital of Jönköping Province; 80 miles east of Göteborg. The city is beautifully situated in a valley between the southern end of Lake Vättern and two smaller lakes, and is backed by pine-clad hills. The chief building is the church of Saint Christina. The manufacturing industries of the town are of considerable importance; the largest single industry is match making, the safety matches made here being used throughout the world. There are also manufactures of machinery and arms, textiles, and paper and woodpulp. The maritime trade was greatly increased by the completion of the Göta Canal in 1832, connecting the Baltic and North seas (Göteborg with Stockholm), thus making Jönköping a seaport.

The town's record goes back to legendary times. It is named in history in the early part of the 13th century, and in 1284 received its town charter. In 1357, 1439 and 1599 Parliament met here. In 1448 occurred the conference of the Swedish and Danish plenipotentiaries. The town was destroyed in 1612

by order of Gustavus Adolphus to prevent it from falling into the hands of the Danes, but was soon afterward rebuilt; and in 1809 a peace treaty was signed here between Denmark and Sweden. Pop. (1947) 41,428.

JONQUIERE, zhôn-kyâr', Canada, town in Chicoutimi County, Quebec, 8 miles west of Chicoutimi, on the Canadian National Railway. It contains sash and door factories, planing mills, pulp and paper factories, foundries, and a furniture factory. Pop. (1941) 13,769.

JONQUIL, jông'kwil. See NARCISSUS.

JONSON, Ben (in full BENJAMIN), English playwright and poet: b. in or near London, 1572, probably June 11; d. London, Aug. 6, 1637. Of Border descent, his father had lost his estate under Queen Mary, turned minister of the Gospel, and died a month before Ben's birth; of his mother little is known except that she took as second husband a master bricklayer. The young Jonson lived in the neighborhood of Charing Cross and attended "a private school in St. Martin's Church." He was then provided by an unidentified friend with means to attend Westminster where he studied under William Camden. About 1589 he was put into the craft of his stepfather, an occupation which he found far from his liking. Consequently he took arms as a hunter in Flanders, challenged an enemy to single combat in the face of both camps, killed him, and stripped him of his arms. Returning to London, he threw in his lot with the theater, first as actor and later as apprentice playwright. In 1595 he had married, and a year later the first of his three children, none of whom were to survive him, was born.

Jonson's known literary career began when he wrote a satiric comedy by Thomas Nash, *The Isle of Dogs*, presented in the summer of 1597. The play gave offense, and the actors including Jonson were arrested and imprisoned by order of the Privy Council; they were released in October, but this was not the last time Jonson clashed with authority. In the same year, Jonson was in the employ of Philip Henslowe. Plays for Henslowe, or others, included: perhaps the first version of *A Tale of a Tub*; *The Case Is Altered*, probably 1597-1598; and some unknown by name. In the fall of 1598, Francis Meres lists Jonson, surprisingly enough, among the writers best for comedy.

The year 1598, indeed, was an important one for Jonson; it marked the real beginning of his success as a dramatist and almost brought it to an abrupt conclusion. In September his comedy, *Every Man in His Humour* (q.v.), was performed by the Lord Chamberlain's Company; it was the first of his plays to receive signal applause and the first which he chose for preservation.

A few days later he engaged in a duel with one of Henslowe's actors, Gabriel Spencer, was wounded in the arm, but killed his opponent. Arrested and tried at the Old Bailey, he escaped with his life only by pleading benefit of clergy. Upon dismissal he was branded on the thumb as a felon, and his goods were confiscated. During his incarceration he became a Roman Catholic. Despite his narrow escape, Jonson's critical arrogance soon precipitated new quarrels. His *Every Man Out of His Humour* (1599), a "comical satire" for Shakespeare's company,

though not a success, made fun of the "fustian" diction of the poet-playwright, John Marston, who retorted in kind. *Cynthia's Revels* (1600), Jonson's mythological satire of court affectations for the Children of the Chapel, added Thomas Dekker to the comradeship of Marston, and *Poetaster* (1601), also for the Children, continued the assault. Dekker's hearty laughter, in his *Satiromastix* (1601), at a man who took himself too seriously, brought to a close the so-called "war of the theatres." It is clear that the clash was temperamental and fanned by the rivalry between the various companies for which Jonson wrote. Jonson had collaborated with Dekker and others in 1599 on two tragedies now lost, for the Admiral's Company. In 1602 he wrote a historical play and "additions," also for Henslowe, to Thomas Kyd's *Spanish Tragedy*, a play in which he had acted years before. Nevertheless, *Poetaster* offended many people who saw themselves or their professions ridiculed, and his *Apologetical Dialogue* was in itself offensive. In it Jonson announced that since his comedies had "proved so ominous," he would try "If Tragoedie have a more kind aspect."

Jonson's vigorous contentiousness as well as his great artistic gifts brought him, however, staunch friends as well as enemies. Early in 1602 he was living with Sir Robert Townshend, and a bit later with Esmé Stuart, lord of Aubigny and future duke of Lennox, whose hospitality he enjoyed for some years. Though his grave tragedy, *Sejanus*, produced by Shakespeare's company in 1603, was rejected by audiences, the accession of James I brought new ones. In August he provided an entertainment for the queen and the prince at Althorpe, and he and Dekker wrote the speeches for James' formal entry into the city in March 1604; in May he assisted Sir William Cornwallis in entertaining royalty at Highgate; and *The Masque of Blackness* for the Christmas festivities of 1604-1605, on which he collaborated with Inigo Jones, was the first of a long series of court successes in the masque form, which he was to develop and dignify. About this time, too, he established himself at the Mermaid Tavern as the leading spirit of a convivial group of wits and writers which included Shakespeare and Francis Beaumont.

On the other hand, two events could well have proved disastrous. The earl of Northumberland had not taken well Jonson's chastisement of one of his servants and summoned him before the Privy Council on the accusation of "popery and treason." Evidently Jonson's friends interceded. In 1604 he was in trouble again. With Marston and George Chapman, Jonson collaborated on a comedy, *Eastward Ho*, which contained incidentally some satire on the Scots. It speaks well for Jonson that when his fellow authors were imprisoned, he voluntarily joined them. Despite the rumor that they should have "their ears cutt & noses," Jonson and his collaborators, seconded again by powerful friends, escaped unscathed. Indeed, in November of 1605, Jonson was even employed by the Privy Council in obtaining evidence about the Gunpowder Plot.

The next ten years were probably Jonson's happiest and certainly the most fruitful and rewarding. His great comedy, *Volpone, or The Fox* (q.v.), produced by the King's Men in 1606, was so outstanding a success that it was presented also at Oxford and Cambridge. In the realm of courtly entertainment, *Hymenaei* (1605)

was succeeded by *Hue and Cry* after *Cupid* (1608), both for weddings; *The Masque of Beauty* (1608) and *The Masque of Queens* (1609). The last year saw too the laughable comedy, *Epicoene, or the Silent Woman* (q.v.), for the Children at Whitefriars, and 1610, perhaps his greatest, *The Alchemist* (q.v.), for the King's Men. About this time Jonson returned to the Church of England. Another attempt at tragedy for the King's Men, *Catiline* (1611), proved a failure, but the vigorous comedy, *Bartholomew Fair*, produced by the Lady Elizabeth's Company in 1614, was a brilliant success. Meanwhile the masques continued. In 1613, Jonson visited France, acting as tutor to the son of Sir Walter Raleigh. Already he had probably begun to plan the collection and publication of those writings which he thought worthy of posterity; the *Workes* appeared in folio in 1616, a monument for which posterity is grateful, despite the contemporary laughter which greeted his self-assurance.

Jonson was now at the height of his fame, but except for the somewhat perfunctory *The Devil Is an Ass* (1616), he wrote nothing for the public stage for nine years. With many friends, noble and literary, with a pension from James and other incidental rewards, recognized by the two universities, Jonson was free to devote his time to various other pursuits, poetic, scholarly, and pleasurable. In 1618 he undertook a pedestrian expedition to Scotland, where he was entertained by many and notably by the poet, William Drummond of Hawthornden, who has preserved his conversation and many biographical details. Welcomed on his return by the king, holding high court in the Devil Tavern, formally inducted honorary master of arts by Oxford University as a man of distinguished learning in humane letters, he was widely recognized as the foremost literary figure in England.

The succeeding years, however, were not so bright. In 1623 his library was destroyed by fire and along with it much work projected or partially completed. Less than two years later King James was dead, and it became clear that Charles I preferred the type of court masque which put Inigo Jones' spectacle over Jonson's poetry. Jonson perforce returned to the stage, this time with another comedy, *The Staple of News* (1626), a success at Blackfriars and at court. It was at the same time the beginning of the decline of his powers.

For the first five winters of the new reign, Jonson was not invited to prepare masques for the court. His financial resources were embarrassed. In 1628 his huge bulk was stricken with paralysis, and his next play, *The New Inn*, written from a sickbed and performed early in 1629 by the King's Company, was damned. Jonson's pecuniary difficulties were somewhat relieved by his appointment as city chronologer, and later by gifts from Charles and an increase in his pension, but his call to join with Jones in masques at court in 1631 caused a quarrel with Jones which ended Jonson's participation. His *Magnetic Lady* (1632), presented by the King's Men, was clearly not by the Jonson of old, and enemies sneered, Jones among them. Jonson retorted with a caricature of Jones in *A Tale of a Tub* (1633), a revision of a much earlier work, which was first censored and even then "not like" at court.

Confined now to his bed in his house in West-

minster, Jonson was able to produce little more. He read prodigiously, made notes which were preserved in his *Discoveries*, devised a couple of masques for the duke of Newcastle, and wrote part of a pastoral play, *The Sad Shepherd*, never completed. His friends flocked around him, and there is evidence of a kind of restoration to the favor of the king. Nevertheless he was in debt when he died on Aug. 6, 1637. Three days later, attended by a great throng of admirers, he was buried in the Poet's Corner of Westminster Abbey. A memorial volume, *Jonsonus Viribus*, appeared the following March, but the monument planned was doomed by the impending war. A square flagstone inscribed "O rare Ben Jonson," at the request of a friend, has since disappeared.

The apparently paradoxical elements in Jonson's character were united by the driving forces which determined his life and opinions. He was Latinist and duelist, Catholic and Protestant, a classicist of marked unrestraint, self-important but generous to those he loved and admired, serious in his convictions but free in jest and gullery. Yet in all he did there was a combative vigor and honesty. He did not suffer fools gladly, and he sometimes confused fools with those who disagreed with him or disliked his assertiveness. But there was nothing puny about Jonson. His reactions were as strong as his critical opinions, which he held to be valuable and demonstrable; if his pronouncements seemed Olympian, he had some reason to be confident. It is characteristic of him that though they disagreed and frequently clashed, he managed to work with Jones for years; that he could ridicule Marston and Dekker, and then shortly collaborate with them; that he could criticize Shakespeare, and yet

... confesse thy writings to be such,
As neither Man, nor Muse can praise too much.

The rounded character of Jonson's genius made him scholar, critic, poet, masque writer, and dramatist—in short, a genuine man of letters. Some of his translations and studies burned with his library, but he left a translation of Horace's *Art of Poetry* and an *English Grammar*. Thirty-six of his masques and entertainments remain to illustrate the nicety of his taste and the fertility of his invention; Jonson indeed brought the masque to its highest point of perfection. His nondramatic poetry, chiseled in its precision, now outspokenly direct, now lyrically graceful, is largely contained in *The Epigrams*, *The Forest*, and *Underwoods*.

But it was as critic and playwright that Jonson made his most distinguished contribution both to his own day and to the future. He was at once classicist, realist, and satirist. The Elizabethan drama which flowered in John Lyly and Robert Greene, in Thomas Kyd and Christopher Marlowe, and in Shakespeare, had elements of all these tendencies, but remained essentially romantic in its exuberance, its variety, and its violation of the so-called classical rules. Jonson, critic before artist, was conscious of apparent formlessness and individual caprice, of incongruity both in aim and material. He insisted on the high dignity of literature, on the acceptance of classical precept and example, on standards and detailed workmanship. His textbooks were Aristotle and Horace; his method, the judicious adaptation of precedent to current needs.

In tragedy, Jonson strove for "truth of Argument, dignity of Persons, gravity and height of diction, fullness and frequency of Sentence."

In comedy Jonson's method was the development from the physiological theory of humours of a new satirical comedy. According to this theory, temperament and behavior were determined by the predominance of one or more of the bodily fluids. A proper mingling made a proper man; a disproportion determined his special bent or characteristics. A "humorous" man, then, is an unbalanced one and a subject for corrective satire. Jonson's best comedies are all adaptations with various modifications of these ideas. Not only do characters become types, at their best universal and allied to those of classical comedy though adapted to present observation, but supersede plot in importance; plot becomes the means for providing situations in which humours may be exhibited in action and dialogue. In *Volpone*, *Epicoene*, *The Alchemist*, and *Bartholomew Fair*, Jonson shows his foibles with joyous comic resource, and these plays are among the finest achievements of English comedy.

Jonson's masques have lost interest to any professed specialists; his translations and scholarship have been superseded; only a few of his poems are preserved in anthologies, or read sung today; his criticism is valuable, but has been absorbed into the great body of literary judgment and taste. Much of what he wrote is of his age and of a great age. But Jonson, a man of letters, remains in his comedies. They had enormous influence on the drama; they are studied in colleges and universities as examples of high comic art and brilliant dramaturgy; and they are frequently revived on both the amateur and the professional stage. They are a permanent heritage of the modern world in "rare Ben Jonson."

Bibliography.—The standard edition is the monumental *Ben Jonson*, edited by C. H. Herford and Percy D. Evelyn Simpson, 11 vols. (Oxford 1925). This contains Jonson's complete works with critical apparatus, and two volumes on his life and writings. The plays have been often edited and are conveniently accessible elsewhere, in, for example, various volumes of the *Yale Studies in English*, and the *Mermaid Series*, edited by Nicholson, 3 vols. (London 1893-1895). An account of Jonson and his work, intermediate in fullness between Herford-Simpson and the present one, may be found in M. Parrott and R. H. Ball, *A Short View of Elizabethan Drama* (New York 1943). For bibliography consult S. A. Greenbaum, *Ben Jonson: A Concise Bibliography* (New York 1938; Supplement, 1947).

Special studies and criticism include: Woodbridge, E., *Studies in Jonson's Comedy* (Boston 1898); Castelain, M., *Ben Jonson, l'Homme et l'Oeuvre* (Paris 1907); Baeker, C. R., *English Elements in Jonson's Early Comedy* (Austin, Texas, 1911); Kerr, M., *Influence of Ben Jonson on English Comedy, 1598-1642* (New York 1912); Palmer, *Ben Jonson* (London 1934); Noyes, R. G., *Ben Jonson in the English Stage, 1600-1776* (Cambridge 1935); Wright, L. C., *Drama and Society in the Age of Jonson* (London 1937); Bentley, G. E., *Shakespeare and Jonson: Their Reputations in the Seventeenth Century Compared*, 2 vols. (Chicago 1945); Baum, H. W., *The Satiric and Indiscreet in Ben Jonson's Comedy* (Chapel Hill 1947); Townsend, F. L., *Apologies for Bartholomew Fair: The First of Jonson's Comedies* (New York 1947).

ROBERT HAMILTON BALL,
Associate Professor of English, Queens College
of the City of New York.

JOPLIN, Mo., city and Jasper County seat, alt. 979 feet, on the Missouri Pacific; Missouri and Arkansas; Kansas City Southern; Missouri-Kansas-Texas; Atchison, Topeka, and Santa Fe; and St. Louis and San Francisco railroads; on both state and federal highways, 150m. S. of

Kansas City. Lead and zinc mining and smelting are its principal industrial interests. Manufactures include mining machinery, cigars, and explosives. Joplin has a public library with two branches; a mineral museum; a radio station; two hospitals; and a municipal airport. The town was named for the Rev. Harris G. Joplin, a Methodist home missionary; he was the first permanent settler, in 1839. In 1848 the mining of lead was begun, and in 1860, exploitation of the county's rich resources in zinc. After a struggle with neighboring towns, the City of Joplin was chartered in 1874; plans originally were to incorporate it and Murphysburg as Union City. With the growth of mining competition by Oklahoma, Joplin branched out with a more diversified industrial program. Municipal government was placed under the administration of a commission in 1914. Pop. (1940) 37,144; (1950) 38,711.

JORDAENS, yôr'dâns, Jacob, Flemish painter: b. Antwerp, May 19, 1593; d. there, Oct. 18, 1678. From his early boyhood in 1607 he was the pupil of Adam van Noort, whose daughter he afterward married, and in 1615 was made master in the Guild of Saint Luke at Antwerp. He was the most eminent painter of the Flemish school next to Rubens, to whom, however, he was inferior in force and conception. The most renowned among his religious pictures are *The Last Supper* in the Antwerp Museum; and *The Martyrdom of Saint Apollonia* in the church of the Augustines, Antwerp.

Consult Rooses, Max, *J. Jordaens, His Life and Work* (English tr., 1908).

JORDAN, Camille, French politician: b. Lyon, Jan. 11, 1771; d. Paris, May 19, 1821. He was a pupil of the Oratorians at Lyon and when still young became imbued with royalist principles, later developing into an active opponent of the French Revolution. When only 20 years of age he published a pamphlet satirizing the Constitutional Church, entitled *Histoire de la conversion d'une dame parisienne* (1792). When Lyon fell in October 1793, Jordan was proscribed by the Directory for his participation in the insurrection and fled to Switzerland, subsequently passing six months in England. In 1796 he returned to France and in 1797 was sent by Lyon to the Council of Five Hundred. In the Revolution of Sept. 4, 1797, Jordan escaped to Basel and later went to Germany where he met Goethe. In 1800 he returned and in 1802 exposed the schemes of Bonaparte in a pamphlet *Le vrai Sens du Vote National pour le Consulat à Vie*. From that time till 1814 he devoted his time in retirement to literature, but at the Restoration was made a councilor of state by Louis XVIII, and from 1816 till his death represented the Department of Ain in the Chamber of Deputies.

JORDAN, jôr'd'n, Conrad N., American financier: b. New York, April 20, 1830; d. there, Feb. 26, 1903. He entered a printing office, but soon exchanged this for a banking establishment, was cashier of a New York bank in 1864-1880, and in 1880-1884 was treasurer of the New York, Ontario and Western Railroad. In

1885–1887 he served as treasurer of the United States, during this period introducing a revised form of debt and cash statements. He was one of the founders of the Western National Bank of New York, of which he became president for a brief period. From 1893 until his death he was assistant United States treasurer in New York.

JORDAN, David Starr, American biologist and educator: b. Gainesville, N. Y., Jan. 19, 1851; d. Stanford University, Calif., Sept. 16, 1931. He secured a master's degree at Cornell University in 1872, and three years later he was awarded his doctorate in medicine at Indiana Medical College. In 1875 he went to Butler University as professor of biology. He resigned this chair in 1879 to go to Indiana University as professor of zoology, and from 1885 until 1891 he served as president of that institution. In 1891 he became the first president of Leland Stanford Junior University; he continued in this office until 1913, when he was made chancellor, an appointment which he held until 1916. Early in his career he had become recognized as one of the leading American authorities on fishes. On behalf of the United States Fish Commission he investigated the fur seal and salmon industry, and he made a study of the geographic distribution of animals and plants, and the relation of species to environment. He was also interested in the problem of preserving world peace, from 1910 to 1914 serving as chief director of the World Peace Foundation. His numerous works included *Manual of the Vertebrates of Northern United States* (1876–1929); *Fishes of North and Middle America* (with B. W. Evermann, 1896–1900); *Footnotes to Evolution* (1898); *American Food and Game Fishes* (with Evermann, 1902); *Voice of the Scholar* (1903); *Fishes* (1907); *The Human Harvest* (1907); *Evolution and Animal Life* (with V. L. Kellogg, 1907); *War's Aftermath* (1914); *The Genera of Fishes* (1918–1920); *Fossil Fishes of Southern California* (1919–1926); *The Higher Foolishness* (1927); *The Trend of the American University* (1929); also his autobiography *Days of a Man* (1922).

JORDAN, Dorothea (or **Dorothy**), stage name of DOROTHEA BLAND, an Irish actress: b. Waterford, 1762; d. St.-Cloud, France, July 3, 1816. She made her first stage appearance in Dublin in 1777 as Phoebe in *As You Like It*. In 1782 she appeared at Leeds, England, and subsequently she toured the English provinces. In 1785 she appeared at Drury Lane, London, in *A Country Girl*. She was most successful and remained at Drury Lane until 1809. In 1811 she appeared at the Covent Garden, excelling in comedy roles. She retired from the stage in 1815. Her private life was a scandal. She had four children by Sir Richard Ford, and for several years was known as Mrs. Ford. In 1790 she became the mistress of the Duke of Clarence, afterward William IV, by whom she had 10 children, who were ennobled under the name of FitzClarence. William IV erected a statue to her in 1831.

JORDAN, Edwin Oakes, American bacteriologist: b. Thomaston, Me., July 28, 1866; d. Sept. 2, 1936. He graduated at the Massachusetts Institute of Technology in 1888 and secured his Ph.D. at Clark University in 1892. In the latter year he joined the faculty of the Uni-

versity of Chicago as associate in anatomy, and he was professor of bacteriology there from 1907 until his retirement in 1933. He conducted researches on influenza, typhoid fever, food poisoning, and bacterial dissociation. His books included *Food Poisoning*, 2d ed. (1931) and *The Newer Knowledge of Bacteriology and Immunology* (1928).

JORDAN, Elizabeth Garver, American editor and writer: b. Milwaukee, Wis., May 9, 1867; d. New York City, Feb. 24, 1947. She was a member of the editorial staff of the *New York World* for ten years and assistant editor of the *Sunday World* for three years prior to 1900, when she was appointed editor of *Harper's Bazaar*; after resigning this chair in 1913 she was literary adviser to Harper and Brothers, New York publishers, for three years. Her numerous books included *Tales of the City Room* (1898); *May Iverson, Her Book* (1904); *Lovers' Knots* (1916); *Wings of Youth* (1917); *The Girl in the Mirror* (1919); *Red Riding Hood* (1924); *Miss Blake's Husband* (1925); *Page Mr. Pomeroy* (1933); *The Life of the Party* (1935); and the autobiographical *Three Rousing Cheers* (1937).

JORDAN, John Woolf, American librarian and editor: b. Philadelphia, Pa., Sept. 14, 1840; d. Wilmington, Del., June 12, 1921. From 1888 he served as editor of the *Pennsylvania Magazine of History and Biography*, and from 1895 until his death he was also librarian of the Historical Society of Pennsylvania. His writings included *Narrative of John Heckewelder's Journey to the Wabash in 1792*; *Bishop Spangenberg's Notes of Travel to Onondaga in 1746*; *Franklin as a Genealogist* (1895).

JORDAN, Louis Henry, Canadian clergyman: b. Halifax, Nova Scotia, July 27, 1855; d. Oct. 4, 1923. He was educated at Dalhousie and Princeton universities, and subsequently studied in Germany at Marburg, Leipzig, and Berlin. His successive ministries were at Saint Andrew's, Halifax (1882–1885), Erskine Church Montreal (1885–1890), and Saint James Square Church, Toronto (1894–1900). During 1887–1889 he was lecturer on church polity at the Montreal Theological College, and in 1902 he was special lecturer on comparative religion at the University of Chicago. His books included *Comparative Religion: Its Genesis and Growth* (1905); *Comparative Religion: A Survey of its Recent Literature* (1906; 1910; 1914); *Comparative Religion: Its Methods and Scope* (1908); *The Study of Religion in the Italian Universities with Labanca* (1909); *Modernism in Italy: Its Origin, its Incentive, its Leaders and its Aims* (1909); *Comparative Religion: Its Adjuncts and Allies* (1915).

JORDAN, Thomas, American army officer: b. Luray, Va., Sept. 30, 1819; d. New York City, Nov. 27, 1895. He graduated at West Point in 1840 and saw active service in the Seminole and Mexican wars. During 1856–1860 he was stationed on the Pacific coast, at this period introducing steam navigation on the Columbia River above The Dalles. With outbreak of the American Civil War in 1861 he resigned his commission and entered Confederate service. He fought at the first Battle of Bull Run and served as chief

staff to General Beauregard. During 1868-69 he edited the *Memphis Appeal*, and in the next year he went to Cuba to lead volunteers fighting the insurgents; given chief command of the Cubans following his landing at Mayari, in January 1870 he inflicted a defeat upon the Spaniards at Guaimaro. With collapse of the revolution in 1871 he settled in New York City, where founding and editing (until 1892) the *Financial and Mining Record*. With J. B. Pryor he wrote *The Campaigns of Lieut. Gen. Forrest* (1868).

JORDAN, William George, Canadian clergyman; b. Whitby, Yorkshire, England, 1852; d. Toronto, Ontario, June 1939. He studied at London University and graduated in theology at the Presbyterian College, in London. After a period with the United Methodist Free Churches he joined the Presbyterian Church. Migrating to Canada in 1889, he spent some nine years as minister at Strathroy, Ontario. In 1899 he was appointed professor of Hebrew literature at Queen's University, Kingston, Ontario, and he continued to occupy this chair until his retirement in 1929. His numerous writings included *The Tong and the Soil*; *History and Revelation*.

JORDAN, Hashemite, hāsh'ēm-it, Kingdom of the, an independent state in northwest Arabia, until April 26, 1949, known as TRANSJORDAN. It is bordered on the south and east by Saudi Arabia, on the east by Iraq, on the north by Syria, and on the west by Israel. The area of 17,500 square miles includes 2,500 square miles west of the River Jordan (formerly in the British mandated territory of Palestine) annexed on April 24, 1950. The population of 1,500,000 (1950 est.) includes some 600,000 Arab refugees from Palestine. Most of the people are Arabs of the Moslem faith; besides Christian Arabs, there are other racial groups, chiefly Circassians. A large proportion of the population is nomadic or seminomadic. Amman (pop., est. 1949, 101,000), the capital, is 25 miles northeast of the Dead Sea; it was the Biblical Rabbah (Rabbath), and was named Philadelphia for Ptolemy II Philadelphus. Other towns include Irbid, in the north, Ma'an, 60 miles south-southeast of the Dead Sea, and 'Aqaba, the kingdom's seaport at the head of the gulf of the same name, on the northeastern arm of the Red Sea. Cities in the area annexed in 1950 include Bethlehem, Jericho, Hebron, Nablus, and the Old City portion of Jerusalem.

The topography, climate, and physical character of the country are typical of most of Arabia (qv.). While fertile near the Jordan and the western shores of the Dead Sea (Bahret Lut), sand dunes occupy much of the surface. The highest point is Jebel Ajlun, which has an elevation of 4,068 feet; Ras Siyagha, 2,644 feet, is the Biblical Mount Nebo or Pisgah. Several streams flow from the fertile areas into the Jordan, among them the Kufrinji and the Nar ez Zerga; the Seil el Qadi and other streams enter the Dead Sea. Indigenous flora and fauna are scanty, though gazelles are still plentiful in the desert regions in the east. Few minerals have been located. Rich phosphate deposits exist near the western frontier, and toward the southern end of the country are indications of the presence of petroleum in payable quantities. Other known minerals include iron, copper, and manganese.

Under the constitution which went into effect on April 1, 1947, executive power is vested in the king, who appoints the prime minister and approves the nominations to the 11-member Cabinet. The legislature consists of a 20-member Senate (until 1950 10-member), the senators being appointed by the king for 8-year terms, and an elected 40-member Chamber of Deputies; the electorate is restricted to males. A 20-year military alliance signed with Great Britain in 1948 provided for the stationing of Royal Air Force units at the Amman and Mafrak airfields. The Arab Legion, Jordan's army, is trained by British officers and commanded by a Briton. In 1950 the Palestine pound was replaced by the dinar, divisible into 1,000 fils, as the currency of Jordan. Although elementary education up to the fifth grade is compulsory and free, illiteracy is widespread. Coeducation is prohibited. At Amman are Terra Sancta College and the Islamic Higher College; and the government also provides scholarships for university education in Britain, the United States, and France.

Agricultural and pastoral industries are possible in the settled western districts. Wheat, barley, lentils, beans, grapes, tobacco, and olives are cultivated; raisins are an important item in the Arab diet. There is also a thriving trade in livestock and animal produce with the neighboring countries. With the extension of irrigation the country has considerable potentialities. There are a few light manufacturing industries, such as mechanical workshops, woodwork, furniture, and building. The phosphate deposits are being developed, and potash is obtained from the Dead Sea. Other minerals exploited include ochre, gypsum, kaolin, and silica sand. The major portion of the Hejaz Railway traverses Jordan, north to south, from the Syrian border to Ma'an, the line thence having fallen into disuse after World War I. There are some 2,200 miles of highways, mostly unpaved; they include an east-west highway linking Haifa, Israel, with Baghdad, Iraq, and a road southward from the frontier of Syria to the port of 'Aqaba. The country is served by a local airline, and by other lines operating between Egypt and Iraq.

History.—Edom, Gilead, and Moab, countries of the early Israelites, lay within the modern Hashemite Kingdom of the Jordan, and the region subsequently was of importance during the era of the Graeco-Roman civilization. Conquered by the Moslems in 637, it formed part of the Ottoman Empire down to World War I. Following expulsion of the Turks by British forces in 1918 the country was included in the Arab kingdom of Syria formed by Faisal, third son of Husein ibn-Ali, king of the Hejaz. Faisal was ejected by the French in 1920, and the next year Abdullah, second son of Husein, arrived at Amman with the intent of assisting in the reconquest of Syria by his younger brother. This proving impracticable, with British assistance Faisal became king of Iraq and Abdullah was created amir of Transjordan. In 1922 the latter country was made part of the League of Nations mandate for Palestine entrusted to Great Britain, but was expressly excluded from inclusion in the clauses relating to the Holy Places and establishment of a national home for the Jews in Palestine. With the approval of the League of Nations, in 1928 Great Britain recognized the existence in Transjordan of an autonomous government under mandatory control, with Amir

Abdullah ibn-Husein as head of the state. The 1928 agreement with Britain was revised in 1934 and again in 1941, and on March 22, 1946, the mandate having been revoked, Great Britain accorded recognition to the independence of Transjordan. With the country now independent, on May 25, 1946, the amir assumed the title of king. The country became a member of the Arab League, but membership in the United Nations was vetoed by the Soviet Union. During 1947-1948 many thousands of Arabs fled to Transjordan from Palestine to escape the fighting between Jews and Arabs which preceded establishment of the state of Israel; and an armistice concluded on April 3, 1949, between Transjordan and Israel provided for the occupation by Jordanian forces of the Old City of Jerusalem and an area of central Palestine amounting to about one fourth of the former mandate. It was announced on April 26, 1949, that Transjordan would henceforth be known as the Hashemite Kingdom of the Jordan. The king established a civil administration in Jordan-occupied Palestine on March 16, 1949, and on April 24, 1950, the annexation of that area was proclaimed; this acquisition more than doubled the population of Jordan. The United States accorded recognition to the kingdom on Jan. 31, 1949, and on April 27, 1950, Great Britain gave *de facto* recognition to the annexation of Jordan-occupied Palestine. King Abdullah, who had labored for nearly 40 years to unite large areas of the Middle East under the rule of his family, was murdered outside the Mosque of Omar, in Jerusalem, by a Palestinian Arab on July 20, 1951. Prince Naif, Abdullah's second son, assumed the regency until September 6, when his elder brother, who had been recuperating from illness in Switzerland, returned to Amman and took the constitutional oath as King Talal.

Consult Peake, F. G., *A History of Transjordan and Its Tribes*, 2 vols. (Amman 1934); Konikoff, A., *Transjordan: An Economic Survey*, 2d ed. (Jerusalem 1946).

JORDAN, the largest river of Palestine, constitutes in its upper course the boundary between northern Israel and Syria and the Hashemite Kingdom of the Jordan; its lower course lies wholly in that kingdom as enlarged by annexation in 1950. The river rises in the Anti-Liban (Anti-Lebanon) Mountains, west of Mount Hermon, and flows south through the Waters of Merom (Bahret el Hule) and the Sea of Galilee (Lake Tiberias, Bahret Tabariya) to enter the northern end of the Dead Sea (Bahret Lut). The length is approximately 200 miles. The valley of the Jordan south of the Sea of Galilee is a great depression, known to the Arabs as the Ghor, 65 miles long; it lies below the level of the sea. The Jordan is not navigable.

JORDANES, jôr-dā'nēz, or **JORDANIS**, a 6th-century ecclesiastic and historian. The first of his two historical works was a short compendium of the most important events in history from the creation to 552 A.D. The second is a history of the Goths, based upon, or copied from, the 12 lost books of the Roman senator Cassiodorus.

JORIS, yô'ris, **David** (also **JAN JORISZ** or **JORISZON**), Dutch Anabaptist leader: b. Bruges, 1501?; d. Basel, Switzerland, Aug. 25, 1556. He joined the Anabaptists in 1533, and at Delft,

in 1556, he founded a sect known as the Davidists or Jorists. Pretending to be the Messiah he denied the Resurrection and held various heretical opinions. In order to avoid persecution he fled in 1544 to Basel, where he lived under the name of Jan van Brugge till his death. When the truth was revealed in 1559, he was denounced for heresy and his remains were exhumed and burned.

JORN UHL, yörn ōl, by Gustav Frenssen is one of those novels, found in the literature of every nation, in which not a man but a well-established national type is the hero. The book was published in English translation in 1905. The author who makes such a type the central figure of a romantic story is sure of popular approval in just the proportion in which his character is true to life and recognizable, emphasizing the universal in the portrait, distinguishing the typical, shading down the personal. Gustav Frenssen was peculiarly successful in his attempt to create, through Jorn Uhl, the picture of the young German peasant-farmer: industrious, idealistic, imaginative, doing his duty not only with patience but with high courage, loving the land, but loving the stars more and with a vision of something even beyond the stars. Contrasted with him are the equally life-like figures of his drunken, pompous, spendthrift father, his drunken, idle, thieving older brother who waste the land beyond all power of Jorn Uhl's labor to redeem it. Together they are the personification of a German peasant family. The straightforward, provincial simplicity of Frenssen's style is thoroughly in harmony with the story and the character of the hero, and deepens the sense of reality. One chapter of the book, detailing the drafting of the young peasant for war service and his experience in the Battle of Gravelotte, has the quality of permanent interest in national literature, and has been translated into use in schools.

JORULLO, hòá-rōō'yò, a volcanic peak in Mexico, in Michoacán state 160 miles southwest of Mexico City. The height is 4,331 feet. Great destruction was caused by its eruption in 1753.

JOSE, hò-sā'. The *José* (*Joseph*, first published at Madrid 1885) of the noteworthy Spanish novelist, Armando Palacio Valdés (1853-1938), is not one of the more ambitious of his works. An interesting novelette in manners, portraying actual conditions of life in the northern maritime districts of Spain, it tells in simple and direct fashion of the tribulations encountered by two lovers of humble station, whose union is thwarted for a while by the machinations of the girl's avaricious and heartless mother and by the operations of a national law which gives parents a tyrannical control over their children contemplating matrimony. The characters are presented in vivid colors on a background of sea and shore, and even the figure of the decayed gentleman, the modern Don Quixote here called Don Fernando de Meira, escapes the charge of conventionality by conforming naturally to type. One might wish, however, that the author had not seen fit to make Fernando's end so wretched; perhaps, withstanding, he felt it imperative to draw home the lesson that for the melancholy ab-

ons of hidalgism a corrective is not easily found. In some of the scenes in which the wives play a part with their wordy quarrels and hair-pulling exercises, Valdés must perforce descend to the vulgar; but he realizes the danger of the situation and never ventures too far into repugnant detail. Taking him all in all, Valdés, as the author of this successful idyll and of about a score of novels of acknowledged worth of his 'Marta y María,' his 'Majos de Madrid' and his 'Alegria del Capitán Ribot,' has proved himself a talent of high order among our modern writers of prose fiction and has well merited the generous flood of praise accorded him by so competent a judge as Mr. Howells.

JEREMIAH D. M. FORD.

JOSEFFY, yō-sēf'i, Rafael, Hungarian-American pianist: b. Miskolcz, Hungary, 1853; d. 1915. He was a pupil of Moscheles at the Leipzig Conservatory and of Tausig at Berlin, won distinction in a concert tour of Holland and Germany, and later appeared with large success throughout Europe and the United States. For several years he was a professor in the National Conservatory at New York, where he resided from about 1880. He was a member of the faculty of the National Conservatory of Music, New York, from 1885 to 1906. As a virtuoso he evinced great facility and technical finish, and won particular recognition through his interpretations of Chopin. His compositions include 'Ungarisches Album' (6 works for pianoforte); 'Die Mühle' (op. 33), a 'Marche Turque,' and 'Konzert-Studien nach Chopin.' He is also the author of the popular work 'School of Advanced Piano Playing' (1892).

JOSEPH, a son of the patriarch Jacob by his favorite wife, Rachel. His father's preference for him and his own relation of dreams which predicted his future exaltation above those of his household drew upon him the envy of his brothers, who sold him to Ishmaelitic and Midianite slave-dealers, by whom he was sold to Potiphar, a captain of the guard in Egypt. The story of his condemnation to prison on the false accusation of Potiphar's wife, of his release and subsequent elevation to the position of vice-regent of Egypt and the final settlement there of his father and brothers is related in the book of Genesis. Authorities still differ as to the period in Egyptian history to which Joseph's life belongs, but the majority agree in placing it under the Hyksos or shepherd kings.

JOSEPH, North American Indian chief of the Nez Percé tribe: b. about 1830; d. Nespelem, Colville Reservation, Wash., 21 Sept. 1904. Of remarkably fine physical build and endowed with superb mental gifts, Joseph (Hinmaton-Yalatlit) was one of the most remarkable men of his race. In 1863 he refused to recognize the treaty by which the whites obtained entry to the Wallowa Valley, the ancient home of his people, in northeastern Oregon. Many of the Indians sympathized with him and continued to dwell there in spite of frequent bickerings with the white settlers. The government undertook to remove these Indians to the Lapwai Reservation in Idaho, and things were proceeding peacefully when outrages by the whites drove the Nez Percés to fury and caused them to attack the settlements. A declaration of war ensued

and Joseph skilfully led his people in a memorable retreat to within 50 miles of the Canadian border, when his retreat was cut off by fresh troops and on 5 Oct. 1877 he was forced to surrender. His skill won praise from his conquerors, General Howard, Colonels Miles, Sturgis, etc. The promises made to Joseph and his people were ignored, and the Indians, numbering 431, were removed to Fort Leavenworth, Kans., and afterward to Indian Territory, where they remained for many years, always yearning for the mountains and valleys of Idaho. In 1883 the government permitted a party of 33 women and children to go back to their old home and in 1884, 118 others were allowed to go. Joseph, however, and 150 others were not permitted to return to Idaho but were sent to Colville, Wash. Chief Joseph visited President Roosevelt and General Miles at Washington in 1903. In his later years he had become reconciled to civilization and encouraged education among the children of his tribe.

JOSEPH, Father (FRANÇOIS LECLERC DU TREMBLAY), French propagandist and statesman: b. Paris, 4 Nov. 1577; d. Rueil, 18 Dec. 1638. He belonged to a distinguished family, traveled much in his youth, and served in the army under an assumed name, but in 1599 he entered the Capuchin order, in which he subsequently attained a high position. Attracting the attention of Cardinal Richelieu, in 1611, that statesman made Father Joseph his secretary and confidential adviser. In this capacity, and as provincial of his order in France, he wielded immense influence and power for many years and ably seconded the cardinal's efforts to convert the Huguenots. He was eager for the defense of Christianity against the Turks and advocated a crusade against them. He left several volumes of memoirs which are still in manuscript in the Paris Library. Consult O'Connor, R. F., 'His Grey Eminence, the true Friar Joseph: An Historical Study' (Philadelphia 1912).

JOSEPH, Saint, the husband of Mary the mother of Jesus Christ, was a descendant of the house of David, born at Bethlehem, but resident at Nazareth, where he practised the trade of a carpenter. Tradition and art represent him as an old man at the time of Christ's birth and he is said to have died before the beginning of Christ's public ministry. His day in the Roman Catholic calendar is 19 March.

JOSEPH I, emperor of Germany: b. Vienna, 26 July 1678; d. 17 April 1711. He succeeded his father, Leopold I, and was employed for nearly the whole of his reign in war. With England and Holland he continued the war against France, to seat the Archduke Charles on the throne of Spain. The great victories gained by the allies under Marlborough in the Low Countries and Prince Eugene on the Rhine made the reign of Joseph especially noteworthy. He was equally triumphant in Italy and Hungary; in the latter kingdom driving the revolted Bagotski from the country and forcing him to seek safety in Turkey; while in the Italian peninsula great cities from Mantua to Genoa were laid under heavy contributions.

JOSEPH II, German emperor, oldest son of Francis I and Maria Theresa: b. Vienna, 13 March 1741; d. there, 20 Feb. 1790. He was

elected king of the Romans in 1764, and on the death of his father in 1765, German emperor. His mother declared him coregent in the hereditary states of the house of Austria and gave him the command of the army, but the real authority remained in her hands. In the earlier part of his reign he employed his time in traveling and becoming acquainted with his estates. He visited his sister, Marie Antoinette, at Paris, and Catherine of Russia in 1780. It was also in those years that he began his intimacy with Frederic II of Prussia, resulting later in the partition of Poland. In November 1780, Maria Theresa died, and Joseph came into possession of full dominion over his hereditary states. He immediately began a series of sweeping reforms. In 1781 the Edict of Toleration granted freer religious worship to all orthodox sects. At the same time he suppressed Catholic monasteries, brought the education of the clergy under state control, and opposed papal interference with the church in his country. Joseph initiated a new system of governmental departments. He simplified the organization of justice, abolished serfdom, revamped the penal code, inaugurated tax reforms, removed trade restrictions, spread education, and established hospitals, asylums, and orphanages. He acted on the definite system for the good of all, but his benevolent despotism received wide disapproval because of the complete disregard of conventions, traditions, and special interests. Increasing serious opposition and unrest toward the end of his reign forced him to withdraw most of his reforms. His family and his friends scorned his liberal views, treating him with cruel neglect. Joseph II died a disappointed and broken man. There is extensive literature on his rule, much of which consists of his correspondence. Consult Arneth, A. von, ed., *Maria Theresia und Josef II, Ihre Korrespondenz*, etc. (Vienna 1867-1868); Schlitter, H., *Die Regierung Josefs II in den Oesterreichischen Niederlanden* (Vienna 1900); Beer, Adolf and Ruter, Joseph, *Joseph II und Graf Ludwig Cobenzl, ihr Briefwechsel* (Vienna 1901); a historical novel by Mulbach, L., *Joseph II and His Court* (New York 1915); Temperley, H. W., *Fredric the Great and Kaiser Joseph* (London 1915); Padover, Saul, *The Revolutionary Emperor: Joseph II* (Toronto 1934); and Goodwin, Sister Mary Clare, *The Papal Conflict With Josephinism* (New York 1938).

JOSEPH AND HIS BROTHERS, a tetralogy of fiction by Thomas Mann, published in four volumes from 1933 to 1943: *Die Geschichten Jacobs* (*The Tales of Jacob*, 1933); *Der junge Joseph* (*Young Joseph*, 1934); *Joseph in Aegypten* (*Joseph in Egypt*, 1936); and *Joseph der Ernährer* (*Joseph the Provider*, 1943). He no longer dwells upon the note of decadence in order to expose the delusion of the German citizen "that one may be a man of culture, yet not of politics," as in *The Buddenbrooks* and *The Magic Mountain* (qq.v.). The theme here is much broader: the author chooses as its framework the simple Old Testament story of the sons of Jacob, with the dramatic career of Joseph as the central feature. Mann makes no important deviations from the Biblical narrative, completely discarding the element of suspense which most novelists regard as a first requisite. With a virtuosity of style equalled only by an incredibly penetrating imagination and rare psychological

insight, he recasts these narratives into a new mold and casts new light upon their fundamental ideas. The characters never become mere abstractions representing certain ideas: they are vividly real in all that they do and say, and the reader is carried along as with the sweep and surge of a great symphony, which ranges from the mystery of man's origins to the coming of the new social world, concerning which the author himself said in *Leiden und Grösse der Meister*: "the new, the social world will come, the organized, united and planned order, in which humanity will be freed from sub-human, unnecessary sufferings which violate the dignity of reason."

It is a notable fact that the writing of the Joseph stories was Mann's preoccupation through the troubled decade preceding his "half voluntary, half involuntary" exile, and extended through another 10 years, into the midst of World War II, the last volume being written in the United States between 1940 and 1943. This in itself demonstrates his unswerving zeal in the steadfast pursuit of a high purpose, which Professor Erwin Edman of Columbia University aptly characterized when he called Thomas Mann "the foremost humanist of our time, who takes the role of man of letters in a serious, almost prophetic sense, and feels that great art must be an instrument of salvation, the regeneration of a democratic, perhaps a classless society" (*Saturday Review of Literature*, July 31, 1937.)

WILHELM A. BRAUN,

Professor Emeritus of Germanic Languages and Literature, Columbia University.

JOSEPH OF ARIMATHEA, jō-zēi -(zīf), ār'i-mā-thē'ā, member of the Jewish Sanhedrin who dissented in the action of the condemnation of Jesus. He was the person responsible for the burial of Jesus, and the only mention of him in the New Testament is in connection with this entombment. According to tradition, Joseph later went to Gaul as a missionary. He is accredited with having erected the first Christian chapel in Britain on the grounds of Glastonbury. From the legends of medieval poetry and tales, he was the one who brought the Holy Grail to Britain. In the Roman Catholic calendar, his feast day is celebrated on March 17; in the Greek Church it is celebrated on July 31. In addition to the Biblical reference there are also dramatizations of his life: Tarriex, Gabriel, *Les Vaincus: Joseph d'Arimathie* (Paris 1903); Steyl, Johannes Albert von, *Joseph von Armathia, ein Karfreitagsspiel in fünf Aufzügen* (1921); and Taylor, Winifred G., *Joseph of Arimathea: A Passion Play* (London 1930).

JOSEPH OF EXETER, English ecclesiastic and Latin poet: c. 1190. He was a native of Exeter but lived in France most of his life. In 1168 he accompanied Archbishop Baldwin on a crusade to the Holy Land. Among his chief works are *Antiocheis*, a poem on the third crusade; *De Bello Trojana* (6 vols.); and *Panegyricus ad Henricum*.

JOSEPHI, jō-zēf'i, Isaac A., American artist: b. New York City, 1859. His artistic education was obtained at the Art Students' League, and with Léon Bonnat at Paris. He has exhibited his miniatures and landscapes at many exhibi-

bitions, receiving honorable mention at the Paris Exposition of 1900 and a silver medal at the Charleston Exposition of 1902.

JOSEPHINE de BEAUHARNIS, b6-ar-né, née **MARIE JOSEPHINE ROSE TASCHER de la PAGERIE**. French Empress: b. Martinique, June 23, 1763; d. La Malmaison near Paris, May 29, 1814. She was the eldest of three daughters and at 16 married the vicomte Alexandre Beauharnis. Josephine was left a widow when Beauharnis was executed as an antirevolutionist in 1794. Two children survived the marriage, Eugene, and Hortense who later became queen of Holland. Josephine's popularity in high French society was at its peak when Napoleon Bonaparte was securing reputation as a soldier and a leader. After the announcement of Napoleon's appointment to the command of the army in Italy, Josephine was married to him in a civil ceremony on March 9, 1796.

The correspondence that Josephine received from Napoleon during campaigns revealed his sincere enthusiasm and love for her. Josephine, however, made few replies, and those she did make were coldly indifferent. She was also discovered to be on compromising terms with several of the officers of the court. When Napoleon threatened divorce, she dissuaded him by promising to amend her life. Fighting the ill-will of Napoleon's relatives, she managed to make her marriage more indissoluble by convincing her husband of the desirability of a remarriage with religious rites and sanction.

Even after this, the continuance of her fickleness, her ceaseless extravagance, and her inability to bear a son caused a final break in her marriage to Napoleon. Through the irregularity of slight technicality, their church wedding of December 1804 was declared null and void.

Josephine withdrew to her retreat at La Malmaison, where she lived her last ten years in retirement. Napoleon frequently visited Josephine to pay his respects to her friendship and to be advised on matters in which he valued her tact and good sense. Consult Masson, F., *Josephine*, 2 vols. (Paris 1899-1902); Ober, F., *Josephine, Empress of the French* (London 1901); Tarbell, L., *Life of the Emperor Napoleon* (New York 1901); Hall, H. F., ed., *Napoleon's Letters to Josephine, 1796-1812* (New York 1903); Le Normand, M. A., *Mémoires Historiques et Secrets de Joséphine*, 2 vols. (New York 1904); Sergeant, P. W., *The Empress Josephine*, 2 vols. (London 1908); Pichevin, R., *L'Impératrice Joséphine* (Paris 1909); Méneval, N. J. E. de, *The Empress Josephine* (tr. D. D. Fraser, Philadelphia 1912).

JOSEPHINITE, a natural iron-nickel alloy, Fe-Ni, found in placer washings on Josephine Creek, Josephine County, Ore.

JOSEPHUS, Flavius, Jewish scholar and historian: b. Jerusalem, 37? A.D.; d. 95 A.D. He was a precocious child and at an early age became a student of law. After a brief visit to Rome, he returned to Palestine serving as a delegate to Nero. He was later chosen governor of Galilee and took active part in the Jewish revolt against the Romans in 66. Leading a small band entrenched on a stronghold point, he resisted siege for 47 days but ultimately had to surrender. Josephus predicted that Vespasian, his cap-

tor, would become emperor. When his prophecy was fulfilled, he was set free. Josephus then adopted the name Flavius, the surname of Vespasian, and remained in the new emperor's patronage. Josephus returned to Rome where he was made a citizen and awarded a pension and an estate in Judea. He wrote *The Jewish War*, a valuable historical document, and *The Antiquities of the Jews*, a history of the Jewish race from the creation until the war with Rome, which is reputed to be his greatest work. English translations are available. Consult Krauss, S., "Josephus Flavius" *Jewish Encyclopedia* vol. 7, (New York 1904); Reinach, Théodore, *Oeuvres Complètes de Flavius Josèph* (Paris 1900-1932); Whiston, William, *Collected Works of Josephus Flavius* (Connecticut 1905); Winbolt, S. E., *Josephus Flavius, Two or More Works* (London 1907); and Bentwich, N. de M., *Josephus* (Philadelphia 1914).

JOSETSU, jō-sē-tsōō. Japanese painter, teacher, and priest: c. 1400. He did landscape paintings of Chinese origin usually showing characteristics of the Ming technique. He was a member of the 4th Yoshimitsu school at Kokokuji, Kyoto, and is responsible for the founding of the school based on Sung and Yuan principles.

JOSH BILLINGS. See SHAW, HENRY WHEELER.

JOSHUA, the leader of the Israelites after the death of Moses. He was the son of Nun, of the tribe of Ephraim, and upon him fell the task of conducting the people over the Jordan, and commanding their armies in battle against the heathen they were ordained to dispossess. He succeeded in ravaging a large portion of Palestine and dividing it among the people. He died at the age of 110 and was buried at Timnath-Serah, in Mount Ephraim.

JOSHUA, Book of. The first 12 chapters of the book of Joshua continue the history of Israel from the point reached at the end of Deuteronomy, the death of Moses, to the conclusion of the conquest of western Palestine. Chapters 13-21 tell of the division of the land among the tribes. The remaining chapters, 22-24, constitute an appendix, giving various details concerning the closing days of Joshua, including his death and the death of Eleazer the son of Aaron.

It is generally agreed that the documents found in the Pentateuch are to be discerned also in Joshua. This results from evidence of the same kind as in the Pentateuch. Their distribution, however, is peculiar. The bulk of chapters 1-7 is from JE, and of 13-21 from P. A considerable part, in detached portions, of 1-12 is from D, but very little in 13-21. All three sources are found in considerable measure in the appendix 22-24. The JE source shows evidence of being composite, especially in double accounts of the same event, but most of it cannot be separated definitely into the J and E portions, in this respect differing from the Pentateuch. The D and P portions are probably not from the same documents as those which are called by these terms in the Pentateuch, but from writings by other authors of these schools. Concerning the details of the compilation of the book there is much difference of opinion. The best opin-

ion seems to be that the book was never actually joined with the Pentateuch, but always an independent book. It is often joined with the Pentateuch under the term Hexateuch because of the use of the same or similar documents.

There are various indications in the book itself that portions of it, at any rate, were written considerably later than the events described. The idealizing of the history, which will be mentioned later, is such an indication. Such also is the reference to "until this day" in Joshua xv, 63, and the reference to the book of Jashar, x, 13, which was a book of poetry later than David. The evidence of the documents indicates that the book contains portions written at various times. The final compilation, however, must have been as late as P, i.e., as late as 500 B.C. Some think it was considerably later, but there is no strong evidence of this, although some slight additions may very possibly have been made considerably later.

The degree of historicity of the book varies with the documents. The presumption would be that the JE portions are more fully historical, a presumption which is confirmed by a detailed examination. In the D and P portions the history is strongly idealized. Especially, the D and P portions present the view that the conquest of the land was completed by Joshua, the inhabitants exterminated, and the land divided among the tribes. Scattered notices from JE, however, in agreement with Judges i. 1-ii, 5, teach that the conquest was effected only gradually by the individual tribes. The view of JE is the earlier, historical one; the other, of D and P, is later and much idealized. The historical data of the book need careful examination in order to ascertain the probable facts. Further, the history of the book is fragmentary, the omission of any account of the conquest of central Palestine being especially remarkable. The D portions present the same religious view of the history that is found in the book of Deuteronomy.

Bibliography.—Blaikie, W. G., 'Joshua' ('Expositor's Bible,' New York 1893); Maclear, G. F., 'Joshua' ('Cambridge Bible,' Cambridge 1897); Robinson, H. W., 'Deuteronomy and Joshua' ('Century Bible,' Edinburgh).

GEORGE RICKER BERRY,

Professor of Old Testament Interpretation and Semitic Languages, Colgate University.

JOSIAH, king of Judah. He succeeded his father, Amon (638 B.C.). He is said in the Scriptures to have done "that which was right in the sight of the Lord." He took an active part in the reform of temple worship, and in the abolition of idolatry throughout the land, and commenced the restoration of the temple, during the progress of which the high-priest Hilkiah discovered the book of the law, that is, the book of Deuteronomy. In his 30th year he marched out against Pharaoh Necho, king of Egypt, who was on his way to attack the kingdom of Assyria. Josiah was slain in the battle at Megiddo where he had attempted to check the northward march of the Egyptians. Consult Wellhausen, 'Israelitische und jüdische Geschichte' (7th ed., Berlin 1914).

JOSIAH ALLEN'S WIFE. See HOLLEY, MARIETTA.

JOSIKA, yó'shi-ka. Miklós, BARON, Hungarian novelist: b. Torda, Transylvania, 2 April 1794; d. 27 Feb. 1865. He entered the army, reaching the rank of Captain, in 1811, turned to politics, and finally in 1834 devoted himself to literature. He took an active part in the Hungarian uprising of 1848, fled in 1850 to Brussels, and went in 1864 to Dresden, where he died. In September 1851, he was, with Kossuth and 35 others, hanged in effigy at Pest. Although the government subsequently offered him amnesty he never returned to Hungary. Up to 1848 he produced 60 volumes of romances, illustrating Hungarian life and history. His principal works are 'Abafi' (1851); 'Zrinyi a költő' (1843); 'Az utolsó Bátor' (1840); 'A Csehek Magyaró szágban' (1845); 'Egymagyar család a forradalom alatt' (1851). Most of his novels have been translated into German, and one—'Familie Maily'—was written in Uno language. Profoundly versed in the life of his people, and master of a pleasing style, he was very popular. Four volumes of memoirs appeared soon after his death (Pest 1865).

JOSS, a Pidgin-English term derived from the Portuguese "deos," meaning God. The word denotes a Chinese god or idol. A Joss-house is the place or temple where the idol is worshipped. There are three such houses in San Francisco, one in Chicago and two in New York. Joss paper refers to the gold and silver paper ornaments which are burned as sacrifice to the gods. Joss stick is a small stick made of a paste formed by compounding the dust of various scented woods mixed with clay. These are burned in the temples as incense for the gods.

JOSSELYN, jos'lin, John, English traveler: b. England, early in the 17th century. He sailed for New England on 26 April, arriving in Boston on 2 July 1638, and "presented his respects to Mr. Winthrop, the governor, and to Mr. Cotton, the teacher of Boston church, to whom he delivered from Mr. Francis Quarles, the poet, the translation of several Psalms into English meter." He returned to England in October 1639, and made a second voyage 23 May 1663, to New England, where he spent eight years. On his return in December 1671 he published a book entitled 'New England's Rarities Discovered in Birds, Beasts, Fishes, Serpents and Plants of that Country, etc.' With a picture of Boston in 1663 (London 1672; reprinted in Boston 1865). He also wrote 'An Account of Two Voyages to New England, etc.' (1674) and 'A Chronological Table of the Most Remarkable Passages from the First Discovery of the Continent of America to 1673.' Reprints were issued in Boston (1865).

JOTHAM, king of Judah, who succeeded (735 B.C.) Uzziah, his father, after having acted as regent for a number of years previously as a result of his father's illness. He ascended the throne at the age of 25 and reigned 16 years. He vanquished the Ammonites and furthered public works in Jerusalem to a considerable extent. The prophets Isaiah, Hosea and Micah lived during his reign. Consult Graetz, H., 'History of the Jews' (London 1891).

JOUBERT, zhōō-bār', **Barthelemy Catharine**, French army officer: b. Pont de Vaux, April 14, 1769; d. Novi, Italy, Aug. 15, 1799. Joining the revolutionary army of Napoleon onaparte in 1791, he served in Italy during the campaigns of 1793 and 1797. He fought at Trent and in the Tirol, and in January 1799 he was superseded as commander in chief of French armies in Italy by Jean Victor Moreau (q.v.). Nevertheless he continued in the field with his successor, and took command again when Moreau was being driven by the Russians back toward the Riviera. Against the advice of his generals, Joubert gave battle to the Russians under Count Suvorov-Rymnikski (q.v.) at Novi and suffered crushing defeat; two thirds of his army was destroyed, and he was killed.

JOUBERT, zhōō-bār', **Joseph**, French moralist: b. Montignac, May 6, 1754; d. Paris, May 3, 1824. He began writing in his native village, then went to Toulouse. There he became a professor in the college of the Fathers of Christian Doctrine. In 1809 he was appointed Inspector of the University of Paris. He was a friend of Louis de Fontanes, François Auguste René Chateaubriand, Louis Gabriel Ambroise de Bonald (q.v.) and Mme. de Beaumont. Selections from his posthumous *Pensées, essais, maximes et correspondance*, a polished criticism of literature, theology, ethics and politics, were edited by Chateaubriand in 1838 for private circulation; and a two-volume edition was published in 1842 by Paul Le Raynal, Joubert's nephew.

JOUBERT, zhōō-bār', **Petrus Jacobus**, known as **PIET**), South African soldier and statesman: b. Congo, Cape Colony, Jan. 20, 1834; d. Pretoria, Transvaal, March 28, 1900. Of Huguenot parentage, and early left an orphan, he migrated to the Transvaal, settling in the Wakkerstroom district. Besides farming, he studied law and was elected to the Volksraad (legislature). In 1870 he was appointed attorney-general of the South African Republic, and he served as acting president during 1875 to 1876, while President Thomas Francis Burgers (q.v.) was in Europe. "Piet" Joubert was strongly opposed to annexation of his country by the British in 1877, and the next year he accompanied Paul (Stephanus Johannes Paulus) Kruger (q.v.) on the latter's second visit to London seeking its retrocession. When war with Britain was imminent in December 1880, Joubert became, with Kruger and Marthinus Wessels Pretorius (q.v.), member of a triumvirate to serve as a provisional government, and he then commanded the Boer forces which defeated the British at Laing's Nek, Ingogo, and Majuba Hill. With peace re-established, he continued as member of the triumvirate administering the country pending the election of a president in 1883. When the South African War (q.v.) broke out in 1899, he was appointed to command the forces of the Transvaal, and their initial successes during the invasion of Natal were due to his careful preparation. Ill health caused him to relinquish his command and compelled his return to Pretoria, where he did not long survive.

JOUBERT DE LA FERTE, **Sir Philip Bennet**, British air force officer: b. 1887. Educated at Harrow and the Royal Military Academy, Woolwich, he was commissioned in 1907 in the Royal Artillery. In 1913 he secured transfer

to the Royal Flying Corps, and during World War I he served with it in France, Egypt, and Italy, gaining promotion to the rank of flight commander and being awarded the Distinguished Service Order. When the Royal Air Force was constituted in 1918 he was granted a permanent commission in it, and in 1919 was promoted wing commander. With the rank of group captain, from 1922 he filled administrative posts, and taught at the Imperial Defence College from 1926 to 1929. He was promoted air commodore in 1929, air vice marshal in 1934, and air marshal in 1936. In 1937 he went to India as air officer in chief, and in 1938 received a knighthood. Recalled to Britain for duty in World War II, he was promoted air chief marshal in 1941 and given charge of the coastal command. In 1944 he was appointed deputy chief of staff in the Southeast Asia campaign. He was Director of Public Relations, Air Ministry, 1946-1947. He retired in 1947.

JOUETT, jōō'ēt, **James Edward**, United States naval officer: b. Lexington, Ky., Feb. 7, 1826; d. Sandy Springs, Md., Sept. 30, 1902. The son of Matthew Harris Jouett (q.v.), he entered the navy in 1841, served with distinction during the Mexican War, and was promoted to passed midshipman in 1847. In 1861, at the outbreak of the Civil War, he entered Galveston Harbor with a detachment of marines and destroyed the Confederate war vessel *Royal Yacht*, and for his services he was appointed to the command of the United States steamship *Montgomery*. As lieutenant commander, he was prominent in Farragut's entrance of Mobile Bay, August 1864. In 1885, when in command of the North Atlantic Squadron, he opened the transit across the Isthmus of Panama, closed by insurgents. He was promoted rear admiral in 1886, and subsequently was president of the Board of Inspection and Survey; in 1890 he retired. By a special act of Congress, passed March 1893, he was granted full pay during his retirement in appreciation of his great services to his country.

JOUETT, jōō'ēt, **Matthew Harris**, American artist: b. Mercer County, Ky., April 22, 1787; d. Lexington, Ky., Aug. 10, 1827. His ancestors were Huguenots who emigrated to North Carolina, and finally settled in Virginia. They were staunch patriots during the American Revolution. His father eluded the British commander, Sir Banastre Tarleton (q.v.), and gave the alarm to the legislature, then in session at Charlottesville, Va., for which action he received complimentary resolutions from Congress. Matthew was educated for the law, but devoted much time to drawing and painting. He enlisted in the War of 1812 as lieutenant of the 28th Infantry, serving in the Northwest, and was appointed captain. In 1815 he taught himself portrait and miniature painting, but in 1816 went to Boston, where he studied four months under Gilbert Stuart. In October 1816, he returned to Lexington, where he achieved a reputation as a portrait painter, as also in New Orleans and Natchez and throughout Kentucky. He painted more than 300 portraits, among which one of Lafayette was ordered by the legislature of Kentucky. His portrait of John Grimes, a Kentucky artist, is in the Metropolitan Museum, New York City.

JOUFFROY, zhōō-frwā', **François**, French sculptor: b. Dijon, 1806; d. Laval, 1882. He won

the Roman Prize in 1832 with *Capaneé foudroyé sous les murs de Thèbes*. In 1857 he was made member of the Institut and officer of the Legion of Honor in 1861. Two years later he was appointed professor at the Ecole des Beaux-Arts. His best works were *Cain maudit*; *Jeune fille confiant son premier secret à Vénus*; *Lamartine*; *La Désillusion*, for the Dijon Museum (1840); bust of *Merlin* (1844); *Printemps et l'Automne* (1845); *Erigone*; holy-water font at Saint Germain l'Auxerrois, Paris; marble group of three children (1843); group in the portal of Saint Gervais (1854); *Le Chatiment* and *La Protection*.

JOUFFROY, Théodore Simon, French philosopher: b. Pontets, 1796; d. Paris, Feb. 4, 1842. He was educated in Paris at the École Normale, where he came under the influence of Victor Cousin (q.v.), and in 1817 he became assistant professor of philosophy there. In 1833 he joined the faculty of the Collège de France as professor of Greek and Roman philosophy; from 1838 he was librarian to the University of Paris and also professor of philosophy at the faculty of letters. He prepared translations into French of the philosophical works of Thomas Reid and Dugald Stewart (qq.v.) during 1826-1828, contributing notable prefaces to them. In his own philosophical works he drew a sharp distinction between psychology and physiology, which he regarded as separate subjects for inquiry. His writings included *Mélanges philosophiques* (4th ed., 1866; Eng. tr., Boston 1835); *Nouveaux mélanges philosophiques* (3d ed. 1872).

JOUFFROY D'ABBANS, zhōō frwà' dà bān', MARQUIS Claude François Dorothée de, French inventor: b. Roche-sur Rognon (Haute-Marne), Sept. 30, 1751; d. Paris, July 18, 1832. He was claimed by the French as the inventor of steam navigation. He served in the army, and in 1783 succeeded in propelling a small paddle-wheel steamboat up the Saône at Lyons—the connection between piston and paddle-wheel axle being rack-and-pinion. However, he found it impossible to get either the scientific or financial backing necessary to develop his idea and to commercialize it. In 1816 he attempted again to get the necessary support. This time he succeeded in founding a stock company. He built another boat, but its lack of success deprived him of further financial support. In 1830 he was admitted to the Invalides, where he died from an attack of cholera. A statue was erected in his memory at Besançon in 1884.

JOUHAUX, zhōō ō', Léon, French labor leader and politician: b. Paris, July 1, 1879. At the age of 12 he left school to go to work, and when 16 he entered a match factory at Aubervilliers. Transferring from one industry to another, he commenced to take part in syndicalist activities. He represented Angers at a delegate meeting in 1906 of the Comité Confédéral, and three years later he became acting treasurer of the Confédération Générale du Travail (CGT), the federation of all major trade unions in France; he was also elected secretary general of the CGT in 1909, and in this position, which he continued to hold until 1940, he exerted immense influence in the organization. From 1911 until 1921 he edited *La Bataille Syndicaliste*, during that period the principal medium for expression of his views. On outbreak of World War I

he induced the French labor movement to give its support to the government, and when the peace conference assembled in Paris in 1919 he was given a seat on all international bodies concerned with labor questions. In 1920 he was named a member of the administrative council of the International Labor Office, and in 1925 he became French delegate to the League of Nations on matters of economics and disarmament; he held these posts until 1928. During the years following World War I he also continued active in the syndicalist movement, where he had great power, and helped to frame the constitution of the Popular Front. In 1936 he was appointed a member of the administrative council of the Bank of France. When France during World War II capitulated to the Germans and secured an armistice in 1940, Jouhaux was interned at Evaux les Bains. In 1943 the Germans deported him to Austria; he was released from captivity at Itter Castle by United States troops on May 5, 1945. In September of that year he resumed his post as secretary general of the CGT, representing it at a conference held in London; and he was appointed a member of the French delegation to the United Nations.

JOUKOVSKY, Vasily Andreievitch. See ZHUKOVSKI, VASILII ANDREEVICH.

JOULE, jouł, James Prescott, English physicist: b. Salford, Lancashire, Dec. 24, 1818, d. Sale, Cheshire, Oct. 11, 1889. The son of a wealthy brewer, because of ill health he was compelled to study at home, where he devoted himself to scientific research at an early age. In January 1838 he published in the *Annals of Electricity* a description of an electromagnetic engine which he had invented, and two years later he described a method for ascertaining the mechanical equivalent of heat which he determined in four ways. Joule's law, a unit of electrical work, was named for him; it is the equivalent of the work done in a conductor in one second by one coulomb, at a pressure of one volt. He published a paper in 1843 on the heat evolved during the electrolysis of water, and in 1847 he announced the doctrine of the correlation and conservation of energy. This latter research brought him to the notice of Sir William Thomson (q.v.), later called Lord Kelvin, and from that time the two men collaborated to a considerable extent. Notably, they conducted the Joule-Thomson porous plug experiment, which was concerned with the thermal changes undergone by gases forced by pressure through small apertures. Joule's numerous contributions to science in the fields of heat, electricity, and thermodynamics brought him high honors. He received the Copley Gold Medal of the Royal Society in 1866, and he served as president of the British Association for the Advancement of Science in 1872 and again in 1887. A statue was erected to his memory in Manchester, and a tablet placed in Westminster Abbey. His writings appeared mainly in the proceedings of scientific societies and in British periodicals, but were collected and published by the Physical Society of London in two volumes, 1884 and 1887. See also **ENERGETICS**; **HEAT**; **THERMODYNAMICS**. Consult "Memoir" by O. Reynolds, in *Memoirs and Proceedings of the Manchester Literary and Philological Society*, Series

IV, Vol. VI, Manchester 1892); Tyndall, J., 'The Copley Medalist of 1870' (in *Nature*, Vol. V, p. 137, London 1872).

JOULE, International. See **ELECTRICAL TERMS.**

JOURNAL OF THE REV. JOHN WESLEY, The. "It was in pursuance of an advice given by Bishop Taylor . . . that I began to take a more exact account . . . of the manner wherein I spent my time, writing down how I had employed every hour." From the 'diary' kept as a result of this advice John Wesley "transcribed from time to time the more material parts" in order that he might "openly declare to all mankind, what it is that the Methodists (so-called) have done and are doing now; or rather what it is that God hath done and is still doing in our land." That is the origin and scheme of 'The Journal' as set forth by the Rev. John Wesley himself. It begins with the entry of Tuesday, 14 Oct. 1735, the day he and his brother, Charles, "took boat for Gravesend, in order to embark for Georgia," and ends with Sunday, 24 Oct. 1790, about four months before the author's death, covering a period of almost exactly 55 years. 'The Journal' is "a curious, monotonous, wonderful narrative" of the goings and comings, the manner of life, the mental attitude toward the world, rubric, religious doctrine and practice; the temperament, the ideas, the whole purpose of this most itinerant of all itinerant preachers. With the exception of the first part which deals with his visit to America, and a few pages covering his trip to Germany, taken in the hope that a stay among the Moravian Brethren would bring order out of the chaos of religious emotions and notions which filled his soul, this journal of nearly 2,000 closely printed pages is devoted to Wesley's unceasing and unparalleled activities throughout the whole of Great Britain and Ireland. Perhaps no journal of so public a man ever reflected so little of the general life, or contained less information concerning the men and events of the time. For example, there is not a word referring to the epoch-making struggles of the American Revolution. It is the journal of a man who could see only the religious scheme which filled his whole being. It is a carefully prepared record of when he preached and where, what he preached about, the size and the character and conduct of the audiences and the influence of his preaching upon them, together with remarks upon the difficulties and personal damages encountered. The brief and frequent mention of the opposition of the clergy of the "Church as by law established in England," of which he considered himself to be a true and loyal member, and the controversies with all other sectaries make 'The Journal' of value for the study of religious persons and institutions other than John Wesley. Although one must needs go to other sources to get a well-balanced and true measure of Wesley and his religious movement. 'The Journal' must needs be carefully and sympathetically read by anyone who would know the author and Methodism from the inside. Singularly enough, no one would ever suspect, from the reading of this journal, that Wesley had any social or home life; perhaps he didn't. His religion was all in all to him. The people he talked and associated with are presented

either as believers or unbelievers. All the events through which he and others passed and even natural phenomena are set forth in such a way as to make them appear as the workings of providence or the activities of demons, and all this is done with a modesty and reverence that is both attractive and surprising. Had it not been for what Wesley believed was wilful misunderstanding and malicious misrepresentation it is hardly likely this journal would have been prepared and published, in which case the world would have lost an intimate and revealing history of one of the most conspicuous figures and important religious movements of the world. Unquestionably 'The Journal' is *just* John Wesley. What of his life is not here he counted as being of no value and so not worth being recorded. The last section, covering the period from 29 June 1786 to the end was prepared for publication by some one after the death of the great Wesley and so is of different value from the other portion.

CHARLES GRAVES.

JOURNALISM. Journalism is a comprehensive term which signifies the business of producing a public journal. In a general way it is applied to the vocation of making newspapers. Broadly speaking it is both a business and a profession, though the name of journalist as commonly understood is limited to those who are engaged on the editorial or news or literary side of the production rather than on the business side. While editor and journalist are not strictly synonymous — the former meaning the head of a paper or a department and the latter any literary worker on a newspaper — they are often used as convertible terms.

In a large sense the subject involves the functions of journalism as collector and purveyor of news and as leader and exponent of public opinion; the ethics of journalism in its various fields of political, religious, literary, social and commercial aim and representation; the relations of the counting room to the editorial department; the training and qualifications of the journalist; in short, the mission, methods, responsibilities and obligations of journalism. All of these general phases are deeply affected by the physical conditions of the business. During the closing years of the 19th century these conditions were practically revolutionized. In the mechanical facilities of production, in the cheapening of white paper and in the instrumentalities of news collection there has been an extraordinary advance. This great change in the material factors wrought a corresponding change in the scope and character of journalism. Not only as a business enterprise but as a public influence it took on new aspects.

The remarkable development of later years touches every side of the material production of a newspaper. The old, limited, slow-moving printing press has been transformed into the ingenious and gigantic quadruple or octuple which converts the plain white roll into complete, folded papers at the rate of 30,000 to 40,000 an hour. The number of pages may be determined at will, even at the last moment before going to press, thus responding to the exigencies of the news; and the application of the half-tone and of color at undiminished speed

permits pictorial effects. Simultaneously with this improvement in the printing press has come the linotype which substitutes machine typesetting for hand composition. A third vital advance has been the perfection of the process of making paper out of wood-pulp, which has vastly increased the supply and greatly decreased the cost of white paper.

These radical changes in the elemental business factors have largely modified the conditions of journalism. They have opened the way to unlimited production and have enormously cheapened the cost of the single copy. Two and three-cent papers have become the prevailing rule. Immense circulations have thus been rendered possible, and where, about 1875, the edition even of the most widely read papers was comparatively limited not a few now issue scores and even hundreds of thousands of copies a day. At the same time the initial cost of the newspaper plant with its expensive machinery and the magnitude of the daily transactions require a far larger outlay than in the earlier time and the business has come to be one demanding much greater capital.

All of these circumstances have inevitably and powerfully molded the course and character of journalism. They have given increased importance to its business side, and have tended to make business considerations in the publication still more dominant. The effect has been twofold and somewhat contradictory. The great capabilities of the business with the reduced cost of telegraphing have stimulated and quickened journalistic enterprise and have broadened the range of the journalistic field. The scope of journalism has been enlarged and in many cases its standard has been elevated. Within a sphere, perhaps too limited, the best and worthiest effort is accepted as the best business. But, on the other hand, the competition for great circulations has bred sensationalism and a pandering to the taste for personal and piquant matters. There is an eager and feverish struggle for the unusual, the dramatic and the spectacular, a constant straining for effect, a lavishness of "scareheads" and garish pictures, a studied and persistent search for objects of criticism and attack. The appetite for the effervescent grows by what it feeds on, and must be met by new excitation. This rivalry of explosive and paroxysmal journalism is carried on with too little sense of responsibility and verification, and while the notable manifestations are exceptional and it would not be just to say that the infection has extended through journalism, it is nevertheless true that its injurious influence is widely perceptible.

In one important and conspicuous respect the development of journalism as a business has palpably improved its character. It has produced a greater degree of independence than ever distinguished it before. In the earlier days political and official advertising might be a large item in the income of a newspaper. Its monetary value gave it potency in controlling editorial policy. But in the expansion of the business under modern conditions official patronage is unimportant compared with general commercial advertising, and its relative decline in value has greatly reduced its power of influencing newspaper expression. The favor of the public is far more advantageous than

that of the party manager. It brings popular circulation and consequently business advertising, and there is less concern about the crumbs that fall from the official table. Even party journalism has greatly advanced in independence. While standing as the recognized exponents of party principles and policies the important party papers have become much more free in their judgment of men, methods and measures. A more critical standard is applied and a more rigorous public accountability is enforced under which there has been a visible improvement in general civic administration.

Under the same influences distinctive independent journalism has increased. It professes to have no connection with any party and disclaims a representative party position. Its theory is that it addresses itself not to party sentiment but to independent public judgment, and its claim for support is based on its journalistic quality without regard to political association. It is the extraordinary advance of newspaper-making as a business that has rendered independent journalism on a large scale possible. A quarter of a century ago it would have been difficult to name more than two or three important examples in the United States. Now there are many conspicuous and successful papers which are thus classed, and even more significant of the change in journalism is the greater independence of the party journals already referred to. Indeed, in essential independence, which consists of free judgment and candid expression on public questions, the line of demarcation between the better class of party papers and the professedly independent papers is scarcely perceptible and it would be hard to distinguish between them.

There has been a signal advance in other directions. Against the false and meretricious tendencies to sensationalism which have been indicated must be placed a higher and broader treatment of all the varied interests of life. In news collection the journalism of to-day is as much ahead of that of 1875 as the railroad express is ahead of the stage coach. It spares no expense, reaches everywhere, sends its correspondents to all parts of the world, employs the best experts and specialists, caters equally to the lover of literature and the lover of sports, keeps pace with scientific discovery and development, rivals the best periodicals in commanding the most famous writers and artists, makes its own special missions of public service, reports all business, social, educational, philanthropic and religious movements, and, in short, treats whatever concerns mankind as within its boundless domain. Its range, enterprise and comprehensiveness are a constant marvel. With all its faults the breadth, fullness and accuracy which are combined with so much celerity of action attest a thoroughness of organization and extent of resources never before equalled.

There are marked differences, however, in its development in different lands. Continental journalism in Europe is of a type quite distinct from English journalism, and that again is unlike American. In Paris the news is not the conspicuous feature of the newspapers. It holds a subordinate place and is limited in its quantity. Literary and dramatic criticism and political discussion command the first rank, and

the feuilleton is a popular and important part. Literary excellence with a flavor of characteristic French wit is the dominant trait. The Parisian type with variations, generally soberer and heavier, is the prevailing Continental model. English journalism is weightier and more enterprising in news. It covers the field of international politics and war with special thoroughness. It lacks the variety and vivacity of American newspapers, but within its chosen and more limited range it is more complete. Its reports of parliamentary proceedings and of important political, social and scientific meetings are copious and intelligent, and its discussions are distinguished by sobriety and information.

In life, spirit, minuteness of news gleanings, emphasis of display and preponderance of personal flavor American journalism far outstrips all others. It does not surpass, oftentimes does not equal, British journalism in the presentation of great events, but in the multiplicity of its news of all sorts not only from its own country, but from all the world, there is no approach to it elsewhere. Its dominant tone is a light and airy freedom. There is a manifest tendency even on the part of the most respectable newspapers to avoid being heavy. The general aim is to be breezy, pungent and picturesque, and this often leads to the flippancy which is remarked in American papers. Perhaps the public taste which is thus indicated and cultivated will serve to explain in part why there are no serious and masterful weekly journals of literary and political discussion in the United States like the *Spectator* and the *Saturday Review*, and why even the monthly periodicals run chiefly to fiction and light matter. There are excellent trade journals of a high grade, showing a demand for the searching and careful treatment of special interests, but outside of these immediate representatives of the stupendous material enterprises of the land, the trend is toward the lighter vein.

Somewhat analogous is the explanation of the fact that journalism has grown more impersonal in its sources and impress. It is no longer distinguished by the great overshadowing personalities which marked it a generation ago. No editorial chief puts his individual stamp on a paper as Horace Greeley did, with his controversial power, his moral earnestness and his incisive force, which seemed to make the whole paper breathe his spirit and speak his voice. There are no successors to Raymond, Bennett, Weed, Bowles and Dana. The late Henry Watterson was the last survivor of the old school of journalists. The difference is due, however, not so much to the lack of men as to the change of conditions. In its immeasurably wider range and larger demands the great journal of to-day is the product of no single mind, but of a vast organization and of a whole galaxy of stars. The elder journalism was largely political pamphleteering. The later journalism is the complete mirror of daily life, and no individual throws so great a shadow across its comprehensive face.

It is a question much mooted whether journalism has declined in influence. It never was as universally read as now; it never was so much a common practice to read several newspapers; and whether in this multiplicity of

reading and frequent contrariety of representation as serious an impression is made as when the appeal was more earnest and less divided may well be doubted. The editorial page has not actually fallen off in interest and importance; on the contrary, it is all in all better written, more varied and more instructive than when it had more of a polemic character. But in the broad development and great advance of the news departments the editorial page has receded in relative importance, and the drift to the light treatment of topics has tended to detract from its distinct and superior position. The greater absorption of the public mind in multiplied interests operates in the same direction. In the stress of modern business life and in the variety of diversions the body of readers have less time to follow public discussion. If it be true, as it often is, that the favorite journal does the thinking for its readers on current questions, it is equally true that many of the questions take less hold than when life was more simple and feeling more tense. When the press is in substantial accord on any public matter, except where party tradition rules, it generally carries the public judgment, and united expression makes it invincible; but when there is a discord of journalistic voices little heed is apt to be paid to any. The power of the press in its aggregate force, in the sweep of its activities and in a certain apprehension of its publicity, has steadily augmented; but at the same time the impression that it is too intrusive, too little restrained, too little governed by a just sense of responsibility, has grown and has impaired the influence it would otherwise exert.

It remains true, however, and probably grows more true with the decadence of other influences, that the press is the most effective force in protecting the moral and social well-being of the community. It is the belief of many observers that under our modern conditions the weight of mere authority is declining. In the intense strife and eagerness of the times the efficacy of the old standards in enforcing true principles and restraining wrongdoing grows weaker. With this advance of individual assertion and independence the power of public opinion is becoming the surest defense of social and business morality. The blaze of publicity gives a protection which nothing else furnishes. In the financial and social world there is a wide margin along the shadowy and undefined line between law and lawlessness, between ethical duty and questionable interest where the search-light of exposure is the only security. Much would be done under cover of darkness which fears the light. Despite a freedom which often degenerates into license the press is thus recognized not only as the most effective safeguard against political and administrative debauchery but as the best bulwark against that social and business misconduct which becomes a public offense.

The relation of the counting-room to the editorial department involves both the business and the ethics of journalism. The business side cannot be disregarded. In its ultimate purpose it is a commercial proposition. Newspapers are published to make money. The counting-room considers both income and outgo. It adjusts expenditures to receipts. It properly

studies to augment revenue in every legitimate way. But while newspapers are business enterprises they are such with recognized limitations and obligations. They are not simply business undertakings but public representatives, and the former object, while consistent with the latter, is subordinate to it. The foundation of the newspaper is the confidence of the public. It is the history of yesterday and the interpreter and teacher of to-day. In the very nature of the relation it assumes distinct obligations. It is bound to give the news and to treat public questions in absolute good faith. The counting-room is warranted in doing business in every way compatible with the fulfilment of that duty, but in all legitimate journalism it is a fundamental rule that editorial opinion and news publication must be beyond the reach of any questionable influence. The editorial department must be entirely free from commercialism. Public confidence and moral power depend on full faith that editorial and news conduct is honest, fearless and upright. The publication of a newspaper, like any other enterprise, is founded on business principles; its sphere or field of operations, whether general, political, literary or other, is chosen; the relation of counting-room and editorial-room in organizing and maintaining it on a sound business basis is of the most intimate character; but when the general lines of the enterprise are determined, the independence and integrity of the editorial management and fidelity to its declared aim as a public representative within its chosen sphere are absolutely indispensable. This rule lies at the foundation of the whole ethical code of journalism.

The question of the training and qualifications of the journalist has assumed new interest and importance both through the general growth of the profession and through special movements for its advancement. Schools or chairs of journalism have been established in a few instances and in a limited way, and the munificent endowment by Mr. Pulitzer of a college of journalism in Columbia University—the first large and distinct project of the kind—has presented the proposition in a practical and definite form. There are two systems of thought on the subject. The first holds that the best and most efficient school of journalism is the newspaper office. It believes that the true journalist is born, not made; that knack, aptitude, native talent, the sense of news and proportion lie at the foundation of success; and that the most useful training is that of actual experience. It does not dispute that broad education and culture are essential to the journalist, and recognizes that particular studies, like history, political economy, the fundamentals of law, social science and kindred matters, may be followed with special advantage. But it urges that these may be gathered from the general college course, and that the college or university has no distinctive professional knowledge to teach journalists in the special sense that it has to teach lawyers or physicians. The technicalities of the newspaper art—a suitable style, phonography, proof reading, the treatment of news and the like—are best acquired in practice, and the rest is the quickest and surest application of knowledge

which is power, and of instinct or intuition which in dealing with public intelligence and currents is no less power, to the activities of the world.

The other system of opinion is represented in the scheme and scope of Mr. Pulitzer's College of Journalism. It is based on the theory that the journalist can be prepared for his vocation, like the lawyer, by a special course of study adapted to its requirements. Its aim and its tendency are to elevate and dignify the profession, and to establish a higher standard both of obligation and of performance. It seeks to teach not merely the technical necessities in newspaper-making but the true ideals of public service to which the newspaper should be dedicated, and the wide range of knowledge with which the journalist should be equipped. This includes style, ethics, law, literature, history, sociology, statistics and particularly the principles and methods of journalism. It embraces an examination and comparison of existing newspapers by experts, an exposition of the functions of editor, correspondent and reporter, and the production of an experimental journal under the necessary limitations with its practical application of the instruction. In its main features this plan is an enlargement of the ordinary academic course directed to a particular end, and it is claimed that the establishment of such a college with liberal endowment would not only provide a large body of trained journalists but would set a standard for the profession.

On the whole, notwithstanding the faults of the "new journalism," the position of the press in the public estimate is increasing. One evidence of this truth is the more liberal character of libel legislation. In some States the greater license has prompted efforts at more restrictive measures, but the general trend of legislation has been toward reasonable liberality with just accountability. The prevailing movement has been to provide reparation for any wrong or injury that may be done, to assure just restitution for actual damages, but not to permit punitive damages to trammel the free expression of opinion. Journalism is advancing and is acquiring a higher position and recognition as a distinct profession. With the enlightened spirit of the age and with the marvelous agencies of instant and united expression the power of public opinion steadily grows, and the journalist is its medium and prophet. See AMERICAN NEWSPAPERS; PERIODICAL LITERATURE.

CHARLES EMORY SMITH,

Late Editor of 'The Press,' Philadelphia.

JOURNALISM, Agricultural. As with the press in general, agricultural journalism has grown in this country as nowhere else in the world. This is due, of course, to the widespread literacy of our people, as compared with the general agricultural populations of other modern countries. But it is also due to the demands of the new farming and rural life. The extension of the reading habit among farmers has undoubtedly furthered the rapid expansion of agricultural journalism. Its growth in this country really began about the middle of the last century, but since 1900 there has been a tremendous growth in the number, the variety, the circulation and the influence of the farm papers and journals of all kinds.

This period of most rapid expansion is coincident with that of the extension of public education and the various phases of rural progress. Until recent years there have been few books that treated the farmer's problem from his point of view. Moreover, he had to learn the habit of dependence upon books. The farmer now can find specific help in books, for farm experience is rapidly being put into print. The present-day farmer who would succeed among his fellows must read. The reading habit has naturally developed. The experience of the experiment stations as indicated by their «lists» shows the demand for the ordinary bulletins growing quite rapidly, but not so universal as could be wished. The extension departments have sought to encourage the reading habit by the development of farmers' reading courses. The agricultural colleges have also widely cultivated the habit of «correspondence» in their constituents.

The sympathetic editor of an agricultural paper has an even greater opportunity. An important phase of the work of the farm journals is nearly always this «correspondence» feature. They also bring to the farmer digests of the books and bulletins elsewhere appearing which might be of interest to him. They thus furnish to the farmer practically the only literature adapted to his needs and tastes except the technical agricultural books and bulletins. The proportional scarcity of books and papers in the farm home is a result of the lack of adaptation of general literature to the farmer's special needs. The daily newspapers—and especially the weeklies and semi-weeklies—have to some degree adapted their columns to the needs of their farmer readers, by, in many cases, pages and supplements which practically amount to farm papers. The farmer's need for suitable reading matter is thus rapidly and successfully being met.

In 1924 there were listed in the various annual newspaper directories nearly 600 special agricultural journals. From 1918 the number had increased by nearly 200 (50 per cent). This rate of increase was much more rapid for this and other special journals and periodicals than for the press of the country in general, and is indicative of the adaptation of the American press to the special needs of the various classes and occupations of our people. The number of those which the directories call agricultural publications, and which have some agricultural material and interest, but are often agricultural only in name, is much larger, probably 900. This listing does not include the very large number of government bulletins and other publications which might legitimately be added. The «weekly» seems to be the most popular form of American journalism, in general, for of the 25,000 newspapers and periodicals published nearly two-thirds, or more than 16,000, are weeklies. This is even truer of the more specialized periodicals, and specifically of the agricultural press. «Quarterlies» are rare, as are «bi-monthlies»; but «monthlies» are fairly common; the «semi-monthly» or «bi-weekly» much less so; the «weekly» by far the most common. There are also «dailies», but they are only in the form of brief bulletins of information. The weeklies also have by far the larger circulations, indicating that they best meet the popular de-

mand. The agricultural press has specialized with amazing rapidity, showing the intensive special and local interest of the farmer. The number, variety and circulation of the papers that cannot be classed as agricultural, but are devoted to forestry, horticulture, floriculture, stock and stock-raising, irrigation, poultry, beekeeping, dairying, as well as to a multitude of still more special interests, steadily increases.

The foreign language press appears also in agricultural journalism. There are already a score and more in Hungarian, Japanese, Swiss-Italian, Bohemian, Hollandish, Finnish, Swedish, German, Polish. The largest number hitherto are in German.

No attempt has been made to arrive at the total circulation of farm papers. There are a half dozen at least with sworn circulation of more than 500,000; probably upwards of 50 have a circulation of more than 100,000. The more special and local papers naturally have the smallest circulation. The more important of the farm papers thus equal in circulation the greatest city dailies. In general, they are largely confined to State areas for their respective constituencies, but a number are regional in influence. There are none that approximate to the status of a national farm journal. There has, however, been some approach to such in the case of the *Orange Judd Farmer* with its various regional editions.

Thus, while its latter-day expansion has been most noticeable, agricultural journalism has nevertheless had a long history and a sound development and evolution. It is by no means of such recent appearance as is so often suggested. While there was no sign of an agricultural paper until the beginning of last century, the rise of the agricultural societies at that time brought such into existence in the form of the regular organs of the societies for collecting and distributing information. Such were, however, rather in the nature of a «record» than in the form of a «journal.» Probably the first of these was the *Massachusetts Agricultural Repository and Journal* of the Massachusetts Society for Promoting Agriculture, established in 1793.

Agricultural journalism in this country is usually, however, dated from 1819 when the *American Farmer* was established in Baltimore as an eight-page weekly. This lasted till 1862. Other notable early farm papers were *The Plough Boy*, of Albany, New York; the *New England Farmer*, of Boston, 1822; the first *New York Farmer*, New York, 1827. Few of these early publications have survived. The *Country Gentleman*, originating in 1853, has probably had the longest continuous history. But a number of farm papers, appearing first about the middle of the century, still survive, and have given a substantial nucleus to the rapidly expanding agricultural press. From 1850 the development has been rapid. Independent horticultural papers began to appear about 1835 and other special journals rapidly followed. Agricultural journalism has doubtless played its part in the adjustments necessary under the rapidly changing conditions of agriculture and rural life in the United States. Its prints have doubtless taken the place of traditional experience, so important a factor in agricultural progress in other lands. It has served as a neces-

sary and invaluable link between the progressive leaders of American agriculture in the government offices, the colleges, and on the farm, and the general farm population. It has served to distinguish and dignify the farmer's occupation and life by its recognition of his special needs and tastes. Its greatest lack at present seems to be that it is still largely devoted to the technical and economic aspects of the farmer's life and fails to devote sufficient attention to the social. This defect is, however, being remedied by the development of special farm home and family journals.

WILLIAM L. BAILEY,
Professor of Sociology, Northwestern University.

JOURNALISM, Class Publications. The story of American journalism is incomplete without consideration of the influence of magazines as distinguished from newspapers, of technical and trade papers, foreign language papers, college periodicals, and a long line of what are called "Class Publications," ranging all the way from religious papers and women's magazines to medical journals and anarchistic periodicals. All these are a part of journalism, and each class contributes its share to the molding of public thought and action. For it must be admitted that the republic is largely governed by its journalism; this has come to be the accepted mode of interchanging thought, and when many great newspapers or magazines or periodicals act in unison on definite lines, public thought is molded, and action results. We have to judge our public men mainly by what the press says of them; we have to form opinions of our industries largely by the trade papers; we have to measure the work of colleges in considerable degree by the sort of college papers they create. The great divines, the great surgeons, the great scientists have to be made by the press or remain unknown. So, whether we like it or not, we are forced to the conclusion that the charge that America is governed by its press is largely true; hence the great importance of keeping that press pure and devoted to the highest ideals. Magazines of nation-wide circulation have come to exercise a strong influence on national policies and the government at Washington. They thus serve as a wholesome balance to the influence of a local press that must largely represent its own locality rather than the people as a whole. The religious press has a wide influence on the development of the churches, which are generally recognized as the saving element of every community that makes for advance in morality and ideals. The agricultural press is almost as numerous, and has undoubtedly had a large share in the movement to make farming more profitable and to rescue agriculturists from handing all their profits to middlemen. Through public agitation and development of granges, selling societies and the Farmers' National Congress the farmer has taken his rightful place as a business man, and seems likely to maintain it in spite of industrial trusts. The technical and trade press has had a tremendous development, belonging almost wholly to the period since 1880. Every great industry has numerous important periodicals, and the minor industries have from one to half a dozen each. These have come to wield a wide influence,

and are very informative to the outside world, as well as the special industry concerned. They afford a field for discussing and thrashing out differences of opinion in the trades, both as to business measures and mechanical and technical problems. This sort of journalism has reached its highest development in America, and has done a large share toward bringing together the active men in each industry and helping them to work on harmonious lines. College journalism was long looked upon as amateurish, and merely illustrative of boyish effort and imitation; but it is now apparent that it has found a deeper and fuller meaning. In the colleges are developed most of the men who are to be the leaders of the coming business generation. Their college papers are the trying-out ground, where young college men first test themselves against the world, and begin to learn something of the conditions of life and society under which each must work out a place for himself, if at all. They afford a much needed expression of the younger minds, and dull is the college professor who cannot gain lessons from the sprightly scribbles of his own students. The foreign language press was regarded by most journalists as being a wholly negligible feature in American journalism until the advent of the war. Then it became apparent that visitors to our shores who clung to their mother tongues were largely influenced in their views by our foreign language papers, and that many of them were quite un-American in tone and utterance. It is well that the eyes of the great public were opened to what is the average character of foreign language papers, because an understanding of their position and influence carries its own remedy for any abuses of the power to influence those on American soil, where Liberty should be maintained as the national watchword and the ideals of the Fathers of the Republic upheld at all costs. The number and importance of these various class papers can be ascertained by reference to the article on NEWSPAPERS, AMERICAN. They are a permanent addition to Journalism, and must be reckoned with in any broad-minded effort to judge of the influence of the press on the peoples of the New World.

CHARLES H. COCHRANE,
Formerly of the Editorial Staff of Newspaperdom.

JOURNALISM, Columbia University School of, an institution endowed with \$2,000,000 by the late Joseph Pulitzer, owner of the *New York World*, and the forerunner of many similar institutions in the United States. With the advance of civilization and general culture and intelligence, the demands upon the journalists of the present day are constantly becoming greater, and this college is the recognition of the importance and place of journalism as a profession, and a practical endeavor to equip those who adopt it, by a course of thorough instruction, for its exacting and laborious duties. Mr. Pulitzer considered the creation and rendering effective of public opinion a task of which the press alone is capable of successfully accomplishing. The College of Journalism is therefore a means to an end—to raise the character and standing of journalism, to increase its power and prestige, and to attract to the profession

men of the highest capacity and the loftiest deals, who, because of special training, will advance the profession to a higher standard of thought and action. This school was the first institution of the kind in the world. It opened Sept. 30, 1912 and its degrees of B.Lit. in Journalism and M.S. in Journalism are available to both men and women. Candidates for admission must have completed two years in a recognized college; those not so equipped are eligible for a proficiency certificate only. Those properly equipped may obtain the first degree in two years. The B.Lit. in Journalism is a requisite for candidacy for the second degree. While there are universities and colleges which give courses in various phases of journalism, no other school is so well endowed, none has a course giving so much time to the solid study needed for the training of the journalist, and the school has also the crowning advantage of a metropolis like New York in which to train its students in reporting by sending them to see and to write upon events as they come in the life of a great city. Attendance on first-night performances is employed in training for dramatic criticism. This practical training in the work of the journalist comes in the last two years, but of the four years' course four-fifths are devoted to the study of history, constitutional law, political science, economics, statistics, American and European literature, etc.; a mastery of either French or German is insisted on. In 1918 the school was placed on a full professional standing.

JOURNALISTS, The (*Die Journalisten*). This comedy of four acts in prose was played for the first time in 1852, the year in which it was written. It originated in the personal experience of its author, Gustav Freytag, who from 1848-1870 had been a partner and joint-editor of the *Grenzboten*, a German weekly for literature and politics. The scene is laid in a provincial town in Germany, and the significance of journalism in politics is dealt with, as well as the character and the social position of journalists. In the electoral campaign between the Conservative and the Liberal party—the pivot of the plot—victory for Oldendorf, the candidate of the Liberals, is won through Bolz, one of the editors of the Liberal paper *The Union*. Bolz is the hero of the play. He can get along well with any one, he is never upset, least of all when he pretends to be, he is humorous and peppery, he can even venture on risky enterprises, for his heart is and always remains in the right place. In his person the journalists are also granted their esteemed place in modern society, for Adelheid Runeck, a young lady of wealth and noble birth, gives him her hand in marriage.

The strength of this comedy lies largely in a clearly drawn up scheme, a quick, witty dialogue, a smooth delineation of characters, and a sympathetic insight into human nature whose weaknesses are smiled at rather than satirized. Consult G. Freytag's works, vol. 3, pp. 1-112 (Leipzig, 1887-88); English translation in *The German Classic*, vol. 12, pp. 10-108; Seiler, F., *G. Freytag*, pp. 81-91 (1898); Stern, A., *Studien zur Literatur der Gegenwart*, vol. I, (1905); Lindau, H., *G. Freytag* (Leipzig 1907).

EWALD EISERHARDT.

JOURNEY AROUND MY ROOM (*Voyage autour de ma chambre*). We owe this "exquisite morsel," as the French admiringly call it, to a happy accident. Xavier de Maistre (1763-1852) having been arrested as a young officer for duelling was sentenced to confinement for six weeks. He wrote 42 chapters, one for each day, descriptive of his wanderings around his room. He had no thought of publishing the work, but his elder brother, the philosophic writer, Count Joseph de Maistre, secured its publication. It is a little the irony of fate that, as David says in his introduction to the volume containing it in the French series known as the *Library of the Bibliothèque Nationale* the younger brother's unvalued literary diversion promises to outlive the elder brother's philosophic speculations. The book is known particularly for its sympathetic treatment of the duality of man's nature. His animal body is in prison, but his mind can go wandering far beyond the walls. His mind can occupy itself satisfactorily while his animal is doing the ordinary things of life. His mind watches his animal make coffee in the morning, and sometimes, lost in happy memories or occupied with poetic distractions, permits the animal without sense in such matters to burn itself with the fire irons or do something equally foolish. A favorite mode of journeying, since he is not hurried, is while seated on an armchair to lift the forelegs a few inches from the floor and then, swinging backward and forward, to move gradually, almost imperceptibly, around the room. Almost invariably his animal makes his way toward the portrait of a charming lady that hangs on the wall. Thirty years after *The Journey Around My Room*, its author wrote *The Nocturnal Expedition Around My Room* in the same vein and, surprisingly enough, with equal charm. Consult Sainte-Beuve, *Portraits Contemporains*; *Bibliothèque Nationale Collection des Meilleurs Auteurs Anciens et Modernes* (complete works in single small volume); Eng. translation, Philadelphia 1829; New York 1907.

JAMES J. WALSH.

JOURNEY'S END. A powerful drama (prod. 1929) by Robert C. Sherriff, giving a realistic account of four day's existence in the French trenches, drawn from the author's experiences during World War I. The play concerns the struggle of a small group of British officers to maintain their morale as the monotony of interminable waiting gives way to battle conditions of constant tension and shock. A quiet realism is combined with homely humor to make the officers vividly real, and each has his own way of reacting to ever-present death: drunkenness, passive acceptance, stolidity, or temporary cowardice. The action opens as Captain Stanhope's company takes over a portion of the front line. In the course of the play, Osborne, his trusted subaltern and friend, is killed in a raid on German trenches, while Raleigh, who had worshipped Stanhope as a boy, is paralyzed by a shell wound. Stanhope and his remaining men are left to face a full-scale attack. The mood of the drama is keyed to a low, unheroic level so that it becomes a tribute to the inexorable courage of men engaged in an unbearable struggle which, for them, has lost its meaning. The play was an outstanding success in

several European countries and the United States during the 1930's.

JOUTEL, zhōō-tel', **Henri**, French pioneer in America: b. Rouen, c. 1645; d. there after 1723. When La Salle was preparing for his final expedition to Louisiana in 1684 (he had so named the valley of the Mississippi two years before), he induced Joutel, a man of long service in the French army, to accompany him as his aide. The 4-ship expedition sailed from La Rochelle in July 1684. Due to bad reckoning caused by a stormy passage they missed the mouth of the great river where La Salle had planned to establish his colony, and made a landfall far west of it in Matagorda Bay on the Texas coast. A colony was planted on a site in neighboring Lavaca Bay: from that base La Salle made several exploring expeditions in search of the Mississippi, often leaving Joutel in command of the colonists. Twice during these absences the colonists conspired to kill Joutel and seize control, but both attempts were thwarted. Finally, La Salle decided to abandon the Lavaca Bay site and on Jan. 12, 1687 the entire party started its northeasterly journey to the Mississippi. They had crossed the Brazos River on March 19 when the conspirators foully murdered La Salle. At the time, Joutel was absent from the camp and on his return he feared a like fate. However, the murderers spared him and also La Salle's nephew and his brother Jean Cavelier. With six companions Joutel crossed what is now Arkansas and at Arkansas Post (q.v.) found two of Tonty's men in charge of the hunting station there. They escorted the retreating party to the Mississippi and found Indian guides to lead them north to Tonty's Fort St. Louis on the Illinois River, where they arrived September 14. Tonty was absent on a war expedition, and when he returned in October Joutel and Jean Cavelier for various reasons concealed from him the news of the assassination of La Salle. After passing the winter at Fort St. Louis, in May 1688 they left for Quebec via the Great Lakes-Ottawa River route. Late that year Joutel sailed for France, returned to his native Rouen and lived there until his death. Joutel, it appears, was the only member of La Salle's party in whom the explorer had implicit confidence, and his account of La Salle's last expedition, published in 1713, is the only trustworthy contemporary narrative. It is entitled, *Journal historique du dernier voyage que feu M. de la Salle fit dans le Golfe de Mexique, pour trouver l'embouchure et le cours de la Rivière de Saint Louis, qui traverse la Louisiane*. Consult de Villiers, Marc, *L'Expédition de Cavelier de la Salle dans le Golfe du Mexique* (Paris 1931).

JOUVENEL, zhōōv-něl', **Henry de**, French journalist and statesman: b. Paris, April 2, 1876; d. there, Oct. 4, 1935. A brilliant journalist, he became editor in chief of *Le Matin*, and from 1927 to 1932 edited *La Revue des Vivants*. Elected to the Senate for Corrèze in 1921, he sat in the group of the democratic left. He was minister of public instruction in Poincaré's second cabinet in 1924. A delegate to the League of Nations in 1922 and 1924, he succeeded General Sarraill as high commissioner to Syria in 1925, continuing in that post for two years. Secretary general of the Congress on Disarma-

ment held in Paris in 1931, the next year he was appointed ambassador to Italy. He signed the four-power pact of Italy, Great Britain, France and Germany at Rome in 1933. His books include *La vie orageuse de Mirabeau, Huit cent ans de Révolution Française, 987-1789*; *La Paix Française*. His brother **ROBERT** (1881-1924), also a journalist and editor of *l'Oeuvre*, wrote *la République des camarades* and *le Journalisme en vingt leçons*.

JOVANOVIC, yō-vā'nō-vich, **Jovan** ("Zmaj"), Serbian journalist and poet: b. Novi Sad (Neusatz) 1833; d. 1904. He studied law in Pest, Prague and Vienna and returned to his native place to practice his profession. There he drifted into journalism, becoming editor of the *Javor* (*Maple*) in 1861. In 1862 he returned to Pest to study medicine in which he graduated six years later. All the while he continued to contribute to the press humorous and other articles in prose and verse which attained considerable popularity. In 1864 he founded the *Zmaj* (*Dragon*), which served as the medium of publication of some of his best work. Two years later his successful play *Saran* was presented. His growing reputation led him more and more insensibly into literature. Part of this activity resulted in the founding of *Starmali*, a humorous periodical (1878), and *Neven*, a juvenile publication (1880). In addition to his extensive creative poetical and prose work Jovanovic was a very active and successful translator into Serbian of the literary productions of other poets. Good editions of his own works were published in 1880 and in 1887.

JOVELLANOS, hō-vēl-yā'nōs, **Gaspar Melchior de**, Spanish statesman and writer: b. Gijon, Spain, Jan. 5, 1744; d. Vega, Spain, Nov. 27, 1811. He was educated at the universities of Oviedo, Avila and Alcalá, became in 1770 a member of the Royal Academy, in 1778 chief justice of the Criminal Court at Madrid and in 1780 a member of the council of state. Subsequently he was for a time Minister of Justice, but in 1801, through the agency of his enemy, Don Manuel Godoy, was imprisoned at Majorca. Released at the French invasion (1808), he joined the patriots and became a member of the supreme junta. His writings are various, including treatises on political economy, a dissertation on English architecture, a *Memoir on Law Applied to Agriculture*, the tragedy *El Pelayo*, and *El Delincuente Honrado* (*The Honorable Delinquent*), a comedy.

JOVELLAR Y SOLER, hō-vā-lyār', **Joaquín**, Spanish statesman and soldier: b. Palma de Majorca, 1819; d. 1892. He saw military service in Cuba (1842-49); later in Spain (1849-53); and afterward in Morocco (1853-60). In all of his military campaigns he made a brilliant record and rose to the rank of colonel. In 1863 he was made brigadier-general and the following year he became assistant Secretary of War. He left Spain on the proclamation of the republic; but he was induced to return and was appointed governor-general of the island of Cuba, a position he gave up to become Minister of War under Alfonso XII. But he was needed in Cuba and he again became governor-general of the island.

He was very largely instrumental in bringing the Ten Years' War to a close (1878). On his return to Spain he became captain general of the Spanish army and head of the Spanish forces in the Philippines.

JOVIANUS, jō-vī-ā-nūs, **Flavius Claudis**, Roman emperor; d. Dadastana, Bithynia, Feb. 17, 364 A.D. He was originally captain of the household troops of the Emperor Julian, whom he accompanied in the disastrous campaign against the Persians in which Julian lost his life (363 A.D.). After Julian's death he was proclaimed emperor by the troops, but could only extricate his army by ceding to the Persian monarch the five provinces beyond the Tigris. He was succeeded by Valentinianus I.

JOVINIAN, an Italian who flourished in the 4th century, was an opponent of the regular form of the Christian Church. He was one of the first great protestors in that body. He opposed the celibacy of the priests, though he never was himself married. He also opposed fasting and penance and the adoration of the Virgin. Driven out of Milan for his opinions he went to Rome, where he and his followers were excommunicated (388). Jovinian was banished to the island of Boa by the Emperor Honorius, where he remained until his death in 406, yet his ideas continued to spread. But the activity of Augustine and Jerome, their strong defense of the ascetics, their thunders against Jovinian and the support of the temporal authorities were ultimately successful in stamping out the Jovinian sect. Consult Karnack, Adolf, *History of Dogma* (Boston 1894-1900); Jerome, *Adversus Jovinianum* (Nicene and Post-Nicene Fathers, Vol. VI, 2d series, New York 1893).

JOWETT, Benjamin, English scholar and educator; b. Camberwell, London, 1817; d. Oct. 1893. He studied at Oxford, was ordained in 1842, and became regius professor of Greek in 1855. In 1855 he published a notable commentary on the Epistles of Saint Paul. In 1860 he contributed an essay "On the Interpretation of Scripture" to the celebrated volume *Essays and Reviews*, for which he was tried on a charge of heresy before the Chancellor's Court, but was acquitted. In 1870 he became master of Balliol College, and in 1871 published his most important work, a translation of the *Dialogues of Plato*, of which a fifth edition was issued in 1892. He subsequently published translations of Thucydides (1881) and the *Politics of Aristotle* (1885). He was vice-chancellor of the university (1882-86). Consult *Life and Letters* (edited by Abbott and Campbell, 1897); Tollemache, Benjamin Jowett, *Master of Balliol* (1895).

JOWETT, John Henry, English clergyman; b. Halifax, England, Aug. 25, 1864; d. near Croydon, England, Dec. 19, 1923. He was educated at the universities of Edinburgh and Oxford; ordained a Congregational minister 1890; minister of Saint James Church, Newcastle-on-Tyne 1890-95; Carr's Lane Church, Birmingham, England, 1895-1911; Fifth Avenue Presbyterian Church, New York City, 1911-18; returned to England in 1918 and became pastor of Westminster Chapel, London. He is author of *Apostolic Optimism and Other*

Sermons (1901); *Brooks by the Traveller's Way* (1902); *Thirsting for the Springs* (1903); *Yet Another Day* (1905); *The High Calling* (1909); *From Strength to Strength* (1910); *Our Blessed Dead* (1910); *School of Calvary* (1910); *The Transfigured Church* (1910); *The Preacher; His Life and Work* (1912); *Easter Morning* (1912); *Spirit of Christmas* (1914); *The Whole Armor of God* (1916).

JOWF, or **DJOWF**, jowf, oasis in northern Arabia between the Syrian and Shammar deserts. It is also the name of a district of South Arabia. The oasis, which is really what its name implies, a fertile spot in the desert, produces a variety of products peculiar to the climatic conditions of that region, among them being excellent dates. Pop. about 40,000. The capital, El-Djof, contains about 4,000 people.

JOY, Charles Arad, American chemist; b. Ludlowville, N. Y., 1823; d. 1891. He was educated at Union College and the Harvard Law School. He also studied at Berlin and Göttingen and received the degree of Ph.D. from the latter in 1852, and after a few years spent as professor of chemistry at Union, became in 1857 professor of chemistry at Columbia, where he remained for 20 years. In 1866 he became president of the Lyceum of Natural History and was long one of the editorial staff of the *Scientific American*.

JOY, George William, English painter; b. Dublin, Ireland, 1844. He was educated at Harrow and studied art at Kensington, at the Royal Academy and under Charles Jalabert and Bonnat, at Paris. His principal pictures are *Young Nelson's First Farewell*; *Wellington at Angers*; *Prince Charlie and Flora MacDonald*; *The Death of General Gordon*; *Princess Alice of Albany* (for Queen Victoria); *Reverie*; *Truth*; *Joan of Arc*; *Lear and Cordelia*. He also painted many portraits. He died Oct. 28, 1925.

JOY, Thomas, American colonist; b. Norfolk, England, 1610; d. Boston, 1678. Upon emigrating to America in 1635 he established himself in Boston as an architect and builder and in 1657 erected the townhouse of Boston, the earliest civic structure of any note in New England. In 1646 for his share in the *Child Memorial*, protesting against both the civil and ecclesiastical government of the Bay Colony, he was fined and imprisoned.

JOYCE, Isaac Wilson, American clergyman; b. Coleraine Township, Ohio, Oct. 11, 1836; d. Minneapolis, Minn., July 28, 1905. He was educated at Hartsville College of the United Brethren Church. In 1859 he entered the ministry of the Methodist Episcopal Church, joining the Northwest Indiana Conference. He served as pastor of several important churches and a term as presiding elder. He was elected bishop in 1888. In 1886 he was fraternal delegate to the Canadian Methodist Church. He was president of the Epworth League (1900-04). In 1892 he had supervision of the missions in Europe; Mexico in 1895; China, Japan and Korea (1896-97); South America (1903-04). He was a preacher of an intense evangelical type. Consult Sheridan, Wilbur F., *The Life of Isaac Wilson Joyce* (Cincinnati 1907).

JOYCE, James, Irish poet and novelist: b. Dublin, Feb. 2, 1882; d. Zurich, Switzerland, Jan. 13, 1941. Educated at Clongowes Wood College, Belvedere College, and at University College, Dublin, he published as his first work a small volume of lyrics, *Chamber Music* (1907). In 1914 appeared *Dubliners*, followed two years later by *A Portrait of the Artist as a Young Man*. In 1918 he published *Exiles*, a play. Meanwhile he had left Ireland and lived in Rome, Zurich, Trieste, and Paris. *Ulysses*, published in Paris in 1922, created a furor among French, British, and American critics, some of whom declared it a work of genius. Though circulating freely on the Continent, *Ulysses* was banned in Britain and the United States. Its publication in unabridged editions in the United States was finally authorized in 1933, when Federal Judge John Munro Woolsey ruled that the book was not immoral. Joyce's last novel *Finnegans Wake* (1939) is generally considered inferior to *Ulysses*.

JOYCE, Robert Dwyer, Irish poet and physician: b. in County Limerick, September 1836; d. Dublin, Oct. 23, 1883. In 1866 he went to the United States and practiced medicine for several years in Boston, Mass., contributing during that period to the *Pilot* and other Irish journals. He published *Ballads, Romances, and Songs* (1872); *Deirdre*, a much-admired epic poem, which appeared anonymously as one of the *No Name Series* (1876); *Legends of the Wars in Ireland* (1868); *Fireside Stories of Ireland* (1871); *Blanid*, a poem (1879).

JOYEUSE ENTREE, zhwa-yûz' ân-trâ', the name given to the important privileges of the estates of Brabant and Limbourg, with Antwerp, which the dukes of Brabant were obliged to swear to maintain before they were allowed to enter the ducal residence, from which circumstance the name was taken. It dates from Jan. 3, 1354, from the entry of Duke Wenceslas into Louvain. The most important of these privileges was that the people were released from an allegiance whenever the duke should attempt to violate their rights. So important were these privileges considered that many women went to Brabant to be confined there, that their children might enjoy the rights of a citizen of Brabant.

JOYNES, Edward Southey, American educator: b. Accomac County, Va., March 2, 1834; d. June 18, 1917. Educated at the University of Virginia and at Berlin, in 1858 he was appointed professor of Greek at William and Mary College; from 1866 to 1875 he was professor of modern languages at Washington College, Va.; and subsequently he held chairs in Vanderbilt University and the University of Tennessee. In 1882 he became professor of modern languages in South Carolina College (Columbia), retiring as professor emeritus in 1908. He published textbooks of French and German.

JOYNSON-HICKS, join's'n-hîks' **SIR WILLIAM**, 1st Viscount BRENTFORD OF NEWICK, British statesman: b. June 23, 1865; d. London, June 8, 1932. The son of Henry Hicks, he assumed the additional name of Joynson on his marriage in 1895 to Grace Lynn Joynson. He was a Conservative member of the House of Commons for Northwest Manchester (1908–

1910), Brentford (1911–1918), and Twickenham (1918–1929). In 1919 he was created a baronet, and on his retirement from public life in 1929 he received a peerage. He became postmaster general and paymaster general under Andrew Bonar Law in 1923, and when Stanley Baldwin became prime minister later that year he continued in the Cabinet as minister of health; with formation of Baldwin's second administration in 1924 he was made home secretary, an office he continued to occupy until 1929. As home secretary, in 1927 he directed the raid on the London quarters of the Soviet Trading Corporation which resulted in the severance of diplomatic relations between Great Britain and Soviet Russia. He was prominent in the affairs of the Church of England, serving as president of the National Church League. In 1928 he published *The Prayer Book Crisis*, setting forth his strong opposition to the Prayer Book measure at that period under consideration by Parliament and ultimately rejected. Both in the House of Commons and as chairman for 15 years of the Automobile Association of Great Britain he promoted much motor legislation.

JUAN DE FUCA, hwän' dě fōō'kă, **STRAIT**, an ocean passage between Vancouver Island, British Columbia, Canada, and Clallam County, Washington. It is 100 miles in length and some 15-20 miles wide. The strait connects the Pacific Ocean with the Strait of Georgia on the north and Puget Sound on the south.

JUAN FERNANDEZ, hwän' fēr-nān'dās, a group of three islands in the south Pacific Ocean 400 miles west of Chile and belonging to that country. Más a Tierra is the island nearest to land; Más Afuera lies 100 miles to the west of it; and Santa Clara (Goat Island), the smallest, is off the southwest coast of Más a Tierra. The island of Más a Tierra, 12 miles long and $3\frac{3}{4}$ miles wide, is of rugged configuration; El Yunque (the anvil), its highest peak, rises 3,225 feet above sea level. Cumberland Bay, or Bay of San Juan Bautista, on the north side is the principal harbor, but the water is too deep for safe anchorage in bad weather. It was used as a penal colony prior to 1840. It has a population of about 300 which lives mainly by supplying water, wood, and food to passing vessels. Parts are fertile and produce vegetables, peaches, figs, and grapes; originally there was considerable sandalwood, but it has all been taken. Plenty of fish are obtained from the surrounding waters and also lobster (*Palinurus frontalis*), which is an important source of subsistence and also is canned for export in two factories. In 1914 a wireless station was erected. Más Afuera, six miles long by three and one half miles wide, is very mountainous, its highest summit being 5,300 feet above the sea. It presents fine scenery and its remarkable flora makes a most distinctive landscape. The islands consist of Tertiary volcanic rocks in thick layers comprising a succession of lava flows and tuffs, mostly horizontal. The climate is more humid than that of Valparaíso, with mild winters, moderate summers and frequent gales. The islands had no original wild land animals, but the flora is unique. Some Magellanic types have been found, high on Más Afuera. One remarkable plant, *gunnera*, has leaves 10 feet in diameter. The islands were discovered about 1563 by Juan

Fernández (1536–?1602), a Spanish navigator, but no permanent settlement was made on them or nearly 200 years. Alexander Selkirk (q.v.), who remained alone on Más a Tierra from 1704 to 1709, was the original of Daniel Defoe's *Robinson Crusoe*. The Spaniards placed a garrison on the islands in 1750; and sovereignty passed to Chile when that country achieved independence in 1818.

JUAN MANUEL. See **MANUEL, JUAN.**

JUANA, hwä'nä, **LA LOCA** (JOAN THE MAD), queen of Castile: b. Toledo, 1479; d. Tordesillas, 1555. The daughter of Ferdinand and Isabella, in 1496 she married Philip the Handsome, archduke of Austria, to whom she bore the future Emperor Charles V. She was passionately devoted to Philip, and his infidelities caused a deep melancholy not alleviated by her accession to the throne (1504). His sudden death (1506) induced her insanity.

JUAREZ, hwä'räs, **Benito Pablo**, Mexican statesman: b. San Pueblo Guelatao, Oaxaca, March 21, 1806; d. Mexico City, July 18, 1872. Born of Indian parents, he was admitted to the bar of his native state in 1834 and became a judge in 1842. He served as governor of Oaxaca from 1847 until 1853, when he was exiled by Antonio López de Santa Anna. Returning to Mexico in 1855, he joined the revolutionists under Juan Álvarez, by whom he was made minister of justice. He issued the "Ley Juárez," a reform measure which abolished the special courts and reduced the power of the army and the church. It was the first of a series of reforms culminating in the famous anti-clerical Constitution of 1857. In December 1855 Ignacio Comonfort succeeded Álvarez in the presidency. Juárez resigned his justice portfolio and was again made governor of Oaxaca. In September 1857, the new liberal Constitution being in force, Juárez was elected president of the Supreme Court of Justice, making him the legal successor to the presidency. When Comonfort turned against the Constitution, lost power and fled the country (January 1858), Juárez was obliged to fight the Conservatives in the sanguinary War of the Reform. Not until January 1861 did he re-enter Mexico City; in March he was elected to a four-year term. The country bankrupt, he was obliged to suspend payment on the foreign debt. Great Britain, Spain, and France joined in a plan of intervention. On Juárez' agreement to protect the interests of foreign debtors, the British and Spanish troops evacuated the country, but France proceeded to a war of conquest. Juárez was driven to the extreme north and in 1864 Maximilian assumed imperial power. Upon the interference of the United States, however, the French troops were withdrawn in 1867, and in the same year Maximilian was executed and Juárez elected president. He was re-elected in 1871. His vigorous and liberal policy was of great benefit to the nation, and he has sometimes been called the "Mexican Washington."

JUBA, jōō'bā or **IUBA**, yōō'bā, the name of two kings of Numidia. **JUBA I** (d. April 6, 46 B.C.) was the son and successor of Hiempsal II. When open hostilities broke out between Pompey and Caesar he sided with the former and de-

feated the forces of Caesar under Gaius Scribonius Curio in 49 B.C. He also extended aid to two of Pompey's other backers, Scipio and Cato the Younger. After the Battle of Thapsus, which marked the definite defeat of the Pompeian party, he committed suicide. **JUBA II** (d. about 19 A.D.), son of Juba I, was taken by Caesar to Rome and there given an excellent education. He was reinstated in his kingdom by Augustus in 30 B.C., and the next year he married Cleopatra Selene, daughter of Antony and Cleopatra. In 25 B.C. he transferred from Numidia to Mauretania. Apparently the exchange suited him, as he was very much given to literary pursuits. Although all his works have been lost, he is known to have written extensively on philology, Roman history, and painting. He was especially interested in the languages of Assyria, Libya, and adjoining countries.

JUBA (Italian GIUBA, jōō'bā), river in East Africa, some 1,000 miles in length. It is formed in the mountains of south central Ethiopia by the junction of several streams, among them the Dawa, Ganale Dorya, and Webbe (Web). The Juba flows in a southerly direction across southwest Italian Somaliland to enter the Indian Ocean. At its mouth is the seaport of Chisimaio (Kismayu). By an agreement concluded in 1891, the river was the boundary between the British and Italian spheres in East Africa; this status terminated in 1925 with the transfer of Jubaland (q.v.) to Italy.

JUBA, town, Anglo-Egyptian Sudan, in Equatoria Province, on the Bahr el Jebel (Nile) River, distant 1,090 miles by water from Khartoum (Khartum). It was the capital of the former Mongalla province. Until the Lado Enclave (q.v.) was incorporated into the Anglo-Egyptian Sudan in 1910, it was a Belgian river port. Juba is the terminus of the river traffic up the Nile and the point from which highways radiate into Uganda, Kenya Colony, and the Belgian Congo.

JUBAL, jōō'bāl, or **JABAL**, son of Lamech and Adah. According to Genesis 4:21, he was the inventor of the reed-flute and harp, or lyre, and the father, or predecessor, of all those who play upon such instruments.

JUBALAND, jōō'bā-länd, or **TRANS-JUBA** (Italian OLTRE GIUBA, òl-trä jōō'bā), southernmost portion of Italian Somaliland, bounded on the north by the Juba River and on the south by Kenya Colony. Until 1925 it constituted a province of Kenya Colony. Italy administered it as a separate colony until 1926, when it was absorbed into Italian Somaliland. The port of Chisimaio (formerly Kismayu) is the chief town. Jubaland has an area of more than 30,000 square miles, most of it, with the exception of the valley of the Juba, being semi-arid. The Somali inhabitants, numbering some 130,000, have large numbers of camels and cattle.

JUBAYL, jōō-bil' (French DJEBEIL), coastal village, Lebanon, 20 miles north of Beirut (Beyrouth). As *Byblos*, it was an ancient maritime city of Phoenicia, the chief seat of the worship of Adonis and of Astarte. In Ezekiel 27:9 the town is called *Gebal*, the townsmen being experienced ship calkers, or carpenters of the ships

of Tyre. According to Strabo their work was much interfered with by robbers who infested the Lebanon range. Pompey not only destroyed the robber nests, but delivered the city from a tyrant. The remains of a temple of Baalat, a royal necropolis of the 14th century B.C., and a citadel have been discovered. There are also extensive remains dating from the Roman period and from the times of the Crusades. Byblos was noted in antiquity for its large exports of papyrus to Egypt, and the Greeks borrowed its name as their term for the inner bark of the papyrus, the paper made from it and, by extension, a book, *biblos*. From Greek *biblos* is derived the English *Bible*.

JUBBULPORE, júb'al-pōr, or **JABALPUR**, city, Republic of India, in the State of Madhya Pradesh, situated near the Nerbada River 150 miles north-northeast of Nagpur. It is in a rocky basin, the gorges about which have been converted into artificial lakes of great beauty. There are technical and industrial schools, and a college affiliated with Saugor University. The city is an important trade center and rail junction. Carpets, cotton goods, and pottery are the principal manufactures; cement is made on a large scale in the vicinity. Pop. (1941) 178,339.

JUBILEE, an observance among the Jews (from Heb. *Jobel*, the "ram's horn") which recurred every fiftieth year; the land was to rest, as in sabbatical years; land and houses in the open country and in unwall'd villages reverted to their original owners or the heirs of such; all slaves were to go free. The law as a whole was distinctly theocratic; it vindicated the absolutism of Jehovah; it meant that Hebrews were the servants of Him, and could not therefore continue to be the slaves of their fellowmen; the land belonged to Him, and was only lent to the Hebrew tribes and families, who could not therefore be driven out by any human arrangement.

In the Roman Catholic Church a jubilee occurs every 25th year in which the Pope proclaims a remission, from Christmas to Christmas, of the penal consequences of sin, on condition of repentance, restitution, and the performance of certain pious works. The first Roman Catholic jubilee was given in 1300. Ordinarily, the term is applied to any 50th anniversary.

JUBILEES, *Book of*, a pseudepigraphal production written in Hebrew by a Pharisee sometime between the accession of Hyrcanus to the priesthood 135 B.C. and his breach with the Pharisees 105 B.C. It is an attempt to rewrite the history of Israel and include with it a vast amount of traditional lore. The object of the author was, as Robert Henry Charles states it, to "defend Judaism against the attacks of the Hellenistic spirit that had been in the ascendant one generation earlier and was still powerful, and to prove that the law was of everlasting validity." The book has been known by other titles: *Jubilees*; *The Little Genesis*; *The Apocalypse of Moses*; *The Testament of Moses*; *The Book of Adam's Daughters*, and *The Life of Adam*. It consists of 50 chapters, and besides the historical element it introduces the Messianic hope of Israel. It was translated from the Hebrew into the Greek and may also have been

in the Aramaic. Four manuscripts of the book are preserved in the Ethiopic.

JUCHEREAU, zhüsh-rō', **Louis**, **SIEUR DE SAINT-DENIS**, a French Canadian soldier; b. Quebec, 1676; d. 1731. He became a soldier in Louisiana, where he served, on several occasions, as intermediary between the representatives of the government and the Indians. He became commander of the fort at the mouth of the Mississippi (1700). Later on he went to Mexico, where he arranged a treaty with the viceroy for the encouragement of commerce (1714-1716). Three years later he was in command of a band of Indians at the battle of Dauphin Island, where the Spaniards were defeated (1719). He became commander of Natchitoches fort in 1720, and 11 years later he defended it from an attack of Naches Indians whom he overwhelmingly defeated.

JUDAEA or **JUDEA**, jōōdē'ā, the name for the southern division of Palestine under the rule of the Persians, Greeks, and Romans. It succeeded the kingdom of Judah (see **PALESTINE**). Judaea was bounded on the north by Samaria, the northern boundary extending approximately from north of Joppa to the Jordan at a point some 13 miles north of the Dead Sea; on the east it was bounded by the Jordan and the Dead Sea; on the southwest by the Sinai Peninsula; and on the west by the Mediterranean.

JUDAH, jōō'dā (Hebrew **YEHUDAH**, celebrated), fourth son of Jacob and Leah, and the traditional ancestor of the tribe which bears his name. In Genesis he is said to have advised the selling of Joseph into Egypt. That the Biblical account given of Judah was derived from traditional history there seems little doubt; but these latter accounts appear to have been presented in a manner to suit the readers of the times in which the commitment to paper was made. Just how much, therefore, of the account of Judah that has come down to modern times is historical, semi-historical, or purely traditional or mythical it is very hard to determine. According to the Biblical record Judah married a woman of the Canaanites by whom he had three children, Er, Oman, and Shelah. By his daughter-in-law, Tamar, he also had two sons, Pharez and Zarah. See **JUDAH**, **TRIBE OF**.

JUDAH or **JEHUDAH**, jē-hū'dā (called **HA-NASI**, hā-nā-sē', that is, the Prince, or **HA-KADOSH**, hā-kā-dōsh', that is, the Holy; called also **JUDAH I** and often simply **RABBI**), Jewish scholar and expounder of the law; b. 135?; d. ?220. He was the son of Simon ben Gamaliel II, and on the death of the latter he became president of the Sanhedrin, to which he had been admitted in his youth on account of his extensive knowledge of Jewish law. His wealth, position, and talents enabled him to control, in a thoroughly arbitrary manner, all the actions of the Sanhedrin, which he made the center of much of his religious activity. His home at Sepphoris became the shrine to which thousands went in search of knowledge. From there he exercised a strong and widely extended influence. There he lectured, and the textbook which he wrote for these lectures ultimately acquired such an authoritative position that it was used as the basis for the compilation of the Talmud.

JUDAH, Ben-Samuel (Arabic Abu'l-Isan), a Spanish-Jewish poet and philosopher: b. Castile, about 1086; d. after 1140. Graduating in medicine he practised his profession for a while, but he seems to have finally abandoned it to devote his time to philosophy and poetry. His reputation as the greatest Hebrew poet of the Middle Ages was gained largely through his poems of longing for the home of his race. Finally he set out from Toledo in 1140 with the avowed intention of visiting Jerusalem, a journey from which he never returned. In his own day and for many years afterward he was looked upon as a great philosopher; but his fame to-day rests almost entirely upon his poetical work; for he was too much of a poet to be a deep and formal philosopher or theologian. His principal philosophical work is 'Al-Kha-zari,' which purports to expound, in Arabic, the principles of Christianity, Islam and Judaism and to present the philosophy of Aristotle. There are two translations of this work in German, the better of which is by Hirschfeld (Breslau 1885). Many of his poems have also been published in German and Emma Lazarus has translated some of them into English (Boston 1899). Others are also to be found in 'Songs of Exile,' by Nina Davis (Philadelphia 1901). Consult Kaufman, David, 'Jehuda Helewi' (Breslau 1877).

JUDAH, Ben Samuel, Jewish mystic: b. Speyer, probably about the middle of the 12th century; d. 1217. His school at Ratisbon, founded in 1195, became noted far and wide and was attended by many pupils destined to become famous and influential. So noted did he become as a moralist and mystic that many works appear to have been ascribed to him in which he had no part. Among the numerous works attributed to him, he appears to be the author of 'Sefer ha-kabod' (the 'Book of the Divine Majesty'); 'Sefer Hasidim' (the 'Book of the Pious'); and a commentary on the Pentateuch. The latter, which has been lost, is known only by references to it in more recent works and in citations from it in later commentaries. The 'Book of the Pious' which considered his most important work, is partly a treatise on morality and mysticism; in which a fine distinction is made between the 'divine Majesty' which is revealed to angels and men, and the 'divine Being,' who is not so revealed to humanity because he is too infinitely great for all human conception. This work became the text for the Judah sect which placed great stress on this fanciful distinction between the 'divine Majesty' and the 'divine Being.' Critics are now inclined to dispute Judah's authorship of all of this work except the first sections. Judah Ben Samuel had a great influence over his followers, not so much on account of the originality of his thought and the accuracy of his reasoning and philosophical speculations as because of his deep earnestness, his loftiness of aspiration and his real nobility of character. This influence was increased by his strong desire and tireless efforts to discover the great truths of the Bible and the hidden meaning of its priests, prophets and philosophers. Consult Grätz, 'Geschichte der Juden' Vol. VI, Leipzig 1894; Schlossinger, 'Judah Ben-Samuel' (in the 'Jewish Encyclopedia,'

New York 1914); Zung, 'Literaturgeschichte der Synagogalen Poesie' (Berlin 1864).

JUDAH, Tribe of, one of the Israelitish clans most frequently mentioned in the Bible. It is supposed to have had a strong Canaanitish admixture; and by some critics the story of Judah's marriage to a Canaanitish woman is believed to be but an anecdotal method of recording this fact of the introduction of foreign blood into the family. In the days of David the tribe of Judah comes, for the first time, into prominence. The book of Joshua states that the land of Judah extended from the Mediterranean to the Dead Sea, including in its territory the plain of the Philistines. It bordered on the land of Benjamin on the north. The land of Judah, of a rugged, hilly character, tended to separate the tribe from the other Israelitish clans; and this may account for the fact that it does not receive prominence earlier in Biblical history. The kingdom of Judah, brought into prominence by David, does not correspond in extent to that recorded in the book of Joshua, since the latter embraced the Jerahmeelites, Kenites, Kenizzites, part of the original tribe of Judah and some other small tribes. At no time in history is there a verified record of the tribe of Judah having actual possession of the plain of the Canaanites; though they may have done so in prehistoric times and have still preferred a claim against it. This seems probable from the aforementioned statement in the book of Joshua. The tribe of Judah, which was among the Jews who were carried into Egypt, seems to have prospered there, for when the Israelites left the latter country, it outnumbered all the other Jewish tribes, having 74,000 adult males, this being 12,000 more than Dan, the next most numerous tribe. After the hardships of the long journey home through the desert, the tribe of Judah still numbered 76,500 able-bodied men of fighting age. The clan totem of the tribe of Judah was a lion's whelp, which was later on converted into a standard with the motto "Rise up, O Lord, and let thine enemies be scattered!" In the person of David, the tribe of Judah became the ruling clan; but this superiority was disputed by Ephraim, especially after the removal of the head sacerdotal functionaries to Jerusalem; and the result was the setting up, by the latter, of a separate ecclesiastical establishment. Judah lost its identity as a tribe under Rehoboam and Jeroboam, when the ancient kingdom was divided and the clan of Judah became identified with the kingdom of Judah, which included the tribes of Judah and Benjamin and a large body of Levite priests. Consult Haupt, 'Studien' (Giessen 1914); Meyer, E., 'Die Israeliten und ihre Nachtbarstämme' (Halle 1906); Schmidt, N., 'The Jerahmeel Theory and the Historical Importance of the Negeb' (in the *Hibbard Journal*, 1908, pp. 322-342); Wellhausen, 'De gentibus et familiis Judæorum' (Göttingen 1869); Winckler, 'Geschichte Israels' (Berlin 1895). See JUDAH; BENJAMIN; JEWS AND JUDAISM.

JUDAISM. See JEWS AND JUDAISM.

JUDAIZERS, ju'dā-iz'-erz, certain early Christian converts who insisted on retaining the rites and ceremonies of the Jewish law. They were naturally Jews; and among the concessions that they insisted should be made to them

as new Christians was permission to observe the rite of circumcision. The Apostolic Council decided that these Jewish customs were not binding on Christians under the new gospel dispensation. Paul opposes the views of these Jewish converts very strongly in the letter to the Galatians. See SAINT PAUL; EBIONITES; NAZARENE.

JUDAS, JUDA, or JUDE, one of the brothers of Jesus. Practically nothing is known concerning him save the meagre details found in the New Testament and what has come to us from tradition. Some scholars assume that, according to John vii, 7, Judas and the other brethren did not believe in the Messiahship of Christ until after the Resurrection (Acts i, 14). That he was a married man we would infer from Paul's writing (1 Cor. ix, 5). Scholars ascribe to him the authorship of the Epistle of Jude wherein he speaks of himself as "the servant of Jesus Christ." See JUDE, EPISTLE OF.

JUDAS, or JUDE, one of the 12 apostles. He appears in the apostolic catalogue of Saint Luke as "Judas of James" that is, son or brother of James; in Saint Mark's and Saint Matthew's list he is styled Thaddæus, of which Judas may be an abbreviation. Nothing is known of his life except what is ascribed to him by widely spread tradition. According to Western legend he went in company with Simon the Canaanite to evangelize the Persians, and closed his life by martyrdom.

JUDAS BARSABBAS, the companion of Silas in the bearing of a decree from the apostles and elder brethren to the brethren in Antioch, Syria and Cilicia, according to Acts xv, 22-23. He has been supposed, without satisfactory proof, to have been a brother of Joseph Barsabbas. All that is definitely known of him is that he was a member of the Jerusalem church, that he was a man of influence in his community and that, furthermore, he was looked upon as a prophet.

JUDAS OF GALILEE, a Jewish popular leader who led an uprising against the Roman power about 6 or 7 A.D. According to Acts v, 37, he was killed and his followers dispersed; but Josephus, who records the insurrection, which according to the Acts was at the time of the census, states that Jacob and Simon, two sons of Judas, were put to death; but he gives no information as to the fate of Judas himself.

JUDAS ISCARIOT, is-kär'i-öt (that is, of the family of Cariot in the tribe of Judah). One of the 12 apostles of Christ. He is styled the son of Simon, and was treasurer to the little company that attended Jesus, whom he betrayed, with a kiss, into the hands of the Jewish priests, for 30 pieces of silver. His divine Master addressed to him the mild reproof—"Dost thou betray the Son of Man with a kiss?" Remorse drove him to suicide.

JUDAS MACCABÆUS, Jewish warrior and national hero, who flourished in the 2d century B.C. He was one of five sons of Mattathias, a Joarib priest of Modin, not far from Jerusalem. The father, in 168, killed the officer in command of the troops sent to Modin to overthrow the Jewish religion, and, with his five sons, took to the mountains. On

the death of Mattathias, shortly afterward, Judas became the recognized leader of the revolt, which he managed with very great skill and military wisdom which enabled him to defeat, in succession, four Syrian armies, each of them much stronger and better armed than his own mountaineers. After three years' successful warfare he again established the headquarters of the Jewish faith in the temple at Jerusalem. Judas Maccabæus disputes with David the honor of being the greatest of the Jewish national military heroes. In so high esteem was he held that the memory of his great achievement was kept green by means of a commemoration service in the annual Feast of Dedication. His brothers, too, seem to have been highly honored on account of the heroic part they had all played in the war of liberation; and one of them, Jonathan, became high priest. Under the leadership of Judas Maccabæus, the Jews undertook extensive military campaigns against their enemies on all sides, and with signal success which resulted in the conquest of some and the punishment of others. These warlike expeditions reached into the territory of the Arabs. In 164 B.C. Lysias, the guardian of Antiochus V, determined to punish this activity of the Jews; and to this end he marched against Jerusalem with a picked force of 100,000. Judas found himself unable to oppose a force so much larger than his own. But chance came to his aid in the shape of troubles in Antioch which forced the return of Lysias. Taking advantage of the circumstance and the occasion, Judas secured from the Syrian government recognition of the rights of the Jews to exercise their own religious worship. In the eyes of his followers, this was perhaps his greatest victory. But not content with this, he attempted to secure the recognition of the political independence of his country. But the intrigues of the Syrian party in Jerusalem and the quarrels among his own people weakened his own power in both a moral and a military sense. Though he signally defeated a Syrian army under Nicanor and fought a very successful campaign (163-62 B.C.) the discontent at home increased and tended greatly to weaken his organization and military strength to resist a second and still more formidable Syrian army, against which he fell in battle at Elasa (161 B.C.). He was succeeded by his brother Jonathan, the high priest (q.v.). See MACCABEES.

Bibliography.—Josephus, 'Antiquities, XII'; 'Maccabees I and II'; Schürer, Emil, 'History of the Jewish People in the Time of Jesus Christ' (5 vols., New York 1896); Stade, 'Geschichte des Volkes Israel' (Berlin 1888); Streane, 'The Age of the Maccabees' (London 1898); Weirs, H., 'Judas Makkabæus' (Freiburg 1897); Wellhausen, 'Israelitische und Jüdische Geschichte' (Berlin 1898).

JUDAS MACCABÆUS, an oratorio of Handel which was first produced in London in April 1747; and in Boston, United States, in December of the same year. See HANDEL.

JUDAS TREE, a tree so named because of the tradition that upon one of this family Judas hanged himself. The *Cercis siliquastrum*, the common European Judas tree, is to be found throughout southern Europe and Asia; while the American member of the family,

ercis canadensis, is a much hardier tree and found in northern regions. It is, however, very similar to the Old-World species. The dark-veined wood of both species takes a fine polish. Two other species are known in the United States, the *Cercis occidentalis*, found in the West, and the *Cercis chinensis* introduced to the country from Japan.

JUDD, Charles Hubbard, American psychologist: b. Bareilly, British India, 20 Feb. 1873. He came to America in 1879; graduated, A.B., from Wesleyan University, 1894; Ph.D., Leipzig, 1896. He was professor of psychology at New York University, 1898-1901; professor of psychology and pedagogy, University of Cincinnati, 1901-02; instructor, assistant professor, and professor of psychology and director, psychological laboratory, Yale, 1902-09; professor and head of the department of education, and director of the School of Education, University of Chicago, after 1909. His publications include: 'Genetic Psychology for Teachers' (1903); 'Psychology' (rev. ed. 1917); 'Psychology of High School Subjects' (1915); 'Evolution of the Democratic School System' (1918); 'Silent Reading' (1923).

JUDD, Garritt Parmlee, Hawaiian statesman: b. Paris, Oneida County, N. Y., 23 April 1803; d. Honolulu, Hawaiian Islands, 12 July 1873. In 1828 he went to Honolulu as a medical missionary, and in 1842 was appointed recorder and interpreter to the native government. He organized the first Hawaiian ministry for Kamehameha III in 1843, and held the portfolio of finance from 1844 until his retirement in 1853. He placed Hawaiian finance on a sound basis.

JUDD, Norman Buel, American statesman: b. Rome, N. Y., 1815; d. 1878. He began the practice of law in Chicago in 1836, where he soon became city attorney and was a member of the State legislature from 1844 to 1860. Coming over from the Democrat to the Republican party in 1856, he became prominent in local politics and chairman of the Illinois State Central Committee, a position which gave him great influence at the Second National Convention at Chicago which, in 1860, nominated Abraham Lincoln for the presidency. Lincoln sent him, the following year, as Minister to Russia, where his influence, for over four years, prevented the recognition of the Southern Confederacy. On his return home (in 1865) he was re-elected to Congress for two successive terms; following which he became collector of United States customs at Chicago. In his capacity of railway and corporation lawyer, in which he stood in the fore rank, he was closely connected with the projection and development of most of the great railways of the United States in his day. He was also a very active figure in the legislature. He took prominent part in the impeachment of President Johnson and he was the author of the act which created inland ports of entry and provided for the shipment, in bond, of goods to the interior.

JUDE. See **JUDAS**, one of the brothers of Jesus.

JUDE, Epistle of. One of the so-called Catholic (i.e., general) epistles of the New Testament, whose author names himself "Jude,

a servant of Jesus Christ, but a brother of James," thus reverently contrasting his blood-relationship to James, the head of the Jerusalem church (Acts xv, 13; xxi, 18; Gal. ii, 9, 12) with his higher relationship to Jesus (Mark iii, 34-35), who also was his and James' own brother (Matt. xiii, 55; Mark vi, 3; Gal. i, 19; 1 Cor. ix, 5) according to the flesh. The author describes his document as being an exhortation to his readers to "contend earnestly for the faith once for all delivered unto the saints," (3) and as taking the place of a treatise of a more general doctrinal character, on which he was engaged when occasion arose for this more direct form of address. That a dangerous situation had developed quite as ominous as that of which Paul forewarned both the Ephesians (Acts xx, 29-31) and the Philippians (iii, 18-19) "with tears," is obvious from the heightened tone of indignation, grief and loathing in which he refers to these latter day "wolves" who have "entered in, not sparing the flock." By what new system of theological doctrine the contagious immorality of the intruders was supported, the author assumes as too well known to his readers to require any detailed statement, but only a delineation of its fruits in resultant character and retribution. Only a precarious basis can, therefore, be found for any identification of the heresy with that of the Cainites, the Carpocratians or other Gnostic sects of the post-apostolic age. Similarly indecisive as to a late date are the citations in verses 9 and 14f. from such apocryphal books as *The Assumption of Moses* (7 to 30 A.D.) and *The Book of Enoch* (written before 170 B.C.); the necessary uncertainty as to the local habitat of the readers, whether Palestine, Syria or the Diaspora; and, the intimate relation of this document to the text of 2 Peter, in casting suspicion upon the claim made in verse 1 as to authorship.

In its biting invective and hortatory fervor this epistle equals if it does not surpass Galatians and 2 Corinthians. The interlopers are characterized as ungodly persons who, professing godliness, have "crept in privily" to the "love-feasts" of the readers (iv, 12) only to "turn the grace of our God into lasciviousness" and to "deny our only Master and Lord, Jesus Christ" (consult Phil. iii, 18-19); as pretending to have received divine revelations, which their conduct demonstrates to have been vile, lascivious dreams (8); as flouting all authority, even that of angels, and railing at sacred mysteries which their carnal minds cannot understand (8-10); as continually swayed by ungodly lusts (16, 18) and sensual rather than spiritual in their judgments (19); as comparable therefore, to sunken reefs in a ship's channel or a foaming surf (Is. liii, 20) casting up mire and dirt; to clouds that bring no rain, or to fruit-trees fruitless in autumn, and fit only for winter's fire-wood (12) and to meteors disappearing in eternal night (13). The dissolute character and the impending doom of these corrupters of the Church, prefigured in the punishment of Israel in the wilderness (5); the fall of the angels (6); the fate of Sodom and Gomorrah (7); the legend of the archangel Michael (8-9); and the history of Cain, Balaam and Korah (11); were foretold in the prophecy of Enoch (14-15) and were explicitly

confirmed to them by the apostles of Christ (17-18). Re-enforced by this tragic warning, the epistle ends with a tender exhortation and a triumphant doxology (20-25).

Bibliography.—Introductions: T. Zahn (Eng. tr., 1909); H. J. Holtzmann (1892); A. Juelicher (Eng. tr., 1904); J. Moffatt (1911). Commentaries: Meyer (Kuehl 1897); von Soden in 'Handcommentar' (3d ed., 1899); C. Bigg (in International Critical Commentary, 2d ed., 1902); J. B. Mayor in Expositors' Greek Testament (1910). **MARCUS D. BUELL**, *Late Professor of New Testament Greek and Exegesis, Boston University School of Theology.*

JUDEICH, yōō'dīk, **Johann Friedrich**, German forester: b. Dresden, 1828; d. 1894. After extensive experience in the forestry departments of Saxony and Bohemia he finally became director at Tharandt, where he made his name widely known in forestry. Among his published works are 'Die Forsteinrichtung' (1903); and contributions to Lorey's 'Handbuch der Forstwissenschaft' (1887-88). He wrote for numerous periodicals and edited Ratzeburg's 'Die Waldverderber und ihre Feinde' (7th ed., 1876; 8th ed., 1885-95); and other publications.

JUDGE, **William Quan**, Irish-American theosophist: b. Dublin, 1851; d. 1896. Coming to America in 1864 with his father he studied law and entered into legal practice with him in New York city in 1872. He was one of the founders of the Theosophical Society of America, to which he finally gave up all his time, traveling, as its secretary, throughout Europe and the American continents. See THEOSOPIHY—THE THEOSOPHICAL SOCIETY.

JUDGE, public officer to whom is committed the exercise of judicial power of the state in the administration of justice in its courts. It is his province to decide questions of law and in cases in which facts are to be decided by a jury to instruct the jury as to the law which is applicable and to point out to them what the exact questions for their determination are. (See JURY). He pronounces the sentence, or enters the judgment, of the court.

The word is not a technical one. The officers of the King's Court, when that tribunal began to take definite shape, were known officially as justices. Until the recent Judicature Acts in England it was customary formally, as well as popularly, to speak of the judges of the superior courts at Westminster, though the members of the courts of King's Bench and Common Pleas were properly justices, and of the Court of Exchequer barons, and at the present time the members of the Supreme Court of Judicature, including the Lord Chancellor, the Lord Chief Justice, the Master of the Rolls and the Lords of Appeal are spoken of as the judges of that court. English judges are appointed by the Crown (this patronage being exercised by the Lord Chancellor, who is the head of the legal profession) from the leaders of the bar, and hold office during good behavior.

In all the Federal courts, in all the higher courts of the several States and in most of the inferior courts, judges must be trained in the law, though lay judges were common in the State courts of first instance until quite recent times. Federal judges are appointed by the

President, by and with the advice and consent of the Senate, and hold office during good behavior, being removable only by impeachment. Any Federal judge who has served for 10 years and is 70 years of age may retire on full pay for life. The choice of judges in the States is determined by the State constitutions. As a general rule they are elected for a term of years. The fear was quite generally expressed at the time the tendency to make the office an elective one became general, that judges so chosen would be inferior to those appointed by the State governors, but does not seem to have been justified by the result. In most of the State courts the small salaries paid and the limited terms of office prevent the leading members of the bar from seeking, and in many cases from accepting, the office of judge.

A judge must be impartial and any interest in the cause or the parties will disqualify him from presiding at the trial. While in office he is precluded from practising before the court of which he is a member, and he is commonly, and should be universally, precluded from practising before any court. He is not answerable to any suitor for the correctness of his rulings or decisions, and in the absence of positive fraud is not answerable in damages for any decision he may render. Every judge has power to punish for contempt of court in case of acts committed during the court's session, and even of such acts committed outside the court, though this latter power is to be exercised with care, and its limits are naturally not defined with certainty. For the peculiar functions exercised by American judges as interpreters of the Federal and State constitutions, see JURISDICTION.

Bibliography.—Pollock and Maitland, 'History of English Law'; Blackstone, 'Commentaries' (Bk. III, Chap. 4); Brodie-Innes, 'Comparative Principles of the Laws of England and Scotland' (Bk. I); Kent, 'Commentaries' Cooley, 'Constitutional Limitations.'

JOHN DOUGLASS BROWN.

JUDGE-ADVOCATE, a title given the prosecutor in a court-martial or military commission. In the United States the judge-advocate is generally a member of the judge-advocate-general's department. In Great Britain the duties of judge-advocate usually devolve upon a detailed staff officer, or the prisoner's commanding officer. The prisoner has a right to call on any regimental officer to speak in his behalf. See LAW, MILITARY.

JUDGE-ADVOCATE-GENERAL, the head of the United States army bureau of military justice. He has the rank of brigadier-general and officiates as the legal adviser of the Secretary of War and of the Department of War. All European armies have a similar functionary and a similar department. The Judge-Advocate-General is the legal custodian of all general courts-martial, military commissions, courts of inquiry and papers relating to title of land under control of the War Department, except the public buildings and grounds in the District of Columbia.

JUDGE LYNCH. See LYNCH LAW.

JUDGES, Book of. This book in the Hebrew Bible derives its name from the deliverer whose exploits it records. In its present form

the book is the product of that active era of historical interpretation inaugurated by the publication of Deuteronomy in 621 B.C. (See DEUTERONOMY). The narrative of the struggle between the Hebrews and the earlier inhabitants of the possession of the land furnished material especially adapted to exemplify the doctrine of Deuteronomy, that Israel's prosperous possession of the land was contingent upon her faithfulness to Jehovah. It was one of the first tasks of the historians who were dominated by the thought of the great law book to edit the stories of the Judges and compose the book now contained in chapters ii, 6-xvi. They had at hand for their purposes a history of the early heroes, which may have formed a part of the great, composite work already compiled from the histories of Judah and Ephraim (JE), or may have been a separate work. In any case, the earlier document contained some of the oldest and most authentic historical traditions of the nation. The Song of Deborah (Chap. v), for example, is the oldest considerable composition preserved in the Hebrew Bible. It must have been sung immediately after the events which it celebrates. Taking this price-collection of hero tales, that had been gathered and combined in the three centuries preceding their time, the Deuteronomic editors introduced a heading and conclusion for each tale designed to enforce the great doctrine which they found so well exemplified in the varying fortunes of the times. When Israel forgot Jehovah and turned to other gods, her enemies prevailed; when she returned to him in penitence, a deliverer was raised up and peace secured throughout his rule. They introduced their readers to this new interpretation of the old stories by a summary statement of the facts and principles (ii, 6-iii, 6) which they were to find fully illustrated in the separate stories and their interpretation of each. Seven principal stories form the main body of the work, those of Othniel, Ehud, Deborah and Barak, Gideon-Jerubbaal, Abimelech, Jephthah, Samson. Of these leaders, Abimelech is styled a prince and king, rather than a judge; in truth the brief hereditary rule set up by this man and his son may be counted the first attempt at establishing a monarchy in Israel. Between the longer narratives short notices of six other judges are inserted. The little that is told of them is in the characteristic language and style of the editors. Perhaps they were included in order to bring the number of the judges to 12. To this original book, edited not far from 600 B.C., there was prefixed as an historical introduction an ancient account of the entrance into Canaan and of the failure of the tribes to dispossess the inhabitants (i, 1-ii, 5), and there were added two appendixes (xvii-xviii, xix-xxi) which did not receive the editorial interpretation characteristic of the body of the book. The former of these, telling of the migration of Dan to the northern borders of Israel's territory, is obviously a very old narrative, but the latter, the story of the outrage at Gibeah, gives many indications of a relatively late date.

Fortunately the exilic editors confined their interpretations of the history to the framework which they composed and left the stories themselves in their ancient form, so that they afford the student of Israel's early political, social, and

religious development a mine of information and preserve for the general reader the rugged spirit of the pioneer days of struggle against many and varied dangers. The chronology of the book belongs to the editorial framework; it is based on the theory that the heroes ruled united Israel, whereas the stories themselves reveal the fact that the judges were local leaders in their different tribes and districts. Their lives may have been, in some cases, contemporaneous. An historical use of the book requires careful discrimination between its earlier and later elements, varying in date of composition by as much as 500 years.

From a literary point of view, the older portions of the book give some of the best specimens of rapid, picturesque narrative, full of human interest and of simple loyalty and faith toward Jehovah, which make Israel's early prose so vital, while the Song of Deborah ranks as one of the finest examples of a victory ode preserved in the early literature of any language. On the other hand, the completed book is a monument of great interest in the art of historical composition. It is perhaps our first important example of a deliberate interpretation of events long past from the standpoint of a conscious philosophy of history. The distinction so clearly visible between the naïve stories themselves and the rigid, solemn interpretation of the editors marks a great transition in the development of historical writing in Israel. Since Israel was the first people to develop a true historical literature, this transition is an important landmark in the story of the world's historical writing.

*Professor of Biblical Literature and History,
Brown University.*

JUDGES, Recall of. See RECALL.

JUDGES' CAVE, a crevice between some large fallen rocks on West Rock, New Haven, Conn., now a municipal park, which in 1661 was a temporary hiding-place for Goffe and Whalley, two of the English regicides.

JUDGES OF ISRAEL (Hebrew, *shōphētim*), the leaders managing the affairs of Israel from Joshua to Saul. Their position was partially judicial and partially one of leadership, though the former function, as time went on, seems to have gained in importance at the expense of the latter. The names of these judges usually given are Othniel, Ehud, Shamgar, Barak, Gideon, Tola, Jair, Jephthah, Ibzan, Elone Abdon and Samson, an account of whose deeds and various administrations may be found in the books of Judges and First Samuel.

Some accounts add to these names those of Eli, Samuel, Deborah and Abimelech, making 16 in all. The recorded exploits and actions of these judges seem to be more tradition than real history. According to the records, these "judges" are supposed to have covered a period of 400 years, or an average of 25 years for each functionary, a considerable length of time for the conditions under which they must have held office and the dangers of the age. This average length of time is increased if the estimated period of 480 years for 12 judges is accepted, making 40 years of government for each individual. The functions, characters and actions of these judges were so different in individuals that modern critics are inclined to look upon them rather as legendary traditional or mythological heroes rather than as sober historical characters. Notably Samson has been looked upon as an old sun god; and Deborah, the prophetess, and Samuel, the powerful and influential seer, might well be traditional types of early semi-religious, semi-tribal leaders. See JUDGES, BOOK OF.

JUDGMENT, the decision rendered by the authority to which a question or issue has been submitted for determination. In a more restricted sense, the decision by a court of law of an issue raised by parties litigant, or the determination and declaration by such court of a legal right. There are many rulings by such a court which are not judgments, but determine merely some incidental question, and there are judgments which are interlocutory, as well as final judgments which put an end to the controversy. But every judgment in a judicial proceeding is an adjudication by the court of some right of a suitor, and until set aside or reversed, is the law governing such right.

In early times the solemn character of a court record and the means which the law furnished for the enforcement of an obligation thus established caused such a record to be adopted for the purpose of entering into an obligation as distinguished from resort to a court for the vindication of the obligation when disputed by the other party. A modern survival is found in the confession of judgment, by which a man causes his obligation to pay a sum of money to be entered upon the court records in the form of a judgment against him for the amount due. In consequence of the early practice—aided also by the fact that a judgment may be sued upon outside the jurisdiction of the court in which it was entered, like a contract—the older legal writers speak of judgments as a species of contract. But this classification has been shown to be unscientific by recent writers, since the courts have pointed out that these obligations are not contractual in either their origin or their incidents, and it is now customary to speak of them as *quasi-contracts*.

It is stated above that a judgment is interlocutory or final. In a suit for partition of real estate a judgment that partition be made is interlocutory, and is the basis of further proceedings which result in the final judgment establishing the partition. A final judgment is one which ends the controversy, at least as to some of the parties. It is a general rule that no appeal can be taken, except from a final

judgment, and while there can rarely be a case of doubt as to the finality of a technical judgment, that is the decision rendered by a court of common-law jurisdiction, questions frequently arise as to the finality of decrees (which correspond to judgments) entered by courts of equity. The test is whether the right is finally settled by the decree; for example, when a creditor has claimed to intervene in an equity proceeding to establish his right to share in a fund being distributed, a decree excluding him is final as to him and appealable, though in all other respects the suit remains undetermined by the court below.

A judgment of a competent court having jurisdiction of the parties and the subject matter is conclusive, except so far as it may be the subject of appeal to a higher court. The direct issue thus determined will not be retried by another court, and such a determination cannot be attacked collaterally except on the ground of fraud or lack of jurisdiction of the court in which the judgment was rendered. A judgment *in personam* binds only parties to the cause and those in privity with them; a judgment *in rem*, which is a judgment determining the status of person or property, binds all the world. Decrees of courts of admiralty are judgments *in rem* and conclusive of the status of the subject matter of the cause upon every one. Decrees of divorce are judgments *in rem* and determine the status of the parties to the proceeding. In the United States they are pronounced by the State courts in the administration of very diverse statutes relating to the subject of divorce, and as the courts of all the States, in addition to the general principles of comity observed between courts of different jurisdictions, are bound by the mandate of the Federal Constitution requiring that "Full faith and credit shall be given in each State to the public acts, records and judicial proceedings of every other State" many perplexing questions have arisen. These cases afford good illustrations of successful collateral attacks upon judgments on the ground of fraud or lack of jurisdiction of the court entering the judgment. It is now well settled that a decree of divorce may be successfully attacked collaterally on the ground of fraudulent collusion between the parties or lack of jurisdiction of the court pronouncing it over the person of the defendant. It is to be observed that a final judgment is conclusive of the particular cause, and first determines the right therein litigated, and may be pleaded in bar of any future attempt to assert the right, except in a case in which there has been no determination on the merits; as for example, where the plaintiff has suffered a voluntary non-suit, that is, has elected in advance of a verdict to abandon his case. He loses that particular case and must pay the costs, but is not prevented from bringing another action.

In most of the United States a judgment for a sum of money found to be due, from the date of its entry, and without the issuance of a writ of execution, constitutes a lien upon the real estate of the judgment debtor; that is a claim which must be paid out of the proceeds of any judicial sale of the property in its order of priority as compared with other liens upon the same property. This lien usually extends only to real estate within the jurisdiction

of the court in which the judgment was entered with provision for filing a transcript to create a lien in other counties of the same State in which the debtor owns real estate. A foreign judgment, in which are included the judgments of others of the United States, must be sued on and a judgment recovered upon it to make it effective in any of the States. In such suit no defense which could have been interposed in the original suit will be allowed to the judgment debtor.

JOHN DOUGLASS BROWN.

JUDIC, zhu'dik, **Anna Damiens**, French actress: b. Semur, 1850; d. 1911. In 1868, shortly after her graduation from the Conservatoire, she became very popular at the Eldorado Theatre. In 1871 she visited Belgium; and then returned to the Gaité and other Parisian theatres where her popularity increased by leaps and bounds. Among her notable creations were Niniche, Mimi, Lili and Mademoiselle Nitouche. She made a two years' tour (1885-86) of the principal cities of Europe and the United States. Retiring from the stage for some time, she returned to it in 1898.

JUDICA, joo'di-ka ("judge," or "give sentence"), the first word in the 43d Psalm, used as an introit in the Church of England (1549) for the 3d Sunday in Lent, and in the Roman Catholic Church for the 5th Sunday in Lent. Hence "Judica Sunday" as a term to designate those several days.

JUDICATURE ACTS, in English law, a number of statutes, dating from 1873, simplifying procedure and consolidating numerous courts into one Supreme Court of judicature. Demurrers were abolished, and important changes made in the rules as to the right of trial by jury. The acts in question are 36 and 37 Vict., c. 66, and 38 and 39 Vict., c. 77, with various amendments. A 12th amending act was passed in 1899. By the first of these acts the Court of Queen's (or King's) Bench, the Court of Chancery, the Court of Exchequer, the Court of Common Pleas, the High Court of Admiralty, the Court of Probate and the Court of Divorce and Matrimony were consolidated into one Supreme Court of Judicature, consisting of a High Court of Justice and a Court of Appeal. By these acts laws and equity were administered by the same court, and equitable defenses allowed in legal actions. Another object of these acts was to simplify pleading and practice, and this was done by abolishing the old forms of action. The former arbitrary modes of pleading were supplanted by concise statements of claim or defense. The House of Lords under these acts remains the highest court of appeal. In case a point of law is raised by the pleadings, it is left for settlement until the trial or until after the issues of fact have been disposed of. It is claimed by some that the abolition of demurrers and settling questions of law after the beginning of the action has led to great laxity and inaccuracy in pleading. Upon notice without order, either party has a right to trial by jury in actions of false imprisonment, malicious prosecution, slander, libel, seduction or breach of promise of marriage. By the act of 40 and 41 Vict., c. 57, a Supreme Court of Judicature was established in Ireland in 1878, and by this act and later

ones, a substantially similar system to that of England is now in effect.

JUDICIAL DECISIONS, Recall of. See RECALL.

JUDICIAL DISTRICT. See DISTRICT.

JUDICIAL NOTICE, recognition by a court of some certain feature involved in an action as being self-evident and, therefore, in no necessity of proof. It is a very old doctrine in English and American law. The determining of what facts come under the term judicial notice is almost altogether in the hands of the court which is generally supposed to take judicial notice of the common and the public statute law, the public offices and officers, rules of courts, matters of public record in its own State, the State and the United States political constitutions; and, in addition, all other factors or claims which might, in reason, affect any decision to be made, such as the existence and title of foreign state and sovereign recognized by the United States and public proclamations of the national or State chief executive. In short, the court, in making its decision in case of judicial notice, is supposed to be fully and truly possessed of all the facts, conditions and bearings of the question at issue. The judge must at some time either previous to the trial or during it become convinced that the fact in question is self-evident and that it therefore does not admit of dispute nor require proof. This condition also applies to courts and juries, but the jury cannot take cognizance of a law without instruction from the court, since such is not the function of a jury. An appeal may be made to the appellate court against the decision of the court, and it may, if it finds reason therefor, reverse the judgment and order a new trial. See EVIDENCE.

JUDICIAL SEPARATION, the termination by process of law of the conjugal rights and obligations of husband and wife. In many countries where divorce is either not recognized at all or is very difficult to obtain, judicial separation affords a legal relief against, if not a remedy for, intolerable marriage conditions. It is therefore frequently resorted to in countries that are strongly Roman Catholic, owing to the stand taken by that Church against the dissolution of the marriage contract, which is considered in the light of a sacrament of religion. In most of the countries of Europe, where old customs, laws and traditions change slowly, the securing of a divorce is a very difficult matter, even where the provisions of the law make it possible; and here judicial separation is resorted to as affording quicker and easier relief and less public notice. This condition obtains in England and her colonies. In the United States, however, where many attempts have been made by the various States of the Union to regulate the question of the legal separation of man and wife, more or less liberal divorce laws have been placed upon the statute books of most of the States. In the legal sense of the term judicial separation is not a divorce since it does not dissolve the marriage bonds, but simply requires the contracting parties to live apart as though they were not husband and wife. Divorce, on the other hand, is the dissolution of the marriage ties. The parties to the divorce are generally

permitted to marry again, though the divorce decree sometimes prohibits one or both of them permanently, or for a certain specified time. In effect the judicial separation is, in many respects, similar to that of the decree of divorce. It destroys the right of husband and wife to cohabit (*consortium*) or to enjoy one another's society as married parties. As it has the result of making the parties to the judicial separation, in a legal sense, individuals, it relieves the husband of the support of his wife or of the payment of all debts and obligations contracted by her. But as the parties to the decree of judicial separation are still husband and wife, in the eyes of the law, neither, under the terms and intent of the decree, can marry again. Any such attempt would be legal bigamy and adultery. Nor does legal separation generally interfere with the property relationship of husband and wife or any business contracts, obligations or relationships they may have entered into previous to the decree of judicial separation. The husband, as the head of the family, is still the legal guardian of his children unless expressly deprived of this, or having voluntarily resigned it in the legal process of the securing of the decree. Although legally separated, the wife, on the death of her husband, has the same relation to him and his estate and other possessions as though no separation had taken place. The husband, in the same manner, in the case of the death of his wife, has all the rights given by the marriage contract. See **DIVORCE**.

JUDICIARY, the body of judges or magistrates who exercise their authority either singly or as tribunals, interpreting the laws which the legislatures make and the executives execute. The highest courts in all countries, and those mostly of an intermediate character, are held by a bench of judges, rather than by a single magistrate. Dominating all is usually a supreme court which determines all legal controversies of national concern. In nations under a federal system of government, the judicial power is usually divided between two separate and distinct classes of courts: federal courts exercising judicial power in respect to questions of national concern and state courts established for the determination of legal controversies of a local character.

The Judiciary Act of the United States Congress, 24 Sept. 1789 (1 Stat. 73), is non-embodied with the amendments in the provisions of the United States. The act established the Federal courts of the United States, defined their jurisdiction and powers and regulated procedure. The basis of the whole legal system of the country is the common law (q.v.), without which there would be an extraordinary variety of judicial organization and procedure throughout the nation, each State having its own separate and distinct judicial system and procedure; framed according to its own notions of its local needs and conditions. Above all other governmental departments the Federal judiciary especially, and the judiciary in general, command popular confidence and respect. The importance and political influence the judiciary possesses have been largely increased from the power which the American courts have attained in declaring statutes null and void when they are found to conflict with the Constitution.

From the beginning this power has been recognized almost without dispute. While State judges are for the most part elected by the people, all Federal judges are appointed by the President with the advice and consent of the Senate. In regard to terms of judicial tenure, there is a great variety of opinion and practice throughout the United States. See **COURT; JUDGE; SUPREME COURT OF THE UNITED STATES**.

JUDICIARY AND EXECUTIVE. See **EXECUTIVE**.

JUDITH, Jewish heroine. She was the widow of Manasses, a citizen of Bethulia. When Holofernes, general of King Nebuchadnezzar, according to the book of Judith, besieged Bethulia, a city of unknown geographical position, she went armed with faith in Jehovah to the tent of the invader and was admitted because of her stately beauty. While he slept she cut off his head with his own sword and thus delivered Israel. This incident has been a favorite subject with artists, for in the first place the book of Judith is written with abundant literary point and skill and is naturally suggestive to the sculptor or painter. It is the subject of Donatello's bronze group in the Lanzi palace at Florence, and of many pictures, notably that of Cranach in the Dresden Gallery, and those of Horace Vernet, 'Judith on Her Way to Holofernes' and 'Judith in the Tent of Holofernes.'

JUDITH, zhū'dët', Julie Bernat, French actress: b. Paris, 1827; d. 1912. She was a relative of Rachel (q.v.). She played in the principal theatres of Paris, making her début at Les Folies in 1845. Among her many successful rôles were Pénélope, Alcemène, Rosine, Charlotte Corday and Mademoiselle Aisé. She was married to Bernard Derosne and with him made translations from English into French. Under the pen name Judith Barnard she wrote 'Le Chateau du Tremble' (1872).

JUDSON, Adoniram, American missionary: b. Malden, Mass., 9 Aug. 1788; d. at sea, 12 Aug. 1850. He was a member of the first American Board of Commissioners of Foreign Missions, consisting of five members. Sent to London to confer with the London Missionary Society, he was captured, on the way, by a French privateer and imprisoned at Bayonne. Released, later on, he proceeded to London and accomplished his mission. Returning to America, he and four other missionaries, Hall, Newell, Nott and Rice, were sent to India (or Burma) by the American Board of Foreign Missions (February 1812). In Calcutta Judson and his wife joined the Baptists, and their activities resulted in the formation of the American Baptist Missionary Union (1814). After considerable wandering, Mr. and Mrs. Judson settled in Rangoon (1813). Although they do not seem to have had very great success in gaining converts among the natives, the government, nevertheless, did not show itself at all friendly toward their efforts, which had netted them a score or more of converts in 11 years. On the breaking out of war between Burma and the East India Company, Judson was imprisoned for a year and seven months, and even then was released only on a peremptory demand of the part of Gen. Sir Archibald Campbell. After a year at Amherst in Lower Burma, he went

o Maulmain, where he was successful in founding a church. Returning to America in 1845 on account of his own ill health and that of his family, he went back to Rangoon in 1847, where he occupied a goodly part of his time in the preparation of a dictionary. Forced by returned ill health to leave the country, he was carried on board ship at Maulmain and died on the voyage four days later. His body was buried at sea. Judson was an indefatigable and tireless worker, and his work must be judged from two points of view, the aims actually accomplished and the general results of his labor upon conditions not only in the country in which he labored but upon all of India and Further India. In his 37 years of missionary labor he succeeded in gradually working up a sentiment in the East in favor of religious toleration which is to-day bearing fruit in many quarters. One of his most successful efforts was the organization of an extensive, trained body of native assistants to aid him in the translation of the Bible and other works into Burmese, and in the compilation of his Burmese-English and English-Burmese dictionary, Burmese grammar and Pali dictionary. These works, though intended primarily as aids for missionaries in Burma and the India countries generally, have been great aids to the study, by students and scholars of the languages of the East, in which Judson's missionary efforts and the publicity they had received had helped to increase the growing interest. Consult lives of Judson by his son, Edward Judson (New York 1883 and 1898); and by Wayland. See JUDSON, ANN HASSELTINE; JUDSON, SARAH HALL; JUDSON, EMILY CHUBBOCK.

JUDSON, Adoniram Brown, American surgeon: b. Maulmain, Burma, 7 April 1837; d. New York, 21 Sept. 1916. He was a son of the missionary Adoniram Judson. His mother was Sarah Hall Boardman Judson. He was graduated from Brown University in 1859, Harvard Medical School in 1860, Jefferson Medical College in 1865 and College of Physicians and Surgeons in 1868. He became assistant surgeon in the United States navy in 1861; surgeon in 1866 and resigned in 1868. Since then he had engaged in the practice of medicine in New York city. He was a specialist in orthopedic surgery, inspector of the New York board of health from 1869 to 1877; pension examining surgeon from 1877 to 1884 and from 1901 to 1914; medical examiner of the New York State Civil Service Commission from 1901 to 1909; orthopedic surgeon to the out-patient department of New York Hospital from 1878 to 1908. Dr. Judson was president of the American Orthopedic Association in 1891, member of the American Medical Association, Fellow of the American College of Surgeons, American Academy of Medicine and the Academy of Medicine and was a member of Lafayette Post, G. A. R. He wrote on medical and surgical subjects.

JUDSON, Ann Hasseltine, American missionary to India: b. Bradford, Mass., 22 Dec. 1789; d. Amherst, Lower Burma, 24 Oct. 1826. She was the wife of Adoniram Judson (q.v.), whom she accompanied on his first visit to India (1812) and with whom she labored as a missionary. She published a 'History of the Burma Mission.' Consult Knowles, 'Life of Ann Hasseltine Judson.'

JUDSON, Edward, American Baptist clergyman: b. Maulmain, Burma, 27 Dec. 1844; d. New York, 23 Oct. 1914. He was the son of Adoniram Judson (q.v.) and came to the United States in 1850 after the death of his father. He studied at Madison (now Colgate) University and was graduated from Brown in 1865. He was principal of the academy at Townsend, Vt. (1865-67) and subsequently professor of Latin at Madison (now Colgate) University. In 1875 he accepted the pastorate of the Baptist Church at Orange, N. J., then became pastor of the Berean Baptist Church, New York city, and later secured a site on Washington square, New York, and erected the Judson Memorial Church (in memory of his father), of which he was pastor. Here he built up an institutional church, with many different lines of work, including gymnasium classes, a dispensary and a children's fresh air fund. He lectured on theology at the University of Chicago, 1904-06, and on Baptist principles and polity at Union Theological Seminary, 1906-08, and was made professor of pastoral polity at Colgate in the latter year. In 1899 he published a 'Life' of his father, and he wrote also 'The Institutional Church.'

JUDSON, Emily Chubbock, American writer and missionary: b. Eaton, N. Y., 22 Aug. 1817; d. Hamilton, N. Y., 1 June 1854. She was the third wife of Adoniram Judson (q.v.) whom she married in 1846, and at once accompanied to India. Even at this time she had attained a reputation as a writer under the pen name of Fanny Forester. She wrote the life of Sarah Hall (Boardman) Judson, second wife of Adoniram Judson. On the death of her husband she returned to America in 1850. Ill-health prevented her continuing her literary labor. She, however, assisted Dr. Wayland in writing the biography of Judson. Consult Kendrick, A. C., who has written her biography.

JUDSON, Frederick Newton, American author: b. Saint Mary's, Ga., 1845; d. 18 Oct. 1919. Graduating from Yale University and the Saint Louis Law School (1871) he became private secretary for Gov. Gratz Brown, when he entered upon the practice of law. He lectured at Washington University (1903), and was Storrs lecturer at Yale (1913). He was counsel for the United States on several important occasions, and acquired a reputation as a corporation lawyer. Among his published works are 'Law Practice of Taxation in Missouri' (1900); 'The Taxing Power, State and Federal, in the United States' (1902); 'The Law of Interstate Commerce' (1905); 'The Judiciary and the People' (1913).

JUDSON, Harry Pratt, American educator: b. Jamestown, N. Y., 20 Dec. 1849; d. 4 March 1927. He was graduated from Williams College, A.B. in 1870, A.M. in 1883. He was a teacher at and principal of the high school at Troy, N. Y., 1870-85; professor of history, University of Minnesota, in 1885-92; professor of political science and head dean of colleges at the University of Chicago in 1892-94; professor and head of the department of political science and dean of the faculties of the arts, literature and sciences there, 1894-1907; acting president of the university, 1906-07; president, 1907-23; president emeritus thereafter. He was one of the leading educators of the

country. He published: *Caesar's Army* (1885); *Europe in the Nineteenth Century* (1894, rev. ed. 1901); *The Growth of the American Nation* (1895); *The Young American* (1895); *Our Federal Republic* (1925).

JUDSON, Sarah Hall Boardman, American missionary to Burma: b. Alstead, N. H., Nov. 4, 1803; d. Saint Helena, Sept. 1, 1845, on her way home to United States. She married the Reverend George Dana Boardman in 1825 and went with him to the Baptist missionary work in Burma. On the death of Boardman she was married to Dr. Adoniram Judson in 1834. As his associate in the mission field she translated into Burmese various selections from the Bible, many tracts, and part of John Bunyan's *Pilgrim's Progress*. She also made a hymn-book in Burmese and supervised the translation of the New Testament into Peguan.

Consult her life by Emily C. Judson.

JUDY, the wife of Punch, in the puppet show, Punch and Judy. See PUNCH AND JUDY.

JUEL, yōōl, Jens, Danish diplomat: b. July 15, 1631; d. 1700; brother of Niels Juel. Fearing great-power control of Denmark, he worked for closer ties with Sweden. At home, he promoted commerce and industry, but opposed a more flexible political system and considered the freeing of the serfs impracticable.

JUEL, yōōl, Niels, Danish admiral: b. Christiana (now Oslo), 1629; d. 1697. Going to Holland in 1650, he served under Michel de Ruyter and Maarten Tromp in the war against England and the Barbary States. He also fought with allied Dutch fleets against Sweden in 1659, and also in the later war with the same country in 1676, when being himself in command at the Battle of Jasmund, he defeated and swept the enemy's fleet out of the sea with a very much smaller number of vessels. The following year, with 25 ships to the Swedish 36, he again obtained the victory at the Battle of the Bay of Køge (Kjoge).

JUENGLING, yŭng'ling, Frederick, American wood engraver: b. Leipzig, Germany, Oct. 18, 1846; d. Dec. 31, 1889. He was one of the founders and the first secretary of the American Society of Wood Engravers (1881). In his art he was one of the most consistent advocates and practitioners of the new American system of wood engraving which substituted short broken lines, dots and so forth for the regulation long lines and regular sweep of the graver. He was a bold and clever workman and met with very considerable success.

Consult Weitenkampf, Frank, *American Graphic Art* (New York 1912).

JUG, a vessel of earth, glass or metal, used for holding liquids and characterized by having one handle and a lip for ease in pouring. The origin of the word is uncertain. In slang the term is employed to denote a prison, and there is not wanting evidence that in this latter sense it is an adaptation of the Latin *jugum*, a yoke. In the United States the word pitcher has superseded jug to a great extent.

The 18th and 19th centuries saw the production in England of pottery vessels known as "Toby jugs," "Nelson jugs," etc., usually in the

form of a stout old man with a hat the corners of which form the spouts.

JUGGERNAUT, jŭg'ēr-nôt. See JAGAN-NATH.

JUGGLER, a skillful and dexterous performer of feats of different kinds, including sleight of hand (legerdemain). The juggler is or was to be found in all lands. He was a favorite with the Greeks and the Romans, and has been, for centuries, with the Japanese and Chinese; and he has long been an institution in India, southeast Asia, Iran and Tibet. The Aztecs and many other American native peoples had very skillful jugglers who seem to have been frequently connected with the religious or mythological beliefs of the peoples. See also LEGERDEMAIN; FAKIR.

JUGLANDACEAE, jōō-glän-dā'sè-ē, the walnut family, dicotyledonous plants, native of the north temperate zone. Most of the 40 or more species of this family consist of trees, all nut-bearing and producers of excellent wood for cabinet and other work. The most valuable in this respect is the black walnut. The best known and most extensive genera are the *Juglans* or walnuts, and the *Hicoria* or hickories.

JUGOSLAVIA. See YUGOSLAVIA.

JUGULAR, jŭg'ŭ-lēr, **VEIN**, one of the large trunks by which the greater part of the blood that has circulated in the head, face and neck is returned to the heart. There are two on each side, an external or superficial and an internal or deeper.

JUGURTHA, jōō-gŭr'thā, or **IUGURTHA**, yōō-gŭr'thā, king of Numidia: d. Rome, 104 B.C. He was a natural son of Mastanabal, and a grandson of Masinissa. Micipsa, his father's brother, king of Numidia in 149 B.C., adopted him and brought him up with his own sons, Adherbal and Hiempsal. Micipsa did his best to conciliate him, and declared him joint-heir to the crown with his two sons. But after the death of Micipsa, Jugurtha had Hiempsal murdered and drove Adherbal from the country. Adherbal: pealed to Rome, and after several Roman expeditions into Numidia, Jugurtha was captured (106 B.C.), led in the triumph of Marius at Rome, and finally thrown into a dungeon, where he was starved to death.

JUIN, zhū-ăn', Alphonse Pierre, French army officer: b. Bône, Algeria, Dec. 16, 1888. Graduated from L'École de Saint-Cyr, the French military academy in Paris, he joined the First Algerian Tirailleurs Regiment as an officer in 1910, and served in Morocco in 1912-1914. During World War I he fought in France and was seriously wounded. After the armistice he attended L'École de Guerre in Paris, won recognition as an expert in strategy, became chief of staff in France to Marshal Louis Lyauté, the "organizer of North Africa," and then returned to commands in Morocco.

At the outbreak of World War II he was sent from active duty in Morocco to France and given command of the 15th Motorized Division, which he led bravely and meritoriously; but in May 1940 he was captured and then imprisoned

at Königstein, Germany. His internment by the Germans ended in June 1941, apparently in exchange for his promise to cooperate with the Vichy French government, under which in August 1941 he assumed command of French forces in Morocco. General Juin resisted the Allied invasion of North Africa (November 1942) for less than a day, and on Dec. 29, 1942, after the assassination of Admiral Darlan, was named commander in chief of all French forces in North Africa. He subsequently commanded a Free French field army during the Allied Tunisian campaigns of 1943, and in 1944 headed French and Allied troops during the campaigns in Italy. From August 1944 to December 1945 he served as chief of the Combined General Staff of the French armed forces; in 1946-1947 he was chief of staff of the French Army in Indochina; on May 14, 1947, he was appointed resident general of Morocco; and in April 1948 he was named commander in chief of North African forces. He was reassigned to Indochina on Oct. 10, 1950, to help reorganize French forces for more effective resistance against the Communists. On Jan. 25, 1951, shortly after his return to France, he was granted supreme authority to reorganize the armed forces of France, the first time during peacetime that such power had been vested in a single officer. Less than two months later, on March 20, 1951, he was appointed by Gen. Dwight Eisenhower as the third ranking officer at the Supreme Headquarters, Allied Powers in Europe, being designated specifically to command the North Atlantic Treaty troops in the vital central area sector of Western Europe.

JUIJITSU or **JUJUTSU**. See **JUIJITSU**.

JUJUBE, jōō'jōōb, a spiny and deciduous shrub of the family Rhamnaceae, *Zizyphus jujuba*, native from southeastern Europe to China. The oblong or round fruit is dark red, brown, or yellowish with a sweet granular pulp. There are about 40 species, the principal commercial ones being *Z. jujuba*, the Chinese jujube, and *Z. mauritiana*, the Indian jujube. The Chinese jujube is promising as a fruit tree in the southwestern United States, where it thrives in semi-arid regions with alkaline soil. It may also be grown in the east as far north as New York. *Z. lotus*, which may have given its name to the ancient Lotophagi, is a shrub two to three feet tall, native from North Africa to Persia. Its cherrylike fruits are used as food by the Arabs of Africa.

JUJUY, hōō-hwē', province, Argentina, in the extreme northwest along the Bolivian border. Nearly the entire area is mountainous, a continuation from Bolivia of the high, bleak Andean *puna*, covered with small, drought-resistant shrubs. This section is notable for its mineral wealth, Jujuy accounting for nearly the entire Argentine production of antimony, lead, silver, tin and zinc, as well as much of the salt and gold. The southeastern part of the province is v-laying and humid, its natural vegetation being tropical scrub forest. This section, which produces sugar cane, grains, tobacco and livestock, is an arm of the Argentine Gran Chaco which enters the province through the valley of the Rio Grande de Jujuy, an affluent of the Rio Bermejo. The capital, also called Jujuy (founded 1593; pop. 1942 est. 19,257) is on the Rio

Grande near the beginning of the lowlands, but has a moderate climate due to its elevation (4,167 feet). It is connected by highway and railroad with Bolivia (by way of La Quiaca on the Jujuy-Bolivian border) and Buenos Aires. Area, including the Department of Susques (part of the former Territory of Los Andes until 1943), 20,393 square miles; pop. (1947) 166,783.

JUKES, The, the name given to a family of New York State that had an unusual record of crime and pauperism. In 1875, Richard Louis Dugdale, while making investigations on behalf of the New York Prison Association, found several of the same family imprisoned for various crimes. Becoming interested in the subject, he traced the history of the family through several generations; they were descendants of the two sons of a backwoodsman, called Max, who married two of the Jukes sisters, one of whom is known as "Margaret, the Mother of Criminals." Exact information was obtained in relation to 709 out of the 1,200 descendants and blood relations; of these, 140 had been imprisoned for crime, 280 had been paupers, dependent upon public support, and the large majority were of low physical and moral standard.

Consult Dugdale, Richard L., *The Jukes, a Study in Crime, Pauperism, Disease and Heredity* (New York 1875; republished 1877; 1910).

JUKES, Joseph Beete, English geologist: b. Summerhill, Birmingham, October 1811; d. Dublin, July 29, 1869. He became geological surveyor of Newfoundland (1839-1840); and, in 1842, naturalist to H.M.S. *Fly* engaged in exploring the east coast of Australia and part of New Guinea. Four years later he did excellent work on the Geological Survey of Great Britain (1846-1850); and on that of Ireland; after which he became professor of geology in the Royal Dublin Society and the Royal College of Science of Dublin. Among his numerous published works are *Excursions in and about Newfoundland*, 2 vols. (1842); *A Sketch of the Physical Structure of Australia* (1850).

JULG, yülk, Bernhard, German philologist: b. Ringelbach, 1825; d. 1886. He was educated at Heidelberg and Berlin, graduating in 1848. He became a teacher and finally professor of classical philology at Lemberg (1851), Cracow (1853) and Innsbruck (1863), where he made a special study of comparative philology and Oriental folklore.

JULIA, jōō'yà, only child of the emperor Augustus: b. 39 B.C.; d. 14 A.D. She was his daughter by his second wife, Scribonia, and was first married (25 B.C.) to her cousin, the young Marcellus, and afterward to Marcus Vipsanius Agrippa, to whom she bore three sons and two daughters. On Agrippa's death, in 12 B.C., she was married to Tiberius, who left her on account of her licentiousness. Augustus banished her to Pandataria, a desolate island on the coast of Campania, ultimately allowing her to live in Rhegium. After the death of the emperor, Tiberius treated her with great severity. She died in poverty and distress. Her son, Agrippa, had been put to death by Tiberius shortly before.

JULIA DOMNA, dōm'nà, Roman empress: b. Emesa, Syria, 170 A.D.; d. 217 A.D. She was the second wife of Septimius Severus, and

mother of Caracalla and Geta, and a distinguished patroness of art and science.

JULIAN, jōōl'yān (FLAVIUS CLAUDIUS JULIANUS), Roman emperor, surnamed the Apostate: b. Constantinople, 331?; d. 363. When hardly six years old his father and several members of his family were murdered by the soldiers of his cousin, the Emperor Constantius. He was brought up in the Christian religion, studied philosophy and letters, and resided in Athens, where he was induced to embrace paganism. Having received command of an army against the Germans, he defeated them at Strasbourg in 357 and drove them beyond the Rhine. He also displayed great talent as an administrator in Gaul. The emperor now became jealous of Julian, and recalled his best troops under pretense that he wanted to employ them against the Persians. This order caused a rebellion among the soldiers, who proclaimed their leader, Julian, emperor in March 360, in spite of his own resistance. Constantius prepared to proceed against him, but soon after died, and Julian was generally recognized as emperor in 361. He began his reign by putting a stop to many abuses and limiting the splendor of the court, and was thus able to remit to the people the fifth part of all their taxes. He sought to restore the heathen worship in all its splendor, and on that account opposed Christianity as much as was in his power, without, however, persecuting the Christians themselves. In 363 he headed an expedition against the Persians and took several cities. He was an able ruler, and had also a reputation as an author. Some of his works have come down to us, including speeches, letters, and satirical pieces; the latter are distinguished for wit and humor. He wrote also a work against the Christian religion, of which some extracts remain. Consult Negri, G., *Julian the Apostate* (New York 1905); Gardner, Alice, *Julian, Philosopher and Emperor, and the Last Struggle of Paganism Against Christianity* (New York 1906); and Simpson, D. W., *Julian the Apostate* (Aberdeen, Scot. 1930).

JULIAN, Cardinal. See CESARINI, GIULIANO, CARDINAL.

JULIAN, George Washington, American abolitionist: b. Centerville, Ind., May 5, 1817; d. Irvington, Ind., July 7, 1899. He studied law and was admitted to the bar at the age of 21. In 1845 he was elected to the state legislature as a Whig, but being a strong opponent of slavery he severed his party connection with the Whigs and became one of the founders of the Free Soil Party in 1848. In 1849 he was elected to Congress; in 1852 was candidate of the Free Soil Party for vice president, and in 1856 a delegate to the first national convention of the Republican Party, where he was vice president of the convention and chairman of the committee on organization. In 1860 he was again elected to Congress, and served continuously for ten years. He was a member of the committees on the conduct of the war, on reconstruction, on the preparation of the articles of impeachment against President Andrew Johnson (q.v.) and on public lands, being chairman of the latter. He opposed any monopoly of the public lands, was an advocate of the homestead system, and strongly favored giving the franchise to the Negro. In 1868 he proposed a constitutional amendment providing for woman's

suffrage. In 1872 he joined the Liberal Republicans, and after that became a Democrat; in 1885-1889 he was surveyor general of New Mexico; in 1889 he retired from public life. He published *Speeches on Political Questions* (1872); *Political Recollections* (1884); and *The Life of Joshua R. Giddings* (1892).

JULIAN ALPS, the southern extension of the Eastern Alps, from the Venetian Alps, on the northeast, through the Trentino to the neighborhood of Trieste. The highest peak, Triglav, is 9,394 feet. The whole range, which is very rough and broken, is covered largely with handsome forest. Among them are rich valleys.

JULIAN CALENDAR. See CALENDAR; EPOCH.

JULIAN PERIOD. Method of computing time proposed by Joseph Justus Scaliger (q.v.) in 1582. This system of measuring depends upon the continued product of the three cycles: the years of the Roman indiction, a 15-year period used under the Roman Empire; the metonic cycle of 19 years; and the solar cycle of 28 years. The product of $15 \times 19 \times 28$ is 7,980 years which provides a nonrepeating series of numbers in any of the cycles so that no two-year numbers are the same. It also covers a sufficient period of time to include all historical dates, and avoids any confusion set up between B.C. and A.D. dates. The number in the Julian period can be computed when the number of any proposed year in each of the cycles is known.

JULIANA, yū'lē-á'nà (JULIANA LOUISE EMMA MARIE WILHELMINA), queen of the Netherlands: b. April 30, 1909. She is the daughter of Queen Wilhelmina I and Henry Wladimir Albert Ernst (d. 1934). Princess Juliana married on Jan. 7, 1937 Prince Bernhard of Lippe-Biesterfeld (b. 1911). Children of this union are the princesses Beatrix (b. Jan. 31, 1938), Irene (b. Aug. 6, 1939), Margaret Francisca (b. Jan. 19, 1943), and Maria Christina (b. Feb. 18, 1947). After the Germans invaded her country on April 10, 1940, Juliana lived in Canada. Accompanying her mother she returned to the Netherlands May 3, 1945, a few days before the Germans capitulated. After Queen Wilhelmina's abdication Juliana ascended the throne Sept. 4, 1948.

JULIANUS SALVIUS. See SALVIUS JULIANUS.

JULICH, yū'līk (Fr. JULIERS), a town in the Rheinland, Germany, on the east bank of the Roer River, 16 miles northeast of Aachen (Aix-la-Chapelle) and 25 miles west of Köln (Cologne). Population (1939) 11,569. The town has some interesting old buildings and modern schools and churches. Its chief industries are paper, sugar, silk, and leather. It was once a strongly fortified city and the capital of the independent duchy of Jülich. It was made a fortress in the 17th century, and was successively in the hands of Holland (1610), Spain (1622), and France (1801-1814), before becoming part of Prussia. The works of its fortress were demolished in 1860.

During World War II, Jülich was the scene of brief but bitter fighting during the Allied drive into Germany. Its strategic location made it the

target of several British and American bombing attacks. The United States 9th Army reached the west bank of the Roer just south of Jülich on Nov. 22, 1944. Following the German counter-offensive in December and January, the United States 1st and 9th armies penetrated the Jülich-Bonn line, capturing the town on Feb. 24, 1945 in the great drive on Köln.

JULICHER, yü'lik-ër, **Adolf**, German biblical authority and scholar: b. Falkenberg, Jan. 26, 1857. He studied at the University of Berlin, becoming a preacher, and finally docent of church history there in 1887. In 1888 he was made professor of the same subject at Marburg. Among his works are *Die Gleichnisreden Jesu* (1889-91); and *Einleitung in das Neue Testament* (1904), tr. into English by Janet Ward (1904).

JULIE OU LA NOUVELLE HELOISE.
see LA NOUVELLE HÉLOÏSE.

JULIEN, Alexis Anastay, American geologist: b. New York, N. Y., Feb. 13, 1840; d. May 7, 1919. Graduated at Union College in 1859, studied chemistry there for a year, and in 1860-1864, while resident chemist on the guano island of Sombbrero, carried on a variety of scientific researches. He served on the Michigan Geological Survey in 1872 and on the North Carolina Survey in 1875-1878, but from 1865 to 1909 was regularly connected with the School of Mines, Columbia University, as assistant in chemistry, instructor in microbiology, and (1897-1911) curator of geology. He retired in 1911. His writings include a report on "Lithology" in the Michigan Geological Survey's *Geology of Michigan*, vol. II, 1872; a "Microscopic Examination of Eleven Rocks from Ashland County, Wis.," in Wisconsin Geological Survey's *Geology of Wisconsin*, vol. III, 1880. "On the Geological Action of the Humus Acids" in the *Proceedings of the American Association for the Advancement of Science* (1880); and "Building Stones. Elements of Strength in their Constitution and Structure," *Journal of the Franklin Institute* (1899).

JULIEN, zhü-lyän', **Noël** (called STANISLAS), French sinologist: b. Orleans, Sept. 20, 1799, d. Paris, Feb. 14, 1873. Possessed of an extraordinary linguistic faculty, he taught himself Greek, English, Italian, Spanish, Portuguese and German, and in 1823 commenced the study of Chinese. At the end of a year he published a Latin translation of the philosopher Mencius. He mastered ancient and modern Chinese, Manchu, the Mongolian tongues, and Sanskrit, were the subjects of exact and profound study. In 1832 he became professor of Chinese at the Collège de France; librarian at the Bibliothèque Nationale, 1839; administrator of the Collège de France, 1859; commander of the Legion of Honor, 1863. His most important works are *Summary of the Principal Chinese Treatises upon the Culture of the Mulberry and the Rearing of Silk Worms*, tr. from the French by W. Force (1839); *Exercices pratiques d'analyse de syntaxe et de lexicographie chinoises* (1842); *Voyages des Pèlerins Bouddhistes* (1853-58); and *Syntaxe nouvelle de la langue chinoise* (1869-70).

JULIEN, the second and latest opera composed by Gustave Charpentier, was produced at the Opera-Comique in Paris, Jan. 3, 1913, and

at the Metropolitan Opera House in New York City with Farrar and Caruso on Feb. 26, 1914. Despite a brilliant performance, it failed to win the approval accorded Louise, the previous operatic work of the composer. The critics felt that its leading motives were commonplace, the music fragmentary, and the whole score lacking in merit.

JULIET, one of the two leading characters in Shakespeare's tragedy of *Romeo and Juliet* (q.v.). Juliet also appears in another of Shakespeare's plays, *Measure for Measure* (q.v.), as the lady beloved of Claudio.

JULIUS I, pope: d. 352. He became pope in February 337, and was a staunch defender of Athanasius, who, under the protection of Julius, sought refuge in Rome against the enmity of the Eastern prelates.

JULIUS II, pope (GIULIANO DELLA ROVERE): b. Albissola, near Savona, Italy, 1443; d. Rome, Feb. 21, 1513. He was elevated by his uncle Sixtus IV to the rank of a bishop and cardinal in 1471, and subsequently held eight bishoprics and the archbishopric of Avignon. He was appointed papal legate to France in 1480 and in 1503 was elected pope. Immediately on his elevation to the pontificate he planned the complete reestablishment of the papal sovereignty in its ancient territory, and the extinction of foreign domination and influence in Italy. Refusing to attend the Council of Pisa convened by the king of France, he, in 1511, formed the Holy League, to which Spain, England and Switzerland were parties. In 1512 he made open war against Louis XII, and the Fifth Lateran Council was convoked by him in the same year. The French defeated the papal army near Ravenna, but were soon after driven out of Italy. He was a far-sighted and patriotic sovereign, and a liberal and judicious patron of art and literature, Michelangelo, Raphael and other great artists of the time receiving commissions from him. To procure means for building Saint Peter's he ordered the preaching of indulgences, which was one of the immediate causes of the Reformation. Consult Dumesnil, A. J., *Papst Jules II* (1873); Brosch, M., *Papst Julius II und die Gründung des Kirchenstaates* (1878); and Rodocanachi, E. P., *Histoire de Rome* (Paris 1928).

JULIUS III, pope (GIAMMARIA CIOCCHI DEL MONTE): b. Arezzo, Sept. 10, 1487; d. Rome, March 23, 1555. He was made archbishop of Siponto in 1512 and of Pavia in 1520 and was appointed cardinal by Paul III in 1536. He took an active part in the Council of Trent as papal legate, was elected pope in 1550, and in the following year reopened the Council of Trent, which had been suspended for two years. He endeavored to effect a union with the Nestorians, and commissioned Cardinal Pole to organize, in conjunction with Mary, the reunion of England with Rome.

JULIUS, DUKE OF BRUNSWICK, a German prince and ruler: b. 1528; d. 1589. He succeeded his father as duke of Brunswick in 1568. He made himself prominent in Europe by reversing the Catholic policy of his house and becoming himself the backer of the Reformation. He founded the University of Helmstedt as a foil to the great Catholic educational interests with which he was contending.

JULIUS CÆSAR. See CÆSAR, GAIUS JULIUS.

JULIUS CÆSAR. This play was first produced about 1601, though not printed until 1623 with the publication of the first Folio. It is in a sense a continuation of the historical plays, the background of Rome being substituted for that of England. At the same time it is the first in the series of great tragedies. Based upon the lives of Brutus, Julius Cæsar and Mark Antony in North's translation of Plutarch's 'Lives,' it is a striking illustration of the way in which Shakespeare closely followed his original in spirit and sometimes in language, while at the same time he organized this material into a dramatic whole. If one compares Plutarch's text with the play itself, he can best see the dramatist in the very act of dramatic construction.

"The little more and how much it is
The little less and what worlds away!"

In the play we find ourselves in Rome about 44 B.C.: we see the Roman populace running here and there through the streets; we hear the voices of Brutus and Antony in the forum or catch glimpses of Cicero and Cassius on a stormy night; when the scene shifts from Rome, we see the battlefield of Philippi—and along with all these men and guiding the destiny of events, we see and feel the presence of the mighty Julius. The question inevitably arises as to why Shakespeare named the play after Cæsar, who disappears in the middle of the play. Unquestionably the impression gained from what he says as well as from what others say about him would not indicate that the dramatist thought of him as highly as passages in other plays, notably 'Hamlet,' 'Antony and Cleopatra' and 'Richard the Third,' would indicate. He is rather presented as one whose bodily presence is weak and whose mind is declining in strength and in sure-footed energy. Emphasis is placed upon the weakness rather than strength of this character. But that is not all of Cæsar. There may be a sort of irony in the presentation of him; for after his murder the speech of Antony serves to set him before the imagination of the reader as a mighty spirit whose power was to be sought, not only in the days of his earlier conquests, but in the drift toward imperialism which the conspirators tried in vain to resist. Brutus realizes the futility of his efforts when he cries out on the battlefield of Philippi, "O Julius Cæsar, thou art mighty yet!"

Whatever may be said of Shakespeare's conception of Cæsar, there can be no doubt that Brutus is the tragic figure of the play—a forerunner of that group of tragic heroes so soon to be created. A student of philosophy, a lover of books and fond of the quiet domestic scenes which had connected him with one of the noblest of women, and above all, a devoted citizen with an instinctive love of the old republic, he is totally unfitted for the stirring scenes into which he is drawn. His lack of knowledge of human nature makes him an easy prey for a more calculating man, while his failing to understand the drift of history brought upon him and his country tragic consequences. He is caught in the tangled web of things. The rare nobility of his soul combined with his

tragic end raises the question of the burden of the mystery, the heavy and the weary weight of all this unintelligible world. Of the other characters of the play Mark Antony, Cassius and Portia are drawn with consummate art. Their words have by frequent quotation become so hackneyed that the reader is apt to miss their greatness. Charles Lamb's remark about the frequent acting and reciting of Shakespeare's plays applies with special force to 'Julius Cæsar'; "The very custom of hearing anything 'spouted' withers many a fine passage." Brutus' speech to the Roman citizens justifying the murder of Cæsar, Antony's funeral oration, the appeal of Cassius to Brutus, the dialogue between Portia and Brutus and Antony's tribute to Brutus are among the glories of human speech.

EDWIN MIMS

JULIUS ECHTER VON MESPELBRONN, yoo'li-us êk'ter fôn mës'pël-brôn German Catholic prelate: b. Mespelbronn Castle, 1545; d. 1619. He received a Jesuit education at Paris and Rome and became the leader of the Counter-Reformation in his own country. Owing to his religious zeal he was made bishop of Würzburg with princely powers. He set to work to eradicate Protestantism from his see by removing all the Protestant clergy and by other coercive means; and it was his boast that he had accomplished his aims and had made more than 60,000 converts to Catholicism in three years. He founded schools, colleges and charitable institutions, among the most notable of which were Julius Hospital (1579) and the University of Würzburg (1582). Thus he became noted as one of the most active and constructive members of the Catholic League.

JULLIEN, zhu'lyăn, **Adolphe**, French musical and dramatic critic: b. Paris, 1845. He graduated in law taking, at the same time, very extensive studies in music which he continued after graduation. He began writing for musical journals, and in addition to musical criticisms and chronicles he contributed short stories to the *Français*, the *Moniteur Universel* and other periodicals. Among his published works are 'La Musique et les philosophes au XVIIIème siècle' (1873); 'Histoire du théâtre de Mde. de Pompadour' (1874); 'La comédie à la cour de Louis XVI' (1875); 'Goethe et la Musique' (1880); 'L'Opera secret au XVIIIème siècle.'

JULY, the seventh month of the calendar, which in the Roman year bore the name of *Quintilis*, as the fifth in the computation of Romulus, even after Numa had prefixed January and February. Mark Antony effected a change in its name in honor of Julius Cæsar, who was born on the 12th of the month, and thenceforth by a decree of the senate it was called Julius. It originally contained 36 days. It is said that Romulus reduced them to 31; Numa to 30. Julius Cæsar fixed the number at 31, which is still retained. The Dog-day is supposed to commence on the 3d of the month.

JULY, **Column of**, a bronze column erected on the Place de la Bastille, Paris, 28 July 1810 to the "French citizens who fought for the defense of the public liberties on the memorable days of the 27th, 28th and 29th of July, 1810."

On four hands encircling the column are the names of 615 victims of the revolution.

JULY, Revolution of, the uprising in 1830 which overthrew the Bourbon dynasty and restored the house of Orléans to the throne of France. This was the natural outcome of the reactionary tendency which had been the governing principle of the sovereigns in France since 1814. Revolutionary France was not dead and the democratic spirit was far from being smothered. But the rulers of the country seemed to believe that their own safety and that of the stable government of the country depended upon the establishment of as much arbitrary rule and autocracy as could be achieved. The Church and the extreme royalists were in the saddle; and they proposed to take the best of their opportunities to strengthen their position for all time. Louis XVIII (1814-24), with whom the restoration began, had some little ability and the advantage of having a more or less fixed policy whose great objective was to restore the power of his family and to consistently offer opposition to the growth of the influence of the bourgeoisie. To secure his ends and bind the ability to himself he had been forced to make partial restoration of the property, titles and positions of influence of the "exiles" in the face of strenuous opposition on the part of a long and influential section of the population. Backing which the Church had given the royal family made the interests of the sovereign, the nobility and the clergy one in common. In order that these common interests might be strengthened by the education of the masses in the right direction, from the view point of the Crown, all public and private instruction was placed in the hands of the Church, which proceeded to carry out an aggressive program which ran counter, at every turn, to the ideas of the strong revolutionary and democratic part of the population, the natural and legitimate heirs to the sentiments and aims of the Revolution of 1789. His ever-growing revolutionary body could not be kept from expressing itself, in a manner dangerous in the extreme to the ruling class, by the enforcement of severe laws against the liberty and freedom of the press. The Jesuits, who had been readmitted to the country following the restoration, became very active, not only as educators, but as propagators of royalist teachings, all of which were radical and extreme. Louis XVIII managed to maintain his position as head of the nation in the midst of many threatening dangers. But his successor, Charles X, who had been educated under clerical influence to the most extreme of royalistic views, was a man of little ability, weak will and poor judgment, warped by his training. He was, therefore, incapable of judging of the magnitude of the dangers by which he was surrounded. At the most critical moment in his career, when only the coolest and most liberal judgment could have saved the situation for him, he made his confident representative Count Jules Polignac (9 Aug. 1829), the most bigoted royalist and churchman among the French nobility, a man who could only see one side of the question and that only through his colored glasses. He succeeded in antagonizing the opposition as

even the unwise and undemocratic acts of the sovereigns had not done. The assemblies which met the following year (March 1830), both upper and lower houses, demanded the dismissal of the new and actively royalist ministers, who largely represented clerical influence and interests. Charles' answer, dictated by the court party, was the immediate prorogation and final dissolution of the Chambers. The natural result was that the new election increased the strength of the Anti-royalist party. This the king realized and he determined to anticipate the trouble he saw coming by the suspension of the liberty of the press and declaring the elections null and void (20 July 1830). To make sure that the next Chambers should not prove dangerous or obstructive, the edict of dissolution of the new Chambers prescribed changes in the franchise which practically restored arbitrary government. The newspapers defied the government, to carry out the edict of the suspension of the liberty of the press, and the trouble at once began in Paris. Barricades were thrown up everywhere in the eastern section of the city and the city hall and Notre Dame Cathedral were seized by the revolutionists. After three days' fighting under Lafayette and Lafitte, the revolutionists held possession of all of Paris. Suddenly, the king realizing the strength of the revolution and his own danger, withdrew his various edicts. But it was already too late and he was forced to abdicate in favor of his own grandson, the Duke of Bordeaux. Fearing the temper of the revolutionists, he fled across the border. But the Duke of Bordeaux was not destined to become sovereign of France, if for no other reason, because he was the choice of the late king. On the night of 30 July Louis Philippe, Duke of Orléans, arrived in Paris, at the call of Talleyrand, one-time minister of Napoleon I, and other prominent men of his party who had been intriguing for some time in his favor. He was at once made lieutenant general of the realm. But the choice of Louis Philippe as sovereign was opposed by Lafayette, commander of the National Guard, and his faction, who favored a republic. However, the necessity of not antagonizing the powerful Royalist party, and the diplomatic conduct of Louis Philippe, finally won over the Republicans to a continuation of the monarchy on a restricted and constitutional basis, and the Chambers bestowed the crown upon Louis Philippe (7 Aug. 1830). Although the principal part in the revolution had been played by the workingmen of Paris, still it was represented for the country as a whole by the middle classes who were still royalist in sentiment. A knowledge of the general feeling of the country induced Lafayette and the municipal committee who were, like the Paris workmen, strongly republican, to accept the compromise offered by Lafitte, Thiers and the Orleanists. But in this compromise the laboring class was singularly forgotten, an act which was pregnant with future trouble. According to the agreement with Louis Philippe a new constitution was adopted. This recognized a property qualification which gave the middle classes a very strong voting power and, consequently, influence in the affairs of the nation. But it shut out the laboring classes, who found that they

still had their battle to fight for political freedom. The Belgian and Polish revolutionary movements were more or less directly the result of the success of the July Revolution in France. Consult Fyffe, 'History of Modern Europe' (Vol. II, London 1886); Hazen, 'Europe Since 1815' (New York 1911); Lavisse and Rambaud, 'Histoire générale' (Vol. X, Paris 1898); Seignobos, 'Political History of Europe since 1814' (New York 1899); Robinson and Beard, 'Development of Modern Europe' (Boston 1908).

JUMBO, the name of a large African elephant for 25 years on exhibition at the Royal Zoological Gardens in London. The animal was purchased in 1882 by P. T. Barnum (q.v.), American showman, for \$10,000, and for three years was exhibited in the United States. Jumbo was killed in 1885 by a railroad train in Canada. He was 11 feet 6 inches in height and weighed six tons. His skeleton is preserved at the American Museum of Natural History and his skin at Tufts College, Mass.

JUMEL, zhū'mēl, **Eliza**, American heiress: b. at sea, 1769; d. New York, 16 July 1865. Her maiden name was Capet, and after her mother's death she was adopted by Mrs. Thompson, of Newport. She was a wayward, beautiful girl; at 17 she eloped with a British officer named Peter Croix, with whom she lived in New York. There she was greatly admired, and soon after her first husband's death married Stephen Jumel, who took her to Paris, where her social success was as great as in New York. After Jumel's death she married at 61 Aaron Burr (q.v.), from whom she separated soon afterward. Her home during her last years was the famous Jumel mansion, built by Roger Morris in 1758, for his bride, Mary Philipse of Yonkers. The house was Washington's headquarters during the New York campaign. It was bought by Madame Jumel in 1810, and is still preserved, its site being the Roger Morris Park, New York, which was opened 28 Dec. 1903.

JUMET, zoo'h'mā', a town in Belgium, about three miles northwest of Charleroi. It is the centre of numerous industries, including iron and coal mines, smelters, foundries and glass factories. Pop. about 30,000.

JUMILLA, hoo-mē'lyā, a city in Murcia, Spain, on the river Juá, 35 miles northwest of the city of Murcia. It is the centre of vineyards and fruit orchards, and possesses a few industries, among them being soap, cognac and wine factories. Pop. about 20,000.

JUMNA, or **JAMNA** (Sanskrit YAMUNA), a river of India which rises in the Himalayas, at the height of 10,849 feet. It flows in its upper course in a generally southwest direction, then bends to the southeast and, passing the cities of Delhi and Agra, falls into the Ganges, of which it is the chief tributary, at Allahabad, after a course of 860 miles. Important irrigation works derive their supply of water from this river.

JUMPERS, a class of religionists who manifest their devotion and feeling by jumping from the ground during the time they are assembled for worship and exhortation. They are said to have originated in the Methodist congregations of Wales during the preaching of Whit-

field (1760). They were also called "Barkers" from the incoherent guttural sounds they uttered during their excitement. They still exist in some parts of the eastern States, having emigrated to America after being repudiated by English Methodists.

JUMPING BEANS, the fruits of certain euphorbiaceous plants of the genus *Sebastiania* infested with the larvæ of certain small moths (*Carpocapsa saltitans* and *Grapholitha sebastianæ*), which by their movements make the capsules roll, and even jump as if alive. The larvæ spin cocoons in the capsules, a large part of the interior of which they have devoured, and when ready to emerge as adults, push open a previously cut circular door which has been held shut by silken threads. Several species are found in Central America and Mexico, where they are called "broncho beans."

JUMPING FISH. See MUD-SKIPPER.

JUMPING FROG OF CALAVERAS, **The Celebrated**, one of the earliest works of Mark Twain. It was published in the *Californian* and attracted considerable attention to the author, since it was at once taken up by the general public as a piece of good humorous writing. It made its way into recitation books and public recitals. Mark Twain secured a new humorous effect with a re-rendering into English from a French translation.

JUMPING HARE, or **SPRINGHAAS**, a jerboa-like animal (*Pedetes caffer*) of South Africa, as large as a hare, and much resembling one, which is now set apart in a family (*Pedetidae*) by itself. It will leap 25 or more times its own length, and where numerous does great damage at night to growing crops.

JUMPING MOUSE. See JERBOAS.

JUMPING PLANT LOUSE, an insect belonging to the *Psyllidæ* family. It receives its name on account of its prowess as a jumper. The majority of the members of this family pass their lives upon the leaves of various kinds of vegetation. Some, however, live in water. The adults sleep through the winter, but become very active with the return of warm weather when breeding begins, resulting in several successive families during the season.

JUMPING SHREW, a curious little animal of Africa, one of the insectivora of the Elephant-shrew family (*Macroscelidæ*), which has very large hindquarters and moves by leaping like a jerboa. They inhabit rocky and desert places, remain in holes and hiding places during the day and go abroad at night in search of insect food. The best known perhaps is the Cape jumping-shrew of South Africa (*Macroscelidus typicus*), which is tawny brown, about five inches in length, has a long, flexible proboscis and a long naked tail.

JUMPING SPIDERS, small spiders of the family *Attidæ*, which dwell in low vegetation and are exceedingly agile. They are usually short and stout in form, rarely more than a quarter of an inch long, and are often brightly colored, especially in the case of the males, which take curious attitudes in order to display their ornaments to the females. Cons. Emerton, 'Common Spiders of the United States' (1902).

JUNAGARH, jōō-nā'gēr, or **JUNAGADH**, jōō-nā'gūd, former state, Western India States Agency, India, in the Gujarat region of Kathiawar peninsula. It had an area of 3,337 square miles, mostly level, but hilly in the north, the highest spot being Mount Girnar (3,666 feet). The leading agricultural products are cotton, millet, oilseeds, and sugarcane.

Junagarh maintained relations with the British from 1807 until the division of India in 1947, when its Moslem ruler decided to join Pakistan. Because of its large Hindu population, a plebiscite was held in which the people voted to join the Indian Union, and in 1948 its status was referred to the United Nations. In 1949 it became part of Saurashtra. Pop. of latter (1951) 4,137,359.

JUNAGARH, or **JUNAGADH**, city, India, capital of Sorath district, State of Saurashtra, and formerly capital of Junagarh State, is located 5 miles south of Rajkot, near Girnar hill, and is a railway junction and market center. Its chief industries are hand-loom weaving, oilseed pressing, the making of gold and silver ornaments, and the manufacture of brassware, copperware, and pharmaceuticals. Pop. (1941) 8,111.

JUNCO, the common and also the scientific name of a group of North American finches. It is known as the eastern slate-colored junco (*Junco hyemalis*), also called the snowbird. The head, breast, and back of the male are dark slate, belly white. The female is similar but brown rather than slate. In both sexes, as in all other juncos, the outer tail feathers are white and show prominently in flight. A number of different races or species of juncos inhabit the forests of the western mountains south to Temala, north to Alaska. Most of them differ from the slate-colored junco by having the sides of the back rufous in color. Juncos are about six inches long. They nest on the ground and lay three or five eggs. The male has a melodious song. In the fall they gather into small flocks; they are hardy and some winter in the northern states, where they appear with the first snows, and are called the name snowbird.

JUNCOS, hōōng'kōs, municipality and town, Puerto Rico, 21 miles southeast of San Juan. Chief industries are the raising of tropical fruits, sugarcane and the manufacture of products of the latter. Population of the municipality (1940) 19,464; town (1950) 8,285.

JUNCTION CITY, jūngk'shūn sīt'ī, city, Kansas, and Geary County seat; altitude 1,077 feet; at the junction of the Republican and Neosho Hill rivers; 72 miles west of Topeka; on the Union Pacific, and Missouri-Kansas-Texas roads. In a wheat and cattle raising section, the city is an important shipping point for grain, corn, livestock, and the magnesium limestone quarried nearby. It has railway repair shops, breweries, dairies, and manufactures of flour, shoes, and military uniforms. Three miles northeast of the city, at a point marking the geographical center of the United States, is the military reservation and Army post, Fort Riley (see). The city was founded in 1858 and incorporated in 1859. Pop. (1950) 13,462.

JUNE, Jennie. See CROLY, JANE C.

JUNE, the sixth month in the calendar. The etymology is uncertain. Vossius gives three etymologies of the name—one from Juno; another from *junco* (to join), referring to the union between the Romans and Sabines under Romulus and Titus Tatius; a third from *juniores* (the young men), Romulus having been said to have assigned the month of May to the elders, and that of June to the young men, when he divided the people into these two great classes, the former to serve in counsel, the latter in war. The name has also been traced to Junius Brutus, the first consul. It consisted originally of 26 days, to which it is said Romulus added four, and Numa took away one. Julius Caesar again lengthened it to 30 days, and it has ever since remained unaltered.

JUNE BEETLE or **FIGEATER**, a green and brown beetle (*Cotinus nitida*) of the family Scarabaeidae common in the central and southern United States. The adults often eat figs, peaches, small fruits, and corn. The larvae are white grubs which resemble their northern relatives. (See MAY BEETLE.) They normally feed upon decaying vegetable matter in the soil and not on living roots of plants.

JUNE BUG. See MAY BEETLE.

JUNE GRASS. See BLUE GRASS; GRASSES.

JUNEAU, zhū-nō'; Angl. jōō'nō, Solomon Laurent, American pioneer: b. L'Assomption Parish, near Montreal, Canada, Aug. 9, 1793; d. Shawano, Wis., Nov. 14, 1856. He emigrated to Green Bay, Wis., and thence in 1818 to Milwaukee, where he was active in trade with the Indians. He was not, as has been sometimes stated, the first white settler on the site of Milwaukee. A grant of considerable land had there been made by the Indians to one Mirandean, a previous resident, and of this grant, Juneau, on Mirandean's death, secured possession. Juneau made the first survey of Milwaukee village, was its first postmaster and president, and the first mayor of the subsequent city. On ground presented by him he helped to build the first courthouse in the state. For years he was agent for the American Fur Company. A statue of him was placed in Juneau Park, Milwaukee, in 1884.

JUNEAU, jōō'nō, Alaska, capital of the territory and headquarters of most of the federal departments of government. It is situated on the mainland side of Gastineau Channel, and behind it tower Mount Juneau and Mount Roberts. The Glacier Bay National Monument lies to the northwest. The Alaska-Juneau gold mine on the slope of Mount Roberts, once the world's largest, is now closed, but Juneau has a large fishing fleet, fish processing plants, two sawmills, and a plywood plant, and is a trade and transportation center. There are two radio stations, a daily and a weekly newspaper, and it may be reached by either plane or boat. Pop. (1950), 5,956.

JUNEBERRY. See AMELANCHIER.

JUNG, yōōng, Carl Gustav, Swiss psychologist: b. Basel, July 26, 1875, where he was educated and graduated in medicine. Through common aims he met Sigmund Freud in 1906; but with his

publication of *Wandlungen und Symbole der Libido* in 1912 (*Psychology of the Unconscious*, 1921) which expressed concepts antipathetic to Freud, their six-year friendship ended. Jung was the first to recognize the psychical complex. He introduced the terms *introversion* and *extroversion* to describe basic psychic attitudes; and he considers *thinking, feeling, sensation* and *intuition* to be basic psychic functions. The psyche is divided into the *subjective-psyche* (consciousness), the personal unconscious, and the *objective-psyche* (collective unconsciousness); between these there exists a complementary and compensatory relationship. Thus through analysis and understanding of the symbolism of dreams, fantasies and visions factors may be deduced which when integrated to consciousness will resolve the existing psychic conflict or neurosis. The therapeutic method, to which Jung gives the name of Analytical Psychology, is prospective, aiming at psychic equilibrium through self-realization by means of a dialectical procedure. Other major works include: *Collected Papers on Analytical Psychology* (1916); *Studies in Word Association* (1918); *Psychological Types* (1923); *Contributions to Analytical Psychology* (1928); *Two Essays on Analytical Psychology* (1928); *Modern Man in Search of a Soul* (1933); *Psychology and Religion* (1938); and *The Integration of the Personality* (1940).

See also ANALYTICAL PSYCHOLOGY.

RICHARD C. MATTHEWS,
Analytical Psychologist, Denver, Colorado.

JUNG, yöong, **JUNGE**, or **JUNGIUS**, Joachim, German naturalist: b. Lübeck, Oct. 21, 1587; d. Hamburg, Sept. 17, 1657. He was professor of mathematics at Giessen (1609–1614). He received his doctor's degree in medicine from Padua in 1618. He was professor of mathematics at Rostock in 1625 and rector of the Hamburg Johanneum (1628–1640). He was one of the first consistent students of the natural sciences more particularly physics, entomology, and botany. He attempted to make a classification of plants by genera and species and to provide nomenclature.

JUNG BAHADUR, bà-hä'döör, SIR Maharajah, East Indian ruler: b. 1816; d. Feb. 25, 1877. After holding various important offices, he became prime minister of Nepal. Several attempts were made to assassinate him; but he succeeded in getting the better of his enemies, of becoming practically an absolute ruler and of establishing order throughout his domains. He supported the British during the Indian mutiny (1857–58).

JUNG-STILLING (real name JOHANN HEINRICH JUNG; pseudonym HEINRICH STILLING), German author: b. near Hilchenbach, Westphalia, Sept. 12, 1740; d. Karlsruhe, April 2, 1817. In 1768 he went to Strasbourg to study medicine where he met Goethe who introduced him to Herder. He practiced medicine at Elberfeld until 1778, and in 1778, became a professor of economics at Kaiserlautern and later at Marburg. He returned in 1803 to Heidelberg, and in 1806, was pensioned by Charles Frederick of Baden. His first work, *Heinrich Stillings Jugend* (1777), was strongly influenced by Goethe, and was edited by him. This later became a part of a five volume mystic autobiography published in 1806.

JUNGBUNZLAU. See MLADA BOLES-LAV.

JUNGES DEUTSCHLAND, a literary and political movement in Germany culminating in 1835, and not related with the simultaneous and more important movements known as Young Italy and Young Europe. There never was much organization or consultation between the writers composing it (Heine, Laube, Gutzkow, Mundt, Wienbarg), but they were connected by the similarity of their aims and methods, and by the fact that the Bundestag at Frankfurt in 1835 (having read a denunciation of these men, written by Wolfgang Menzel), issued a decree forbidding the circulation of all past and future writings of the five men concerned, and characterized their movement as "Junges Deutschland," a term first used by Wienbarg in his *Aesthetische Feldzüge*. Basing their principles on stimulus received from recent emancipated French writers, these Young Germans opposed, in a literary way, the political reaction in Germany, the predominant tendencies in literature, and the sectarian Christianity of their day. Both Jesuitism and Protestant orthodoxy were then very strong in Germany, and to these influences the Young Germans opposed the socialistic tendencies emanating from the French July Revolution (1830). Their chief object was to reinvigorate both state and church by the injection of an esthetic culture, thus making both institutions more accessible to larger outlooks. Soon, however, the free unfolding of the individual character became their principal goal. State and church came to be regarded as mere hindrances, and national affiliation was considered to be a base ideal, in no way comparable with Goethe's great conception of a world literature (*Weltliteratur*). The immediate demands of the Young Germans included an emancipation of the Jews and complete freedom for women.

Consult Houben, H. H., *Jungdeutscher Sturm und Drang* (Leipzig 1911); Bloesch, H., *Das junge Deutschland in seiner Beziehung zu Frankreich* (Bern 1903); Proelss, Johann, *Das junge Deutschland* (Stuttgart 1892); Brandes, Georg, *Das junge Deutschland* (Leipzig 1891).

JACOB WITTMER HARTMANN.

JUNGFRAU, yöong'frou (Ger. for maiden), a mountain in Switzerland in the Bernese Oberland, on the border between the cantons of Bern and Valais, approximately 12 miles south-east of Interlaken. One of the most magnificent mountains in Europe, it was first ascended by the Meyer brothers, of Aarau, Switz., in 1811. The Jungfrauabahn, a cog-railway, takes visitors to the Jungfrauoch, at an altitude of 11,340 feet. Located there are the International Alpine Institute for Scientific Research, an Astronomical Observatory, belonging to the University of Geneva, and a meteorological tower on the Sphinx, altitude 11,716 feet. The Aletsch Glacier, situated on the south side, is the largest in Europe. The famous Ice Palace is 66 feet below the surface at an altitude of more than 11,000 feet. The altitude of the Jungfrau 13,669 feet.

JUNGHUHN, Franz Wilhelm, Ge physician and naturalist: b. Mansfeld, Oct. 1809; d. Lembang, near Bandoeng, Java, Apr. 24, 1864. He studied medicine at Halle and Berlin entered the Prussian Army, later joined

he French in Algiers, and finally settled in Java. He explored the Netherlands East Indies, especially Java and Sumatra.

Among his published works are *Topographische und naturwissenschaftliche Reisen durch Java mit einem Atlas* (1845); *Die Bütteländer auf Sumatra* (1847); *Java deszelfs gedaante Bekleedingen inwendige Structuur*, 5 vols. (1850-53); *Java; seine Gestalt, Pflanzendecke und innere Blauart*, 3 vols. (1852-54).

JUNGLE, The, a novel by Upton Sinclair (q.v.), written for a socialist paper, *The Appeal to Reason*, and published in 1906. Based on an observation of the Chicago stockyard conditions in 1904, it was responsible for instigating an investigation of the packing industry by the United States government under Pres. Theodore Roosevelt, which resulted in the passing of the Pure Food and Drug Act of 1906.

Jurgis Rudkus, Slav immigrant had come to Chicago in the hope of finding a comfortable existence for his family. He finds employment in the Packingtown District and discovers the worst phases of industrial Chicago. In the struggle to survive, his young, frail wife, Ona, is forced to work in the packing plant also, and the hard work causes her death in childbirth. After several unfortunate accidents which kill his young son, revent his working, and ultimately cause him to be jailed, Jurgis tires of the struggle and becomes in turn a tramp, a thief, and a beggar. A corrupt political boss hires him, but dispenses with his services as soon as the political scene changes. Jurgis, once more penniless, attends a socialist rally and the book ends with his finding hope through socialism. Written with striking realism, the novel is filled with quiet, unceasing desperation. "Such were the cruel terms upon which their lives were possible, that they might never have nor expect a single instant's respite from worry, a single instant in which they were not haunted by the thought of money." An existence based upon such terms can lead to nothing but degradation and criminality. It has often been said that vice leads to misery, but it can also be said that misery leads to vice. *The Jungle* with its photographic realism and intense social criticism is said to be the closest counterpart to Zola in American fiction.

JUNGLE BOOK, The, collected stories by Rudyard Kipling, published June 2, 1894, in which the animals are leading actors. *The Second Jungle Book* followed on Nov. 16, 1894. The first volume, *The Jungle Book*, narrates in nine magical tales the history of Mowgli, reared from babyhood in the jungle by fostering wolves—how he is adopted as one of the wolf-pack, how he is instructed and befriended by Baloo the wise bear, Kaa the python and Bagheera the black panther, how he is rescued from the Bandar-Log or Monkey People, how he slays Shere Khan, the tiger, how he becomes the acknowledged master of the jungle, and finally how he returns to his own kind, yet still remains in touch with the jungle-dwellers. The collection is diversified by interludes in verse, such as "The Law of the Jungle" and the "Road-Song of the Bandar-Log" which accentuates the satire embodied in the description of the boastful, scatterbrained Monkey folk. *The Second Jungle Book* contains seven stories, among them that of "Rikki-Tikki-Tavi" the mongoose, "Toomai of the Elephants," "The Undertakers"—which is concerned with three sinister scavengers, the crocodile, the jackal and the

adjutant crane,—and "The Miracle of Purun Bhagat," a beautiful tale of an old recluse and the beasts that loved him. "To those who read between the lines," says Frederic Taber Cooper, "the Jungle Books are far more than a new childhood classic. They are the life of modern India, told in allegory, and in Kaa and Bagheera and all the rest we have the types of native life, with its stored-up wisdom of old, primeval instincts, its simplicity of outlook upon the present-day world." Kipling's animals are peculiarly convincing. They act and talk—when they do talk,—in accordance with their animal characteristics, and never give the impression that they are humans masking in fur, feathers or scales.

ARTHUR GUITERMAN.

JUNGLE CAT, or CHAUS, the common wildcat of India (*Felis chaus*). It is 26 inches long in head and body, has a short tail, reaching only to the heel, and is yellowish gray, more or less dark and unspotted, tinged with reddish on the sides, marked by a dark stripe from the eyes to the muzzle, and with reddish black ears slightly tufted. Another Indian jungle cat is the handsome *F. ornata*, which is profusely spotted; it dwells in the desert regions of the Northwestern provinces. Both these cats are said to interbreed with domestic cats, and thus no doubt long ago influenced the varieties of the tamed stock.

JUNGLE FEVER, a severe variety of remittent fever, prevalent in the East Indies and other tropical regions.

JUNGLE FOWL, any of several species of the genus *Gallus*: the *Gallus gallus*, the common jungle fowl from which the *bankiva* of Java is believed to have descended, inhabits parts of India; *G. varius* is found in the Malay islands; the *G. lafayetti* in Ceylon; and the *G. sonnerati*, the gray jungle fowl, is found in western and southern India.

JUNGMANN, yōng'mān, Josef Jakob, Czech philologist and literary man: b. Hudlitz, Bohemia, July 16, 1773; d. Prague, Nov. 11, 1847. Graduated from Prague in law and philosophy, he became a teacher in the gymnasium at Leitmeritz (1799-1815); and in the same capacity at Prague (1815-1835). He was rector for the following 10 years. He attempted to awaken the Czech spirit of nationality and to interest the people as a whole in their national language, to prove the literary capacity of which he made translations from English, French, and German, among his translations being Milton's *Paradise Lost* (1811), Chateaubriand's *Atala* (1805), and Goethe's *Hermann and Dorothea*. His original work consisted of *A History of Czech Literature and Language* (1825) and a dictionary of the Czech language, 1835-1839. His influence for good was very powerful on his own language and his help to philology very considerable.

JUNIATA, jōō-nī-āt'ā, Pa., former borough in Blair County, now a northeastern suburb of Altoona, to which it was annexed in 1929. Juniata is on the Pennsylvania Railroad, and has large railroad shops and silk mills.

JUNIATA RIVER, in Pennsylvania, rising in the Allegheny Mountains and flowing through

beautiful country for about 150 miles and emptying into the Susquehanna River about 15 miles northwest of Harrisburg. The Juniata is not a navigable stream, but from its source to its mouth its banks are followed by the Pennsylvania Canal and the Pennsylvania Railroad.

JUNIN, hōō-nēn, a department, Peru, in the interior, bounded on the north by Huanuco, east by Cuzco, south by Ayacucho and Huancavelica and west by Lima. It has an area of 22,820 square miles. The western portion is more elevated than the eastern, but the latter is densely wooded. Agriculture is neglected and large deposits of silver, copper, coal, and salt remain unworked. Cereals, coffee and sugar are the principal crops, but of the greatest importance is the copper industry. A railroad connects the southern part to Lima and the coast. The capital city is Huancayo. Pop. (1944) 500,161.

JUNIN, or **CHINCHAYCOCHA**, chēn-chī-kō'chā, lake, Peru, situated at an altitude of 12,225 feet in the department of the same name. It is 25 miles long and seven wide.

JUNIOR HIGH SCHOOLS. See EDUCATION, SECONDARY; EDUCATION IN THE UNITED STATES—Educational Organization.

JUNIPER, a genus (*Juniperus*) of ornamental evergreen trees and shrubs of the family Juniperaceae, consisting of about 40 species, distributed mainly throughout the cooler parts of the northern hemisphere. The species have branches which spread in all directions from the main trunk and limbs, small, rigid, needlelike or scalelike, opposite leaves; unisexual flowers, the two sexes usually upon separate plants, the staminate yellow and in catkins, the greenish pistillate ones followed by fleshy or dry, berrylike cones containing from one to six, sometimes 12 seeds, which may not attain maturity until the second or third year. The best-known species in the United States is probably the Virginia juniper, red cedar or savin (*Juniperus virginiana*), to be found widely dispersed east of the Rocky Mountains, upon rocky and sandy soils, mountain sides, etc. It sometimes attains 100 feet in height, its upright or spreading branches forming a handsome conical head. Its numerous attractive horticultural varieties are largely planted in parks and cemeteries. The trunks are highly prized for fence posts, being exceedingly durable; the handsome red heartwood is valued for turning, cabinet-work, cooperage and especially for lead pencils; but the tree is looked upon with disfavor by the orchardist, because it is one of the hosts of apple rust.

The common juniper (*J. communis*) is a smaller species, rarely reaching 50 feet in height and usually less than 25 feet tall, and many of its numerous varieties less than 10 feet. It is widely distributed throughout the northern hemisphere, especially in the colder latitudes and altitudes. Like the preceding species its wood is valued, when of sufficient size, for posts, veneers, pencils and for turning. The tree itself is also used for ornamental planting. Its bark is sometimes twisted into ropes and its long, tough, fibrous roots are used for making baskets. Its blue-black fruit, which it yields profusely, is used for flavoring certain liquors, as is also the oil obtained from them and from the twigs by distillation with water.

Juniperus virginiana. Profile of tree, close-up of twig with fruit.

The Bermuda cedar (*J. barbadensis*) resembles the Virginia juniper, but is of stouter build, though it rarely exceeds 40 feet in height. Its wood is rather more fragrant than that of the preceding species like which it is used. Formerly it was employed in the ships built in the Bermudas, but the forests which supplied this industry were mismanaged and the industry perished. Several other species are of more or less economic importance; for instance, the Spanish juniper (*J. oxycedrus*), a shrub which attains a height of about 12 feet, whose fruits yield a disagreeable smelling oil (oil of cade), used in veterinary medicine; and African juniper (*J. procera*), a useful timber species and probably the largest of the genus, often attaining heights of 150 feet in the mountains of eastern Africa, where it is native. A number of species occurring in western North America are of great economic importance.

Junipers succeed best in moderately moist, sandy loam in open, sunny situations. They make excellent windbreaks and shelter belts, especially where the soil is too dry, rocky or gravelly for other trees. They may be propagated by seeds which, however, usually require two, sometimes three, years to germinate. Cuttings of almost mature wood may be taken in the autumn from the needle-leaved kinds and grown under glass or in the open; species with scalelike leaves are generally side-grafted in the greenhouse during winter. Some of the shrubby species are propagated by layers.

JUNIPERO SERRA (originally MIGUEL JOSÉ SERRA), Spanish missionary in America: b. Majorca, Nov. 24, 1713; d. Monterey, Calif., Aug. 28, 1784. He became a member of the Franciscan Order in 1729, and in 1750 arrived in Mexico City as a missionary. In 1769 he went to the present site of San Diego, Calif., where he founded a mission. He gathered about him a band of 16 of the Franciscan Order and these missionaries converted over 3,000 Indians of whom Junipero himself is said to have baptized more than 1,000. He instructed the natives in the arts of civilization and the colonies which assembled about the mission stations constituted the first settlements in California. His headquarters were at Monterey, but he founded several other missions. Bret Harte incorrectly gives his name as Serro.

JUNIUS, jōōn'yūs; jōō'nī-ūs, **Franciscus** German-born philologist and antiquary: b. Heidelberg, 1589; d. 1677. The boy was brought to Leyden when three years old and there he was educated under his brother-in-law, Gerhard Vossius, a noted philologist. In 1821 he went to England, where he became librarian to the

Earl of Arundel, a position he held for 30 years. During these and following years he devoted his time to study, research and writing. Among his works are 'De Pictura Veterum' (with an English version, 1637); 'The Gothic Gospels of Uffilas' (1665); and 'Glossarium Goticum' (1664-65). This latter is in five languages. These and other valuable manuscripts of his are in the Bodleian Library, Oxford.

JUNIUS, Letters of, a remarkable series of political letters that were published in the London *Public Advertiser* over the pseudonym of "Junius," between 21 Jan. 1769 and 21 Jan. 1772. These epistles greatly stirred the English political world, for they were written with a wide and intimate knowledge of affairs, shrewd political sagacity, literary felicity and a certain waspish malignity. No bolder or more audacious comments on the actions and characters of public men have ever appeared in the English language. So merciless were they in their cold-blooded vivisection and more or less polished abuse of the policies of Granby, Butc, Grafton, Bedford, Mansfield and, to Burke's horror, scathing even the sacred majesty of the king, that extraordinary efforts were made to discover their author. But Junius, whoever he was, escaped detection in his lifetime and, since the days of George III, the question of his identity, though frequently raised in England and America, has never been satisfactorily settled. At the close of his correspondence Junius edited the letters for the publisher of the *Public Advertiser*, Henry Sampson Woodfall, with an explanatory preface and a "Dedication to the English Nation." He also included a few letters he had written under other pseudonyms than "Junius." The whole was published in two volumes by Woodfall in 1772. A later edition, published by Woodfall's son and edited by Dr. Mason Good, appeared in 1812. Good introduced 113 extra letters; some of these had passed between Woodfall senior and Junius, but the majority had been collected by Good from the *Public Advertiser* and attributed to Junius without the slightest proof of their authenticity. It was these interpolated letters that gave rise to the accusation of inconsistency frequently leveled against Junius. Some 60 different individuals have at various times been brought forward as the real Junius, among them being Edmund Burke, Edward Gibbon, Lord George Sackville, Lord Chatham, Sir Philip Francis, Colonel Barré, John Horne Tooke, Lord Temple, General Charles Lee, Hugh M. Boyd, Lord Chesterfield, Horace Walpole, etc. Junius wrote his letters in a disguised hand; he described himself as "a man of rank and fortune," asserted that he was the sole depository of his own secret, and that it should perish with him. From external evidence and fortuitous coincidences, plausible cases have been made out to establish the identity of at least 10 different contemporaries with the unknown Junius. From internal evidence, however, including style, ability, circumstances, ages, chronology and motives, in addition to solemn denials by several reputed authors of the letters, the claims and pretensions of any of the remainder have hitherto failed to obtain a unanimous verdict. Curiously enough, all the advocates base their evidence on similarity of handwriting. Apparently the strongest claim

was that made on behalf of Sir Philip Francis (1740-1818) by Taylor in 1816 and elaborated by a grandson, H. R. Francis, in 'Junius Revealed' (London 1894). The publication of 'The Francis Letters' (2 vols., London 1901), a mass of private and public correspondence, went some way, negatively, to prove that Sir Philip was not Junius. The best criticisms on the disputed authorship may be found in C. W. Dilke's 'Papers of a Critic' (Vol. II, London 1875) and the *North American Review* of October 1829 and April 1832. Consult Britton, J., 'The Authorship of the Letters of Junius Elucidated' (London 1848); Chabot, C., 'Handwriting of Junius' (London 1871); Coventry, 'Critical Inquiry into the Letters of Junius' (1825); Dwarries, Sir F., 'Some New Facts as to the Authorship of the Letters of Junius' (London 1850); 'Junius Unmasked' (Boston 1828); Jacques, 'History of Junius' (1843); Newhall, I., 'Letters of Junius' (Boston 1818); Parke and Merivale, 'Life of Francis' (London); Vicarius, 'The Junius Letters' (London 1903); Wade, J., 'Junius' (2 vols., London 1850), generally called *Woodfall's Edition*, and occasionally reprinted; based entirely upon Good (1812) it contains all his blunders. Waterhouse, B., 'An Essay on Junius and his Letters' (Boston 1831).

JUNKER, yün'kēr, Wilhelm, Russian explorer: b. Moscow, 1840; d. 1892. Educated at Saint Petersburg, Göttingen, Berlin and Prague, he visited Iceland (1869), Western Africa (1873), Tunis (1874), lower Egypt (1875), and went up the Blue Nile to Khartum (1876). After three years spent in this region, he returned to Europe, but went back the following year (1879) to continue his explorations at the head waters of the Nile. In 1886, after numerous adventures, he reached Zanzibar. On his return to Germany he published 'Reisen in Afrika' (Vienna 1889-91), in which he gives an account in three volumes of his travels and adventures.

JUNKERS, yoong'kērz, a name given to the younger members of the nobility of Prussia and the adjoining states. "Junkerthum" (aristocratic manners) was a term of reproach used in the 19th century to designate the party of reaction in Prussia, which found its most strenuous supporters among the nobility. "Junkerei" signifies the behavior of young aristocrats; aristocratic arrogance; in German slang a baker's apprentice is sometimes called a junker.

JUNKIN, George, American Presbyterian clergyman: b. near Carlisle, Pa., 1790; d. 1868. He was graduated from Jefferson College (Pa.), in 1813 and entered the Presbyterian ministry in which he became prominent as a leader of the party known as Old School Presbyterians. He founded Lafayette College at Easton, Pa., in 1832, and was its president till 1841; returning thither in 1845, after three years spent as president of Miami College at Oxford, Ohio. In 1848 he became president of Washington College (now Washington and Lee). He was an outspoken upholder of slavery, but was opposed to secession, and on account of his Union sentiments resigned the presidency of the college in 1861. He spent over \$10,000 of his own and his wife's fortune to meet the current expenses of Lafayette College. He was the

father-in-law of Gen. "Stonewall" Jackson. He published 'Political Fallacies' (New York 1863) and several religious works. Consult 'Life' by D. X. Junkin (Philadelphia 1871).

JUNKS, large flat-bottomed vessels, ranging from 100 up to 1,000 tons burden, used by the Chinese. They have three masts, and a short bowsprit placed on the starboard bow. The masts are supported by two or three shrouds, which, at times, are all carried on the windward side. On the fore and main mast is a sort of lug-sail, of cane or bamboo matting.

JUNO, the most exalted divinity of the Latin races in Italy next to Jupiter, of whom she was the sister and wife; the equivalent of the Greek Hera. She was the queen of heaven, and under the name of Regina (queen) was worshiped in Italy at an early period. She bore the same relation to women that Jupiter did to men. She was regarded as the special protectress of whatever was connected with marriage. She was also the guardian of the national finances, and a temple, which contained the mint, was erected to her under the name of Juno Moneta on the Capitoline.

JUNOT, Andoche, ǎn-dōsh zhu-nō, DUKE OF ABRANTES, French marshal: b. Bussy-le-Grand, Côte d'Or, 23 Oct. 1771; d. Montbard, 22 July 1813. He was intended for the bar, but on the outbreak of the revolution joined a volunteer battalion, and soon attracted notice. At the siege of Toulon, in 1793, he became secretary to Napoleon, and went with him into Italy and Egypt in the capacity of aide-de-camp. In Egypt he was advanced to the rank of general of brigade. In 1800 he was made commandant of Paris, and he particularly distinguished himself at the battle of Austerlitz in 1805. In 1807 he was sent with an army into Portugal, and made his entry without opposition into Lisbon, his success being rewarded with the title of Duke of Abrantes. On the arrival of the British he was defeated at Vimeira, and was then obliged to submit to the humiliating convention of Cintra. Although he subsequently took part in the campaigns (1809) against Austria, (1810) against Spain and (1812) against Russia, he failed to retrieve his reputation. In 1813 he became insane, and lost his life by leaping from a window.

JUNOT, Laure, DUCHESS OF ABRANTES, a French writer: b. 1784; d. Paris, 1838. Her real name was Laurette de Saint-Martin-Permon. She was married to General Junot in 1799; and she eventually became a social leader at the court of Napoleon I. Her extravagance ruined her husband who died in 1813. About this time she turned to literature of a historical and reminiscent nature; and succeeded in keeping herself, for some considerable time, in the public eye. Her 'Memoires' (1831-35) consist of 18 volumes of diffuse material, much of it of interest as reflecting the manners and customs of the times. She also published other works of a like nature from which she earned considerable income; but her boundless extravagance finally left her penniless and she died in a charitable institution.

JUNTA, hoon'ta, Spanish assembly; a high council of state; a term common in all Spanish-speaking countries. It is generally also applied to any gathering or body of men. It was

originally applied to an irregularly summoned assembly of the states, as distinguished from the cortes or parliament regularly called together by the authority of the king. In Cuba the term was adopted by the insurgents before the Spanish-American war, to designate the general legislation of the Cuban republic abroad. This legislation or junta was first appointed 19 Sept. 1895 by the Constituent Assembly that formed the insurgent Cuban government, which at the same time made T. Estrada Palma head of the junta and chief Cuban representative abroad with authority to appoint ministers to all governments and to have control of Cuba's diplomatic relations and representatives throughout the world. See CUBA.

JUNTO, The, a club formed about 1727 in Philadelphia by Benjamin Franklin for mutual improvement. Morals, politics, and natural philosophy, as well as the social well-being of man were the main subjects discussed. It continued for about 30 years. The name was also applied to an English Whig ministry in the reign of William III, the chief members of which were Admiral Russell, Somers, Lord Wharton and Montague, the great financier. This was the first ministry ever made of one and the same party politics. It was the suggestion of Robert earl of Sunderland, to William III, after the former's return from exile in 1691. See also AMERICAN PHILOSOPHICAL SOCIETY.

JUON, yoo'ōn, Paul, Russian musician. b. Moscow, 1872. Educated in music in Moscow and Berlin, where he won the Mendelssohn scholarship, he became a teacher in the Bakst Conservatory. In 1906 he became professor of Musical composition in the Hochschule at Berlin. As a composer he has paid considerable attention to the folk-lore of Russia. He has inventive power and originality, and his music covers a wide range; but throughout it is Slavic in character. His chamber music is undoubtedly his best; for in this he is unsurpassed by any of his contemporaries.

JUPATI, joo'pā-tē, a palm (*Raphia tadarag*) of the tide-flooded lands of the lower Amazon and Pará rivers, remarkable for its leaves, probably the largest in the vegetable kingdom. The trunk is only six or eight feet high, and one foot in diameter. The leaves rise nearly vertically from the trunk, bending out on every side in graceful curves, forming a magnificent plume 70 feet in height and 40 in diameter. Leaves have been measured 50 feet long, and the leaf-stalk is often 12 or 15 feet long below the first segments of the leaf, and four or five inches in diameter, perfectly straight and cylindrical, and when dried light and strong as the quill of a bird. The Indians split it into laths for a variety of purposes—window-shutters, boxes, bird-cages, partitions, and even entire houses being constructed of it, with the addition of a few supporting posts at the angles. The fruit, a large oblong drupe, has a bitter oily flesh.

JUPITER, joo'pī-tēr, or **JUPPITER**, the supreme deity of ancient Rome, the same as the Greek Zeus. As the supreme deity Jupiter received from the Romans the title of *optimus maximus* (best greatest), and as the deity presiding over the sky he was considered as the originator of all the changes that took place in the sky. From him accordingly proceeded

rain, hail and the thunderbolt, and he it was that restored serenity to the sky after it had been obscured by clouds. Hence the epithets of Pluvius (rainy), Tonans (thundering), etc., were applied to him. The most celebrated of his temples was that on the Capitoline Hill dedicated to him as Jupiter Optimus Maximus, jointly with Juno and Minerva. He was represented with a sceptre as symbolical of his supreme authority. He was the guardian of all property; and every Roman was believed to be under his protection and that of his consort Juno, the queen of heaven. White animals were offered up to him in sacrifice, his priests wore white caps, and his chariot was represented as drawn by four white horses. See JUNO.

JUPITER, the largest member of the solar system except the Sun itself. In fact, both in mass and volume it more than equals all the other bodies, large and small, added together. In brilliancy, only Venus and most occasionally Mars surpass it, its stellar magnitude varying from -2.5 to -2.1 respectively at the most and least favorable oppositions. At an average conjunction, however, could it be seen behind the Sun, it would be only -1.4 . Its orbit lies outside the Earth's; therefore, it can at opposition remain above the horizon all night long. Often it is the brightest object in the heavens. As it takes 12 years to complete its orbit about the Sun, and as there are 12 constellations in the Zodiac in which it is always found, obviously it traverses one constellation yearly. The semimajor axis of its orbit is 483,870,000 miles, which equal 5.203 astronomical units. The eccentricity is 0.0484, so at perihelion the distance to the Sun is about 23,400,000 miles less, and at aphelion 23,400,000 more, than the above value. The sidereal period is 4332.6 days or about 11.86 years, while the synodic period, which is the length of time from one opposition to the next, is 399 days. At mean distance the apparent equatorial diameter of Jupiter's disk is $46''.86$, of the polar $43''.74$, which indicates at once the considerable solar flattening of about $1/15$. These figures correspond to diameters of 88,000 and 82,900 miles respectively. The disk's elliptical shape is plainly seen even with a small telescope. The volume of Jupiter is 1,323 times that of the Earth. Its mass, however, which is independent of its volume, is only 317 times greater; hence its density is 1.32 that of water, and slightly less than that of the Sun, which is 1.41 . Its mass in terms of the Sun is $1/1047.4$. This is so large that the center of gravity of Sun and Jupiter actually lies slightly outside the former's surface. Due to the planet's great centrifugal force at its equator, objects at the poles weigh 15 per cent more than at the equator. On the Earth this value is only $1/189$.

The greatest elongation of the Earth from the Sun as seen from Jupiter is 12° , hence Jupiter shows no appreciable phase effects except, at quadrature, a slight darkening of the limb farthest from the Sun. The center of the disk is brighter than the edges, an effect much accentuated in photographs of the planet. This effect is due to the light of the Sun, by which alone the planet shines, being reflected mostly from layers lying some distance below the outer one. Near the planet's limb, where such light comes back to us almost tangentially, it has to penetrate far thicker layers than does that nearer the center of

the disk; hence the greater relative brightness of the latter regions. Former suppositions that there might be some inherent light are now wholly discarded. The albedo or reflecting power is high, being 44 per cent of the incident solar light. This would indicate reflection from a cloud-covered planet. Jupiter receives only 0.037 times as much heat and light per square mile as does the Earth. Its equator is inclined only 3° to the plane of the orbit; hence seasonal effects are practically nonexistent. The more recent measures of the temperature of that level in Jupiter's atmosphere which reflects the solar radiation is -140°C . As this temperature can readily be explained by the amount of heat received from the Sun, there seems no grounds for believing that it is appreciably, if at all, affected by the planet's internal heat.

Surface Features.—The planet's color is yellow, but examination shows several approximately parallel belts, of varying width, which are generally red-brown in color. They run parallel to the planet's equator and are semipermanent. This means that while the belts as a whole remain, their numerous details may change conspicuously, sometimes in relatively short periods of time. Therefore, with a large telescope and high power Jupiter is by far the most interesting of all planets, with the possible exception of Mars. The spaces between the belts are usually called *zones* and therefore form the brighter portion of the disk. The belts were discovered in 1630 by Nicolas Zucchi and Daniel Bartoli. Using the designations adopted in the French *Annuaire Astronomique*, we have in order: south polar region, south temperate belt, south temperate zone, south tropical belt, equatorial zone, north tropical belt, north temperate zone, north temperate belt, and north polar region. As details remain visible for weeks at a time, it is easy to derive the rotation period. This was approximately determined as early as 1662 by Robert Hooke. The equatorial zone rotates in $9^h 30^m 30^s$, while zones and belts to the north and south take from $9^h 55.1^m$ to $9^h 55.9^m$, and do not increase regularly with greater latitude. Single spots have rotated as fast as $9^h 48^m$ or as slow as $9^h 59^m$. This proves that we see no solid surface but the top surfaces of great cloudbelts resembling the trade-wind belts on the Earth. Remembering that a point on Jupiter's equator moves about 27,000 to the Earth's 1,000 miles per hour while the quantity of solar heat is not quite 4 per cent, atmospheric circulation must be on a quite different scale. With a high power, the edges of the belts are by no means straight or regular, but the belts appear as if made up of masses of cumulus clouds, partly overlapping. Spots of contrasting color are seen at times in both belts and zones, but no single detail remains visible indefinitely without changes of shape and often of relative position. Studies have been made also of changing colors in certain zones which indicate that these changes are correlated with turbulence in other regions.

Great Red Spot.—This marking first attracted general attention in 1878, but had been seen and drawn clearly enough for subsequent identification as early as 1831. It is even possible that it was seen by Hooke in 1664 or by Giovanni Cassini in 1665. Since 1878 it has been under careful observation as to size, color, and position on the disk. It is roughly 30,000 miles long by 8,000 miles wide, oval in shape, of

changeable color and lies at latitude 20° south. When most conspicuous it has been an intense brick-red; sometimes it has been quite invisible, its position indicated only by the hollow it made in the south edge of the south tropical belt. From its semipermanence we might be disposed to think that here at last was an "island" projected up through the clouds. But even this "island" is in motion, referred to a hypothetical solid nucleus below, which would rotate at a uniform velocity. To prove this point a period of $9^h 55^m 40.6^s$ —which by the way was then quite satisfactory for the spot—was selected, and the position of its center in 1894 chosen as longitude 0° . Up to 1902 the longitude increased as far as 46° ; it then decreased to 8° in 1910. A year later it had retrogressed to longitude 328° . Since then its fluctuations have been rapid and irregular, until in 1938 it was quite on the other side from its position in 1911, or at longitude 152° having again passed 0° in both 1919 and 1927. Another formation known as the *south tropical disturbance* was discovered in 1901; this is situated in the south temperate zone. From being a dark mass on the southern edge of the equatorial belt, it expanded to over 180° in length, showing considerable detail. Its rotation period being $9^h 55^m 19.5^s$, it overtakes the red spot about every two years, passing at a velocity of 16 miles per hour. While passing, for some unknown reason, the disturbance is accelerated and it drags the red spot bodily in the direction of its motion for some distance, after which the spot falls dark. Both disappeared in 1919 and again in 1926. Another curious phenomenon is the apparent repulsion on neighboring matter which is exercised by the spot, so that it seems to form a bay in the edge of the neighboring belt. Rupert Wildt concludes that, as the red spot has now been under continuous observation for over 80 years, it can hardly be otherwise than of a solid nature, as any liquid would tend to spread out over surrounding regions. If it were floating in the atmosphere freely, it must consist of some extremely light solid only. If it were dragged over solid ground, the momentum, necessary to be transferred from the surrounding fluid to cause the body to move, would be great and might not be afforded by known conditions. Obviously the nature and behavior of the red spot are very mysterious.

The spectrum of Jupiter has long been known to contain heavy absorption bands, the constitution of which was unknown. In 1932, Wildt proved that they were largely caused by methane and ammonia. This was fully confirmed in 1933 by T. Dunham. The larger part of the ammonia must be liquified due to the low temperature. The critical "velocity or escape" for Jupiter is 5.32 times greater than for the Earth, hence it might be expected to retain an abundance of the lightest gases, hydrogen and helium. That hydrogen compounds should be formed is thus to be expected. Dr. Harold Jeffreys has proved theoretically that the superficial matter of the giant planets, of which Jupiter is largest, must be some extremely light substance. Wildt discusses whether such planets can have extended atmospheres occupying a considerable part of their volume, because at relatively small depths the atmospheres under their own weight would reach densities of the order of magnitude of those of the solidified common gases like molecular hydrogen, helium, ammonia, and methane. If the

atmosphere is isothermal, solidification of the common permanent gases under their own weight would occur at depths where the pressure would be from 10^4 to 10^6 atmospheres. This should be about 600 miles. Lower down, the compressibility would approach that of ordinary liquids, so the general behavior would be more like our ocean than our atmosphere. Assuming that Jupiter is an isothermal body, Wildt proposes a model as follows: a dense rocky metallic core C radius 19,000 miles; a layer of ice B, thickness 17,000 miles; surmounted by a layer A of highly compressed, condensed gases, mainly solid hydrogen, thickness 8,000 miles. He assumes that the core contains 20 per cent of oxygen. At the temperature of the outer layers, -140° C approximately, methane is still gaseous but ammonia is frozen. The clouds are, therefore, probably composed largely of ammonia crystals. The ice layer would have come from water due to the combination of hydrogen and oxygen, when the planet was still hot. Eventually, on cooling, the ice would form.

There seems general agreement that the central core of Jupiter will be composed largely of iron-nickel, as indeed is presumed for all planets, but theories on the thickness and composition of the upper layers differ very greatly. Even recently, reasons have been advanced to support the theory that below the atmospheric layers the planet has a solid surface, perhaps with strong volcanic actions therefrom. This might presuppose that such a surface was relatively warm, from internal heat, due in part to radioactivity. Photometric work by G. Link on Jupiter's atmosphere, through studying the effect of its shadow on the satellites, indicates that the planet is surrounded by an absorbing layer whose upper surface is at 20 per cent of the radius. This stratum would not be homogeneous; the maximum of density would be at an altitude of about one tenth of the radius. This value agrees quite well with the thickness of layer A in Wildt's model. That life could exist on Jupiter seems utterly impossible, nor could it exist on any of its satellites.

Satellites.—Jupiter has the most numerous family of satellites of any planet, 11 now being known. Others may be found in the future, only any that remain undiscovered must be very small bodies indeed. The four large moons of Jupiter were the first bodies to be discovered by use of the telescope, having been found by Galileo in 1610. Their discovery, incidentally, produced great consternation among those who firmly believed that the solar system must consist of seven bodies only. But for being so close to Jupiter, they would be readily visible on a clear night without optical aid. Their angular diameters, as seen from the Earth at mean distance, are $1''.00$, $0''.88$, $1''.41$, and $1''.36$ respectively, which averaged with those given by eclipses correspond to 2,350, 2,150, 3,300, and 3,200 miles. They move almost in the plane of the planet's equator, the first three furnishing solar, and undergoing lunar, eclipses at every revolution; the fourth somewhat less often. (See ECLIPSE.) Their orbits are almost perfect circles, and the relative positions of the first three follow a remarkable law, found by Laplace, $L_1 + 2L_2 - 3L_3 = 180^\circ$, where L_1 , L_2 , L_3 represent their longitudes. Their distances from Jupiter are 262,100; 417,100; 664,900; 1,170,000 miles; and their approximate periods are $1^d 18^h 28^m$, $3^d 13^h 14^m$, $7^d 3^h 43^m$, $16^d 16^h 32^m$, in "

ward. Their masses in terms of the Moon are 0.09, 0.65, 2.10, and 0.58; while their densities in terms of water are 2.9, 2.9, 2.2, and 0.6. With the largest telescopes, faint markings have been detected on their disks, despite their small angular diameters, and there is sound reason to believe that, like our Moon, they keep their same faces always towards their primary. From the data given, Satellites I and II are about the size and density of our Moon; III and IV considerably larger. The very low density of IV furnishes a most difficult problem, for even were it made of ice, the density would be 1.0 not 0.6—that it could not be solid seems quite impossible. Satellite V was discovered visually in 1892 by Edward

Barnard with the Lick 36-inch refractor. It takes the planet in just half a day, in the same plane as does I, but at a distance of only 112,700 miles. It is probably not over 100 miles in diameter and a most difficult object to observe. Nos. I and VII were discovered by Charles D. Perrine, also at Lick Observatory, by photography with the Crossley reflector in 1904 and 1905. They are very different from those already discussed, being about 100 miles and 30 miles in diameter respectively, periods 251 and 260 days, and mean distances of just over 7 million miles. Their orbit planes are highly inclined to that of the planet, being 29° and 28° , with the large eccentricities of 0.155 and 0.207. In this same group should be classed Satellite X, discovered by Seth

Nicholson in 1938 at Mt. Wilson Observatory. This tiny body is some 10 miles in diameter, its period 254 days, and its distance and orbit much like VI and VII. These three have direct motions, as do the first five.

No. VIII was discovered by P. J. Melotte at Greenwich in 1908. It is about 20 miles in diameter, has a period of 739 days, a mean distance of 4,600,000 miles, eccentricity of 0.378, and an inclination of 148° (in 1910). This shows that it moves in a clockwise direction, opposite to the light so far discussed. In 1914 at Mt. Lick, Nicholson discovered Satellite IX and in 1938 at Mt. Wilson, XI. These two, with VIII, seem to form another group. For IX we have: diameter 15 miles, period 758 days, $a=14,740,000$ miles, $e=0.28$, inclination of orbit 157° . For XI, diameter 10 miles, $a=14,000,000$, eccentricity $=0.207$, inclination of orbit 163° . Both move clockwise, which infers a different evolution from the other eight which move direct. As yet XI has been studied so short a time to give as full particulars as for its two companions, but they furnish most serious difficulties in calculating their orbits. When on the side of Jupiter nearest the Sun, the perturbations of the latter are so serious that the two satellites never follow even approximately the same orbits for successive revolutions. Doubtless exactly the same will turn out to be true for XI. As an example, from 1908 to 1916, the period of VIII lengthened from 713 to 768 days, its orbit's inclination changed from 152° to 146° , etc. The orbits can only be calculated by mechanical quadratures, and no long-range predictions of future positions can be anything but roughly true.

The hypothesis has been discussed that the outer six satellites may be captured asteroids, which, on venturing too near Jupiter, from just the right direction and under just the right conditions, may have been forced to leave their orbits about the Sun and join this satellite family. The mathematical difficulties of the prob-

lem are great, and a fully satisfactory solution has not been made as yet, though it is believed that the direct-moving small satellites cannot now be lost by a reverse process. The same conclusion, so far as the future is concerned, is probably true for the outer three. But as no asteroid is known to move in a clockwise direction, while half of the comets do, the further hypothesis might be advanced that the outer three are really captured nuclei of comets which have lost all their coma material. If this should turn out to be tenable, the great difficulty of opposite direction of motion—and evolution—would be removed. Nothing has been said in this connection about the inner five. That is because, whatever origin is eventually decided upon as correct from the evolutionary standpoint for the normal satellite, this will fully fit their cases.

The satellites of Jupiter, through observations of their eclipses, gave the first proof that light moves with a finite velocity, even if a very great one. This was done by the Danish astronomer Ole Römer (Roemer) in 1675, though his suggested explanation was only accepted after James Bradley in 1725 had discovered the aberration of light. The principle involved is as follows: Jupiter's orbit has a major semiaxis of 5.2 astronomical units and hence is far larger than the Earth's which is within. Therefore, in the course of the year, when Earth and Jupiter are on the same side of the Sun, the Earth is only 4.2 a.u. distant from Jupiter but in some 6+ months later, it will be 6.2 a.u. distant, when on the opposite side of the Sun from Jupiter. Call the first point A, the second point B. Then from A to B our distance from Jupiter is increasing day by day, from B to A, decreasing. But a Galilean satellite revolves always in the same period about the planet, so eclipses actually take place at equally spaced intervals. Hence if light has a finite velocity, as we go from A towards B the intervals from one eclipse to the next should lengthen, as light has each time a longer path to travel to reach us, but the contrary is true from B to A. If light had an infinite velocity, the intervals, either as we approached or receded from Jupiter, would be the same. The greatest changes, of course, occur in the two positions when the angle JES is 90° , which is not far from half way from A to B. By his observations, Roemer was able to prove the intervals differed as described, thus proving light's finite velocity. See also ASTRONOMY.

JUPITER CAPITOLINUS, Temple of, the national shrine of ancient Rome. Situated on the Capitol, it was dedicated to Jupiter Optimus Maximus, Juno and Minerva. It is said to have been built by Tarquinius Superbus and completed in 509 B.C. It was built against the side of Monte Caprino, the southern summit of the Capitoline Hill and was supposed to stand on sacred ground. On account of its

position it could be approached from only one side. It was destroyed by fire in 83 B.C. and was rebuilt by Lucius Cornelius Sulla. Subsequently it was rebuilt or restored by Augustus (9 B.C.), Vespasian (74 A.D.), and Domitian (82 A.D.). It was ruined by the Vandals in 455 A.D.

JURA, jōōr'ā, Fr. zhū-rā', department, France, located on the eastern frontier, bordering Switzerland. Its area of 1,952 square miles is generally rugged, over two thirds being covered by the Jura (q.v.) mountain range which in places rises more than 5,000 feet. On the west are lower, level regions. Grains and poultry are important in the agriculture of the west; wines are produced along the western slopes of the Jura Mountains; and there is extensive cattle breeding and cheese making. Lumbering, stone quarrying, salt mining, and various artisan manufactures, including clockmaking and gem cutting, are carried on. The chief streams are the Ain, Brenne, Loue, and Doubs. The principal towns are Lons-le-Saunier (the capital), Dôle, St.-Claude, and Morez. Pop. (1946) 216,386.

JURA or **JURA MOUNTAINS**, a range of the Alpine mountain system, occupying parts of France and Switzerland and forming a natural barrier along the Franco-Swiss border. It extends generally southwest to northeast, in a number of parallel ridges, through the French departments of Ain, Jura, and Doubs and the Swiss cantons of Vaud, Neuchâtel, Bern, Solothurn, and Basel. The greatest length is about 160 miles, from Belley, France, to the Rhine at Basel, Switzerland; the greatest breadth is about 40 miles. The principal geological formation of the Jura is a fossiliferous limestone for which the Jurassic period of the Mesozoic geological era was named. The highest peaks of the Jura are in France (Crêt de la Neige, 5,652 feet, and Mont Reculet, 5,643 feet). The Col de la Faucille, about 50 miles northwest of Mont Blanc, and the Pontarlier gap, about 30 miles south of Besançon, are the principal passes.

JURASSIC, jōō-rās'ik, in geology, the second period of the Mesozoic era, following the Triassic and preceding the Cretaceous, and the system of rocks formed during about 30 million years some 150 million years ago. The Jurassic was named for one of its characteristic formations, a highly fossiliferous limestone found in the Jura Mountains of France and Switzerland. It was a period in which dinosaurs (q.v.) flourished and the earliest bird (*Archaeopteryx*, q. v.) was evolved.

Exposures of Jurassic formations in England yielded fossils that enabled William Smith in 1795 to conclude that "each stratum contained organized fossils peculiar to itself," a discovery that facilitated the dating of strata. Ami Boué placed the rocks of the period in proper sequence in 1829, and Alexandre Brongniart named them Jurassic in the same year. The prevalence, during the period, of ammonites—flat-coiled cephalopods having shells with complexly fluted partitions that permit confident recognition of similarities and differences—enabled paleontologists to divide the system into more than 100 fossil zones. Ammonites evolved rapidly and, being free floating, spread readily; consequently, geo-

logical sequences in the Jurassic system are more easily compared in time over long distances than are the sequences in any other system.

The Jurassic is commonly divided into lower, middle, and upper phases. Several stages are recognized in the Lower Jurassic or Lias; in the Middle Jurassic, two stages, the Bajocian and Bathonian, are recognized; in the Upper Jurassic, the Callovian, Oxfordian, Kimmeridgian, and Portlandian are generally distinguished.

In North America, marine rocks are exposed only in the western parts of the United States and Canada, and in Mexico; some are also exposed in Cuba. However, along the Gulf of Mexico deep wells penetrate a seaward-thickening wedge that pinches out about 200 miles inland, between southern Arkansas and the Rio Grande. There are oilfields at the northeast, and the section has a 1,000-foot deposit of salt, thought to be the source of the domes rising through overlying rocks (see TERTIARY). In Mexico, early Jurassic rocks occur in the southern states; but upper Jurassic rocks lie on Paleozoic in the State of Coahuila.

During the Lower Jurassic, the interior of North America was land as far west as California, Nevada, and western Alberta; but streams and lakes deposited some sediments, and winds piled up dunes, such as those that must have formed the Navajo sandstone in Zion National Park, Utah. During the Middle and Upper Jurassic, marine waters spread eastward into Colorado, the Dakotas, and western Saskatchewan, a few hundred feet of deposits passing eastward into stream-laid beds. Middle and Upper Jurassic deposits reach thicknesses of a mile in Utah and the Canadian Rocky Mountains. Several miles of sediments and lavas formed in volcanism were lacking in this interior region, prevalent in a belt within the Pacific Coast. Several miles of sediments and lavas formed in subsiding troughs, geosynclines, that extended interruptedly through southern Alaska, western British Columbia and the western states from the Pacific Ocean into western Nevada; there were associated lands, some with active volcanoes, some in the present Pacific area. The Nevadan Disturbance, a period of intense folding of the earth's crust, raised mountains dividing this broad area. At the same time there occurred intrusions of granitic rocks, including the granodiorite forming the walls of Yosemite Valley. Seas withdrew, eventually, to a geosyncline along the Pacific coast; while, toward the interior, streams laid sediments that have yielded fossils of great dinosaurs, particularly in Wyoming. See also GEOLOGY; MESOZOIC ERAS.

MARSHALL KAY

JUREL, hōō-rēl', or **XUREL**, any of several species of edible fishes found in warm seas belonging to the family Carangidae (q.v.). The best-known is the hardtail (*Caranx crysos*), "yellow mackerel," also called the hard-tail jack, or runner, which occurs in the Atlantic from Brazil to Cape Cod and sometimes in Nova Scotia. It is also found in the eastern Pacific. It has a slender, elongate body, bluish above and silvery below, is short-headed and short-snouted and reaches a length of 20 inches and a weight of four pounds. It feeds on small fishes and shrimp.

JURI, zhōō-rē', a once-powerful Indian tribe belonging to the Arawakan family. The

are closely related in customs, racial appearance, traits and language to the *Passé*. Their territory once extended from the Lower Putumayo and Japurá into the northern tributaries of the Amazon. They are experts in the use of the canoe and were at one time very much feared by neighboring tribes on account of their deadly blowpipes. Their extensive dwellings are constructed of poles thatched with palm or other leaves, much like those in use everywhere throughout tropical America.

JURIEN DE LA GRAVIERE, zhū'rě'ān' de lā gra'vė'ār', Jean Pierre Edmond, French writer and soldier: b. Brest, 1812; d. 1892. He began his active life in the sea service and became rear-admiral in 1855. He had charge of the French naval interests in the expedition to Mexico in 1861. The following year he arranged the Treaty of La Soledad with the other sharets in the expedition, Spain and England. On his return to Europe he was put in command of the Mediterranean fleet (1868-70). He prepared all the plans for the escape of the empress in 1870. The following year he became director of charts in the Naval Office and in 1888 he was made a member of the Academy on account of his literary and other services to his country. Among his published works, which are all on naval subjects, are 'Guerres maritimes sous la République et sous l'Empire' (1847); 'Voyage en Chine pendant les années 1847-50' (1854); 'Les Campagnes d'Alexandre' (1883-84); 'Les gloires maritimes de la France' (1888); 'L'Amiral Roussin' (1889); 'Les Anglais et les Hollandais dans les mers polaires et dans les mers des Indes' (1890); 'Le siège de la Rochelle' (1891); 'La flotille de l'Euphrate' (1892); 'Les Gucux de mers' (1892).

JURIEUX, zhū're'ē', Pierre, French writer and theologian: b. 1637; d. 1713. Although a voluminous writer and bitter controversialist in behalf of Protestantism, he is remembered now for two works, 'Histoire du Calvinisme et celle du Papisme' (1682) and 'Histoire critique des dogmes et des cultes' (1704).

JURISCONSULT (French *jurisconsulte*, Latin, *jurisconsultus*, one skilled in the law), one who gives opinion on cases of law; one learned in the law; and, specifically, a master of civil law. During the Republican period of Rome the *jurisconsults*, who were almost always men of independent means and good family, trained in the law, gave their legal advice free of charge as a means of adding to their friends and influence to aid them in securing some elective office. Under the Empire certain men were given the right to respond (*jus respondendi*) by the emperor. As these were among the most noted of Roman jurists, their decisions were ordered to be followed by the judges. Before long the jurists thus honored were almost all selected from the members of the Imperial Auditor; and as this was the highest court of appeal there arose the custom of making the lower courts follow the decisions of the higher; a custom now universally followed. The famous digest of Justinian was compiled from the writings of the imperial jurists, who had left, in a digested form, the case law of the latter part of the Republic and the first part of the Empire. Throughout the Latin countries the term *juris-*

consult is used in the sense of jurist. See CIVIL LAW; JURISPRUDENCE; ATTORNEY AT LAW. Consult Muirhead, 'Historical Introduction to the Private Law of Rome.'

JURISDICTION includes both the right to exercise authority (*imperium*) and the field within which such authority may properly be exercised (*dominium*), whether its limits be territorial or personal. In early law, jurisdiction in the second sense was rather personal than territorial, and the same must be true wherever distinct races occupy together the same territory. While the tendency is to gradually work out a system of law applicable to all inhabitants, the state must of necessity recognize the fact that its subjects of different races will consent to be governed only by separate and often contrasting systems. Such is the case, for example, in British India to-day. So, too, jurisdiction was divided according to the subject matter, and the Church secured and jealously maintained authority over all matters of conscience, and managed to extend the jurisdiction of the Ecclesiastical Courts to very important questions, including marriage, legitimacy, wills and administrations, and to actions affecting the personal rights of the clergy.

The Constitution of the United States discriminates clearly and sharply between the executive, the legislative and the judicial powers of government, and its provision that the Constitution and the laws of the United States made in pursuance thereof shall be the supreme law of the land, taken in connection with the provision that the judicial power shall extend to all cases arising under the Constitution, forms the basis of a jurisdiction which, at least in the extent to which it has been carried, is without precedent outside of the United States. It is by virtue of these provisions that the Federal courts exercise the power of declaring void acts of Congress or of the State legislatures which conflict with the Constitution of the United States. To this power and the energy and ability of the Supreme Court in its exercise are due the vigor and efficiency of the Federal government and the establishment of its supremacy within the field of its jurisdiction. This feature has been imitated in the several State constitutions with results unquestionably beneficial as a whole, and so important that the courts have come to be spoken of as the guardians of the constitution. But one result not so fortunate is that the legislative branch of the government, though in theory as much bound by constitutional restrictions as though there were no authority to which an appeal against the validity of its enactments can be taken, is manifesting a disposition to disregard them altogether, leaving the whole question of constitutionality to the courts. As our system of government provides no method by which the question can be raised, except in the course of a litigation in which one party relies upon the right conferred by such a statute, there are possibly many unconstitutional acts in force in the various States. A more important consideration is that a disposition on the part of the judiciary to interfere with matters properly legislative may thus be created, and lead to forced constructions by which any law which the judges believe to be had is held obnoxious to the Constitution — resulting in illogical and

inconsistent decisions and a weakening of the authority of the courts.

The Constitution provides that the judicial power of the United States shall extend to controversies "between citizens of different States." The purpose was to open the way for legislation which would provide a tribunal in which the right of a citizen of any State to pursue his legal remedies could not be denied; probably, too, to afford him a tribunal less likely to be affected by local prejudice than a State tribunal of first instance, probably a County Court. It is not contended that anything further was designed, but upon this clause depends the most extensive and, except for the provision as to constitutional interpretation which we have just considered, the most important body of Federal decisions. The tendency of the Supreme Court was at first to hold that the Federal court should administer the law of the State in which it was sitting and that while a citizen of Pennsylvania, for example, having a claim against a citizen of New York, might, if he saw fit, bring his action in the Federal, rather than in the State, court—the law to be applied would be the law of the State of New York. But this rule has been departed from in the later decisions, and while the Federal courts still hold themselves bound to follow the interpretation put upon State statutes by the State courts (unless, of course such statutes are attacked as in conflict with the Constitution of the United States), they hold themselves free to disregard the interpretation of the common law by the State courts, and the system of law built up within the State by the adjudications of its courts, and to adopt their own interpretation, and follow their own judgment. That the Federal courts are popular is shown by the fact that the most important litigation, estimated on the basis of the amount at stake is, where possible, usually brought before them, notably proceedings against corporations and especially the foreclosure of corporation mortgages where it is quite common for the trustee for the bondholders to be a corporation or individual of another State, or where a committee of bondholders, or even a single bondholder, residing outside the State which is the domicile of the debtor corporation, is the plaintiff. This is sufficient to give jurisdiction to the Federal court.

We have therefore a most interesting condition of concurrent jurisdictions applying to every inhabitant of the United States. The Federal courts are courts of limited jurisdiction—limited to authority expressly conferred by the Constitution and laws of the United States, but once jurisdiction is established, unlimited in the scope of its exercise. Congress has prescribed that the jurisdiction shall only exist when the matter in controversy has a pecuniary value exceeding \$2,000, and that actions shall be brought only in the district within which the plaintiff or the defendant resides and has made provision for the removal from the State courts of causes which might originally have been brought in the Federal courts. Some of the States have attempted to prevent this increasing jurisdiction of the Federal courts; for example, by the passage of acts providing as a condition of a license to a foreign corporation to do business within the State, that such cor-

poration, if sued, would not remove the cause into the Federal court.

The field in which a State of the American Union may exercise its political or judicial authority is circumscribed by its geographical boundaries. The process of its courts can reach only persons who reside in, or voluntarily come into, their jurisdictional limits, or property which is located in, or is brought into, the territory of the State. An action for debt against a non-resident can be conducted only as a proceeding *in rem* against his property found in the State and held by writ of attachment; a judgment *in personam* against a non-resident defendant, who had not been served with initiatory process within the State or voluntarily entered an appearance, would be a nullity. A suit for divorce is a proceeding *in rem*, the *res* being the status of the parties; and, when brought in the proper matrimonial domicile, substituted service of the summons and bill outside the State will give the court jurisdiction. Criminals, who have become fugitives from justice, are brought into the State from which they have fled on requisition to the governor of the State in which they have taken refuge.

National governments are similarly restricted, though their jurisdiction has wider limits. These may extend far beyond their national frontiers to lands and peoples over which the governments hold complete sovereignty or even a mere suzerainty or protectorate. Or the *dominium* of a government may extend to persons of its own nationality living abroad, over whom, or in whose behalf, it claims extra-territorial rights. The extra-territorial jurisdiction formerly exercised by the nations of European race in the non-Christian and imperfectly organized polities of the Orient and the Far East has been greatly narrowed. It was abolished in Japan by treaties; it was declared no longer existent in Turkey by the law suppressing the capitularies and without regard for treaties. In Persia, China and a few other countries it is still the rule that nationals of European and American states can be tried for crime only in the consular courts of their own nationality; likewise these courts have exclusive jurisdiction in civil actions in which their nationals are defendants, or which involve their civil status. Controversies between natives and extraterritorialized foreigners are sometimes triable in mixed courts. The most important of these was the one long maintained in Egypt, and to which the principal nations, including the United States, each appointed a judge. There is a regularly organized United States District Court at Shanghai, forming part of the Federal judiciary system.

Some national governments claim permanent *dominium* over their nationals wherever they go and contest the jurisdiction even of the countries to which their former subjects have emigrated, and in which they have become naturalized. The Italian government, for instance, declined several years ago to surrender to the American authorities a former Italian subject, who had fled to Italy to escape trial in the United States for a crime alleged to have been committed by him in the latter country: the ground of refusal being that an Italian by birth or descent was answerable to courts of Italy alone for his delicts. His liability was not di-

minished by or altered by long absence from Italy, or by a voluntary change of civic status or allegiance, nor even by the accident of having been born in another country. The locus of the crime was considered quite immaterial. To prove its consistency the Italian government about the same time declined to accept jurisdiction in a case involving a young American, the body of whose wife had been put into a trunk and thrown into Lake Como. The nativity of the offender, not the place of the offense, fixed the jurisdiction; let American courts try Americans and the Italian courts administer correction to Italians. This is the American and English rule of jurisdiction turned upside down and inside out. The Italian government receded somewhat from its position, but from considerations of comity, and without abandonment of its principles. The rule of *dominium in personam* also permits the French and other Continental European courts to take criminal jurisdiction over persons who are not, and never were, within the orbit of their territorial authority, and to try and convict such persons in their absence — which is the direct opposite of one of the fundamental principles of the common law.

STEPHEN PFEIL.

JURISPRUDENCE. The use of this term as an equivalent for "Law" is confusing and apt to conceal its real import. "Medical Jurisprudence," so called, is not even law, but a compilation of facts, taken from the science of medicine, which may be useful in the determination of questions of law. The title "Equity Jurisprudence" on a book generally indicates that it is a treatise on pleadings and procedure in the Court of Chancery, and when one speaks of American jurisprudence what is usually meant is the administration and practice of the law in America, specifically in the United States. These and many other similar uses of the term are incorrect. Jurisprudence is the science which concerns itself with the discovery and presentation in a systematic manner of the relatively few and simple ideas underlying the infinite variety of legal rules. In making its observations and deductions jurisprudence recognizes no limits of time and place; a rule stated in, or inferred from, a section of the Code of Hammurabi (B.C. 2340) is within its sphere of inquiry just as much as one declared in an act passed by Congress or a State legislature during the present year. Nor does the science take cognizance of the different classes of people whose wants were satisfied by the invention of a legal rule, nor the circumstances under which it was invented. The general rules of *hypothec* are applicable alike to a bottomry bond, a mortgage on land or a pledge of chattels; the general rules of possession, ownership and contract are applicable alike to mariners, landlords or pawnbrokers. Jurisprudence should not be confounded with the history of laws or of the law; a science which reduces legal phenomena to order and coherence is obviously something quite different from an historic exposition of the law of one or of many countries, or even the juxtaposition for the purpose of comparison of the rules embodied in various systems of law. The comparative study of laws engrossed the attention of Roman jurists, and in the *jus gentium* they put together the rules which they found to be common to a

great number of legal systems. Their ideal was a universal code, from which all systems were imagined to be derivable, or toward which they were supposed to tend. It was in their efforts to realize this ideal that the Romans made a discovery of far greater importance than that of a merely material unity in the laws of many nations. There was disclosed to them a formal unity which enabled them to rubricate the essential principles of their ideal or "Natural law" in spite of the heterogeneous origin of their material and the differences of the methods of grouping the topics adopted in the various legal systems. In a word, the Roman jurists invented the science of jurisprudence, which differs from comparative law as much as it differs from legal history. In making this invention the Romans did a service for law, parallel to the service done by the Alexandrian Greeks for language when they invented grammar. The difference between comparative law and our science is well stated by Dr. T. E. Holland in his 'Elements of Jurisprudence' by the following illustrations: "It is the office of comparative law to ascertain what have been at different times and in different communities the periods of prescription or the requisites of a good marriage; it is for jurisprudence to elucidate the meaning of prescription in its relation to ownership and to actions at law, or to explain the legal aspects of a marriage and its connections with property and the family." A science of jurisprudence, to be sure, might be deduced from the observation of the laws of a single nation, just as the Alexandrian Greeks deduced a science of grammar from Greek, the only language they familiarly knew — and just as the general formulæ of grammar thus derived are applicable to all languages, so would a formal science of jurisprudence, though deduced from but one system of laws, be of universal application. While comparative law and legal history are not prerequisites, nevertheless they are invaluable aids toward the formulation of the science. Comparison of the laws enforced in the same country at different times, or of similar though not identical laws of various countries, greatly improves the possibility of separating the essential elements of the science from their historical accidents, and of discovering the relative importance of human wants by the universality (or the reverse) of legal provisions respecting these wants. The means whereby humanity has satisfied its wants are as infinite in number as the wants themselves, but humanity has not always, nor often, had clear conceptions of the ends to be attained by the means employed. Legal history, therefore, is a vast accumulation of complex and perverse facts. Jurisprudence obtains unity out of this complexity by observing the human wants for the satisfaction of which laws have been invented, and the modes in which such wants have been actually satisfied; by collating and digesting the facts observed, with no regard for their historical or geographical associations, and arranging the formal rules deduced from this matter in categories, according to logical principles derived from other practical sciences.

A formal science must necessarily begin with an understanding of the character of the phenomena about which it rationalizes; it can have no coherence if the thing with which it is concerned is given a name with complex and

shifting meanings. A discussion of the great variety of ideas expressed by the word "Law" is deferred to another part of this work. (See LAW). It must suffice here to define "Positive Law," with which alone the science of jurisprudence is concerned, as "a rule of external human action, recognized and enforced by a sovereign political authority." This definition is narrow enough not only to exclude the conceptions expressed by such terms as the "laws of nature" where the word "law" is used merely figuratively, but also to differentiate positive law from moral law, ethics, etiquette or the "code of honor." It is broad enough, on the other hand, to include rules established by custom when they have obtained recognition from the State, and regulations made by municipalities, corporations or other agencies, to which the sovereign political power has delegated some part of its authority. The action regulated must be a human action and it must be external; i.e., it must affect a thing or a person other than him who does the act. A thought is not an act until it finds expression in words or deeds. An omission, however, may be an act in law. Jurisprudence naturally falls into two divisions, public and private. The latter comprises the rationality of legal rules governing the relations of individuals among themselves. Public jurisprudence is that division of the science which is concerned with the rationale of the legal rules which govern the relations between individuals and the State. A third division of the science is sometimes made to include the rules governing the interrelation of States. Inasmuch, however, as there is no supernatural authority to compel observance of these rules by mutually independent sovereignties, international law is lacking of the fundamental characteristic of positive law. It, therefore, fits only imperfectly into the scheme of our science. "The most obvious characteristic of the law is that it is coercive; it was invented because of transgressions. Even when it operates in favor of the legitimate action of individuals, the law does so by restraining interference with such action." This carries us forward to the subject of legal rights, the creation and protection of which are the primary objects of law. The elements of a right are, the person entitled, the act or omission, the object and the person obligated. A right has been defined by Holland as "one man's capacity of influencing the acts of another, not by his own strength, but by means of the opinion or force of society. When one is said to have a right to anything, or over something, or the right to be treated in a certain way, what is meant is that public opinion would regard with approbation, or acquiescence, his doing the act or his use of the thing, and would reprobate the conduct of any person who should prevent his doing the act or using the thing, or who should fail to treat him in the manner to which he is believed to be entitled." A right thus sanctioned is a moral right. When the capacity residing in one man to control a thing or the action of another is exercised with the assent and assistance, if need be, of the State, it becomes a legal right—and this irrespective of the moral sanction of the community. The distinction between public and private rights lies upon the surface. The State has the right not to be conspired against or not

to have its peace disturbed. An act of treason is a violation of a public right residing in the State, and the State intervenes not only to punish the traitor, but to protect itself—for the State is to be regarded as a "person" by analogy, with rights that need to be safeguarded by itself as well as it safeguards the rights of private persons. Some trespasses are violative of a private as well as of a public right. A libel or an assault, for instance, infringes upon private rights and, also, upon the public right of the State not to be disturbed by acts constituting, or tending toward, breaches of the peace. All legal rights fall into one of the two categories, public or private. The division of the science of jurisprudence in two corresponding departments is, therefore, logically consistent. It commends itself also by the convenience of an arrangement whereby constitutional, ecclesiastical, criminal and administrative law, on the one hand, and the law of contracts, property, succession and torts, on the other hand, fall into groups, to one or the other of which all legal topics may be referred. The classification of rights under the heads "Rights of Persons" and "Rights of Things," is logically imperfect as well as inconvenient in practice. The right to receive rent does not depend upon some distinctive characteristic of landlords as a class; nor would this right be affected because the landlord should happen to be following an occupation, say that of a pawnbroker, whose business is conducted under some special kind of administrative regulations. These regulations of the pawnbroking business in no way increase or impair the right of a pawnbroker, as landlord, to rent from a tenant. If a landlord should be an infant, however, a whole set of legal disabilities would come into play, affecting and modifying the antecedent right of this specific landlord to receive rent or the remedial right of the infant to enforce payment thereof. These modifying causes affecting the relations between an infant landlord and his tenant, are entirely unconnected with the general rules of possession, ownership and contract, which govern the relations between landlord and tenant—and when both parties concerned are normal the "personal dimensions" of a right need not be considered at all. In most cases they could be utterly disregarded, for the conditions of abnormality in natural persons are not numerous. They are lunacy, infancy, coverture, alienage, outlawry and a very few others. By abstracting the rubric "rights of persons," which means nothing more than the law relating to varying legal capacities, and relegating this topic to a separate head—such as "the law of abnormal personality"—the definition and consideration of legal rights would be greatly simplified.

A legal right is either antecedent or remedial. An antecedent right is an exceptional advantage enjoyed by the person clothed with it. The right of an heir to a house and land devised to him, or the right of a merchant to goods purchased by him, are antecedent rights; and they are exclusive, because they are enjoyed by nobody else. Antecedent rights may be *in rem*, meaning that they are available against the whole world, as in the cases just mentioned; or they may be *in personam*, meaning that they are available only against a par-

ticular person. The right of ownership is a right *in rem*, it is available against the whole world; the right of a landlord to rent is a right *in personam*, for it is available only against his tenant. A remedial right arises when an antecedent right is violated. It is available only *in personam*, that is to say, against the person by whose infringement of an antecedent right the remedial right comes into being. Public as well as private rights may be either antecedent or remedial. The right of the State not to be betrayed is antecedent and is a right *in rem* because it is available against the whole world. When a traitor violates this antecedent right a remedial right *in personam*, available against the offender, is created. Antecedent private rights *in rem*, available against the entire world by those entitled to the enjoyment thereof, are: (1) The right to personal safety and freedom; (2) to the society and control of one's family and dependents; (3) to reputation; (4) to advantages open to the community generally, such as the free exercise of one's calling; (5) to possession and ownership; (6) to immunity from damage by fraud. Many of these, of course, become the objects of particular legal intervention only when they are infringed, as the right to personal safety is infringed by a menace, an assault or an act of negligence. Antecedent rights when not infringed, or when they are not "in motion"—meaning in process of creation, devolution or extinction—are said to be "at rest." When at rest such rights are, nevertheless, under the protection of the State through its powers of police. The State not merely punishes stealing, it prevents it. Every right has relation to some thing, and the object of a right may be tangible or intangible. The "bubble, reputation," is an intangible thing, to the enjoyment of which a man has a right, but which he cannot reduce to possession. The rights of possession and ownership, generally speaking, are extensions of the power of a person over tangible physical objects. Possession and ownership are not identical. The Roman jurists even maintained that the custody of a thing by a bailee did not constitute possession, and that the abstraction of the thing from his custody did not give the bailee any remedial right against the abstractor—no more than a servant could claim legal recovery of his master's goods left in his care and stolen by a thief. The modern English law holds just the opposite, as also did the ancient Teutonic law. "Violations of possession give rights of action independently of rights of property. Such rights of action are extensions of the protection which the law throws around the person." (13 Meeson and Wellsby, 581). The Salic law gave the person from whose custody cattle had been taken the sole right of recovery, exclusive even of the owner. To be in possession of a thing one must have it sufficiently in one's control to exclude others; but possession may be symbolical. By entry on any part of an estate an heir will be assumed to be in possession of the whole, and one who buys goods in storage may be put into possession by receiving the keys of the warehouse wherein they are stored, or by the transfer to himself of a warehouse receipt. The essentials of possession are the will and the power to possess and the exercise of both.

"Neither the mere wish to catch a bird out of reach, nor the mere power to take a horse standing unguarded will suffice to put one in possession of the bird or the horse." The will to possess, or *animus domini*, rather than mere physical possession, is "nine points of the law." It is manifested in the largest and the smallest human relations—by a nation, which fights the world to keep a province, down to the individual, who defends property in his hands in the honest belief that he owns it, and the thief, who knows perfectly well he does not. The incidents of ownership are the right to possess, the right to enjoy and the right to dispose of property. The right to possess is lost or suspended by letting, lending, pledging or mortgaging property. The right to enjoy includes the right to the increase—growing timber, accretions of alluvion, the young of cattle, etc. The right of ownership is limited by the State through taxation, the prohibition of obnoxious use, or by taking in virtue of eminent domain; or it may be limited by individuals, as coparceners, neighbors having rights of way, rights of access to water or other easements, or right of support from adjacent soil. The right of disposal includes the right to destroy what one owns. A few kinds of things other than physical may be objects of ownership—patents and copyrights, for instance. Property is either movable or immovable—the distinction between real and personal is not quite the same, though nearly so. Property may be lawfully acquired by purchase, succession or prescription. Gift is a mode of succession. The right of ownership is terminated by the death of the owner. A dead man is not a legal person.

In the foregoing is shown the method whereby scientific jurisprudence prepares its material by formulating the myriads of juristic facts in a relatively small number of statements, capable of orderly arrangements within the compass of a single volume of moderate size. The nomenclature of the science, though an important element thereof, has not always been adhered to. It could have been adhered to strictly only at the sacrifice of popularity in treatment. Clarity seemed more desirable than profundity. It was possible to deal with only one class of private rights, and antecedent rights *in rem*, more specifically rights of possession and ownership, were selected for illustration because they present the fewest difficulties. A very much larger class of private rights than the one discussed are the rights *in personam*. To this class belong all the rights conceded by contract and, though these really partake of the character of antecedent rights, they are never available *in rem* against the world, but always against specific individuals. Under the general title "rights *in personam*" are gathered also all other remedial rights, whether they arise from breaches of contract or out of what the Roman jurists call "obligations *ex delicto*," which our lawyers classify as the laws of torts. A further division of law must still be considered. The rules wherein are defined the rights, whether public or private, which the State will support or protect, constitute the "substantive law." The rules prescribing the modes of aiding or protecting either public or private rights are classed as "adjective law" or procedure. Ju-

dicial intervention may be either preventive, as by injunction, or redressive. Redressive intervention is by far the more frequent mode, and in respect to private rights the redress usually takes the form of indemnity or damages. In some cases, however, the remedy is more direct, as when a nuisance is ordered abated, or the specific performance of a contract is decreed, or a mortgagor is put in possession of the property mortgaged by summary process. Rights of action are extinguished by release, waiver or condonation; by bankruptcy of the person liable; by set-off; by merger, as in the case of the substitution of a covenant or a judgment note for a simple contract—the substantive right is not extinguished, but the right of action on the less solemn evidence of the debt or obligation would be merged. Estoppel by judgment for the defendant, and by prescription or limitation, are the remaining modes of extinguishing remedial rights. The death of the person of incidence, i.e., the plaintiff in an action for tort, not merely extinguishes the procedural remedy, but the right itself. To this there is an exception when death caused by negligence or other tortious act is the ground of action. In such case the right and the remedy pass to the executor or administrator. Remedial rights may be suspended without being lost—as, when an action is pending in a court of concurrent jurisdiction, another court will not proceed with a suit to enforce the same right. Finally there is a private, as well as a public, international law. The questions that arise in this department of the law are mainly jurisdictional. When parties are nationals of, or are domiciled in, different countries a suit may be brought in a court of the country where the plaintiff is domiciled; where the defendant is domiciled; where the object of the controversy is situated; where a marriage, a will or other agreement, whereby a right was created, was performed or made; in a court of the country where a contract was to produce results or of the country where the plaintiff chooses to bring his action. The courts of the situs of the object of a controversy (*forum rei*) have always assumed jurisdiction in such cases. Jurisdiction is declined by the English courts in suits for divorce if the husband is not domiciled in the country, but there is no uniform rule on this subject in the United States. English and American courts will take jurisdiction in actions on contracts no matter where they have been made or where they are to be executed, provided the parties are within reach of their process. More complex than the question of the competency of the court is the question as to what country's law should be applicable in any given case. Some states claim exclusive rights to punish persons of their nationality for crimes, no matter where committed. There is such diversity in the rules that have been applied that a basis for general formulæ can hardly be said to have been laid in this department of jurisprudence. The formulation of the science was practically completed by the Roman jurists, who invented it, in the domain of private law at least. The 'Institutes' of Gaius, whereof those bearing the name of Justinian and produced four centuries later are merely a recension, are still the point of departure for all scientific

studies of the law. Among English writers Jeremy Bentham (1748-1832) was the first to bring really scientific methods to bear on the subject. He was followed by John Austin, Sir Henry Maine and others. Thomas Erskine Holland in his 'Elements of Jurisprudence', which first appeared in 1880, and whose arrangement of the topics and definitions have been followed herein, has set forth the subject in an exhaustive yet very compact form.

STEPHEN PFEIL.

JURUA, zhoo-roo-ä', a tributary of the Amazon rising in the Andes of Peru and flowing northeast through Brazil toward the Amazon, which it joins at Fonteboa after a meandering course of 1,200 miles, about one-third of which is navigable. The country along the greater part of its course is subject to great floods during the rainy season. The vast districts of the upper waters of Jurua and its many tributaries have been little explored; and some of it is still unvisited by white men.

JURY, 12 impartial men, legally competent to act, who, under the sanction of their oaths, determine by their unanimous verdict the innocence or guilt of the accused in a criminal trial, or decide the issues of fact which are contested between plaintiff and defendant in a civil trial.

The jury is the characteristic feature of English or common law, distinguishing it from the systems of continental Europe derived from the law of the Roman Empire. It is peculiar in itself and incidentally it has produced characteristic developments of our law not found in the Roman or civil law systems, of which perhaps the most noteworthy is our law of Evidence. The history of the jury system has been most thoroughly and ably investigated, especially in recent years.

Its function has completely changed. Originally those persons from the vicinity who had knowledge of the subject matter were summoned to court to state, upon their solemn oaths, what the common opinion of the neighborhood was as to those facts which formed the basis of the criminal charge to be tried, or the basis of the right to possession or enjoyment of land which was at issue, which were the typical cases of early days. It seems to have been soon established that 12 substantial men were a sufficient number to determine this question. As the judicial system developed,

courts came to have more extended territorial jurisdiction, and litigation grew more extensive. Attendance of 12 persons acquainted with the facts of each cause to be tried would impose an intolerable burden upon the community, and our forefathers worked out the plan of submitting their legal controversies to the decision of an impartial jury sworn to determine the facts in issue upon testimony given under oath by witnesses summoned by the parties.

Students of English and American history would probably unanimously agree that as a part of our system of civil government the jury has been a valuable institution. There can be no doubt of its educational value, and of its importance in making each freeholder who served on a jury feel that he was individually performing an important public duty. Juries played a conspicuous part in defense of popular rights against attempts at tyrannical exercise of authority by the executive government. In the libel cases of the 18th century the contest was bitterly fought, the judges, under the lead of Lord Mansfield, maintaining that whether a document was libelous or not libelous was a question of law for the court (that is, for the judge) to determine, the jury being limited to finding affirmatively or negatively the fact of publication; while the juries, on the other hand, contended for their right to find general verdicts ("guilty" or "not guilty"). The contest was settled by Fox's Libel Act in favor of the right of the jury to determine the guilt or innocence of the accused.

Students of law differ as to the merits of the jury system. Arguments drawn from the supposed mental inferiority of juries need not be considered, since this is not an inherent defect, and there is no more reason why a community should have inferior jurymen than inferior officials of any other class. But weighty objections of an essential character have been suggested. The chief is as to the requirement of an unanimous verdict, which, it is argued, must constantly produce a disagreement and failure to reach a conclusion, or the sacrifice of opinions conscientiously held by some of the jurors. There is no doubt that this requirement is an essential feature of the jury system as known to English law; it has been expressly so decided by the Supreme Court of the United States which, in interpreting the clause of the Federal Constitution which provides that in civil suits in the Federal courts "the right of trial by jury shall be preserved," has held that this requires the unanimous verdict of 12 men. A small number of the States have modified the system by providing for juries of less than 12, or of verdicts rendered by a vote less than unanimous. When such legislation is not in conflict with the State constitution it is lawful, as is doubtless the provision authorizing the service of women on juries.

Another objection is the doubt as to whether the jury is the best means of arriving at determinations of fact. This controversy has been bitterly fought, one side maintaining that the jury is not fitted, either by training or capacity, to decide fairly and intelligently doubtful questions of fact, and that one of its most important functions, that of assessing damages, is not properly performed, especially where the requirement of unanimity necessarily leads to

compromise verdicts. On the other hand it is argued that the jury, if properly drawn, represents the average intelligence of the community, and that when it does so, no fairer tribunal can be discovered, and not, perhaps, very consistently, that in civil matters control of the case is really in the judge, who by careful instructions can usually so direct the jury as to bring about an intelligent verdict, or, as a last resort, can set aside one which is clearly wrong, and award a new trial.

A verdict of acquittal in a criminal proceeding finally disposes of the charge against the defendant both by the common law and, in this country, by the provisions of the Federal Constitution (and of most, if not all, of the State constitutions) that no person shall "be subject for the same offense to be twice put in jeopardy of life or limb." Doubtless from this arose the doctrine that in criminal cases the jury are judges both of law and fact, which caught the popular fancy, is not without the weight of respectable judicial authority to sustain it, from the time of Junius, who upheld it in opposition to Lord Mansfield, has been a favorite doctrine of popular leaders, and only in recent years may be regarded as finally disposed of. The doctrine was discussed by Chief Justice Mitchell, of Pennsylvania, in a capital case in 1891, and pronounced by him to be "unsound in every point of view, historical, logical, or technical," and in 1895 the Supreme Court of the United States (speaking by Mr. Justice Harlan) reached the same conclusion and held that in the courts of the United States it is the duty of the jury in criminal cases to receive the law from the court, and to apply it as given by the court, subject to the condition that by a general verdict a jury of necessity determines both law and fact as compounded in the issue submitted to them in the particular case. Mr. Justice Gray filed a long and able dissenting opinion concurred in by Mr. Justice Shiras, and in this case, reported in 156 United States Reports (page 51), all the arguments on both sides can be found.

The grand jury is, historically, a sort of representative committee of the people of the district throughout which the jurisdiction of the court extends, charged with the duty of reporting to the court offenses which have been committed which they consider should be inquired into, and persons whom they believe to have committed criminal acts for which they should be punished. Its development into the modern grand jury is not well understood. The highest authorities on our early legal history say of it, "The details of this process will never be known until large piles of records have been systematically perused. This task we must leave for the historian of the 14th century."

The grand jury as an existing institution consists of a number of persons drawn from the same class as the ordinary or petit jurors. At the common law the number summoned was 23. They are sworn to the faithful discharge of their duties, and the court then delivers a charge to them, calling their attention to the duties they are to perform, either generally or with reference to any matters of special public interest falling within their jurisdiction to which the court thinks proper to direct their attention, and they can then proceed to business. All indictments are submitted to them and, according

as they determine, after hearing the prosecutor's evidence, whether they are well founded or not, they endorse them «true bill» or «ignoramus» (or equivalent words). In the former case the accused is held for trial, in the latter discharged. It is the custom for them to make report to the court on such matters as seem to them of public interest and importance, and to make such recommendations as seem good to them. The report made by them of any offense from their own knowledge or observation, without a bill of indictment laid before them, is called a Presentment. See VERDICT.

For the history of the origin and development of the jury, consult Pollock and Maitland, 'History of English Law' (Boston 1899); Thayer, 'Preliminary Treatise on Evidence at the Common Law' (chaps. ii-iv, ib. 1898); Stephen, 'Commentaries on the Laws of England' (Bk. V., ch. xiv); Stubbs, 'Constitutional History of England' (Oxford 1883); Cooley, 'Constitutional Limitations'; Lesser, 'Development of the Jury System' (1893); Forsyth, 'Trial by Jury'; Edwards, G. J., 'The Grand Jury Considered from an Historical, Political and Legal Standpoint' (Philadelphia 1906); Hamilton, T. F., 'Handbook for Grand Jurors' (Albany 1906); Sackett, Frederick, 'Instructions to Juries' (3 vols., Chicago 1908); Train, A. C., 'The Jury System: Defects and Proposed Remedies' (Philadelphia 1910). For a discussion of the merits of the institution under modern conditions which is generally accepted as full and impartial, consult 'The System of Trial by Jury,' by the late Mr. Justice Samuel F. Miller (21 Amer. Law Review, 859). For the origin of the grand jury, Pollock and Maitland, 'History of English Law' (Bk. II, ch. ix, § 4).

JOHN DOUGLASS BROWN,
Attorney at Law, Philadelphia.

JURY, a temporary contrivance employed to replace some part of a ship which has been lost or disabled. The word is supposed to come from the old French *mast d'ajurie* (helping mast); but its origin is uncertain. The terms jury mast, jury rig, jury rudder, jury anchor all designate temporary structures. The word is usually used as an adjective.

JUS GENTIUM, jŭs jĕn'shĭ-ŭm, a term which, in its broader sense, means international law. Among the Romans the «law of nations» was used with a very wide application, including the laws observed by the civilized nations with whom they came into contact, that is, had relations with. It extended not only to diplomatic but also to commercial relationships. At a later period *jus gentium* became restricted to the rules and regulations observed by independent governments in their dealings with each other. See CIVIL LAW; INTERNATIONAL LAW; **JUS NATURÆ**.

JUS NATURÆ, or **NATURALE**, natural law, the principles believed to be common to all minds and necessary to the comfort and progress of humanity. The Romans sometimes confounded the *jus naturæ* with the *jus gentium*, or law of nations (q.v.). The Stoics developed the idea of the *jus naturæ* as an altogether ethical conception to designate the law as it should be for the benefit of humanity as contrasted with the law as it existed with its many imperfections and injustices.

JUS PRIMÆ NOCTIS, the privilege granted to other persons than the husband to cohabit with the bride on the first one or several nights after the wedding. That such a custom existed there seems to be plenty of evidence; but that it was ever a law of tribes, peoples or nations is, at least, unproved. That there was a time in the history of humanity when the marriage custom did not exist and men and women cohabited promiscuously seems almost certain, and it may be that the custom of *jus primæ noctis* was a survival of this more primitive condition of human society. There is considerable evidence to prove that this right was allowed and exacted among certain savage tribes, the favored persons being the high priests and chiefs. In most cases the conditions of society where this privilege prevailed permitted a husband to have as many wives as he could support. In general, as a race advanced in civilization and culture and monogamy became a fixed institution the custom of *jus primæ noctis* became more and more frowned upon. Consult De Labessade, 'Le Droit du Seigneur' (Paris 1878); Schmidt, K. J. L., 'Jus Primæ Noctis' (Freiburg 1881); Westermarck, E., 'History of Human Marriage' (London 1908).

JUS RELICTÆ, in Scots law, the share of the widow in the movable property of her husband after his death, amounting to one-third if there are surviving children or grandchildren and to one-half if there are none. The husband by will could not take this share away from the widow, but by express contract she could accept an equivalent provision. However, if the husband dies insolvent, the creditors must be paid in preference to the widow.

JUSSERAND, zhu's'-răn', Jean Adrien Aubin Jules, French philologist, historian and diplomat: b. Léon, 18 Feb. 1855. He graduated in law and, entering the diplomatic service in 1876, he became legal adviser to the French embassy in London in 1887; Minister to Denmark in 1898; and Ambassador to the United States, 1902-25. He was vice-president of the Historical and Literary Society of France, Grand Officer of the Legion of Honor and Corresponding Fellow of the British Academy. Among his published works are 'Le Théâtre en Angleterre depuis la Conquête jusque aux prédécesseurs immédiats de Shakespeare' (1878); 'Les Anglais au Moyen Age' (1884); 'Le Roman Anglais' (1886); 'A French Ambassador at the Court of Charles II' (1892); 'With Americans of Past and Present Days' (1916); 'Histoire du peuple Anglais' (3 vols., 1895-1909). His 'History of the English in the Middle Ages,' which was crowned by the French Academy, was translated into English under the title of 'English Wayfaring Life in the Middle Ages' (1889) by Lucy T. Smith; as was also his 'Roman Anglais'. In 1913 he published 'Ronsard'; in 1916 'With Americans of Past and Present Days.' He died 18 July 1932.

JUSSIÉU, zhu'sĕ-ē', Laurent Pierre de, a French writer: b. Villeurbanne, 1792; d. 1866. A nephew of Antoine Jussieu and grand-nephew of Joseph, Bernard and Antoine (the elder) de Jussieu, he inherited much of the talent of his illustrious ancestors. After the Revolution of 1830 he became secretary-general of the Seine and in 1839 a member of the

chamber of Deputies. After the fall of Louis Philippe he retired to private life. He was a strong and consistent advocate of general primary instruction and fought for the extinction of illiteracy from among the French laboring classes. He wrote extensively for the public press and published numerous educational works that had wide circulation and extended influence. Among the latter are *Simon de Nantua* (Paris 1818), which has been published many times and in all kinds of editions and translations into several foreign languages; *L'Abbé Gauthier, de Montègre, Moreau de Saint Méry et Mesnier* (Paris 1819); *Le village de Valdoré* (Paris 1820); *Antoine et Maurice* (Paris 1821), which was crowned by the Society for the Improvement of Prisons; *Exposé analytique de l'Abbé Gauthier* (Paris 1822); *Pierre de Giberne* (Paris 1825); *Oeuvres Posthumes de Simon de Nantua* (Paris 1829), which won the Montyon prize of the Academy; *Les Petits Livres du père Lami* (6 vols., Paris 1830-42); *Fables et contes en vers* (Paris 1844); *Cloud Grangambe* (Paris 1854).

JUSTE, zhust', **Théodore**, Belgian historian b. Brussels, 1818; d. there, 1888. He was professor of history at the École de Guerre and member of the Belgian Academy. Among his numerous works are *Histoire de la révolution des Pays-Bas sous Philippe II* (1855) and *la Révolution belge de 1830* (1872).

JUSTEL, zhu-stél', **Christophe**, French Protestant theologian: b. Paris, 1580; d. there, 1649. Secretary to King Henry IV and then to the duc de Bouillon, he was given the task of organizing the library of the University of Sedan, one of the most important libraries of the 17th century. He was the author of *codex canonum Ecclesiae universae* (1610); *le Temple de Dieu ou discours de l'Eglise, de son origine et de l'excellence des perfections de l'Eglise chrétienne* (1618); and genealogies of the noble houses of Auvergne, Turenne and Vergy (1645). His son Henri Justel (1620-1693), was secretary and councilor to the king. Emigrating to England in 1681, he was appointed librarian of the royal library of Saint James's. He wrote *Bibliotheca juris canonici* (1661) and *Recueil de divers voyages faits en Afrique et en Amérique* (1674).

JUSTICE (French, *justice*, Latin, *justitia*), one of the cardinal virtues of the Greeks and the Romans. It seems to have been a personification of social and moral duty, that is, of the moral law, which might or might not correspond with the temporal law. Justice was the highest idea of the correct bearing of all the members of a community to one another and of the law of the state to the individuals constituting its population. An action or condition might be legally right and morally wrong, as the holding of slaves, the torturing of prisoners taken in war, the exactions often made by the ruling classes upon the peasantry, the persecution of the members of one sect by those of another. The customs, conditions and laws of states and communities change with the changing times; but justice remains the same in all ages and among all peoples, since it is based neither upon man's conception of what justice really is nor upon his administration of what he

calls justice, but upon the intrinsic and inherent rights of all, born of the social equality of all before the law. Thus the ancient conception of justice, carried to its natural conclusion, was purely democratic; and among the philosophers it maintained this complexion even in the most autocratic periods in the life of Greece and Rome. But as the conception of justice as one of the graces was largely academic, autocracy had little to fear from it. Yet to this persistent personification of justice later democracy owes much of its ability to state concisely and clearly its position as champion of the rights and obligations of humanity as a whole. The conception of absolute justice as the securing to humanity, security of possessions, freedom of action, and the right to realize expectations insofar as these do not conflict with similar rights and privileges of the community as a whole is not new. It is as old, at least, as the struggle of the upper and the lower classes in Rome, and probably much older; but it has remained for the present age to analyze more closely the attributes, functions and field of action of ideal justice, which, from the very fact of its being ideal, is never fully attainable, since there is and cannot be any such a thing as absolute justice, the administration of which would presuppose absolute perfection in the human race. Justice, as an ideal virtue (or as the personification of such), is therefore an aim in the administration of the law to be continuously striven for with the hope of getting constantly nearer to it; but also with the moral certainty of never ultimately reaching it in this world. See also **ETHICS**.

Legal, a term used in two senses, one of which makes it equivalent to the justice meted out by the administration of the law, and the other of which considers it as the equivalent of the moral right in a question at issue, irrespective of the attitude taken by the law itself or its administrators. A decision may be, and sometimes is, legally correct, but morally unjust. In this latter sense there is a survival of the classical idea of justice personified as a cardinal virtue. Legal justice, in adjudging a case, is required to take into consideration all the facts and circumstances in the case and their bearing upon one another and upon the individuals and rights and other matters concerned in the legal decision or decree. All this must be done in conformity with the law and its particular bearing on the case. The object of the law is to do justice to the individual while protecting the community as a whole. Through its inflexibility the law may occasionally work a hardship upon the individual. This is because it is finite and the ever-changing conditions of humanity are infinite. The tendency of the whole body of the law is gradually to provide a fuller and freer administration of justice to the members of all classes of society. See also **LAW**; **JURISPRUDENCE**.

JUSTICE, a play by John Galsworthy first produced at the Duke of York's Theatre, London, England, February 21, 1910. The play, a tragedy in four acts, concerns a forgery by William Falder, a junior clerk in a solicitor's firm, of a check for £90 to enable him to help Ruth Honeywill and her children escape from her sadistic, drunken husband. Falder is found out and ultimately sentenced to three years penal

servitude. Because he feels that he cannot accept the platitudinous kindnesses of the prison's governor and doctor, Falder becomes bitter and morose. When he is at last released, he is unable to hold a position after other employees discover his past record; and, having once more seen Ruth Honeywill, whose life has been equally miserable, he throws himself upon the mercy of his former employer. Only at the price of foregoing his relationship with Ruth, the only hope that sustained him in prison, can Falder regain his employment. Ruth agrees to the bargain, but Falder, unable to face further bitterness, commits suicide.

The play presents clearly one of Galsworthy's most prominent and passionate themes—human justice versus the law. A young lawyer, Hector Frome, pleads the side of humanitarianism, declaring that Falder was so emotionally disturbed that he was incapable of rational action. The judge refuses to accept the power of emotion as empirical evidence and concludes, "The Law is what it is—a majestic edifice . . . I am concerned only with its administration." The true tragedy of the play is that the protagonist is unable to deflect from himself the impersonal force of the law that, inexorably, frames his destiny.

JUSTICE, Department of, in the United States, an executive department of the government, the head of which, the Attorney General, is appointed by the president and confirmed by the Senate. He is a member of the cabinet and under the provisions of the Act of Congress of Jan. 19, 1886 as amended June 25, 1948, he ranks sixth after the vice president, in the line of succession to the presidency in case of a vacancy in that office. His salary is \$22,500 a year.

The office of the Attorney General was established by the Judiciary Act of September 24, 1789 which provided for the federal courts. However, the Department of Justice was not organized into a separate department and placed under the Attorney General until June 22, 1870 when, by Act of Congress, the establishment of the department brought under his direction and control all United States district attorneys and other counsel employed on behalf of the United States; gave him supervisory power over United States marshals, and secured uniformity in the handling of legal matters and the trial and prosecution of cases.

The Department of Justice is the largest law office in the world, with a staff of more than 31,000 persons throughout the nation and its territories, and the Attorney General is the federal government's chief law officer. He is legal adviser to the president on any questions of law which may arise in the conduct of administrative affairs; is required by statute to give advice and opinion to the head of any executive department of the government, when requested; directs special matters relating to national defense; directs 30 penal institutions, ranging from federal jails and camps to penitentiaries; supervises the work of United States attorneys and United States marshals; approves abstracts of title for lands acquired by the government for national parks, slum clearance projects, post office sites, and such wartime installations as airfields, camp sites and naval bases; supervises all litigation in the courts, civil or criminal, to which the government is a party; represents the United States in legal matters generally; appears in the Supreme Court in

cases of exceptional importance, and provides special counsel for the United States in certain cases or when the character of the interests involved requires such action.

The chief assistants to the attorney general are the solicitor general; the deputy attorney general; nine assistant attorneys general, in charge respectively of divisions entitled Criminal, Antitrust, Lands, Claims, Tax, Customs, Executive Adjudications, Office of Alien Property, and Administrative; the Director of the Federal Bureau of Investigation; the Director of the Bureau of Prisons, and the Commissioner of Immigration and Naturalization. There are two departmental boards, the Board of Immigration Appeals and the Board of Parole. In addition, there are 94 United States attorneys and 94 United States marshals.

Second in rank is the solicitor general, directly in charge of all government litigation in the Supreme Court of the United States. He assists the attorney general in the execution of his duties and, by a special provision of law, performs all such duties in case of a vacancy in the office of attorney general, or in his absence. The deputy attorney general is the third-ranking official of the department and has charge of the general administration. He assists the attorney general in the formulation of major departmental policies and programs, and acts as liaison with the Congress in connection with legislation in which the department is interested.

The Criminal Division is charged with the enforcement of federal statutes, and with cases involving criminal offenses punishable under federal laws.

The Antitrust Division is principally concerned with the elimination of restraints in interstate and foreign commerce which are in violation of the Sherman Act and other antitrust statutes.

The Tax Division handles, on behalf of the federal government, the prosecution and defense of all criminal and civil suits relating to taxes, except customs taxes and taxes on beverages.

The Lands Division handles legal matters arising in connection with the public domain; conducts litigation relating to Indian affairs; passes upon the validity of title to real property which the United States proposes to acquire and conducts the necessary condemnation proceedings; serves as public counsel in the courts in proceedings under various conservation acts.

The Claims Division handles civil suits and claims for and against the government and its officers, including matters pertaining to patents, copyrights, civil bankruptcy, and admiralty.

The Executive Adjudications Division handles executive orders, recommendations upon legislation, the preparation of opinions and like matters; handles conscientious objector cases; coordinates departmental matters concerned with United States participation in the United Nations and related international organizations.

The Customs Division is invested by statute with responsibility for the interests of the government in all matters of reappraisal and classification of imported goods and of all litigation incident thereto.

The Office of Alien Property exercises the authority delegated to the attorney general as successor to the alien property custodian under the Trading with the Enemy Act and Executive orders issued pursuant to that act to seize, administer and sell property in the United States, its

territories and possessions owned by nationals of foreign countries.

The Administrative Division is charged with the responsibility for business management of the department handling personnel matters, budget and accounting, services and procurement, records and files and general office services, including those relating to the offices of the United States attorneys and marshals.

The Federal Bureau of Investigation (q.v.) has general charge of investigation of offenses against the laws of the United States, except counterfeiting, narcotics, and other specifically assigned laws.

The Bureau of Prisons has charge of federal penal institutions and prisons, and is vested with the control and management of all such institutions except those maintained by the Army and the Navy.

The Immigration and Naturalization Service administers the immigration, alien registration, and nationality laws relating to the admission, exclusion, detention and deportation of aliens, the registration of aliens, and the naturalization of aliens. The Board of Immigration Appeals reviews for final decision certain appeals from orders of the commissioner of immigration and naturalization in alien matters.

The Board of Parole grants and revokes paroles of federal prisoners.

The United States attorneys are charged with prosecuting crimes and offenses against the United States, and the United States marshals have the same powers in their judicial districts in executing the laws of the United States as sheriffs in the States have in executing state laws.

Other duties handled by the Department of Justice include supervision of the revision and codification of the criminal and penal laws; the recommendation of judicial appointments; the administration of the national bankruptcy laws; and investigations and recommendations in connection with applications for executive clemency.

JUSTICE OF THE PEACE, minor magistrates in English-speaking countries appointed to keep the peace in the jurisdiction to which they are assigned. In England these officials are appointed by commission of the crown, by act of Parliament, or by charter, with well-defined duties "to keep all ordinances and statutes for the good of the peace, and for the good rule and government of all the people."

In the United States, in some cases justices of the peace are appointed by the executive, in others they are elected by popular suffrage. Their powers and duties differ somewhat in the several jurisdictions, but in general they have jurisdiction in minor civil and criminal cases, their powers being expressly defined by statute. They also conduct a preliminary inquest or examination of offenders charged with felony and hold such for the upper court, bail being allowed in nearly all cases except murder.

Consult Baylies, E. (ed.), *Bender's Justices Manual of Civil and Criminal Law and Practice for Justices of the Peace and Police Justices in New York* (3d ed., New York 1913); and Haines, E. M., *Practical Treatise on Powers and Duties of Justices of the Peace and Police Magistrates* (16th ed., Chicago 1905).

JUSTICES' CLERK, an officer in England who assists the justices of the peace. He is always a lawyer and generally has much influence owing to the fact that many of the justices

of the peace fall short of the requirements of their office in so far as familiarity with the law is concerned. Though the justices' clerk is not looked upon as a public officer, he has a certain legal standing and is permitted to collect fees for the business of his court.

JUSTICIAR, jüs-tish'i-är, in English history, the chief political and judicial officer of the Norman, and later, kings until the 13th century.

The chief justiciar was the highest legal officer in the kingdom; he was president of the Court of King's Bench and of the exchequer, and all other courts were under his authority. In the absence of the sovereign from the kingdom, he was *ex-officio* regent. His office was one of the highest in importance and influence.

JUSTICIARY, High Court of, the supreme criminal court of Scotland, having authority to try all crimes except those excluded by statute. It is said that decisions of this court are not subject to appeal or review, but it is probable that the House of Lords could hear an appeal on a question of law. The lords of judiciary hold circuits twice a year, there being three circuits, the northern, southern and western.

JUSTIFICATION. Under this head fall many intricate problems toward the solution of which theology contributes in its discussions of that very abstract subject: Grace. The term explains itself and no matter where it is applied the fundamental idea is the same and means pardon, acquittal, readjustment, restoration. In divinity it aligns itself very closely with atonement and imputation (q.v.). No matter how opinions may differ as to its nature, there is agreement on this, that justification may be defined as that process whereby fallen man is forgiven his transgression and restored as much as is compatible with his changed condition to the state and privileges which were his before his disobedience. All Christians admit that this reprobation came and comes through Christ. It has been and is the dueling ground of the two religions which have most largely divided the world. Relating to this topic the attitude of Catholics and Reformers is antipodal. The leader of Protestantism is clear in his affirmation. Catholic teaching and dogmatic enunciation is not one whit less positive. The question is cardinal for both. In the process of justification the agent is God through Christ; the object, man. The crux of the difficulty is how does God effect it and how is man affected by it. Is righteousness imparted or infused? Luther and his disciples consider justification as imputed to the individual. This restored condition is something outside himself, with which he has nothing to do. "The justified man is not only acquitted as innocent but regarded as having perfectly obeyed the law in the person of Christ. There is to him the nonimputation of sin and the imputation of righteousness." "The faith doth not shut out repentance, hope and the fear of God in every man justified, but it shutteth them out from the office of justifying." (Church of Eng. Homily.) It becomes imperative for every attempt to solve this problem to consider man's will and divine grace. Luther, apprehensive lest by any concession he might minimize the value of the latter, denied free will in human nature and asserted that by

faith, a strong faith in the special mercy of God, and by that alone man was justified. To use his own words (Cap. 2 ad Galat.): "Faith, without and antecedently to charity, justifies." Faith does not cause justice in any way—it is not the cause but the organ of justification. Man is in no way intrinsically affected by it and its essence is in the imputation of the justice of Christ. Calvin referring everything to the elect teaches that faith once received can never be lost, that is, a man justified is so forever, independently of his actions. Baptism is not necessary for salvation. The predestination of the elect is their salvation. The breaking up of Protestantism into the many denominations which now exists necessarily brought variants in this doctrine, yet it may be put down as the generally accepted formula. The idea was not new if we are to credit what Saint Augustine says (*De fide et oper.* 14) wherein he remarks that even in the time of the apostles some, not understanding, concluded from the epistles of Saint Paul that faith alone was necessary for salvation, whereupon Peter, James and Jude wrote to instruct the faithful that such was not the meaning of Saint Paul's words. The Catholic theology has been reproached with emphasizing the worth of man's works to the detriment of divine grace. The doctrine of Catholics is that Pope, councils, the fathers, the doctors and the apostles, and hence Christ, affirmed that justification is of a nature to require, except in infant baptism, good works on the part of man to ripen unto salvation. Faith alone will not suffice. It is gratuitous and unmerited save through Christ. It is supernatural. It is a created gift and when bestowed, as in justification, the recipient becomes inherently just, not accidentally nor vicariously. Initial justification is infused in baptism, which sacrament incorporates the one baptized into and with the mystical body of Christ, his church, and lives by grace, which is living of the life of Christ as an engrafted branch lives the life of the vine. In this incorporation, since Christ is Son of God, is founded the adoption and heirship of the baptized as sons of God. What is said of baptism is held concerning justification as administered by the other sacraments. It is not contended that by it sin is blotted out "historically," that is, sins committed do not cease to be part of man's past, but are remitted inasmuch as they are provocative of God's anger and as truly pardoned as if the sinner had never rendered himself guilty of them; they are effaced in the moral order and in the physical order the stains they leave on the soul are washed out, stains which make the soul displeasing to God. Natural powers, no more than the Mosaic law, suffice for salvation which is to be reached through Christ only and for which in the adult some disposition of his own contributing is requisite. Moreover, while by justification sin is remitted, this remission calls for an interior disposition and renovation of soul, whence justification is a quality superadded to the soul to which it is inherent and therefore is more than transference or imputation. The fruits of justification are the rendering of man pleasing to God, just, beautiful, like unto Christ, a living member of Christ and God's son by adoption, heir to the kingdom of heaven, a participant in the divine nature (*Consorts divinæ naturæ*) and capable of condign merit.

When a man is justified there is within him a special indwelling of the Holy Spirit. There is no understanding with accuracy these different theories of justification save by a thorough inquiry into the views of theologians on the very abstruse questions of the incarnation and grace.

PATRICK A. HALPIN,
Late Professor of Ethics, New Rochelle College.

JUSTIFICATION (Latin, *justificatio*, justification), a defense in a civil or criminal action showing that the defendant was legally justified in doing what it had been admitted in court, he did do, and that, therefore, the alleged cause of action is not legally sufficient. All the facts to be used in the justification must be legally set forth as such and as constituting an answer to the action; and the conclusion to be drawn therefrom depends upon those having the legal power of decision in the case. The presentation of facts of justification is common in cases of accusation of crime. A man accused of homicide may plead that the act was committed in self-defense, or in the execution of the law by an officer of the law or his aids or assistants. A policeman may plead that he killed a man to prevent his escape or because he showed fight, or because he refused to surrender when called upon to do so. An automobile driver may defend himself against an action for homicide on the ground that he had taken all possible care, that he had not exceeded the speed limit and that the death of the party in the case was due to his own carelessness, or to some accident or condition over which the accused had no control.

JUSTIFICATION, or PROOF BY SURETIES, is a term employed in the legal action taken by the said sureties on a bond or undertaking to prove that they possess the requisite legal property qualifications.

JUSTIN (MARCUS JUSTINIANUS JUSTINUS), a Latin historian, who probably lived at Rome in the 2d or 3d century A.D. He made an epitome of the general history of antiquity by Trogus Pompeius, a native of Gaul, who lived in the time of Augustus, and whose work is no longer extant. This epitome, although incorrect in detail, is valuable for its compressed reproduction of the old histories. The first English version, by Goldingé, appeared in 1574.

JUSTIN I, Byzantine emperor: b. 450; d. 1 Aug. 527. He was a peasant of Dacia and rose from the rank of a common soldier to the commander of the imperial guard, and on the death of Anastasius I in 518 became emperor. He relegated the civil administration to the quæstor Proclus, and between them the empire was governed with a fair amount of success. Consult Bury, 'Later Roman Empire' (1889).

JUSTIN II, Byzantine emperor: d. 5 Aug. 578. He succeeded his uncle Justinian I in 565. In 574 his difficulties led him to abdicate in favor of Tiberius, captain of the guard. During his reign northern Italy was conquered by the Lombards, and the Persians took pos-

ession of several Asiatic provinces of the empire.

JUSTIN MARTYR (sometimes known as **JUSTIN THE PHILOSOPHER**), a Christian apologist and martyr: b. Flavia Neapolis, Shechem, Palestine, 100 A.D.; d. Rome, 165. He began active life as a professor of Platonic philosophy, and subsequently embraced Christianity without abandoning Platonism. He was a staunch adherent of the Christian party in the empire, a keen confuter of Gnosticism and an unwearied defender of the Christian doctrine of the Logos. In every department of Christian dogma he stood foremost as a teacher. Eventually he went to Rome (150 A.D.) and during 10 years of activity he wrote his *Apology*, with a supplement known as the *Second Apology*, addressed to the Emperor Marcus Aurelius. He afterward had a controversy with a Jew, an account of which is embodied in his *Dialogue with Trypho the Jew*. He was put to death for his faith, and his day on the Church calendar is April 31.

JUSTINA, second wife of Valentinian I (364–375); mother of Valentinian II. She was successful in her efforts to restore her son to the throne. Her influence was not powerful enough to prevent Valentinian from accepting baptism at the hands of Ambrose, in spite of her sympathy with the Arians and her antipathy for Ambrose.

JUSTINIAN I (in full **FLAVIUS PETRUS SABBATIUS JUSTINIANUS OF FLAVIUS ANCIUS JUSTINIANUS**, surnamed **JUSTINIAN THE GREAT**) emperor of the East: b. of Gothic peasant parentage at Tauresium, Illyricum, 483 A.D.; d. 565. Patronized by his uncle, Justin I, who, from a Thracian peasant, had become emperor, he so flattered the Senate and dazzled the people that he was made consul, and took the title of *Nobilissimus*. On the death of his uncle, with whom he had latterly shared the imperial power, he was proclaimed emperor, and married an actress named Theodora. During his reign the party disputes of the Greens and the Blues became so violent, that in his attempt to quell the tumults the emperor's own life was in jeopardy, and a great part of Constantinople was destroyed by fire in 532. Aided by his generals, he was able subsequently to restore to the Roman Empire a part of its former possessions, as when Belisarius in 523 and 529 defeated the Persians, and achieved victories in Africa, and when Narses put an end to the Ostrogoth rule in Italy. Turning his attention to the laws, Justinian commissioned 10 learned civilians to draw up a new code, and the result was the *Corpus Juris Civilis*, or body of civil law. See also **CODE**.

Justinian took great interest in building cities, fortifications and churches; among the latter he rebuilt the church of Hagia Sophia at Constantinople. To maintain his public munificence he oppressed the people with taxes.

Consult Baker, G. P., *Justinian* (London 1931); Burnet, J., *Aids to Justinian* (London 1936).

JUSTINIAN II (surnamed **RHINOTMETUS**), Byzantine emperor: b. 669; d. December 711. He succeeded his father, Constantine IV, in 685, and was deposed and banished for his cruelty, by his general, Leontius, in 695. He regained his throne 10 years afterward, and was overthrown by Philippicus Bardens and killed.

JUTE. Two species of plants yield the jute of commerce, *Corchorus capsularis* and *C. olitorius*. They are tall annuals, 8 to 15 feet high, the fiber being produced in the bark, and known as bast fiber. Supposed to be indigenous to India, where the species grows wild, cultivated to a limited extent by other Eastern people, as the Chinese and Malays, *C. olitorius* is naturalized in all parts of the tropics to the shores of the Mediterranean. Jute was introduced into the United States by the Department of Agriculture in 1870, and was found to be adapted to cultivation along the line of Gulf States from Texas to South Carolina. It should be noted that the China jute of commerce is not jute at all, but a similar bast fiber derived from *Abutilon avicennae*. This plant was experimented with in New Jersey in the 1890's, though unsuccessfully, the fiber being wrongly called American jute. In India many kinds of jute are recognized, all being known under local trade names, which are unimportant here. The value of jute as a textile lies wholly in its fineness, silkiness and adaptability to spinning, low cost of the raw material being another advantage. Several American fiber plants classed as weeds yield a better, whiter and stronger fiber, though they cannot be utilized for economic reasons. The fiber of jute, compared with other textiles, is quite inferior, the bleached filasse soon losing its whiteness and becoming a dingy, dirty brown, while its strength rapidly deteriorates. Nevertheless it may be regarded as one of our most useful fibers—too useful in certain directions, as its fineness and luster, as well as cheapness, adapt it most readily to purposes of adulteration, and as it takes colors easily it can be stained or dyed to imitate many of the other fibers, though such frauds are not difficult to detect. The uses of the fiber are many, and it enters into all classes of textiles from woven fabrics of great beauty to coarse ropes and bagging. The fiber is also made into all kinds of cordage, either honestly, as jute, or as an adulterant, considerable quantities having been used in past time for the manufacture of binding twine. The commercial use of jute dates back over a century, the first exports in noticeable quantity (about 18 tons) having been made, to England, in 1828. By 1850 the exports had reached 30,000 tons; in 1871, 310,000 tons. Both high and low lands in India and Pakistan are employed for this culture, although the larger part of the crop is produced upon the "churs" or lands of recent alluvial formation along the rivers. In the United States river bottoms would be favorable for the culture, in localities of the South.

Jute: fruit and plant; natives cutting it; as used for bailing material.

Twelve to fifteen pounds of seed is the average quantity sown per acre. In India the yield is about 400 pounds of fiber per acre. Little or

no cultivation is given the crop save thinning out where overcrowded. The plants mature in three months and the crop is harvested with a bill hook and sickle when the flowers have begun to show and the seed has not yet appeared. If the plants are allowed to seed, the fiber will be stronger and heavier, but harsher. The stalks are sorted as to length into three sizes, and made into bundles that one man can carry. The extraction of the fiber is accomplished by steeping the bundles in stagnant water, covering them with jungle plants, clods of earth or cow dung. When the retting is completed the ryots go into the water waist deep, and by thrashing the surface of the water with the stalks, assist the loosening of the bark with the fingers, and the fiber is separated. Afterward it is wrung out and hung upon lines to dry. It is next made into drums of 70 or 80 pounds. If for exportation, it is pressed into bales of 300 pounds or over. Jute is treated by processes similar to those employed in turning flax into linen. Special machines are used for the various processes, such as heckling, spreading, drawing, roving and spinning.

World War II had an adverse effect on jute production. The 1934-1938 prewar average of world production was 1,875,000 metric tons, while the largest postwar production amounted to only 1,568,000 tons in 1947-1948, and the 1948-1949 production dropped to 1,391,000 tons, nearly all of which originated in India (368,000 tons) and Pakistan (994,000 tons). The world shortage stimulated an increase of about 12 per cent in the 1949-1950 acreage of the crop in Pakistan and about 30 per cent in India's acreage. Most of the world's export of jute is shipped from these two countries as fiber or fiber manufactures. The United States importation in 1948 amounted to about 75,800 tons, compared with a prewar average of 73,200 tons. A United States Department of Commerce preliminary estimate of the price of jute and jute butts imported into the United States in 1948 was \$348.99 per long ton (2,240 pounds), and of jute burlaps, 25.9 cents per pound. The total value of jute and jute manufactures imported into the United States in 1949 was \$141,995,000, and of the same products exported, \$5,473,000 (*Statistical Abstract of the United States 1950*).

JUTES, or **JUTS**, one of the Low German tribes who shared in the occupation and conquest of England in the 5th century A.D. They came from the European continent but from just what part of its western coast is not certain. It has been customary to identify their original habitat with that of modern Jutland. It is contended, however, by some investigators that the Jutes spoke quite a different tongue dialectically from that of the people of modern Jutland, which is Danish. An attempt has been made to identify the Jutes with the Frisians and thus to reconcile the apparently conflicting statements of Bede, who states that the tribes invading England were Angles, Jutes, and Saxons; and of Procopius who asserts that they were Angles, Saxons, and Frisians. Modern research has attempted, with more or less satisfactory results, to identify the Jutes with the roving Low German bands who, spreading over the North Sea and adjacent islands and British coast to the west, took possession of much of the south of England, parts of the Lowlands of Scotland, the Shetland, Ork-

ney and Hebrides islands. Efforts have also been expended in attempting to prove the persistence of the Jute type in southern England and the Lowlands of Scotland today, as distinct from other English types, existing or supposed to still exist from the days of the Germanic and other tribal invasions, occupations and conquests.

Consult Ripley, W. Z., *Races of Europe* (London 1913).

JUTLAND, jüt'länd (Danish JYLLAND), peninsula. Denmark, bounded on the north by the Skagerrak, south by Schleswig-Holstein province, west by the North Sea, and east by the Kattegat. Its total area, including the surrounding islands, is 11,411 square miles. The coast line is much broken by fjords, the Lim Fjord insulating the north section of the peninsula.

The country is generally low-lying, and presents little picturesque scenery. The minerals are confined to iron, limestone, and marble. The name is derived from the nation of Jutes who dwelt on the peninsula (see JUTES). Jutland was in early times an independent kingdom, but was conquered by Gor the Old, king of Denmark, who died ?940.

In World War I, the great naval Battle of Jutland (q.v.) was fought off the west coast of the peninsula. In World War II the peninsula was invaded by the Germans in 1940; they occupied it until the end of the war. Pop. (1945) 1,672,235.

JUTLAND, Battle of, one of the great sea fights of history, also known as the Battle of the Skagerrak, was fought in the North Sea on May 31-June 1, 1916 between the British and German fleets. According to the German Admiralty, the High Seas Fleet was bent on "an enterprise directed northward"—probably to support Hindenburg in the Baltic. There is little reason to believe that it was the German intention to challenge the entire, overwhelming naval power of Britain. Admirals Reinhard Scheer and Franz von Hipper encountered the Battle Cruiser Fleet under Admiral David Beatty, who was steaming north to rejoin the Grand Fleet of Sir John Jellicoe. The battle opened at 3.30 p.m. and lasted throughout the night. The British Grand Fleet in this engagement comprised 37 capital ships, 8 armored cruisers, 26 light cruisers, and 80 flotilla leaders and destroyers, commanded by Admiral Sir J. R. Jellicoe. Admiral Scheer's German High Seas Fleet numbered 27 capital ships, 11 light cruisers, and 63 flotilla leaders and destroyers. The action was fought about 75 miles west of the Danish coast, and ended with the flight of the German ships. Though British casualties far exceeded the Germans' in ships and men, the net effect of this action was to destroy German hopes of challenging British sea power.

JUTURNA, Fountain of, a spring at the foot of the Palatine Hill, Rome, which tradition says was named by Jupiter after a water nymph with whom he was in love. The spring or fountain was just south of the celebrated temple of Castor and Pollux, where it is said that these two appeared, in 496 B.C., to announce the defeat of the Latins at the hands of the Romans at the Battle of Lake Regillus. The spring, though neglected and partially filled up, is still active. (See CASTOR AND POLLUX; NYMPHS.) Consult Hülsen-Carter, *The Roman Forum* (Rome 1906); Macaulay, *Lays of*

Ancient Rome; Virgil, Aeneid, XII; Wissowa, G., Religion und Kultur der Römer (Munich 1912).

JUVENAL, jōō'vē-n'l (full name DECI-MUS JUNIUS JUVENALIS) Roman satirist (60?-140 A.D.). The evidence for his life, while fairly abundant, is of so dubious and conflicting a character that it is impossible to reconstruct the poet's career with any certainty. After the accession of Trajan in 98 A.D. he began to publish satires in which, with extraordinary force and indignation, he described the conditions of life at Rome, for the most part as they existed during the reign of Domitian (81-96). He was apparently an intimate friend of Martial, who mentions him in three epigrams (VII, 24 and 91; XII, 18), though the two men were widely different in their outlook on human life. See also JUVENAL'S SATIRES.

JUVENAL'S SATIRES, the 16 satires of the Roman poet Juvenal (q.v.), the product of his maturer life. None of them was composed with certainty before the year 100 A.D. For the most part they are poems of moderate length, seldom exceeding 300 lines. Several are much briefer.

The *Satires* deal with the social defects of the times, and cover a fairly extensive range of topics. The first satire gives the poet's excuse for writing; everyone else is composing, why not he! Moreover, whoever contemplates the social degeneracy of the day must naturally feel impelled to write in arraignment of existing conditions and tendencies.

The second satire deals with a phase of sexual perversion more characteristic of antiquity, probably, than of modern times. The ninth has a similar theme.

In the third, Juvenal deplores the fact that Rome is no longer an endurable place of residence to an honest man. Only he who will lie, cheat, murder, can win advancement in the Rome of Juvenal's day. Foreigners—especially Syrians and Greeks—have invaded the capital in such numbers that it is no longer Roman but Greek. Houses are so poorly constructed that they often fall in ruins. Rent and provisions are high. Conflagrations are common. The noise of traffic has become unbearable, while theft and assault are the order of the day.

The fourth satire touches upon the degeneracy of the Senate. In the reign of Domitian, this body had so deteriorated in dignity that Juvenal represents senators assembling in a council of state to discuss the fitting way of serving an unusually large turbot at the imperial table.

The fifth satire deals with the trials and indignities of clients or parasites. A large class of dependents had sprung up in the empire, men often of respectable antecedents but now in reduced circumstances. These clients danced attendance on the great men of the day, and in return received a small daily dole of money and an occasional invitation to their patron's table. The studied discrimination of which they are made the object on such occasions is the special theme of the satire.

The sixth satire deals with the license practiced by a certain class of the women of the day. The seventh bewails the unfortunate lot of literary men. Poets, historians, orators, rhetoricians, teachers alike are all ill paid, neglected, and unhappy. The eighth satire arraigns the pretensions of those who pride themselves on their descent. Virtue alone, says the poet, is true nobility. Noble birth should impose responsibilities, but the nobles of Juvenal's day go on the stage and appear as gladiators in the arena.

The tenth (probably the most famous of the whole collection) is on the vanity of human wishes—the desire for power, for money, for long life, for beauty. The emptiness of all these is illustrated by examples. Shall we then pray for nothing? Yes, a sound mind in a sound body (*mens sana in corpore sano*), a contempt for death, and a willingness to endure toil.

The eleventh satire exalts the simple life and country joys. The twelfth is aimed at the legacy hunter. The thirteenth returns to the general degeneracy of the times and pictures the torments of a guilty conscience. The fourteenth emphasizes the contagion of a bad example, especially in the home, and exhorts parents to be worthy of imitation by their children. The fifteenth aims to illustrate Egyptian barbarity by an account of an Egyptian custom. The sixteenth (a fragment) enumerates some of the advantages of the soldier's life and status.

Juvenal lacks the urbanity of Horace. Conscientious of his own rectitude, he is unscathing in his denunciation of the faults of others. At times he almost deserves the name of scold. Yet his purpose was lofty and he not infrequently rises to great nobility of sentiment and expression.

CHARLES E. BENNETT.

JUVENILE DELINQUENCY, a relatively modern concept referring to the criminality of nonadult persons and to certain forms of behavior on their part which, within the context of different cultures, are regarded as socially deviant. The concept has gained general acceptance only in the 20th century, following the creation in 1899 of what is now acknowledged as the world's first juvenile court in Cook County, Ill. Previously, all offenders, regardless of age, were dealt with according to the nature of the offenses committed by them, such treatment being usually punitive. Juvenile court philosophy drew attention to the individual as someone in need of care and protection in view of his immaturity. The offence committed by him was subordinated to this consideration.

History.—In the history of the administration of criminal justice, among the early attempts to give differential treatment to persons of tender years, mention may be made of the 10th century monarch, King Athelstan of England, who enacted a law that "man shall not slay none younger than a fifteen winters' man." On the whole, however, a juvenile who had committed an offense was dealt with as an ordinary criminal, and it is not surprising that in the 18th and 19th centuries, when the prevailing criminological theories favored the imprisonment of offenders, juveniles as well as adults were imprisoned.

Among historical precedents which led to the birth of the concept of juvenile delinquency, two deserve brief mention. Of significance in the first place are the early attempts made to separate juveniles as a different category from adults in connection with imprisonment. Thus, as early as 1704, Pope Clement XI founded in Rome a center for the correction of "profligate youth" so that they might be taught to become useful citizens. In 1756, the Marine Society of England established a special institution for the reforma-

tion of juvenile offenders, and other institutions, some of which were known as "ragged schools," (q.v.) soon followed. By 1825 New York City had established a "house of refuge" for juveniles which was the predecessor of the American reformatory school.

The full force of this movement, however, was not felt until 1854 when the Reformatory Schools Act was passed in England, this legislative recognition giving the necessary impetus for the spread of the idea of separate institutional treatment for juveniles. By the end of the 19th century, a substantial number of reformatory schools had been established in a number of countries; under British administration, for example, Burma, India, and what is now Pakistan had a Reformatory Schools Act in 1870 and established special juvenile institutions. The development of this movement was coincident with the humanitarian outlook of the Western world at that time, and it emphasized that juveniles should be reformed instead of punished.

Concurrent with this development, attention was drawn to the need for separate procedures in the adjudication of juvenile cases by the courts. It had been a long-standing practice in Anglo-Saxon law to accept the proposition that children under a certain age, usually seven years, were incapable of distinguishing whether their actions were right or wrong. Associated with this concept was the rebuttable presumption that persons between the ages of 7 and 14 years could discern the import of their actions. The courts decided this issue, and it was understandably difficult for them to define with precision what constituted discernment. With the growing acceptance of the idea of reforming juvenile offenders, there was a stage when the courts resorted to reformatory treatment for those juveniles who appeared to be capable of reform because they did not seem to be unduly vicious, on the presumption that they had acted without discernment. Those appearing to be depraved and incapable of reform, on the other hand, were sentenced to ordinary prisons on grounds that they had acted with discernment. Thus, the offense committed by a juvenile was beginning to play a less important role than the judgment of whether he was suitable for reformatory treatment. As a result of this, the need for specialized court procedures came to be increasingly felt.

Early efforts to establish separate adjudication procedures in juvenile cases were known, among others, in a Swiss ordinance of 1862, and in Boston, Mass., where charges against children were heard separately in 1869. The State of South Australia also experimented with such procedures before the end of the 19th century. It was not until July 1, 1899, however, that the first juvenile court in the world was established as a result of a juvenile court law prepared by a committee of the Chicago Bar Association. The formulators of this law advocated that the state should provide adequate measures for the care and treatment of juvenile delinquents instead of regarding them as common criminals. The importance of this approach was that the principles which were associated with chancery practice (particularly *parens patriae*, the idea of state responsibility for looking after socially handicapped children) came into what had previously been the realm of purely criminal procedure. The juvenile court movement has spread throughout the world since that time.

Definition.—Any discussion of juvenile delinquency raises two fundamental questions: Who are the juveniles? and What constitutes delinquency? In answer to the first question, the most common criterion employed is chronological age. The vast majority of the laws dealing with juvenile delinquency throughout the world provide an age limit beyond which special procedures and measures meant for juveniles are inapplicable. This age limit varies not only from one country to another, but also from state to state within a country as in the case of the United States. In Europe, the variations range from 16 years in Belgium to 21 years in Sweden. The majority of European countries, however, fix the age limit at 18 years. Jurisdictions in the United States have fixed the limit with considerable variation, ranging from 16 years in states like New York and Connecticut to 21 years in such states as California and Arkansas. Here again the majority of states have fixed it at 18 years. In Latin America, the range is from 14 years in Haiti to 20 years in Chile, with the majority of the republics fixing it at 18 years. The limit in Asia ranges from 15 years in some countries like Syria and Lebanon and most of the Indian states to 20 years in Japan.

In addition to the upper age limit, most laws employ a lower age limit below which criminal responsibility, in accordance with common law tradition, cannot be attributed to juveniles. The majority of countries throughout the world accept either seven or eight years as the lower age limit, often in conjunction with the rebuttable presumption concerning discernment, although there are some countries where it is higher, apparently the highest being found in Finland where the lower age limit is 16 years.

The second question as to what constitutes delinquency is more difficult to answer. The word *delinquency* is derived from the Latin *delinquere* meaning "neglect," and it may be interpreted in broad terms as neglect on the part of juveniles to conform to the accepted standards of behavior in a given society. There is general agreement, among the vast majority of the countries of the world, that an antisocial act which in their respective laws is defined as a criminal offense constitutes delinquency when committed by a juvenile. Beyond this, however, various meanings are attributed to the term. In the United States, for example, there are over 30 forms of behavior which are regarded as delinquency. They include incorrigibility, addiction to drugs, disorderliness, vagrancy, and sexual irregularities, to mention just a few. What is delinquent behavior in one state may not be so in another. According to English common law a boy under the age of 14 years is presumed to be incapable of having sexual intercourse and he cannot, therefore, be found guilty of a sex offense in England. In the United States he may be considered a delinquent. The trend in the mid-20th century is toward the broadening of the concept of delinquency with the consequence that it cannot be defined with any precision. The apparent increase in juvenile delinquency is due partly to the recognition of a greater number of behavior forms as delinquent. This is true not only for the highly industrialized and more developed countries but also for the so-called less developed countries where detribalization and shift of population to urban areas have brought juveniles face to face with impersonal law, which regards

delinquent certain forms of behavior which were customarily considered acceptable conduct in the juvenile's previous environment.

Juvenile Courts.—The juvenile court is the pivot around which revolves the machinery for the treatment of juvenile delinquents. Juvenile courts are found in every region of the world, but in the Far East and the Middle East the movement to organize them is still in its early beginnings. Even where they exist in considerable numbers, the tendency is to have them in the bigger cities, and adequate expansion of this movement is yet to come.

The individualized justice which juvenile courts are supposed to offer cannot be obtained without adequate and appropriate services to achieve this end. Such services are required from the time that a juvenile has committed an offense to the time when he is returned to the community.

The arrest of juvenile delinquents is usually carried out by the ordinary police in most countries of the world. In this connection, however, administrative or legislative provisions are often quite specific that (1) the processing of juvenile cases should be undertaken with a minimum of delay; (2) restraints such as handcuffs should be used sparingly on juveniles except in instances where the consideration of public safety justifies such procedures; and (3) the fact of a juvenile's arrest should be reported as soon as possible to his parents or guardians and to the local probation officer. It is not possible, however, to adhere strictly to these provisions in some countries, and the need has been increasingly felt for employing police who are specially trained to deal with juvenile cases. There is a growing tendency to use special police in juvenile cases in many countries of the world. A large number of the cities in the United States have established special divisions or bureaus in their police departments, such as the Juvenile Aid Bureau of New York City. In Europe, special juvenile police are found in the cities of such countries as Austria, Belgium, France, the Netherlands, the Scandinavian countries, and the United Kingdom. In some cases, women police perform duties connected with juvenile cases. In Latin America there are juvenile police in Argentina, Brazil, and Mexico. With regard to Asia, special juvenile police units are found in Manila, the Philippines, the State of Bombay in India, and in Japan. The functions of special police include the examination of juvenile cases with a view to reaching a decision on whether a juvenile should be released after caution or under certain prescribed conditions, or sent up for hearing and adjudication by a juvenile court.

In the matter of keeping a juvenile under detention after his arrest prior to the disposition of his case by a court, the tendency is distinctly towards providing specialized detention facilities. Such specialized places are known variously as detention homes (United States), remand homes and remand centers (United Kingdom), and reception homes or depots (Australia and New Zealand). Two purposes are served by having special facilities: (1) a juvenile is segregated from adult offenders, thus minimizing the dangers of contamination, and (2) an opportunity is provided to study the social background and psychological attributes of the juvenile. It should be noted, however, that some juveniles are still sent to adult detention facilities in most countries. On

the one hand, juveniles who have committed serious offenses or who, in the opinion of the arresting authorities, are unruly or dangerous are normally sent to adult facilities for reasons of public safety. On the other hand, many countries still lack special detention facilities, and even when they are available they are usually concentrated in the cities. In the United States, for example, juveniles are still sent to adult detention places for reasons other than that of public safety.

Very often, special detention homes make provisions for the observation of juveniles through social, psychological, and psychiatric services. Such observation usually occurs before the court has reached a decision on measures of treatment to be applied to a juvenile, as ideally the court should use the results of the observation for its decision. In the United Kingdom, however, there are classifying homes which conduct observation on juveniles after a court has ordered institutionalization with a view to finding the most suitable institution for this purpose.

The juvenile court itself requires an adequate and qualified staff so that effective measures for the rehabilitation of juvenile delinquents can be applied. Unfortunately, a large proportion of the juvenile court judges in many countries are still not specialists in the juvenile field, but serve concurrently as judges of adult courts. There must also be sufficient staff to conduct social investigations of juvenile cases.

Throughout the world, the procedures of juvenile courts are marked by an informal atmosphere achieved through closed hearings, the presence of police in mufti, and generally by dispensing with legalistic formalities. Where British precedents are followed, the use of the words "conviction" and "guilty" is avoided. Information detrimental to the juvenile concerned is usually not allowed to be published by the press.

Some countries, notably the Scandinavian, do not employ juvenile courts. They use instead administrative bodies known variously as child welfare boards or child welfare committees, in which laymen and specialists participate, to deal with cases of juvenile delinquency. In these countries, the prosecuting authorities decide whether a juvenile should be considered by an ordinary court or a child welfare committee. The decision is usually based on the seriousness of the offense involved. Not being courts, the child welfare committees achieve a maximum of informality in dealing with juvenile cases and have the advantage of avoiding unnecessary traumatic experiences for the juveniles who are concerned.

Treatment of Juvenile Offenders.—One of the most frequent measures of treatment applied by juvenile courts is probation. A juvenile delinquent is placed under the supervision of a probation officer whose duties are to befriend and assist him with a view to his rehabilitation. Probation is essentially social case work because it is the task of the probation officer to find regular employment for his charge and assist in his family problems whenever necessary. Trained probation personnel is a prerequisite for the success of this measure. In most countries where probation is used for juveniles, the tendency is to employ trained personnel on a full-time salaried basis. In England, for example, the Home Office offers a training course for probation officers. In the State of Victoria in Australia, on the

other hand, probation officers are volunteers selected from all walks of life.

In some European countries such as France and Belgium, a measure analogous to probation known as "supervised freedom" is practiced. The tendency in these countries is to employ full-time personnel although in the past volunteers have played a more important role.

Other measures of treatment in freedom include foster-home placement for those juveniles who have no homes or whose homes are inadequate. In spite of the emphasis on rehabilitation in the treatment of juvenile delinquents, many countries still employ measures such as corporal punishment, the rehabilitative value of which is doubtful.

Next to probation, juveniles are most often sent to institutions for rehabilitation. The modern juvenile institution is a greatly improved version of the early reformatory school, but it is a far cry from the ideal establishment which sends back to the community a rehabilitated juvenile whose adjustment to normal living conditions is easy and smooth. Juvenile institutions offer agricultural or industrial training to juveniles and usually provide opportunities for the development of social responsibility in their inmates. There is a tendency to have the cottage type of establishment in preference to the congregate type of institution so that juveniles may be classified according to different criteria, and individualized treatment given. It has also been realized that individualized treatment does not consist in treating a juvenile apart from other human beings but in relation to them. In the United States, the State of New Jersey has led the way in experimenting with group therapy methods in the rehabilitation of juvenile offenders.

In view of the fact that the institutional setting offers an artificial atmosphere which in many instances is unrelated to actual conditions prevailing in the outside community, aftercare is a very important element in the treatment process. Comparatively speaking, aftercare services throughout the world are underdeveloped. In this connection, England and some states of India, such as Bombay and Madras, have experimented with aftercare hostels where juveniles are placed prior to their final release. Such hostels offer a less abrupt adjustment for juveniles in returning to their communities. Otherwise, aftercare usually means supervision by a parole officer. As in probation, the importance of having well-qualified supervisory personnel in this respect cannot be overemphasized.

Prevention of Juvenile Delinquency.—On the basis of the fact that the number of juveniles passing through juvenile courts in the United States increased from 300,000 in 1948 to 435,000 in 1953, the Children's Bureau has estimated that over 750,000 juveniles will be dealt with annually by the juvenile courts in 1960. In this situation, even if treatment services are improved quantitatively as well as qualitatively, the need for preventing juvenile delinquency is more vital than ever. Prevention is of two kinds: general prevention by the provision of social welfare measures including adequate housing, education, and so on, for the healthy growth and develop-

ment of children; and specific prevention by the provision of detection and treatment services for juveniles who develop behavior problems which may result in delinquency if left untreated. It is commonly accepted by the authorities in the field of juvenile delinquency that general prevention, however desirable, cannot by itself automatically solve the problem of juvenile delinquency. Specific measures, therefore, are essential in any preventive policy and program. Such measures consist of child and family guidance services and an educational system in which teachers are alert to the problems of their students. In the United States, the most promising type of preventive program seems to be community coordinating councils. Such councils are constituted by community welfare agencies whose activities have a bearing on child welfare and juvenile delinquency, and they coordinate the activities of the component organizations so that unnecessary overlapping and duplication of effort can be avoided. Instead of being sent to the courts, juveniles are referred to appropriate agencies for treatment when they present behavior problems. The councils also plan recreational activities for juveniles in the communities concerned.

The causes of juvenile delinquency are multiple, and while research undertaken by such authorities as Eleanor and Sheldon Glueck in the United States has contributed to a better understanding of the factors involved, further research is needed. The effectiveness of preventive programs cannot be judged until more knowledge is gained with respect to the causes of delinquent behavior. Research must go hand in hand with the organization of preventive programs so that the latter can be improved as greater knowledge is gained.

International Action.—Since 1948 the United Nations, taking into consideration that juvenile delinquency is causing concern in many countries of the world, has been implementing a program of international policy and action on juvenile delinquency. Apart from publishing comprehensive studies on the problem in different regions of the world, the organization has also given requesting governments technical assistance in the form of regional seminars, experts, fellowships, and scholarships.

RICHARD PAW U.

JUXON, jūk's'n, William, English prelate: b. Chichester, Sussex, England, 1582; d. London, June 4, 1663. He was bishop of London from 1633 to 1649 and attended Charles I on the scaffold in the latter year. At the Restoration he was made archbishop of Canterbury.

K The 11th letter of the English alphabet, and in the western European alphabets generally that have *j* (inserted after *i*), but the 10th letter in the Latin alphabet (which had dropped *θ* before *i*). Actually the letter is superfluous in English, since it carries no value that is not also borne by *c*. Yet the English written language has *k* not only finally (*hulk*) and medially (*akimbo*, *ankle*, *token*, *awkward*, *pumpkin*), but also initially, especially in a large number of borrowed words such as *Kaaba* (Arabic *ka'bah*, "building," from *ka'b*, "cube"), *kaiser* (German), *kaleidoscope* (Greek), *kaolin* (Chinese *kao-ling*, "high mountain," especially one which was an important source of China clay), *kolinsky* (Russian, from the local name *Kola*), *kumiss* (Tatar, "fermented mare's milk"), *kyle* (Gaelic *caol*, "strait, narrow channel," between the sea and a lake), *kraken* (Norwegian, a legendary sea monster). Occasionally it is useful to distinguish two different words, such as *celt*, "axhead" (Latin *celtis*, "chisel") but *Keltic* (κελτικός), though the latter spelling doubtless has been influenced by German 19th century scholarship. However, the number of words that show initial *k* is small in English compared with those that begin with *c*. In German, on the other hand, it is *k* that is favored for native words, the writing *c* (frequently pronounced like *s*, that is, *ts*) being reserved for borrowed words, for example, *Cicero* (tsi'tsero), *Citat*, *Concept*; whence the writing with *s* as in *Zentrum* (as well as *Centrum*), *Konzept* (now more common than *Concept*). The pronunciation *ts* generally occurs before front vowels (*e*, *i*, *y*, *ö*, *ä*), but not always consistently (*Encyclopädie*, or *Enzyklopädie*, despite Greek κύκλος, the modern compound having reached the German language through French).

English shows initial *k* before *n* where *kn* is native or stands initially in words borrowed from other Germanic languages (especially Scandinavian and Dutch), though *k* is no longer pronounced, for example, *knee*, *know*, *knight*, *knit*. The *k*, which was still heard as late as the 17th century (as in modern German), usually represents an Indo-European *g* (compare *know* with Latin *gnosco*).

In Slavonic alphabets of Greek origin *k* also appears (12th in the Cyrillic alphabet, 11th in modern Russian). It is soft when followed by *i*, *e*, *ě*, *ja*, *ju*, or *b* (usually transliterated); otherwise it is hard. The Slavonic languages also have spirants that arose from an ancient *k*-sound, but these are regularly represented by distinct symbols (Old Church Slavonic *desŕb* meaning "ten"; Greek δέκα). Palatalization is frequent in English also (*kirk* in Lowland Scots, *church* in English) and hence pairs like *bake* and *batch*,

make and *match* have arisen with the alternation *k* and *tsh*.

The numerous modern English writings of the *k* sound are mentioned in the article *C*, and need only illustration here: *ck* medially and finally after old short vowels (*ticket*—but *etiquette*, properly "label," a word of Germanic origin, related to *stick*, which has reached English twice, at two different epochs, from French; *pick*, *back*). Final *ic* formerly was written *ik*, *ick*, *ique*, as well as *ic*, but modern spelling has only *ic* (*static*), except in recent loanwords like *critique* (compare *critic*). The writing *qu* appears in words taken from French (*quay*, *conquer*) and sometimes has influenced the pronunciation as well (*banquet*, *quote*; but *marquis*, *marquetry*, *marquee* still have the *k*-sound, at least in good standard usage). Words borrowed from Greek show *ch* (pronounced like *k* in English): *archangel*, *chaos*, *epoch*.

Though *k* may vary phonetically, according to the position of the accompanying vowels in the mouth, such distinctions are merely phonetic, not phonematic. The same is true of the variations of aspirated *k* (as in *kin*), unaspirated (as in *skin*), or unreleased (as in *doctor*). Distinctions of juncture, as well as of the length of the *k*-sound, mark off *black cat* and the like from *black at*, as they do in *night rate*, *nirate*, and *dye trade*.

The original Semitic symbol for *k* (11th in order, though the corresponding symbol is now 14th in the South Semitic Ethiopic, 22d in Arabic), like its name (Hebrew *kaph*, whence Greek *kappa*), is said to have denoted "bent hand"; but little trace remains of this, even in the oldest known forms of the letters (Cretan *Υ*, Moabite *Υ*); and *κ* or *Κ* is quite ancient. The practice, common in Italic alphabets, of writing the thorns in curved form (*κ* and *ϰ*) and then detached from the upright stroke (*ϰ*) contributed to the identification of *K* and *C* in the Latin alphabet; the former was retained only in a few words of religious or legal significance, which were usually abbreviated, as *K.* or *Kal.* for *Kalendae* (the calendar being controlled by the priests), *k(alumniae)*, *k(awsa)*, and the proper name *K(aeso)*.

For bibliography see the article *A*. See also *ALPHABET*.

JOSHUA WHATMOUGH.

K AS A SYMBOL. It has numerous significations, according to the connection in which it is used. Thus, for instance, *K* in chemistry stands for kalium or potassium. In heraldry and titular honors it stands for knight, as for example, *K.C.B.*, Knight Commander of the Bath; *K.G.*, Knight of the Garter. In the expression

O. K. the K stands for correct or right, in sense at least, whatever be the derivation of the expression itself. K2 is a sign sometimes used to represent Mount Godwin Austen, while Ka (q.v.), in Egyptian mythology, represents the spirit of the dead. In the Middle Ages, K was used with Roman numerals as a symbol for the number 250, and K as a symbol for 250,000.

KA, *kä*, the spirit of the dead, the second self, which formed a very important part of the religious belief of the ancient Egyptians. Each Egyptian was thought to possess his own particular *ka*, which constituted the spirit of his life in the future world where all the inhabitants, whether earthborn or heavenborn, possessed each his *ka*. To this rule not even the gods were exempt, the Creator of the universe and of men being as much dependent upon "his second self" as earthborn mortals. Every human being, while on earth, according to Egyptian belief, possessed two spirit beings, the *ka*, which remained in the future world, and the *ba*, which accompanied the body on earth and deserted it at death. The *ba* was thought to be the earthly being or soul of man; and the root form of the word and its signification are suggestively like the form and use of the Indo-European root word for being or to be.

The Egyptians carried this idea of relation of time to existence to a conclusion that legitimately followed their belief in the divine character of their sovereigns. They represented their king as possessing, while on earth, both a *ba* and a *ka*, ever present in his person. Being of earth, the sovereign must, while on earth, possess his *ba*, or second earthly person; but being, at the same time, the heavenborn child and the representative upon earth of the divine power, and not having relinquished his heavenly or future-world estate, he necessarily also had to possess his *ka*, without which he could not retain his future world connections.

The kings of Egypt possessed several names, one of which was known as their "ka" or "banner" name. This signified that they were the representatives on earth of Horus. Every Egyptian sovereign prepared his own monumental tomb and provided for the perpetual performance, at stated periods, in his Ka chapel, of mortuary services supposed to be necessary to maintain the power and influence of the deceased in the future world, and perhaps even his spiritual existence. Nobles and people of wealth generally followed the example of the king, while similar services were performed for the deceased of humble rank by his direct descendants. Thus it was a great misfortune for an Egyptian, in the lower walks of life, to die without leaving a son behind him to perform for him these pious offices.

The *ka* seems to have, in the popular belief, descended from the heavenly regions to become the guardian companion through life of certain favored beings who were neither gods nor sovereigns, though they would appear to have acquired godlike qualities. They seem to have been the forerunners of the saints in the more modern religions, to whom were accorded preferential places in the future world on account of their earthly virtues and divine accomplishments.

The mystical and imaginative Egyptian doctrine of the *ka* and its interest in the affairs of the individual together with its relation to the *ba* exercised a strong influence on early Christian

religious thought and the development of the religious dogma of the soul. John's description of the Holy Ghost might have been the last Egyptian definition of the *ka* as the indwelling divine principle whose presence saved the soul. This is essentially the doctrine of the *logos* in its highest development. Both the *logos* and the *ka* came ultimately to signify a saving, divine principle. From this to the conception of the *ka* in mortal principle or soul was but a step, which had been already taken in Egypt before Christianity had put in its appearance. See also BOO OF THE DEAD; EGYPTIAN RELIGION AND SOCIOLOGY.

A., *Development of Religion and Thought in Ancient Egypt* (New York 1912).

KAABA, *kä'bä*, **CAABA**, or **KAABEI** properly a quadrangular structure, but a name particularly applied to a celebrated temple at Mecca. The name is especially given to a small oratory in the temple in the center of a large space surrounded by galleries. It is an irregular cube, 40 feet long, 33 feet in width, and about 50 feet in height. This is the point toward which the prayers of all Moslems are directed.

In a corner (the southeast) fixed at a height of five feet from the ground is the famous black stone, believed to be one of the precious stones of paradise, and to have been brought by the angel Gabriel to Abraham, when he was constructing the Kaaba. Although its authenticity is very much in doubt (it has been stolen, burned and broken), it is an object of profound veneration to the pilgrims who resort to the sacred city.

The temple of the Kaaba is older than the time of Mohammed, previous to whom it was the Arab pantheon, containing the nation's idols. The prophet destroyed the idols, but permitted the most characteristic form of worship to remain—the tawaf, or sevenfold circuit of the sanctuary. In the prophet's day the outer walls were covered by a veil of striped cloth. A broad band of these coverings is embroidered with inscriptions from the Koran. The door as well as the post and lintel is of gilt silver. Modern description of the interior do not always tally, a difference probably due to the difficulty of observation. Thirteen silver lamps hang between the two pillars. A silver-plated door opens on a staircase leading to the roof. The caliph Mahdi spent lavishly on the decorations and in beautifying the place of prayer around "the Ancient House." The temple was completely restored in the 16th century. See also MECCA.

F., *Die Chroniken der Stadt Mekka* (Leipzig 1857–61); Snouk Hurgronje, Christiaan, *Mekka* (The Hague 1888–89); Grimme, Hubert, *Mohammed* (München 1892); Souhby, Saleh, *Pèlerinage à la Mecque et Médine* (Cairo 1894); Wellhausen, Julius, *Skizzen und Vorarbeiten* (Berlin 1897); Huart, C. L., *Histoire des Arabes* (Paris 1912–13).

KAALA, *kä-ä'lä*, the highest peak on Oahu, Hawaiian Islands. It is part of the Waialeale Range, and attains an altitude of 4,030 feet.

KAALUND, kó'lōon, Hans Vilhelm, Danish poet: b. Copenhagen, June 23, 1818; d. there, April 27, 1885. He studied painting and sculpture, and wrote poetry at the same time. But his success in the latter so far surpassed his achievements in the former that he decided in 1838 to make literature his life work. For 20 years, however, he published poems with just enough success to warrant his continuing with the prospect of ultimately achieving the success he so much desired and had so earnestly worked for. In 1858 a collection of his best poems *Et Foraar (spring)* written to the date of publication, was received with warmer welcome than had been given to previous editions of his works. In 1875 he published a drama *Fulyia*; and two years later, another volume of poems, *En Efteraar (A Second Spring)*.

KA'B IBN-ZUHAIR, kăb'ib-'n-zōō-hīr', an Arabian poet contemporary with Mohammed, and thus flourished in the 7th century. He was the son of a poet of some note, Zuhair ibn Abi Sulma' a ul-Muzani. All the members of the family became converts to the preaching of Mohammed, except Ka'b, who was finally outlawed on account of his hostility to the latter. Later on he became reconciled to the prophet, with whom he seems to have become a favorite. One of the most famous of Ka'b's poems is a eulogy on Mohammed, beginning *Bānat Su'ad*, composed in 630 A.D.

KABALE UND LIEBE, one of the earliest dramas of Johann C. F. von Schiller, published in 1784. It has been translated into English under the title of *Intrigue and Love*.

KABARDINIAN AUTONOMOUS SOVIET SOCIALIST REPUBLIC, autonomous republic, Soviet Russia, Europe, situated on the northern slopes of the Caucasus Mountains, with the Georgian SSR on the south and southwest, the Cherkess Autonomous Oblast on the northwest, Stavropol Kray on the north, and the North Ossetian ASSR on the east, with an area of 4,600 square miles. The territory consists of three separate sections: the mountainous terrain in the south containing some of the highest peaks in the Caucasus Mountains—Dykh Tau (17,085 feet), Shkara Tau (17,040 feet), and Koshtan Tau (16,875 feet); the mountainous slopes of the Caucasus in the central region, with well-developed forests and livestock raising on the grassy slopes; the Kabardinian lowlands to the north, supporting the majority of the population on its fertile black earth. The last section has a favorable climate and raises wheat, maize, millet, vegetables, and hemp, and numerous orchard crops.

The land is drained by the Terek and its tributaries and is administered from the capital city of Nalchik. Industries include fiber, fruit-canning, and wine-distilling plants, flour and oil pressing mills, and starch factories. There is some mining, principally of molybdenum, in the mountainous tracts, and there is considerable lumbering and hydroelectric power development. The capital city produces food and wood products and clothing, and is a resort center, particularly for mountain climbers.

Ethnically the land before 1943 was divided into two principal nationalities, the Kabardian (forming about 60 per cent of the population) and the Balkarians (16 per cent), both Mohammedan; however, since 1943 the Balkarians have

been deprived of their nationality and resettled for having supposedly been sympathetic toward the Germans during World War II. Russians and Ukrainians make up the remaining nationalities.

Under Russian rule since 1825, this district has had a swift-changing history since its formation in 1921 as the Kabardinian Autonomous Oblast in the Russian Soviet Federated Socialist Republics. The following year additional territory inhabited by the Balkarians was added and the name changed to Kabardino-Balkar Autonomous Oblast, and in 1936 the district became an autonomous republic with an area of 4,747 square miles. When the Balkarians lost their nationality in 1943, the principal Balkar district of the republic was ceded to the Georgian SSR and the name of the republic changed to its present heading. In 1944, additional territory was ceded to the North Ossetian ASSR. The republic was occupied by the Germans for a short period during World War II. Pop. (1947 est.) 300,000.

KABUL, kă'bōōl, city, Afghanistan, capital of the country and of the province of Kabul, situated at the western extremity of a spacious plain, in an angle formed by the approach of two ranges of hills, and situated (with the exception of a modern garden suburb) on the right bank of the Kabul River, which is spanned, in or near the city, by several bridges. It is a place of great strategic strength, and stands at a height of 5,895 feet above sea level. It has a delightful summer climate, but the winter is severe. Since the eighties of last century great improvements have been effected in the city, and under the enlightened rule of Abd-er-Rahman Khan (died 1901) important industries were introduced and electrical power developed under European tutelage. The city now has cotton and wool mills, a cement plant, and food processing and canning factories. Good highways have also been constructed, and a local railway has been built. The mosques are spacious and commodious and the town is an important center of trade with India and central Asia. In the way of advanced education, there are three civilian colleges and one military college here. A government mint and arsenal are also located here.

History.—Kabul has had a stirring and eventful history. It was made capital of the Mogul Empire under Baber in 1504, and for two centuries (1526–1738) was under Mohammedan rule from Delhi. It was captured by Nadir Shah in 1738, and his successor, Ahmad Shah, founded the Durrani Dynasty. The city was taken by the British in 1839, and three years later was the scene of the capitulation of British forces who, guaranteed safe conduct to the frontier, were brutally massacred, only one man out of a total of 16,000 soldiers and camp followers reaching safety. In retaliation the city was again occupied by British troops, and on evacuation partially destroyed by them. It afterward became the center of a dynastic struggle between rival claimants to the throne of Afghanistan. In 1879 the British resident and his staff were massacred, and this was followed by Gen. Frederick S. Robert's march on the city, and occupation of it for a year. Pop. (unofficial estimate) 300,000.

KABUL, a river in Afghanistan and India which rises on the southern slopes of the Kohi-Baba Range, at an altitude of 8,400 feet above sea level. It is about 360 miles in length at its

junction with the Indus at Attock, West Punjab, Pakistan. It supports considerable commerce carried on in small boats and rafts. On its shores are Kabul and Jalalabad. Its main tributaries are the Kunar and the Swat rivers.

KABYLIA, kâ-bî'li-â or kâ-bî'l'i-â, a mountainous coastal region, Algeria, in Alger and Constantine departments, and extending from the lowlands near Algiers east to the area about Philippeville. It is divided by the valley of the river Oued Soummam into two parts, Great Kabylia and Little Kabylia. The former has a dense population, namely of Berbers, subsisting off the rugged terrain, which includes the Djurdjura Range, by raising olives on the mountain slopes, and figs, wheat, tobacco, and grapes in the valleys. The chief trading city is Tizi-Ouzou and the main port is Bougie.

Little Kabylia, which includes the Babor Mountains, is Algeria's greatest producer of cork. It has deposits of lead, iron, zinc, and copper which are relatively unworked. Its main port is Djidjelli.

The natives are a fierce Berber tribe called Kabyles; their religion is Sunnite Mohammedan; and their language is their own, although they have no written script. These natives were among the last in Algeria to surrender to the French.

KACHHI, kâch'hê, or **KACH GANDAVA**, division, Pakistan, in northeastern Kalat State (now part of the States Union), Baluchistan, consisting of a dry, low-lying plain of sparse population, bounded on the north, west, and northeast by the Central Bahui Range, and having an area of 5,330 square miles.

The plain is watered by several seasonal mountain streams, including the Nari and Bolan, none of them navigable, and wheat, rice, and cotton are grown here, mostly for local consumption. Although there are no major industries save those of native handicrafts (carpets, leather goods, and palm mats), the region is noted for producing fine horses and camels.

The natives are 92 per cent Moslem and their chief villages are Lahri, Bhag, and Gandava. Pop. (1951) 86,112.

KACHIN STATE, kü-chîn', constituent unit, Union of Burma, situated in northern Upper Burma in a mountainous tropical region known as the Kachin Hills, and bordered on the north by China and Assam. The state has an area of 33,871 square miles and was formed in 1947 under the new Burmese constitution from the states of Bhamo and Myitkyina. Its fertile valleys are drained by the Mali and Nmai rivers, both headwater streams to the Irrawaddy River, and the upper reaches of the Chindwin River. The main agricultural products include rice, vegetables, opium, sugar cane, cotton, and tobacco. There are famous jade mines near Mogaung and amber is mined along the upper basin of the Chindwin.

The capital city is Myitkyina, and it and the other principal towns of Bhamo, Maingkwan, Sadon, Mogaung, and Putao are well served by a railroad from Mandalay, ample river navigation, and the Ledo Road, built during World War II under Gen. Joseph W. Stilwell's troops. It was through the Kachin Hills in 1944 that an Allied force of Chinese, American, and British

Colonial troops drove the Japanese out of Burma.

Ethnically, Kachin State has three main groups: the Thais, representing 30 per cent of the population; the Burmese, 25 per cent; and the Kachins, 20 per cent. The last people, from whom the state was named, are a fierce, warlike, Tibeto-Burmese tribe and have caused uprisings in the past (1892, 1895) that necessitated the sending of Indian troops to quell them. Nearly half of the tribe resides in another state (Shan State) and they comprise a total of over 175,000 people. They are also known as Jinghpaws or Singphos, and their raids and plundering still cause concern.

The northern part of Kachin State has a generally undefined boundary, and parts of it are still claimed by China. Pop. (1941) 427,625.

KACZKOWSKI, kâch-kôf'skî, **Zygmunt**, Polish historical writer and novelist: b. Bereznica (Galicia), March 2, 1825; d. Paris, Sept. 7, 1896. He showed himself an ardent revolutionist in the outbreak of 1848. In 1861 he was imprisoned for treasonable writings, but was liberated on his agreeing to leave the country. Going to Paris he continued his literary work there for a considerable time. After his return to Vienna he gave all his attention to literature, which was the gainer thereby.

His extensive historical studies helped to give true local color, incident, and truthfulness to his brilliant historical novels, among which are *Caton* (1851); *Bitwa o Choroszanke* (1852); and *Grob Nicczui*, 6 vols. (1853-1855). His novels of modern life include *Dziwoziona* (1855); *Murdelio* (1855); *W'nuczeta* (1855); *Bajronista* (1857); *Sodalis Marianus* (1859); *Graf Ras* (1879); and *Olbrachtowi rycerze* (1889).

KADELBURG, kâ'dêl-bôörk, **Gustav**, Austrian actor and dramatist: b. Budapest, July 26, 1851; d. Berlin, Sept. 11, 1925. Making his debut in Vienna in 1868, he went to Berlin three years later, where he remained 12 years, gaining in power and reputation, after which he returned to Vienna as stage manager of the Volks Theater only to make his way back to Berlin, where he found life more congenial. He successfully toured the United States for two seasons.

He was the author of many farces and comedies and collaborated in the writings of others and translated dramatic works from English into German.

KADESH-BARNEA, kâ'dêsh-bâr'nê-â, or **KADESH**, Palestine. The name of a place mentioned in Numbers 13:26; 20:1; and 33:36 as a stopping place for the Children of Israel on their way to Palestine. For 38 years it was the center of the activities of the budding nation. Many fateful affairs occurred here, including the death of Miriam, the sister of Moses, the serious rebellion of Korah, and the disobedience to divine command of Moses himself. From this place the spies were sent to make their survey of Palestine, and here their report was made. Then the march was resumed from this point. The exact site of Kadesh-Barnea has been the subject of much conjecture and considerable controversy. It was not until 1842 that anything like certainty was attained. Rev. John Rowland, then residing at Gaza, was directed to the spot by some Arabs. It remained for H. Clay Trumbull to establish

the correctness of this site, which he did in 1883, publishing his results in *Kadesh-Barnea* (London 1884). It is located about 50 miles south of Beer-sheba, opposite Mount Hor on the east, and the coast of Philistia about Gaza on the West.

KADIKÖY, kă-dî-kü'ê (ancient CHALCEDON), city, Turkey, situated opposite Istanbul, of which it is a district and a suburb, on the east side of the entrance to the Bosphorus on the Sea of Marmara. Kadiköy is just south of Üsküdar (Scutari) and serves as a rail terminus and a commercial center. For history see CHALCEDON. Pop. (1950) 66,540.

KADMONITES, kăd'mön-its, a Canaanite tribe whose land was promised by Jehovah to Abraham's seed (Genesis 15:19). They are thought by some to be synonymous with the Bene Qedhem (Children of the East) mentioned in Genesis 25:1-6.

KADUR, kû-dōor', district, India, in western Mysore on the Deccan Plateau; bordered on the west by the Western Ghats which rise to elevations of over 6,000 feet. Its area is 2,775 square miles. The capital is Chikmagalur (pop. 1941, 15,383). Other chief towns of the district are Tarikere and Birur. Drained principally by the Tunga and Bhadra rivers, headwaters of the Tungabhadra River, it is an important coffee growing center. There are also large cardamon, tea, and pepper estates in the western foothills. Sugarcane, millet, cotton, and coconuts are also cultivated; rice is grown on terraced farms. Forest products include bamboo and sandalwood. Kadur iron mines supply the ore for the iron and steel milling plant at Bhadravati. Pop. (1941) 358,290.

KADUR, town, India, in Kadur district, west central Mysore, 20 miles northeast of Chikmagalur, the district capital. It is a center for millet, cotton and tobacco. A handicraft is biri (cigarette) making. Pop. (1941) 4,484.

KADZHARAN, kû-ju-rän', town, USSR, in southern Armenian SSR, 15 miles west-southwest of Kafan, a rail spur terminus. In the Zangezur Range of the Lesser Caucasus at an elevation of 8,000 feet, it was developed as a mining center for copper and molybdenum ores after World War II. It has a concentrating plant. Pop. (1947) over 500.

KAECHON, kă'chün', town, Korea, in southern Pyongan Province, northern Korea, 40 miles north-northeast of Pyongyang. In a coal and iron mining area, it had an important graphite plant at the outbreak of the Korean War. Pop. (1944) 18,381.

KAEMPFERT, kēmp'fērt, Waldemar Bernhard, American editor and author: b. New York City, Sept. 23, 1877. Educated at the City College of New York (A.B. 1897) and New York University (I.L.D. 1903), Kaempfert served from 1897 to 1911 as assistant editor of the *Scientific American*, becoming in the latter year managing editor. In 1915 he became editor of the *Popular Science Monthly*, a position he held for five years. In 1927-1928 he was science editor of the *New York Times*, and after spending three years in Chicago as the director of

the Museum of Science and Industry there, he returned to his former position on the *New York Times*, where he has been since. In his daily and Sunday articles for the *Times*, he has covered everything from crystal radio sets to flying saucers. His books include *History of Astronomy* (1910); *The New Art of Flying* (1911); *Science Today and Tomorrow* (1939); and he has edited *A Popular History of American Invention* (1924).

KAESONG, kă'i-sōng', or **KAIJO**, kî-jō (formerly SONGDO), city, Korea, in Kyonggido Province (formerly Keiki Province), about 45 miles north of Seoul (Keijo). An ancient town it is noted chiefly for its production of ginseng roots, a dubious medicinal herb highly prized in the Orient. Under Japanese rule and home rule, the production of ginseng was a government monopoly, running into millions of dollars' worth a year. The other product noteworthy of Kaesong is its celadon porcelain ware, a sea green porcelain treasured by connoisseurs.

Kaesong was made the capital of Korea in 917 by Wanggon, the founder of the Koryu Dynasty, and remained in this capacity until 1392. During the 20th century, the town assumed new importance. Its position on the 38th parallel during the Korean War (1950) made it a bone of contention between Communist and United Nations forces and the city passed back and forth several times between the two armies. Here were held in 1951 the first truce conferences of the war. Pop. (1949) 88,708.

KAFA, or **KAFFA**, kă'fä (Ital. CAFFA), province, Ethiopia, in the southwestern part of the country. It is mountainous for the most part and covered with thick forests in the higher regions. The capital is Jimma, and other important cities include Bonga, Jiran, and Maji. The province extends west of the Omo River and borders on the Anglo-Egyptian Sudan. Its forested mountain region, including the Enarea district, contains elevations rising to from 5,000 to 11,000 feet. To the south are lowlands near Lake Rudolf. Drainage is by the Gojab, Gibbe, and Kibish rivers.

Chief products of Kafa are coffee, cereals, hides, and beeswax. Most of the coffee crop is harvested from indigenous wild trees. There are iron mines at the village of Omo, 40 miles east-southeast of Jimma.

Formerly an independent kingdom, it was Christianized in the 16th century. During the 18th and early 19th centuries it rivaled Ethiopia, which incorporated it in 1897. The slave trade persisted well into the 20th century. The population is Hamitic.

KAFFA, kă'fä. See FEODOSIYA.

KAFFRARIA, kă-frâr'i-ä (officially called TRANSKEIAN TERRITORIES), region, South Africa, in the province of the Cape of Good Hope east of the Great Kei River. It became part of Cape Colony in 1865 and now includes the districts of Griqualand East, Transkei, Pondoland, and Tembuland, comprising a total area of 18,310 square miles, and having a population (1946) of 1,250,811. Its natives are mostly Kaffirs, members of the Bantu race, and like most of the natives of the southern and western country of Africa, their main industries are the raising of cattle and grain.

KAFIR-BREAD, *kāf'ér-brēd*, the edible spongy pith of the stems and cones of any of several species of cycads (q.v.) growing in South Africa, especially *Encephalartos caffer*. This substance resembles sago in its farinaceous character.

KAFIR-CORN, Indian millet (*Sorghum vulgare*) extensively cultivated by the half-civilized negroes of south-central Africa. It is called kaoliang by the Chinese. See GRASSES; MILLET.

KAFIRISTAN, *kā-fē-rīs-tān'* (Persian, "land of the infidels"), a region of central Asia in northeast Afghanistan, on the south slope of the Hindu Kush, and having as its southern boundary the Kabul River. Formerly the name was vaguely given to a much greater territory; it is now restricted to a country with an area of about 5,000 square miles, nominally under the government of the Amir of Afghanistan, but virtually belonging to an independent people. In the northern portion, which is mountainous, the surface is rugged and broken; in the south the land is mostly level or moderately undulating. Much of the soil has a high degree of fertility and is adapted, especially in the valleys, to the cultivation of fruits and cereals of various kinds. Grapes are largely produced, from which is made an excellent wine. They are said to be skilful workers in wood and metals, but their main pursuits are agriculture and stock-raising. In features and complexion, as well as in beliefs, manners and customs, they differ much from neighboring tribes. They appear to be of Aryan extraction and claim descent from soldiers of Alexander the Great. They are not without dissensions in the various tribal divisions in which they exist, but their isolation in a region of natural strength has enabled them to maintain a kind of political unity despite internal discords, as well as to preserve their independence against the invasions of other tribes. They have no literature, and in their language appear mingled traits of the Indo-Iranian dialects in their Iranian and Indian divisions. In religion they withstood Mohammedan influences until in 1895 they became subjects of Afghanistan, when Mohammedanism was imposed upon them outwardly; but they cling with fondness to their old superstitious beliefs. Consult Biddulph, 'Tribes of the Hindu Kush' (1880); Leitner, 'Kafiristan' (1881); McNair, 'A Visit to Kafiristan' (Proc. Royal Geog. Soc. 1884); Robertson, 'Kafirs of the Hindu Kush' (1896).

KAFIRS, *kāf'érz*, **KAFFIRS**, **KAFFRES**, or **CAFFRES** (from Arabic *Kafir*, infidel or unbeliever), the principal race inhabiting south-eastern Africa, a branch of the great Bantu family. The name is now chiefly restricted to the tribes occupying the coast districts between Cape Colony and Delagoa Bay. They differ from the negroes in the shape of the head, being more like that of Europeans; in the high nose, frizzled hair and brown complexion, which becomes lighter in shade in the tribes of the more southern districts. They are a tall, muscular race, the average height being from 5 feet 9 inches to 5 feet 11 inches, and frugal and simple in their habits. Their chief occupation is raising and tending cattle, and hunting; they are also employed in the mining industry;

garden and field work is mainly performed by women. They are of a peaceful disposition, but in times of war they display considerable bravery, tactical skill and dexterity in the handling of their assagais or spears, shields and clubs, as has been shown in their engagements with the British forces. There are several distinct branches or families of Kafirs, but the tribes which recent events have specially brought to the front are the Pondos, the Fingoes, the Zulus and the Swazi. Kafirs, especially of the Zulu tribe, are distributed in large numbers over Natal and Cape Colony, and have become to some extent civilized. There were frequent wars between them and the Dutch and British.

KAGA, *kā'gā*, or **KASHU**, province in the west of the Japanese island of Honshū, and forming a part of the ken of Ishikawa. It is a place of very considerable industry, which embraces the manufacture of silk yarns and goods, inlaid and other bronzes of very beautiful designs, Kaga porcelains and many other distinctly native products. Kanazawa, the capital of Kaga, which has a population of about 147,000, is situated five miles inland from its port, Takama, a place of considerable shipping activity.

KAGOSHIMA, *kā'gō-shē'mā*, Japan, a city in the island of Kyūshū, capital of Satsuma province and of the prefectural ken of the same name, on the northwest shore of Kagoshima Bay. The town is well built and is an important industrial centre with a considerable export trade. The celebrated Satsuma porcelain is manufactured in suburban Tanoura. Kagoshima was the feudal seat of the powerful Shimadzu daimios, and in 1863 was bombarded and destroyed by the British, owing to the murder of an Englishman; the reigning daimio refusing satisfaction. Here in 1877 Saigō (q.v.) set up the standard of rebellion, and here also he was overwhelmingly defeated a few months later. A great disaster took place on 12 Jan. 1914, when the volcano of Takurajima, situated on a small island directly facing the city, after being quiescent for 130 years, burst into flame, rendering 100,000 people homeless and compelling the inhabitants of Kagoshima temporarily to vacate the city. Pop. 182,000.

KAGU, *kā'gōo*, the native name of the remarkable bird (*Rhinoceros jubatus*) peculiar to New Caledonia, where it was discovered only in 1860 and is now rapidly disappearing. It is the only species of a distinct family most nearly related to the sun-bitterns. The kagu is about the size of a domestic fowl, with short wings, rather long legs, a ralliform beak and a long crest. When the wings are folded, the colors are mottled gray, the wings and tail barred with a darker shade; but when they are spread the wings are seen to be barred and spotted with white and black arranged in a conspicuous pattern. The kagu is noteworthy for the extraordinary dances and antics which it performs.

KAGUAN, *kā-goo-ān'*. See COLUGO.

KAHLENBERG, *kā'lēn-bērg*, Louis, American chemist: b. Two Rivers, Wis., 27 Jan. 1870; d. Sarasota, Fla., 18 March 1941. He was educated at the universities of Wisconsin and Leipzig, and from 1895 was a member of the University of Wisconsin faculty, as instructor

assistant professor and professor of physical chemistry, and after 1907 as professor of chemistry. From 1908 to 1919 he was chairman of the chemical department at the university. He published *Laboratory Exercises in General Chemistry* (1907); *Outlines of Chemistry* (1909); *Qualitative Chemical Analysis* (with J. H. Walton, 1911); *Chemistry and Its Relations to Daily Life* (with E. B. Hart, 1914).

KAHN, kân, Gustave, French poet, novelist, and literary critic: b. Metz, Dec. 31, 1859; d. Paris, Sept. 4, 1936. During his school days he began contributing poems, short stories, sketches and reviews to the newspapers and journals, and thus he continued actively from 1880 on. He took a trip to Africa of which he made good literary use; and on his return to France in 1886, he joined hands with Jean Moréas and Paul Adam founding *Le Symboliste* and *La Vogue*. From this time on he took a very active part in the Symbolistic movement of which he became, in a sense, the most active leader. With Catulle Mendès and others he organized, in 1897, the "Matinées of poets," with the avowed object of encouraging the younger symbolistic writers to become still more symbolistic. These matinées were held successively at the Odéon, Antoine and Sarah Bernhardt theaters.

Kahn was largely interested in the *vers libre* movement, and he has been put forward as the inventor of this form of poetry which has been so much abused, especially in the United States; and which has consequently borne such notoriously bad fruit. This claim, however, has been strenuously contested. There is something attractive about much of the symbolistic *vers libre* of Kahn; but the brood that he and his symbolistic followers have encouraged in the journals and reviews under their control or at their disposition, have proved scarcely worth the rearing, since most of them are compelled to limp through their literary life in a manner painful to themselves and to their readers. In recognition of his services to literature Kahn was made an officer of the Legion of Honor. Among his published works are the books of poems *Les palais nomades* (1887); *Chansons d'amant* (1891); *Premiers poèmes* and *Le livre d'images* (1897), often called his best volumes; and *Les fleurs de passion* (1900). His works of fiction and criticism are *Le roi fou* (1895); *L'Esthétique de la rue* (1901); *L'Adultère sentimental* (1902); *Symbolistes et técadents* (1902); *Boucher* (1909); and *Ch. Baudelaire* (1928).

KAHN, kân, Otto Hermann, American banker and promoter of opera: b. Mannheim, Germany, Feb. 21, 1867; d. New York City, March 29, 1934. He came to the United States in 1893 to the banking firm of Speyer and Company, after five years in the Deutsche Bank branch in London, and he joined Kuhn, Loeb and Company four years later. There he soon became prominent in railroad and corporation finances.

Of a strong musical disposition he long took a very prominent part in the encouragement of grand opera in this country. He was president and chairman of the board of directors of the Metropolitan Opera Company; founder and vice president of the Chicago Grand Opera Company; honorary director of the Royal Opera, Covent Garden, London; and vice president of the Philharmonic Orchestra Society.

KAHOKA, kâ-hô'kâ, city, Missouri, and Clark County seat, 20 miles west of Keokuk, Iowa, on the Chicago, Burlington and Quincy Railroad. In the midst of a dairy farming and stock raising country, it makes principally cheese and pickles. Wheat, oats, and corn are grown in the surrounding region and shipped from the city. Kahoka is under mayor and council government, and its water supply system is municipally owned. There is a public library. Kahoka was named after an Indian chief of the early days. Pop. (1950) 1,847.

KAIANIAN (Persian *kai*, king), an ancient Iranian dynasty belonging to the early days of the history of the country. It bridges over the semihistorical, semitradeional, and semimythical period extending between the shadowy mythical age of Iran and the time when the country emerges into the light of formal history and loses itself in the later Archaemenidae sovereignty. According to a Persian account, which is probably more mythical than historical the dynastic Kaianians began with the establishment of the throne of Kai Kobadh (Kobad) by the great legendary Persian hero, Zoh. All the succeeding members of this royal family bore the title "kai" thus giving rise to their titular dynastic designation. The kaianian rule came to an end with the reign of Cyrus, founder of a united Persia in the 6th century B.C., after a little less than 380 years' duration, if the semilegendary records on the case are to be accepted as authoritative.

Throughout this long period certain names stand out so prominently that they have given their titles to families or dynasties; as seems to have been the case in early Biblical chronological records. Thus Kai Loraspi is gravely recorded to have reigned 120 years; and other Kaianian sovereigns are credited with like unnatural age. It was under the last of these kings, Kai Vish-tasp, that Zoroaster lived and propagated his religion.

KAIETEUR FALLS, kî'ê-tôor', a famous waterfall in British Guiana, on the Potaro River, a tributary of the Essequibo, 100 miles southwest of Bartica. It was discovered in 1870 by Barrington Brown. Its total height is over 800 feet, and the sheer descent of the water is 741 feet, the width of the hard rock over which it plunges being 350 feet. The water has worn a great cavern in the softer underlying layers, and against the dark background thus formed the whiteness of the spray is contrasted with magical effects. The scenery about this great waterfall enhances its beauty and grandeur and makes it a favorite tourist spot.

KAIFENG, kî'fûng', city, China, capital of the province of Honan, 340 miles northwest of Nanking, and 11 miles distant from the Hwang Ho or Yellow River. It was the capital city of China from 907 to 1127, coming first under the Five Dynasties and then under the Northern Sung Dynasty, and was then known as PIEN-CHING. The city was held by the Japanese during the Sino-Japanese War from 1938 to 1945, and in 1948 fell to the Chinese Communists. Kaifeng has several times suffered disaster by flood from the Hwang Ho, by earthquake, and by fire.

Kaifeng is a station on the Hankow-Peking Railway. It has a large commercial trade with

the interior. A colony of Jews settled here about 1163 A.D. and for hundreds of years existed as a separate group, but lost its identity in a city that was predominantly Mohammedan. The city was taken by assault in the Taiping rebellion of 1853. Pop. (1936) 224,800.

KAILAS, kī-lās', mountain range, southwestern Tibet, rising to an elevation of 23,165 feet, and containing sources of the Brahmaputra, Indus, and Sutlej rivers. It refers also to cluster of peaks in central Kailas range, particularly one sacred to the Hindus as the abode of the deity Siva, and located north of Lake Manasarovar.

KAILASA, kī-lā'sā, famous Hindu rock temple erected (probably 10th century A.D.) at the village of Ellora, near Aurangabad, India. The structure comprises an entrance corridor of 137 by 88 feet, leading to the sanctuary or main chamber of 244 by 137 feet. Another room, 100 by 56 feet, forming the temple proper, rises to the height of 90 feet in a magnificent dome which is supported by four rows of handsome columns of sculptured elephants. The edifice contains extensive sculptured works and painted designs.

KAILYARD, kāl'yārd, **SCHOOL**, term used to designate a group of late 19th-century Scottish writers, principally James Barrie and John Watson (qq.v.), who made important use of dialect, and idealistically, sentimentally, and sometimes humorously portrayed Scotch village life. *Kailyard*, Scotch for "cabbage garden," first arose in its literary connotation from the line, "There grows a bonnie brier bush in our Kailyard," which appeared in Watson's *Beside the Bonnie Brier Bush* (1894; q.v.).

KAINITE, kā'ī-nīt, or **KAINIT**, kā'ī-nīt, a hydrous magnesium sulphate with potassium chloride. An impure kainite containing 12 per cent or more of potash is used as a fertilizer. Kainite is a natural salt and when pure contains 35.1 per cent potassium sulphate, 24.2 per cent magnesium sulphate, 18.9 per cent magnesium chloride, and 21.8 per cent water of hydration.

KAIPING, kī'pīng', town and district, China, situated on Liaotung peninsula in Hopeh Province, about 100 miles southeast of Peking. Located in rich coal fields with an annual production of six million tons. Kaiping is served by the Peking-Mukden railway and by the port of Chinwangtao on the Gulf of Liaotung.

KAIRA, kī'rā, town and district, India, in Bombay State, 20 miles south of Ahmadabad. Possibly founded about 1400 B.C., the town is known to have been a flourishing commercial center in the 5th century A.D., and is the district capital. Kaira District, comprising 1,617 square miles, is watered by the Mahi and Sabarmat rivers and raises rice, cotton, millet, and pulse. Cotton textiles and glass are manufactured. Pop. (1941) of town, 7,311; of district, 914,957.

KAIROUAN, kēr-wān', or **KAIRWAN**, kīr-wān' (Arab. QUAIRWAN, kīr-wān), city, Tunisia, situated on a barren sandy plain and surrounded by a wall. It was founded about 670 A.D. by the Arab general, Okba; was the capital of the Aghlabite dynasty (800-909); and remained an important commercial center. Un-

der the administration of the French government, starting in 1881, numerous municipal improvements were effected. Kairouan is connected by rail with the capital, Tunis, 80 miles north, and with the port, Sousse, 30 miles northeast. Its manufactures include morocco leather goods, carpets, and copper utensils. Still one of the sacred cities of Islam, Kairouan was formerly almost inaccessible to Christians. Much of its ancient grandeur survives in beautiful architecture, particularly its fine mosques. The imposing Okba Mosque, rebuilt in 827, is held in veneration by the Moslems as one of the reputed four gates of paradise. Pop. (1946) 32,299.

KAISER, kī'zēr, **Georg**, German author: b. Magdeburg, Germany, Nov. 25, 1878; d. Ascona, Switzerland, June 5, 1945. As a dramatist who employed advanced modern technique incorporating brilliant dialogue in well conceived plays, he secured recognition as one of the leaders of the German expressionistic school of dramatic writing. Kaiser created both comedies and serious plays devoted to social and ethical problems. They were almost uniformly successful, both artistically and commercially, until the advent of the Hitler regime, which suppressed and burned his works and forced him into exile. His best known plays include *Die Jüdische Witwe* (*The Jewish Widow*, 1911); *König Hahnrei* (*King Henry*, 1913); *Von Morgens bis Mitternachts* (1916), a moving drama of the futility of modern civilization, which was produced in 1922 by the Theatre Guild, Inc., in New York, under the title of *From Morn to Midnight*; and *Gas* (in two parts, 1918 and 1920), which bitterly denounced the industrial system and pleaded for man's emancipation from the tyranny of the machine. Kaiser also wrote the novels: *Est Ist Genuq* (*It's Enough*, 1932); and *Villa Aurea* (*Village in Sicily*, 1940).

Other of his dramatic works include: *Rektor Kleist* (1905); *Die Bürger von Calass* (1914); *Die Versuchten* (1917); *Die Sorina* (1917); *Die Koralle* (1918); *Der Brand im Opernhaus* (1918); *Holle, Weg, Erde* (1919); *Die Flucht nach Venedig* (1923); *Nebeneinander* (1923); *Kolportage* (1924); *Zweimal Oktober* (1926); *Gats* (1928); *Oktoberfest* (1928); *Zwei Krawatten* (a review, 1929); *Mississippi* (1931).

KAISER, Henry J., United States industrialist: b. Canajoharie, N. Y., May 9, 1882. After an earlier career as a delivery boy in Utica, N. Y., as a photographer at Lake Placid, N. Y., and Daytona Beach, Fla., he went to Spokane, Wash., where he entered the sand and gravel business. Between 1914 and 1930, operating his own construction firm, he won a \$250,000 contract to pave roads in British Columbia, and also did highway construction in Cuba, involving a 300-mile, 200-bridge road across the swamps of Camagüey Province, and in California and Washington (1914-1929).

From 1930 on he managed numerous far-flung construction and industrial activities. In 1931 he headed Six Companies, Inc., contractors for the construction of the Boulder (Hoover) Dam. Two years later he headed Bridge Builders, Inc., which erected piers for the San Francisco-Oakland Bridge, and in 1934 he directed the Columbia Construction Company, which built the Bonneville Dam, Ore. He also managed the Consolidated Builders, Inc., constructors of the Grand Coulee Dam, Wash., in 1939. In all, between 1931 and 1945, he shared in the realization of more than 70 major construction projects.

In addition he built factories for the produc-

ion of cement, magnesium, iron and steel, and other raw materials, and for the manufacture of ships and automobiles. He organized and administered the Permanente Cement Company, which established the world's largest cement plant at Permanente, Calif.; he built the huge Fontana, Calif., steel plant; and he shared in the establishment of the Kaiser-Frazer Corporation, the first major new American producer of automobiles in the post-World War II era.

Henry J. Kaiser's major contribution was made during World War II, when he organized and managed half a dozen shipyards in California and Oregon, which in the years 1941 and 1942 were assigned an estimated one third of all the ships contracted for by the United States government in its wartime shipbuilding program. His shipyards, using specially devised methods of prefabrication and construction, drastically reduced the length of time required for shipbuilding, and soon became recognized as the world's largest and swiftest producers of ships.

KAISER, Isabelle, Swiss author: b. Beckenried (on Lake Lucerne) Switzerland, Oct. 2, 1866; d. there, Feb. 28, 1925. Her works, written in both French and German, comprised poetry, short stories, romances and idealistic novels. Writing most often in French, she won a prize from the French Academy. Best known of her works are the novels *La Vierge du lac* (1913) and *Rahels Liebe* (1921).

KAISER, kī'zēr, Jakob, German politician: Hammelburg, Bavaria, Germany, Feb. 8, 1888. At first a bookbinder, he became active in the Christian Trade Union movement and was a member of the Center Party between 1910 and 1933. In the latter year he was elected member of the Reichstag. Imprisoned for seven months in 1938 by the Nazi regime, he took part in the abortive plot against Hitler's life in July 1944, but, by going into hiding, escaped reprisals. In 1945 he emerged as one of the founders of the Christian Democratic Union party set up in the Soviet zone of Berlin and was the party's chairman until the Russians dismissed him in Nov. 1947. Settling in West Germany he was elected to the Federal Parliament in August 1949 as representative of North-Rhine-Westphalia. In September of that year he was appointed Minister for All German Affairs in Konrad Adenauer's government.

KAISER, kī'zēr (Lat. *caesar*), German title, equivalent of emperor, first associated after 962 with the Germans, whose kings became emperors of the Holy Roman Empire. In 1871, after the Franco-Prussian War, William I of Prussia assumed the title of emperor (kaiser) of Germany, a title distinct from the older designation of German emperor. See also EMPEROR; CAESAR.

KAISER WILHELM CANAL. See KIEL CANAL.

KAISER WILHELM II LAND, Antarctica, on the Indian Ocean coast, between 86° and 91° 52' East, so named by its German discoverer and explorer, Erich von Drygalski, in 1902; now called Wilhelm II Coast.

KAISER-WILHELMSLAND, kī'zēr-vīl' nēlms-lānt, former colony of Germany in north-

eastern New Guinea, part of German New Guinea which included also the Bismarck Archipelago and the German Solomon Islands. Occupied by Germany in 1884, it was seized by Australia in 1914. Australia now rules it under a United Nations mandate as the Territory of New Guinea.

KAISERSLAUTERN, kī-zērs-lou'tērn, city, Germany, located in the Rhenish Palatinate district of Bavaria, about 40 miles west of Mannheim. It is the center of spinning and weaving activities and of iron and steel works and railway shops. Its factories also produce bicycles, sewing machines, furniture, clothing and shoes, brewery and tobacco products, and other items.

First mentioned in 882, the city was the site of a magnificent palace, built in 1152 by Frederick (Barbarossa) I, and destroyed by the French in 1713. It became a city in 1276, and in 1357 became subject to the Palatinate. It was conquered by the Spaniards in 1635, by the French in 1688, and in 1801 was retaken by the French and made the capital of the French department of Donnersberg until 1814. Bavaria obtained it in 1816 and it was returned to the Palatinate in 1849, but still remained an integral part of Bavaria. Pop. (1950) 62,395.

KAJANUS, kā-yā'nōōs, Robert, Finnish conductor and composer: b. Helsinki, Finland, Dec. 2, 1856; d. there, July 6, 1933. Graduated from the Leipzig Conservatory in 1880, he founded in 1882 the Helsinki Philharmonic Society, an orchestra which under his direction became internationally known for its performances of the works of Sibelius and other Finnish composers. When this organization became the Helsinki Municipal Orchestra in 1914, Kajanus continued as conductor until 1932. He taught music at the University of Helsinki from 1897 to 1926, having been named a professor in 1908. As a composer, Kajanus was one of the first to create a characteristic Finnish national style. His works included symphonic poems, rhapsodies, orchestral suites, cantatas, chorale works, songs, and piano music.

KAJAR, kā-jār, a dynasty of seven rulers of Persia (Iran). Founded in 1794 by the eunuch chief of the Kajar tribe, Agha Mohammed Khan, who murdered the last representative of the Zand or Zend dynasty (1750-1794) Lutf Ali, the Kajar dynasty lasted until 1925, when the Persian Majlis (National Assembly) on October 31 of that year deposed Ahmad Shah or Ahmed Mirza (q.v.) and chose Reza Khan Pahlavi as his successor. The list of shahs of the dynasty is as follows:

Agha Mohammed Khaan	r. 1796-1797
Fath Ali	r. 1797-1834
Mohammed Shah	r. 1834-1848
Nasr-ed-Din	r. 1848-1896
Muzaffar-ed-Din	r. 1896-1906
Mohammed Ali	r. 1907-1909
Ahmad Shah (Ahmed Shah)	r. 1909-1925

During the period of this dynasty and particularly from the reign of Fath Ali, Persia was drawn into the orbit of European politics, lost Baku, Georgia, most of Persian Armenia and other territories to Russia, granted capitulations and other economic and financial privileges to European powers, and, in 1906, received a constitution (see PERSIA-IRAN—History).

KAKA, kā'ká, a large slow-flying brownish parrot (*Nestor meridionalis*) of New Zealand, which inhabits forests, where it goes about in

noisy flocks, and nests in hollows of trees. Its food is miscellaneous, but consists principally of nectarous flowers and of the grubs hiding under bark, which it tears away by its powerful hawk-like beak. A near relative is the kea (q.v.), while other species on New Zealand, Norfolk, and neighboring islands have become nearly extinct since the occupation of those islands.

KAKABEKA FALLS, a cataract of the Kaministiquia River, Ontario, Canada, 17 miles west of Fort William. The falls, which are noted for their picturesqueness, have a height of 130 feet and a width of about 450 feet. The village of Kakabeka Falls is located here and is noted as a hydroelectric power center.

KAKAPO, kā-kā-pō', the Maori name of a large, ground-keeping parrot (*Strigops habroptilus*), which is now nearly extinct, owing to its inability to withstand the dogs, cats, rats, and other animals introduced by civilization, in addition to which its flesh is good to eat. Its terrestrial habits have led to such a reduction of the wing muscles that the keel has nearly disappeared from the sternum. Its brown-barred plumage and whisker-like feathers about the beak have given the bird the name of owl parrot.

KAKARALI, kā-kā-rā'li, a South American tree (*Lecythis ollaria*), whose timber is much used in British Guiana for piling and structures exposed to salt water, since it endures well, and resists the boring of shipworms and the attacks of barnacles. The Indians beat its bark until it separates into thin layers convenient for use. It is also known as the monkeypot tree.

KAKKE, kāk'kā, the Japanese word for beriberi (q.v.).

KALA AZAR, kā'lā ā-zār', or **DUMDUM FEVER**, a disease prevalent in India, northern China, Indo-China, Sudan, and countries bordering the Mediterranean. It is caused by a protozoan parasite, *Leishmania donovani*, and is characterized by emaciation, fever, anaemia, enlarged spleens, and leukopenia. The disease is more often fatal than not and is divided into two types, one, affecting older children and adults, prevalent in the Far East, and the other, affecting infants, prevalent in Mediterranean countries. The parasite is known to be carried by the Indian bedbug and, although its bite is doubted to transmit the disease, the disease is carried when the person bitten kills the gnat and scratches the bite, thus spreading the infection.

KALAHARI DESERT, kā-lā-hā'rē, a region of South Africa, extending from the Orange River to Lake Ngami, and from longitude 26° E. nearly to the west coast. It is situated in Bechuanaland Protectorate, western Union of South Africa, and eastern South-West Africa, and is part of the huge inner tableland of South Africa. It has an elevation of 3,000 to 4,000 feet, and is called a desert because it contains little water, although besides grass and creeping plants there are large growths of bushes and trees. Herds of antelopes and other tropical animals roam over its plains, and on the game thus provided, as well as on the vegetable products which grow there, particularly watermelons and large tubers, a great number of Bushmen and Hottentots subsist.

The Kalahari is remarkably flat, and is intersected in different parts by the beds of ancient rivers. The soil is in general a red-colored soft sand, but in the ancient riverbeds there is a good deal of alluvium which, when baked hard, is so retentive that in some cases pools formed by the rain contain water for several months. The desert was first crossed by Daniel Livingstone and William C. Oswell in 1849. In the south-western part of the region is the Kalahari National Park, 3,729 square miles, a game reserve containing nearly all the animals native to that region particularly gemsbok (oryx).

Consult L. A. Mackenzie, *Report on the Kalahari Expedition* (Pretoria, U of S. Af. 1945).

KALAKAUA, kā-lā'kā'ōō-ā, David, king of the Hawaiian Islands: b. Nov. 16, 1836; d. San Francisco, Calif., Jan. 30, 1836. After leading an unsuccessful revolt against King Lunalilo in 1873, he was elected king of the Hawaiian Islands by the Assembly in 1874 after Lunalilo's death. He visited the United States in 1874 and took a trip around the world in 1881 and on his return to Hawaii attempted many reforms in the government. However, in 1887, after his reforms had aroused a revolution, he was compelled to grant a new constitution to his people which very greatly restricted the royal authority.

KALAMATA, kāl-ā-mā'tā, or **KALAMAI**, kā-lā'mā, seaport, Greece, capital of Messenia Department, situated near the mouth of the Nedon, in the Gulf of Messenia, and connected by rail to Patras and Argos. A manufacturing and trade center, it has flour and silk mills and manufactures cigarettes and liquors. It exports figs, oranges, mulberries, olives, and foodstuffs from the surrounding region and has a coaling station and repair docks.

The town was first established in 1204 by French crusaders. The first Grecian National Assembly was held here in 1821 and in 1825 the town was sacked by Ibrahim Pasha during the Greek war of independence. Pop. (1951) 38,363.

KALAMAZOO, kāl-ā-mā-zōō', city, Michigan, and seat of Kalamazoo County, at an altitude of 775 feet, situated on the Kalamazoo River, 142 miles west of Detroit and about 140 miles by rail east-northeast of Chicago, and served by the Pennsylvania, the Michigan Central, the New York Central, and the Grand Trunk railroads state and federal highways, and a municipal airport with scheduled air service. Within a 60 mile radius are Grand Rapids, Lansing, and Battle Creek, and within the territory thus defined Kalamazoo is an important trading center and shipping point. Southwestern Michigan is largely agricultural, and the valley of the Kalamazoo River is noted for its production of celery, tulip and gladioli bulbs, pansy plants, and peppermint. Corn is the principal staple crop, and a considerable acreage is devoted to orchards and vineyards. The region is well watered—besides the rivers there are many lakes.

Kalamazoo itself has over 240 manufacturing concerns making such products as paper, pharmaceuticals, furnaces and stoves, fishing tackle, essential oils, electric goods, truck transmissions, air-conditioning machinery, and water and gas heaters.

The city has fine library facilities, those of its public library, of two college libraries, and

the county law library. Educational equipment includes public and parochial schools, Kalamazoo College, opened as an academy in 1833 and reorganized as a college in 1855, the Western Michigan College, founded in 1904, and Nazareth college (at Nazareth), a Catholic school for girls, founded in 1897. The city has musical organizations, including a symphony orchestra and a male chorus, and an institute of arts. A small historical museum is maintained in the public library building.

Kalamazoo is well equipped in respect to parks, playgrounds, and recreation centers. Its organized philanthropies cooperate in the conduct of community chest campaigns. Welfare institutions are two general hospitals, a county tuberculosis sanitarium, and a state hospital for mental cases. In the neighborhood of the city there are old Indian mounds. Fort Custer is about 18 miles distant.

History.—The name Kalamazoo is of Indian origin, meaning "boiling pot," and was given to the river because of gas bubbles in the water. There was a trading post here in 1823, but the first permanent settlement was in 1829 when Titus Bronson gave his name to the trading settlement here. The Indian name was restored to the town in 1836 and incorporation as a village was effected in 1843. For years Kalamazoo enjoyed the distinction of being known as the largest village in the land until it was made a city in 1884. In 1847 a group of Hollanders, seeking refuge from religious persecution, settled here, and as early as 1856 celery was introduced among the farmers. Kalamazoo was one of the first cities in Michigan to adopt a commission form of government with a city manager. Pop. (1950) 57,704

KALAMAZOO, a river which has its rise in the northwestern part of Hillsdale County, Michigan, and flows west and northwest into Lake Michigan. From the source to the city of Kalamazoo it makes three southward curves, but from Kalamazoo the course is generally northward. Its whole length is about 200 miles, only of which are navigable. At the mouth is a good harbor for vessels of about 100 tons. The waterpower is extensive, and has been of great value in the development of the southwestern part of Michigan. Allegan, Kalamazoo, Battle Creek, Albion, and Marshall are on this river.

KALAPOOIA or **KALAPUYA**, *kāl-ā-pōō'ya*, the family name of a group of Indian tribes in northwestern Oregon, principally in the Willamette River valley. They were of a decidedly peaceful character and consequently have not figured prominently in the history of the country. Never very numerous in historical times, the Kalapooians are represented by descendants who are for the most part American citizens who have adapted themselves to the ways of their country. The Yonkalla, Yamel, Atfalati, and Santiam tribes on the Grande Ronde Reservation belong to this group.

KALAT or **KHELAT**, *kā-lāt'*, a former state in British India and Pakistan, and since April 12, 1952, merged with the other Baluchistan states of Las Bela, Kharan, and Makran into the Pakistan States-Union. The state of Kalat had an area of 59,068 and a population (1951) of 100,000. On the formation of Pakistan in 1947,

Kalat, although within the boundaries of that country, was recognized as independent and its khan was generally accorded to rule the other three Baluchistan States. Since the unification, Pakistan decreed that the present khan of Kalat shall be president until his death and that thereafter the president shall be elected by a council of rulers.

The city of Kalat, 88 miles south of Quetta, was the capital of the state of Kalat, and is the center of the caravan routes to Khuzdar, Gandava, Quetta, Mashung, and other cities. The British, who occupied the city in 1839, retained a garrison at Kalat since 1854 and a resident agent since 1877, although these were withdrawn in 1948. Lying at an altitude of 6,780 feet, the city has a population (1941) of 2,463.

KALB, *kälp* or *kälb*, **Johann** (known as **BARON DE KALB**), German soldier: b. Hüttendorf, Germany, June 29, 1721; d. Camden, S. C., Aug. 19, 1780. A soldier of fortune, Kalb was one of several excellent European officers who served in the American Continental Army during the Revolutionary War.

He received his military training as an officer in a German regiment of the French Army, seeing action in the War of the Austrian Succession and in the Seven Years' War. In 1768 he visited the American colonies as a secret agent of the French government to test the feelings of the colonists for Great Britain, and in 1777, after volunteering to serve in the American Army and receiving a commission of major general from Silas Deane in Paris, he came to America with 11 other volunteer officers, among them the marquis de Lafayette.

Congress ratified his commission on Sept. 15, 1777, and Kalb hastened to join the main army in New Jersey under George Washington. After leading an abortive attempt to invade Canada that stopped short of Albany, N. Y., he was sent in April 1779 to re-enforce Gen. Benjamin Lincoln, who was besieged at Charleston, S. C.

He went as far as Petersburg, Va., where he learned that Charleston had fallen, and there he was joined by Gen. Horatio Gates, under whose command he was. The armies hastened on to Camden, S. C., and after a disastrous delay which allowed Lord Cornwallis to enter the city, attacked on Aug. 16, 1780. General Kalb's right wing was the only flank that held during the first charge, but eventually, with Cornwallis concentrating his entire force upon them, they were forced to give way. Kalb, captured by the British after he had fallen with 11 wounds, died three days later in Camden.

KALBECK, *käl'bëk*, **Max**, German poet, critic, and author: b. Breslau, Jan. 4, 1850; d. Vienna, May 3, 1921. After working for several newspapers in Germany and publishing a well-received book of poetry, *Aus Natur und Leben* (1870), he went to Vienna in 1880 where he quickly became a well-known music critic and librettist. He wrote excellent criticisms of Richard Wagner's *Nibelungen* (1876) and *Parsifal* (1880); and several volumes of collected criticisms, *Wiener Opernabende* (1881) and *Opernabende* (1898). He wrote a new text for Christoph W. Gluck's *Die Maierkönigen* (1888) and the book for Alexander von Frelitz's *Das Stille Dorf* (1897). He adapted to German dramas and operas, among them Jules E. F. Massenet's

'Le Cid' and 'Werther'; Verdi's 'Otello,' and characteristic and popular productions of Smareglia, Smetana, Mascagni and Tschai-kowsky. He also wrote an appreciative and critical biography of Brahms (1904).

KALCKREUTH, kälk'roit, Stanislaus, COUNT, German landscape painter: b. Kozmin, 1821; d. 1894. He began life as a soldier and served as lieutenant in the First Guards Regiment from 1840 to 1845. Resigning from the service he went to Berlin and there studied painting under some of the most famous German teachers. He possessed a certain poetical and mystical bent which became early evident in his paintings which were highly idealized. This gained him great popularity and won for him the appointment of art professor from William IV of Prussia (1859) and permission to organize the new art school, opened the following year in Weimar. He became director of this school, upon which he stamped his individuality for 16 years; during which he had considerable influence on the trend of art in Germany and Austria. But the day of Kalckreuth is already past, for his artificiality has become apparent to modern art critics. Among his best known and most popular paintings are 'Lac de Glaube' (1855); 'Canigai Valley' (1856); 'Rosenlaur Glacier' (1878), all three in the Berlin National Gallery; 'Lake in the Pyrenees' (1858), in the Königsberg Museum, and a notable series of landscapes in the Orangery near Potsdam.

KALE, or **BORECOLE**, a cruciferous plant (*Brassica oleracea*, var. *acephala*), differing from cabbage most strikingly in the non-formation of heads, the leaves being loose and free. It is largely cultivated as a pot-herb, especially in the South, where it generally withstands the winter. It is rather coarse in texture and flavor, but frosts modify both somewhat. In some sections it is extensively used for cattle-feeding. One of the largest producing regions is that in the vicinity of Norfolk, Va., which ships about 200,000 barrels to the markets each year. The varieties cultivated in America are nearly all treated as annuals, being grown from seed much like late cabbage. Some varieties, however, are perennial and may be propagated by cuttings, etc. For cultivation see CABBAGE.

KALEEGE, ka-lēj, or **KALIJ**, **PHEASANTS**, a sportsmen's name in India for the pheasants of the genus *Gallus*, which range along the foot-hills of the Himalayan range and eastward to the China and down the Malay peninsula to Java. They are of medium size, richly dressed, with flattened crests, naked cheeks and spurs on the male. White is conspicuous in the plumage of most, so that they are sometimes called silver pheasants, especially the Chinese species (*G. nymphaea*), frequently seen in parks and menageries. All are attractive as game birds, especially the Himalayan white-crested and black-crested.

KALEIDOSCOPE, ka-li'dō-skōp, an optical instrument invented by Sir David Brewster in 1817. It consists of a tube through the length of which pass two mirrors or reflecting planes, which are hinged together along one edge, and form two sides of a triangular prism; while the one end is fitted up

with an eye-glass, and the other is closed by two glasses, at a small distance from each other, between which are placed little fragments of glass or other colored objects. The eye looking into the tube perceives these objects multiplied, and the slightest moving of the instrument produces new figures.

KALENDS. See CALENDAR.

KALERGIS, ka-lēr'gēs, **Demetrius**, Greek soldier and statesman: b. on the island of Crete 1803; d. 1867. Educated at Saint Petersburg he studied medicine at Vienna and Paris, but left his course unfinished to take part in the Greek War of Independence (1821), during which he was taken prisoner by the Turks. He took part in the revolution of 1845 and was forced to exile himself, spending the next three years in London. After the residence of some time in Paris, he became Minister of War in the Mavrocordatos Ministry (1854-61) after which he was sent as Ambassador to Paris, where he played an important part in the negotiations which finally bestowed the throne of Greece on Prince George of Denmark.

KALEVALA. The romantic movement, which in Germany began by the collection of folk songs and fairy tales, frequently led in the outlying countries to literary creations of national epics on the basis of actual epic songs. Thus arose in Finland the "Kalevala," systematically arranged by Elias Lönnrot in 1835, and in 1849 totally rearranged and enlarged to 22,800 verses. Almquist showed how Lönnrot had eclectically glued together actual variants, sometimes composing himself a few lines in order to bridge over discordant passages, more frequently rejecting verses which clashed with the general scheme he had in mind. However, if we disregard the unity of the "Kalevala" as a whole and the unimportant literary transitions, we have in Lönnrot's production an extremely valuable collection of Finnish heroic and magical songs, which throw a light upon the formation of a popular literature among the Finnish tribes. Some archaeologists have assumed that in this 'Kalevala' we have a documentary record of a primitive state of society, but Comparetti, with far more justice, holds that it is not an invariable document of antiquity, but reflects, in ever changing form, the intellectual condition of the simple folk not far removed from the time when these songs were written down. Therefore it is not correct to speak of the 'Kalevala' as an epic, especially since the indeterminateness of images represented and the arbitrary personification of nature permit no set classification. The Finnish mythology is based on shamanistic polydaemonism and is not as highly developed as it was among the Romans, Assyrians or other cultured nations of antiquity, hence it yields no well-defined theogony. Similarly the hero is not always to be separated from the poet and magician, and his chief exploit consists in song competitions, as is the case with the shamanic wizard, or in wooing of the bride. The most cherished possession of such a hero is the sampo, a treasure which is hazily identified with a precious casket or a mill, but which Comparetti takes to be a Scandinavian word meaning 'the commonwealth,' and which

here has become a concrete object to be striven for. Just as indefinite is the Kalevala, the country of Kaleva, one of the heroes, though some authors take it to be «Finland» while the Pohjola, with which it is in conflict, has been supposed to represent the country of the North or the abode of the dead. But, while the Kalevala loses in importance as a national epic with a well-sustained plot, it justly maintains its place in popular literature, on account of the vivid imagery displayed by the popular poet.

The poem is now accessible to English readers in several translations: 'The Kalevala, the Epic Poem of Finland,' rendered into English by J. M. Crawford (2 vols., New York 1888); 'Kalevala, the Land of Heroes,' translated from the original Finnish by W. F. Kirby (London 1907, in 'Everyman's Library,' 2 vols.). Selections from the 'Kalevala' are given in 'Selections from the Kalevala,' translated from a German version by J. A. Porter (New York 1868); 'People of Finland in Archaic Times,' by J. C. Brown (London 1892); 'The Sampo, Hero Adventures from the Finnish Kalevala,' by James Baldwin (New York 1912). The best study of the poem is still that by Comparetti, 'The Traditional Poetry of the Finns,' translated by Isabella M. Anderson, with introduction by Andrew Lang (London 1898). The obligation of Longfellow's 'Hiawatha' to the 'Kalevala' was early pointed out by Th. C. Porter (in the *Mercersburg Review*, Vol. VIII, 1856).

LEO WIENER,

*Professor of Slavic Languages and Literatures,
Harvard University.*

KALEVIPOEG, ka-lä'vë-pëg (son of Kalev), the chief Esthonian epic poem, based upon popular songs collected by Kreutzwald (1857-59). As the material used by the collector was destroyed, much discussion has resulted as to the position occupied by the poem among real national epics. Consult Kirby, 'Hero of Esthonia and Other Studies' (Vol. I, London 1895); Reinthal, 'Kalewipoeg, eine estnische Sage' (including the text of the poem with a German translation, Dorpal 1857-61).

KALGAN, käl-gän' (Chinese, *Chang-Kia K'ow*), a city of Meng Chiang (formerly Inner Mongolia), about 125 miles northwest of Peking and on the Peking-Suiyuan Railway, at about 2,800 feet above sea level. At Kalgan, on 22 Nov. 1937, the Japanese established the «Federated Council of the Mongol Border Land» (Meng Chiang) which became the «Mongolian Federated Autonomous Government» under Japanese auspices, in 1939. Prior to 1937 the city was an important trading center. Kalgan was partly destroyed by floods in 1924. Pop., about 63,000.

KALHANA, käl'ha na, a noted Sanskrit writer, author of 'Rājataragini,' the chronicle of the kings of Kashmir.

KALI, käl'le, a Hindu goddess represented with four arms, wearing a necklace of skulls, and the hands of slaughtered giants round her waist as a girdle. Her eyebrows and breast appear streaming with the blood of monsters she has slain and devoured. One hand holds a sword, another a human head. She is the goddess of death and destruction, and goats and other animals are sacrificed on her altars.

KALIDASA, kä-lī-dä'sä, the greatest poet and dramatist of India and one of the great world poets. Native tradition assigns him to the 1st century B.C., but western scholars place him as late as the 6th century A.D. He was one of the nine «gems» or poets, at the court of King Vikramaditya, in Ujjain, but the fact that several monarchs were so named makes his date no more definite. The present tendency of scholars is to place him earlier than the 6th century but not so early as the traditional date. His most famous works is the drama 'Sakuntalā,' translated by Sir William Jones in 1789 and highly praised by Goethe. This translation helped to call the attention of the Occidental world to Sanskrit studies. Kalidasa wrote two other plays, the 'Vikramorvasī' and 'Māla vikā and Agnimitra.' His great lyrical masterpiece is the 'Megha-duta' (Cloud Messenger), in which a cloud is made the envoy of a lover to his absent sweetheart. Other poems are 'Ritu-samhāra,' a poem on the seasons; the 'Kumara-sambhava,' in 18 cantos, and the 'Raghuvamsa,' a eulogy of the great house of Rama, Prince of India. Many other works have also been attributed to him with various degrees of probability. His literary value has long been conceded. He excels in artistic form and his conceptions are full and rich. Editions and translations of Kalidasa have come forth in great number within recent years. Consult Schuyler, 'Bibliography of the Sanskrit Drama' (New York 1906); Foulker, 'Kalidasa: A Complete Collection of the Various Readings of the Madras Manuscripts' (4 vols., Madras 1904-07); Pansikar, 'Kumarasambhava,' with the commentary of Mallinath and Sitaram (5th ed., Bombay 1908); Cappeller, 'Sakuntala, kürzere Textform mit Anmerkungen' (Leipzig 1909); Hultzsch, 'Megha-duta' (London 1911). Of the English versions of the 'Sakuntala' the following are of importance: Jones, Sir William, 'Sakuntala, or the Fatal Ring' (Calcutta 1789; London 1790; 1870); Monier-Williams, 'Sakuntala, or the Lost Ring' (6th ed., London 1890); Edgren, 'Shakuntala, or the Recovered Ring' (New York 1894). There is a fairly complete bibliography of Kalidasa and a discussion of his date in Macdonell, 'History of Sanskrit Literature' (London 1913). For details of Kalidasa's life and period, consult Beckh, 'Ein Beitrag zur Textkritik von Kalidasa's Megha-duta' (Berlin 1907); Bhao Daji, 'On the Sanskrit Poet, Kalidasa,' in *Journal of the Bombay Branch of the Royal Asiatic Society* (Bombay 1860); Huth, 'Das Zeitalter des Kalidasa' (Berlin 1892); Seviratne, 'Life of Kalidas' (Colombo 1901); Ray, 'Age of Kalidasa,' in *Journal of the Asiatic Society of Bengal* (Vol. IV, Calcutta 1908).

KALINGA, kä ling'ga, a sub-province in northern Luzon and also a tribe inhabiting it. Part of the tribe has become partially civilized. Among the members of this part agriculture is practised and metal work is carried on successfully. They adhere to the Catholic faith and live much as the natives do on other parts of the island. Other members of the tribe live in the interior where they have little communication with the whites and are, therefore, but imperfectly known. They are reputed head-hunters and tree-dwellers. The Kalinga are closely

related linguistically and racially to the Tinguians of the Abra.

KALININ, kŭ-lyě'nyin, Mikhail Ivanovich, Russian statesman: b. Verkhnyaya Troitsa, Tver (later Kalinin) Province, Nov. 20, 1875; d. June 3, 1946. The son of a peasant, he received a rudimentary education, and at the age of 18 became a factory worker in St. Petersburg (later Leningrad). There he joined the Social Democratic Party in 1898 and became active in the revolutionary movement, subsequently being arrested several times. His last arrest was in 1916, and the next year he took a prominent part in organizing the October Revolution. Nikolai Lenin (q.v.) secured for him the chairmanship of the Petrograd Soviet, and in 1919 he became chairman of the Central Executive Committee of the Russian Soviet Federated Socialist Republic. With creation in 1922 of the Union of Soviet Socialist Republics (USSR), he was made chairman of its Central Executive Committee, and in 1938, under the new constitution, his title became chairman of the Presidium of the Supreme Soviet of the USSR—a designation equivalent to that of president of the Soviet Union. As titular chief of the government he had, however, extremely limited powers. He continued to serve in that office until his retirement on March 19, 1946, because of illness. In his honor, Tver and Königsberg were renamed, respectively, Kalinin and Kaliningrad (qq.v.).

KALININ, Kŭ-lyě'nyin, Soviet Union, capital of a region of the same name, Russian Soviet Federated Socialist Republic, formerly known as TVER. It is situated on the Volga, 96 miles northwest of Moscow (Moskva), and is an important industrial city; manufactures include steel and iron products, cotton textiles, and leather goods. The city was the capital of an independent principality from the 13th century until 1490, when it was annexed by Moscow. The Cathedral of the Transfiguration, a remarkable structure with five cupolas, built in the 16th century, possessed fine mural paintings executed by Platon (1737–1812), a monk who became the city's bishop in 1770. Tver was renamed in honor of Mikhail Ivanovich Kalinin (q.v.). Pop. region (1939), 3,211,439; city (1939), 216,131.

KALININGRAD, Soviet Union, Baltic seaport, chief town of an oblast of the same name, Russian Soviet Federated Socialist Republic, formerly known as KÖNIGSBERG. Until captured by the Russians on April 9, 1945, during World War II, it had been the capital of the German province of East Prussia. It is situated on the Pregel River, 4.5 miles from its mouth, 397 miles northeast of Berlin; a canal, completed in 1901, permits vessels of deep draught to reach the city from the Baltic. Notable buildings include a Gothic cathedral begun in 1333; a palace, once the residence of the grandmasters of the Teutonic Order, a wing of which comprises the church in which Frederick I in 1701 and William I in 1861 placed the crown on their heads as kings of Prussia; and a university founded in 1544 by the Margrave Albert, containing an observatory, established in 1811, made famous by the work of Friedrich Wilhelm Besel (q.v.). There are also a botanical garden, a conservatory of music, and valuable museums and libraries. It is an important industrial city, manufactures in-

cluding iron and steel products, yarns and thread, woolen textile, chemicals, and amber wares. Founded in 1255, it became a member of the Hanseatic League (q.v.) in 1365, and from 1457 till 1528 it was the residence of the grandmaster of the Teutonic Knights (q.v.); thereafter it was the residence of the dukes of Prussia until 1618. From 1757 till 1762, during the Seven Years War, it was occupied by the Russians, and it suffered much from the French in 1807; Frederick William III retired here when Napoleon was master of Europe. Immanuel Kant (q.v.) was born at Königsberg in 1724. By the Potsdam Declaration, in 1945, the United States and Great Britain agreed that, subject to the final peace settlement, Königsberg and the northern triangle of East Prussia should be transferred to Soviet Russia; the city was renamed in honor of Mikhail Ivanovich Kalinin (q.v.). Pop. (1939) 368,433.

KALINJAR, käl-lin-jar', India, small hill town in the Banda district of the United Provinces, 90 miles southwest of Allahabad, having a history reaching back through the three prehistoric periods of Hindu chronology. The scene of ancient pilgrimages, it contains numerous caves, tombs, temples, and statues of archaeological interest. Toward the close of the 13th century it was captured by the Moslems, who constructed an immense rampart, five miles in circuit, around the summit of the hill on which Kalinjar stands. It was surrendered to the British in 1812.

KALISCH, käl'ish, Isidor, Jewish divine. b. Krotoschin, Prussia, Nov. 15, 1816; d. Newark, N. J., May 11, 1886. He attended the universities of Berlin, Breslau, and Prague, but left Germany at outbreak of the revolution of 1848 and went to Britain. Thence he moved to the United States, and for the next quarter of a century served as rabbi in various American cities. He was a leader in the Jewish Reform movement, and from 1875 he devoted himself to literary work at Newark. His *Wegweiser für rationelle Forschungen in den Biblischen Schriften* (1853) was translated by M. Mayer under the title *A Guide for Rational Enquiries into the Biblical Writings* (1857); he also translated *Nathan the Wise* (1869) and wrote original poetry in German and Hebrew.

KALISPEL, or **PEND D' OREILLE**, pän dö' rä'y', a Salishan tribe formerly living in Idaho and Washington about Pend d' Oreille lake and river. When they became known to the whites they had already attained to considerable advancement along the lines of civilization. This was largely increased through contact with the Jesuit missions which began to be established among them shortly before the middle of the 19th century. A few are still in Washington, but most of the tribe live upon the Flathead Reservation, Montana.

KALISPELL, city, Montana, and Flathead County seat, altitude 2,949 feet, in the Swan and Mission mountains, on the Great Northern Railroad. Ten miles south is Flathead Lake, 30 miles long, 10 miles wide. Hungry Horse Dam is 23 miles northeast and Glacier National Park is 32 miles northeast. Industries include farming, lumbering, and mining. Pop. (1940) 8,245; (1950) 9,737.

KALISZ, kă'lěsh, Poland, city of Poznan province, 147 miles southwest of Warsaw (Warszawa). Among its industries are milling, weaving, distilling, and sugar refining, and woolen and leather goods are also manufactured. One of the most ancient towns of Poland, it is thought to be the Galisia of Ptolemy. Pop. (1938) 68,300.

KALIUM, another name for the metal potassium, whence its symbol K is derived.

KALIYUGA, kă'lě-yōō'gā (Sanskrit word meaning age of strife), the fourth and last of the Hindu ages contained in a mahayuga or great yuga. According to the Hindu belief each succeeding age marked the increased moral and physical degeneration of all created things. Naturally, therefore, the Kaliyuga, being the last of the four ages of this constant degeneration, is the worst. It is believed to have begun in 3102 B.C. according to the followers of the Tantras, the Kaliyuga is the age of Kali, the goddess of epidemics and diseases of all kinds and more especially of cholera.

KALKAS, kăl'kaz, a people who at one time formed a section of the eastern Mongols, but who now dwell in northeastern Mongolia. They are nomadic in habits and typical of the nomadic inhabitants of the steppes. They are supposed to number about a quarter of a million; but no definite census has been taken of them. Consult Haddon, *The Races of Man and their Distribution* (London 1910).

KALLAY, kăl'loi, Benjamin von, Austro-Hungarian statesman: b. Budapest, Dec. 22, 1839; d. July 13, 1903. Of Magyar parentage, he was elected to the Diet of Hungary in 1867, and two years later became Austro-Hungarian consul general at Belgrade. He returned from Serbia in 1875, resuming his seat in the legislature as a supporter of the foreign policy of Count Julius (Gyula) Andrássy (q.v.). In 1879 he received a post in the foreign office, and two years later he became acting minister of foreign affairs. From 1882 until his death he served as minister of finance and administrator of Bosnia and Herzegovina, in this latter office displaying considerable foresight and ability. His writings included a *History of the Serbs* (1877) and *Russia's Policy in the East* (1878).

KALLIO, kăl'lyō, Kyösti, Finnish statesman: b. 1873; d. Helsinki, Dec. 19, 1940. He was a peasant farmer in his early years, and throughout his political career he was a champion of the cause of agriculture. In 1904 he entered the Diet of Finland, at that period an autonomous grand duchy of the Russian Empire, and in 1917 became a senator. He was active in the movement which secured the country's independence in 1919, and was appointed the republic's first minister of agriculture. From 1922 until 1924 he served as prime minister, and in 1925 he was minister of communications. He was again head of the government in 1929-1930 and 1936-1937, and on Feb. 15, 1937, he was elected president for a six-year term. He proclaimed a state of war after Soviet Russia had invaded Finland on Nov. 30, 1939, but in March of the next year he was compelled to accept harsh terms of peace. On grounds of ill health he resigned the presidency on Nov. 28, 1940. A proponent of democratic government and consti-

tutional rule, he fostered some of Finland's most notable land reforms, notably the breaking up of the large estates.

KALM, kălm, Peter, Swedish botanist: b. Angermanland, 1715; d. 1779. He was educated at the universities of Åbo and Uppsala, and became a close friend of Carolus Linnaeus (q.v.). On the recommendation of the latter he was sent to North America by the Swedish government in 1748 to make a survey of its natural history. There he spent three years, and in 1752, following his return to Sweden, he was appointed professor of botany at Åbo. His *En resa til Norra Amerika* (3 vols., 1753-1761) was translated into English by J. R. Foster under the title *Travels into North America* (3 vols., 1770-1771). *Kalmia*, the genus of plants, was named for him.

KALMAR, kăl'mār, Sweden, seaport and capital of a län (county) of the same name, on Kalmar Sound, 190 miles southwest of Stockholm. The län of Kalmar, 4,456 square miles in area, has important lumbering and stock raising industries. The seaport stands in part on the mainland and in part on two small islands. In the historic castle of Kalmarnahus, parts of which date from the 12th century, was signed on July 20, 1397, the "Union of Kalmar," which settled the succession to the kingdoms of Sweden, Denmark, and Norway upon Margaret (q.v.), queen of Denmark, and her heirs. The harbor of Kalmar has been much improved by breakwaters and dredging. The town's industries include shipbuilding and the manufacture of matches. Pop. län (1924), 229,978; town (1944), 23,834.

KALMIA. See MOUNTAIN LAUREL.

KALMYK or **KALMUCK**, member of a western branch of the Mongol race originally dwelling in central Asia. Early in the 17th century the Kalmyks migrated into Russian territory and established themselves in the region southwest of the lower Volga. There they partly abandoned nomadism, but maintained their ancestral Lamaism, with numerous monasteries. Physically of small stature, the Kalmyks are intrepid soldiers and splendid horsemen; during the imperial regime in Russia numbers of them were attached to the Cossack regiments. Under Catherine II of Russia, an immense horde of Kalmyks undertook, in 1771, a reflex migration, 300,000 being reputed to have reached the Hungarian homeland, where they recruited the Mongol population, reduced by Chinese massacre in 1758. Those remaining within the Russian sphere enjoyed a considerable degree of autonomy within the province of Astrakhan. Under the regime of the Soviet Union, the Kalmyk Autonomous Soviet Socialist Republic was constituted in 1935, the area being 28,641 square miles; the population was estimated in 1941 to number 231,935, of whom 75.6 per cent were Kalmyks. In 1942, during World War II, nearly half the republic was occupied by German forces, and assistance rendered them by many of the Kalmyks brought retribution from the Russian government. After the Germans retreated from the area in 1943 the Kalmyk ASSR was disestablished, the territory being assigned to the contiguous Stalingrad, Rostov, and Stavropol regions, and the newly formed Astrakhan Region; the Russian name Stepnoi was given to Elista, which had been the capital of the republic.

KALMYK AUTONOMOUS SOVIET SOCIALIST REPUBLIC, former constituent of the Soviet Union. See **KALMYK** or **KALMUCK**.

KALNOKY, käl'nô-kî, **COUNT Gustav Siegmund** (BARON VON KOROS-PATAK), Austro-Hungarian diplomat: b. Lettowitz, Moravia, Dec. 29, 1832; d. Prödlitz, Feb. 13, 1898. An officer in the cavalry, he entered diplomatic service at the age of 22, serving in Munich, Berlin, London, Rome, and Copenhagen. In 1880 he became minister of foreign affairs, working to better relations between Austria-Hungary and Russia. In 1882 he engineered the Triple Alliance (q.v.) with Germany and Italy, and in 1883 he secured the secret adherence of Rumania. He retired to life membership in the upper house in 1895.

KALOCSA, kô'lô-chô, town, Hungary, 3 miles from the left bank of the Danube, 70 miles south of Budapest. It has been a seat of an archbishopric since the 12th century. Pop. (1941) 12,341.

KALPA, kül'pâ, in Hindu chronology, a day and night of Brahma, or a period of 4,320,000 or 8,640,000 solar-sidereal years. A great kalpa comprises the life of Brahma.

KALPA SUTRA, käl'pâ sôo'trâ, the Sanskrit work treating of the ritual governing the performance of a Vedic sacrifice. It is also the name of the most sacred of the Jainas religious works, written by Bhadra Bahu in the 7th century A.D., and still held in the highest reverence.

KALTENBRUNNER, käl-tên-brun'nër, **Ernst**, German official: b. Ried, Austria, Oct. 4, 1903; d. Nürnberg, Germany, Oct. 16, 1946. After obtaining the degree of doctor of philosophy at the University of Prague in 1926, he practiced law and at the age of 26 had become an assistant judge at Salzburg. In 1932 he joined the Austrian Nazi Party, and in 1935 he was made the leader of the Schutz Staffel (S.S.) in Austria. He was appointed state secretary for security in 1938, and in 1943 he became chief of the German State Secret Police (the Gestapo). He engaged in a widespread program of crimes against humanity, including the murder and mistreatment of prisoners of war, the massacre of Jews and others thought hostile to the Nazi system, and the torture and imprisonment of people in concentration camps of occupied countries. He was captured by United States troops, tried by the United Nations War Crimes Tribunal, and hanged.

KALUGA, kâ-lôo'gâ, city of the Tula Region, Russian Soviet Federated Socialist Republic, situated on the left bank of the Oka River, 100 miles southwest of Moscow. Agricultural machinery is manufactured, and leather goods are also made on a large scale. Basil III Ivanovich (1479-1533) incorporated Kaluga into the grand principality of Moscow in 1518; it was the capital of Kaluga Province prior to establishment of the Soviet regime. Pop. (1939) 89,484.

KALYMNOS, käl'yêm-nôs (ancient CALYMNOS), island, Greece, in the Dodecanese group. About 40 square miles in area, and 11 miles off the coast of Asia Minor, it has a mountainous terrain, and is an important sponge-fishing center. Pop. (1940) 11,864.

KAMA, kâ'mâ, in Hindu mythology, the god of love and marriage. Endowed with perpetual youth and surpassing beauty, he exercised sway over both gods and men; his weapons were blossom-tipped arrows shot from a flowering bow with a bowstring of bees. According to one authority he sprang from Brahma's heart. His wife is Rati (Pleasure).

KAMA, kâ'mâ, river of the Soviet Union largest tributary of the Volga. It rises in the Ural Mountains in the Udmurt Autonomous Soviet Socialist Republic, flows first north, then northeast, and continues in a south and south westerly direction to join the Volga, 43 miles below Kazan after a course of some 1,200 miles. It is navigable almost throughout its whole course. A canal connecting it with a tributary of the Dvina gives water communication between the Caspian Sea and the Arctic Ocean.

KAMAKURA, kâ-mâ-kôo-râ, city, Japan, or the island of Honshu, 14 miles southeast of Yokohama. Capital of Japan in the 13th century, it is now most famous as a center of historic shrines and temples, and as a resort area. It contains the giant statue of Buddha (42 feet), known as *Daibutsu*, cast in 1252. Pop. (1947) 55,168.

KAMAL-UD-DIN, kâ-mâl'ôod-dên', **Isma'il Isfahani**, Persian lyric poet: d. 1237. After enjoying the pleasures of the world he assumed the garb of a Sufi and took up his abode in a hut near Isfahan, city of his birth. He composed many gazels, quatrains, and eulogies. His most famous work is *Divan*, a collection of poems chiefly in praise of his patrons.

KAMALA, kâ-mâ'lâ, a drug formerly in India and Arabia as a specific against tapeworm. It occurs as a brick-red powder, adherent to the fruit of the euphorbiaceous plant *Mallotus philippinensis*, formed by minute roundish, semi-transparent granules, mixed with stellate hairs. The active principle of the powder lies in the 80 per cent of resin it contains, which also supplies the coloring matter, called rottlerin, used as silk dye.

KAMBAN, kâm'bân, **Gudmundur**, Icelandic novelist and playwright: b. Litli-Bær, Alftanes, Iceland, June 8, 1888; d. Copenhagen, Denmark, May 5, 1945. He lived mainly in Denmark and wrote in the Danish language. His major work was the historical novel *Skálholt* (4 vols., 1930-1932; Eng. tr., *The Virgin of Skálholt*, 2 vols., 1936). Another novel, *I See a Wondrous Land* (1936), appeared in English in 1938. Kamban was executed as a Nazi collaborator.

KAMBODJA, kâm-bô'jâ, a Burmese (*Plumeria acutifolia*) related to the oleander, which is commonly used as a shade tree in the villages of that country.

KAMCHATKA, kâm-chât'kâ, peninsula northeastern Asia, bounded on the west by the Sea of Okhotsk and on the east by the Bering Sea. It is 750 miles long, from north to south, and the maximum width is 250 miles; the area is 104,260 square miles. A mountain range traverses the country in a southwesterly direction, with many peaks more than 7,000 feet in height. snow line, in latitude 56° 40', is at an elevation c

260 feet. A large number of volcanoes are in active operation. The highest peak is Kluychevskaya, an active volcano 15,745 feet high. Numerous rivers have their sources in the mountains. The Kamchatka River, rising in the mountain range down the center of the peninsula, follows generally northeasterly course of some 300 miles to enter the Bering Sea; with its affluent the Yelovka, it is navigable for 150 miles. Other rivers include the Avatcha and the Tagil. There are numerous lakes and hot springs. Earthquakes are frequent and violent. The climate is very severe; the winter lasts nine months, and frost is common at all seasons. Animal life is abundant, and fish swarm in the rivers and neighboring seas. The wild animals, plentiful in the more sequestered regions, include bears, wolves, reindeer, wild sheep, black, red, and gray foxes, ermines, sables, and otters. Wild fowl are numerous. Herrings, cod, and salmon are the principal varieties of fish. Fur seals and whales abound in the adjacent waters. The mountains are covered with forests of birch, larch, pine, and cedar; they are of considerable size in the south, but diminish northward until the northernmost portion of the peninsula is covered only with reindeer moss. Minerals known to exist, but little worked, include coal, copper, gold, iron, and sulphur.

The Koryaks, an aboriginal tribe, are largely nomadic. Those of the interior subsist on the produce of the reindeer, and the coastal Koryaks are fishermen. The Kamchadales, the most numerous people, are half breeds, a mixture of Mongols with migrants from Siberia. They were Christianized in the 19th century, and generally speak Russian. The Russians established their first settlement in Kamchatka in 1696, and in 1803 created a provincial administration for the peninsula. Petropavlovsk became the capital, and other towns which grew up include Palana and Nizhne Kamchatsk. Administratively, the peninsula became the Kamchatsk Region of the Russian Soviet Federal Socialist Republic, having an area of 69,711 square miles. Agriculture and the rearing of livestock are being developed, and fish canning is of increasing importance.

KAME, low hills of glacial sands and gravels arranged in stratified order. These hills are more or less isolated and frequently form ridges sometimes reaching about 100 feet in height above the surrounding level country. They are frequently found in the vicinity of the terminal moraines along the line of retreat of the Pleistocene continental ice sheets. See **DRIFT**; **GLACIAL PERIODS**.

KAMEHAMEHA, *kā-mā'hā-mā'hā*, name of the native rulers of the Hawaiian (Sandwich) Islands. **KAMEHAMEHA I**, surnamed **NUI** (the Great): b. Kohala, Hawaii, 1737?; d. Kailua, Hawaii, May 8, 1819. Becoming head chief of the island of Hawaii in 1781, he conquered all islands except Kauai and Niihau by 1795 and made himself king; Kauai and Niihau were ceded to him in 1810. He created an organized government and permitted trade with foreigners. His successor was his eldest son by Keopuolani, his head wife, **KAMEHAMEHA II** (**LIHOLIHO**): b. Hawaii, 1797; d. London, England, July 14, 1824. In 1820 he admitted the first American missionaries. Kaahumanu (Feather Mantle), favorite queen of Kamehameha I, was the young king's *kuhina nui* (premier), and she became regent when he and

his consort went to England in 1824. They died there, and he was succeeded by his full brother, **KAMEHAMEHA III** (**KAUIKEAOULI**): b. March 7, 1814; d. Honolulu, Dec. 15, 1854. Because of his youth, Kaahumanu acted as regent until her death in 1832, when Kinau, a daughter of Kamehameha I, assumed the functions of *kuhina nui*; Kaahumanu, who had become a Christian in 1825, administered the kingdom with notable wisdom and skill. Kamehameha III, a liberal ruler, promulgated a constitution in 1840 and a more modern one in 1852; he secured recognition of the kingdom's independence from the United States in 1842 and from Great Britain and France the following year. He was succeeded by his nephew (son of Kinau and Kekuanaoa, governor of Oahu), **KAMEHAMEHA IV** (**ALEXANDER LIHOLIHO**): b. Feb. 9, 1834; d. Honolulu, Nov. 30, 1863. In 1855 he signed a treaty of commercial reciprocity with the United States, but it was not ratified by Congress. In 1856 he married Emma, adopted daughter of Dr. Rooke, and with her he founded the Queen's Hospital in Honolulu. He was succeeded on the throne by his full brother, **KAMEHAMEHA V** (**LOT KAMEHAMEHA**): b. Dec. 11, 1830; d. Dec. 11, 1872. The constitution which he promulgated in 1864 was less democratic than that of 1852 but satisfied the majority of the Hawaiians. Japanese labor was imported into the islands by a contract made in 1868. He never married, and with his death came the end of the Kamehameha dynasty.

KAMEHAMEHA, Order of, an Hawaiian society founded in Honolulu in 1864 by Kamehameha V. The order was divided into three classes. The badge of the order was a white enameled cross with gold rays surmounted by a crown.

KAMENETS-PODOLSK, *kā'mé-nyëts pō-dōlsk'*, Soviet Union, city of the Ukrainian Soviet Socialist Republic, capital of a region of the same name, near the borders of Bessarabia and Galicia. Agricultural machinery is manufactured. For centuries a part of Poland, it was in Turkish occupation during 1672-1699; in 1795 it became part of Russia. Pop. 33,035.

KAMENEV, *kā'myi-nyëf*, **Lev Borisovich**, Russian politician: b. Moscow 1883; d. there, Aug. 26, 1936. Originally surnamed Rosenfeld, as a young man he joined the Social Democratic Party and became involved in revolutionary movements. He was exiled to Siberia in 1915, but returned to Russia after the revolution of February 1917. With Leon Trotsky (whose sister he married) and others he helped establish the Bolshevik government, and in 1923 became a vice president of the Union of Soviet Socialist Republics. Until 1932 he occupied a number of important government posts, but more than once he was expelled from the Communist Party for opposing its policies. In 1934 he was arrested for complicity in the assassination of Sergei Mironovich Kirov; he was convicted of participating in plots against Joseph Stalin which had been instigated by Trotsky, and was put to death.

KAMERLINGH ONNES, **Heike**. See **ONNES**, **HEIKE KAMERLINGH**.

KAMERUN. See **CAMEROONS**.

KAMES, **Lord**. See **HOME**, **HENRY**.

KANAZAWA, kă'nă-ză'wă, Japan, the largest city on the western coast, on Honshu Island, nearly opposite Yokohama. It was founded in 1583 and the fief, given by Toyotomi Hideyoshi (1536-1598) to Mayeda, one of his captains, made thus feudal ruler of Kago, Noto, and Etchū (one city, eight counties, and 774,091 inhabitants), the wealthiest of all in Japan. Like other cities in Japan, it declined after the fall of feudalism, in 1871; but, like most of them also, subsequently regained prosperity through manufactures, modern improvements, and increase of the output of bronze and lacquer work, red decorated pottery (kutani), and habutai silk. Its public buildings are notable, and its renowned public gardens are the finest in Japan. The Kenroku Park of the Six Combinations—vastness, solemn solitude, labor bestowed, venerable moss-covered appearance, running water, and charming prospect—is one of several places of recreation. Hakusan, or White Mountains, and one of the most noted in all Japan (8,793 feet high), is in view. The thousands of pilgrims annually ascending it usually start from this place. The estimated population in 1938 was 191,600.

KANCHENJUNGA, kăn-chŭn-jŭng'gŭ, mountain of the Himalayas, third highest in the world, on the frontier between Nepal and Sikkim, east-southeast of Mount Everest. The height is 28,146 feet. Its name means the "five treasure houses of the great snows," each of the five peaks being supposed to be a store of a different treasure.

KANCHIL, the smallest species of chevrotin (q.v.). It inhabits Java and neighboring islands, is less than a foot tall, and is proverbially quick and clever in its movements and hiding in the forest. Its scientific name is *Tragulus javanicus*.

KANDAHAR, kăn-dă-hăr', or **CANDAHAR**, Afghanistan, capital of a province of the same name. It is situated on a well-cultivated plain, 3,462 feet above the sea, 313 miles southwest of Kabul. It is enclosed by a mud wall 27 feet high, with a large tower at each of the four corners, 54 semicylindrical bastions, and a broad and deep ditch in front, capable of being filled with water from the river. There are six gates, each protected by double bastions. The circumference of the city is over three miles. One of the most imposing buildings is the octagonal, domed structure containing the tomb of Ahmed Shah (q.v.). There are 180 mosques in the city. It is claimed that this city was founded by Alexander the Great. Kandahar is famous for the fruits grown in the vicinity, and tobacco is cultivated for export; it has important manufactures of felt and silk. Kandahar was held by the British in 1839-1842, and again in 1879-1881. The estimated population in 1937 was 60,000.

KANDALAKSHA, kăn-dă-lăk'shă, USSR, a port on the gulf of the same name (an inlet of the White Sea), in the Murmansk Region of the RSFSR. The principal industry is fishing for cod and herring. Kandalaksha is on the railroad between Moscow and Murmansk. The estimated population in 1935 was 17,000.

KANDAVU, kăn'dŭ-vōō', most southwesterly, and fourth largest, of the Fiji Islands, area

165 square miles. The island, 38 miles long, is almost severed at the center by the Tavuki Isthmus. Mount Washington, 2,750 feet in height, stands at the southwestern tip of the island. Pop. 5,536.

KANDINSKI, kăn-dĭn'skĭ, **Vasili**, Russian painter and designer: b. 1866; d. Paris, France, Dec. 17, 1944. He was associated with the Moscow Academy of Art, and for a time he served as director of the Moscow Museum of Pictorial Culture. In 1911 he founded in Munich, in collaboration with Paul Klee (1879-1940), a school of abstract impressionist painting. He also established in 1921, the Russian Academy of Artistic Sciences. From 1922 until 1933 he was an instructor in the Bauhaus group, at Weimar. He then left Germany, thereafter making his home in Paris. His views on painting were set forth in *The Art of Spiritual Harmony* (1914).

KANDY, kăn'dê, or **CANDY**, Ceylon, capital of Central Province. It is situated at an elevation of 1,602 feet above sea level, alongside an artificial lake, 75 miles northeast of Colombo. The town contains Buddhist and Brahman temples, including the Dalada Maligawa, the most sacred Buddhist edifice in the world. This temple enshrines the reputed Tooth of Buddha, supposedly brought from India 25 centuries ago by a princess who hid it in her hair. Many Pali and Sanskrit manuscripts have been found in Kandy. At Peradeniya, three miles distant, are the beautiful Royal Botanic Gardens. Although occupied by the Portuguese in the 16th century, and by the Dutch in the 18th, the town continued to be the capital of the ancient kingdom of Kandy until 1815, when it was annexed by Great Britain. The artificial lake was constructed in 1840 by the last king of Kandy. Pop. (1941) 30,541.

KANE, Elisha Kent, American Arctic explorer: b. Philadelphia, Feb. 3, 1820; d. Havana, Cuba, Feb. 16, 1857. He was graduated as M.D. in the University of Pennsylvania in 1842, and shortly afterward became surgeon to the American mission to China. After extended travel in India, Egypt, and the continent of Europe, he returned to the United States in 1846, and was employed in the government survey of the Gulf of Mexico. In 1850 he obtained the appointment of senior medical officer to the expedition of two vessels, the *Advance* and the *Rescue*, which sailed from New York on May 22 in that year in search of Sir John Franklin (q.v.). On the return of the expedition, Kane published *The United States Grinnell Expedition in Search of Sir John Franklin—a Personal Narrative*. On May 31, 1853, the *Advance* alone, under Kane's command, sailed again from New York to resume the search, and proceeding up Baffin's Bay and through Smith Sound, reached lat. 78° 43' N. Here the *Advance* remained frozen up for 21 months, and was finally abandoned because provisions were becoming scarce and scurvy and other diseases had made their appearance. The object now was to reach the Danish settlements in Greenland, about 1,300 miles distant. This long and perilous journey, partly in boats and partly in sledges, was accomplished, after 10 weeks of severe privation, with the loss of only one man, and that by an accident. In 1856 Kane published *The Second Grinnell Expedition*, and was awarded

gold medals from Congress, the New York legislature and the Royal Geographical Society. Consult Elder, *Biography of Elisha Kent Kane* (1857); Greely, *American Explorers* (1894).

KANE, John Kintzing, American jurist: b. Albany, N. Y., May 16, 1795; d. Philadelphia, Pa., Feb. 21, 1858. He was graduated from Yale in 1814, was admitted to the bar in 1817, entered practice in Philadelphia, was elected to the Pennsylvania legislature as a Federalist in 1823, later became a Democrat, and supported Jackson in the canvass of 1828. In 1845 he became attorney-general of Pennsylvania, in 1846 United States district judge for Pennsylvania, in 1856 president of the American Philosophical Society. He won distinction by his legal attainments and his decisions in patent and admiralty law, but his commitment of Passmore Williamson for contempt of court in an action under the Fugitive Slave Law was attacked by the Abolitionists.

KANE, Paul, Canadian artist: b. Toronto, 1810; d. 1871. He received his early art education at Upper Canada College, and was inspired with the ambition to depict the Indians. After spending some years in the United States, he went to Europe in 1841, studied art in Italy, and returned to Toronto in 1845. He made a transcontinental journey in 1846-47, in the course of which he visited many of the western tribes, and brought back with him some hundred sketches of great ethnological value, and developed later into an important series of paintings of Indian life and western scenery. In 1859 he published the literary result of his travels, *Wanderings of an Artist among the Indian Tribes of North America*, illustrated by his own sketches.

KANE, Sir Robert John, Irish chemist: Dublin, Ireland, Sept. 24, 1809; d. there, Feb. 1, 1890. He was educated for the medical profession and in 1832 became a member of the Royal Irish Academy. In the same year he founded the *Dublin Journal of Medical Science* and was its editor for two years. From 1834 to 1837 he was professor of natural philosophy in the Royal Dublin Society; in 1846 originated the Museum of Industry in Ireland. He was knighted the same year, was president of Queen's College, Cork, for several years prior to his resignation in 1873, and in 1876 was elected president of the Royal Irish Academy. He wrote *Elements of Chemistry* (1842); *Industrial Resources of Ireland* (1884), etc.

KANE, Pa., borough in McKean County; alt. 2,013 feet; on the Pennsylvania, and the Baltimore and Ohio railroads; 94m. SE. of Erie. It lies on the eastern boundary of the Allegheny National Forest. There are deposits of oil, gas, and silica near by. Industry here is well diversified; brush handles, wooden toys and Venetian blinds are made. Shirts, silk garments, leather baggage, and wire glass are additional products of the local mills and factories. Kane has a Little Theater, a public library, and an armory. Winter sports, especially skiing, attract visitors. The borough is also an attractive summer resort. First settled in 1859, it was named in honor of its founder, Gen. Thomas L. Kane (1822-83), who served as an officer in the Union army in the Civil War, commanding a brigade at Gettys-

burg. Government is by burgess and council. Pop. (1940) 6,133; (1950) 5,706.

KANEKO, kã'nã-kô (VISCOUNT) **Kentaro**, Japanese statesman: b. Fukuoka, 1853. He came of an old Samurai family, and received foreign education in the United States, being graduated from the Harvard Law School in 1878. He began his career as a professor in the school that was the forerunner of the Tokio Imperial University. In 1885 he became private secretary to Prince Ito, then Premier of Japan; was sent abroad for the purpose of investigating constitutional systems; served as president of the Privy Council (1888-90), and chief secretary of the House of Peers, 1890. Two years later, he was a delegate to the International Law Conference in Switzerland. He was vice-minister for agriculture and commerce in 1894; minister of the same department in 1898, and in 1900 Minister of Justice. During the Russo-Japanese War (1904-05) he was non-official representative of his government in this country, and a powerful factor in effecting the peace negotiations at Portsmouth. He was made Privy Councillor in 1890. D. May 16, 1942.

KANGAROO. See MARSUPIALIA.

K'ANG-HI, or **KANG-HSI**, the second emperor of the Ta Tsing dynasty established in China by the Manchu Tartars: b. 1655; d. 1722. He began to reign in 1661, under a regency and assumed the reigns of government in 1669, when only 14 years of age. When he was 19 he was forced to face a rebellion of the Chinese under Wu San-Kuei, which spread throughout the whole vast empire. But K'ang-Hi struggled against many very great difficulties and was finally successful in restoring the country to order and in even extending his authority to Khokand, Badakhshan and Thibet. He proceeded to consolidate his power by increasing the number of provinces to 18 and extending his dominion most intimately over each of them. The Jesuits, who were welcomed by him, contributed to his victories by supplying him with the most modern cannon and arms then in use in Europe, and to the scientific glories of his court by the reformation of the calendar (1669), the taking of a complete census and the surveying of the whole empire. Under these and other influences K'ang-Hi became a great and consistent patron of art and literature. In this field his energies, very active at court, extended to other literary centers of the empire. So strong became the influence of the Jesuits that Christianity was officially recognized in 1692. A break, however, occurred with Rome in 1698, when the Pope decided against ancestor worship to which the emperor clung tenaciously as a vital part not only of his religious faith but also of his family creed. The breach between the emperor and Rome continued to widen until finally the former issued an edict banishing from the country all the Christian missionaries who dared to differ from his own expressed opinion on these or other matters. Among the literary activities patronized by K'ang-Hi and supervised by him were the great Imperial Dictionary of Chinese; a concordance to all Chinese literature (*Pei-Wên-Yun-Foo*) in 110 large volumes; two great encyclopaedias, the largest of which (the *Ku-Kin T'oo Shu-Ts'ih-Ching*) consists of

over 5,000 volumes. For this latter vast undertaking movable copper type was used. These, though the most notable, were only a few of his many art and literary activities. He encouraged commerce with foreigners and granted permission to the East India Company to establish an agency in China (1677).

K'ANG TE or **KANG TEH**. See HSÜAN T'UNG.

K'ANG YU-WEI, käng' yō'wā', Chinese scholar and reformer: b. Nanhai, Kwangtung Province, March 19, 1858; d. Tsingtao, March 31, 1927. Coming under the influence of the missionaries, he became greatly interested in Western history and philosophy, of which he made a deep study. This led him to become leader of a reform party in China. His lectures and leaflets attracted wide attention, his influence spreading to all the provinces and becoming especially strong in the schools of higher learning. This brought him to the attention of the imperial court, and in 1898 he became one of the principal advisers of Emperor Kuang Hsü. The famous reform decrees of that year were inspired by his counsel, and when they proved a failure Empress Dowager Tzu Hsi secured his proscription. He fled the country in order to escape execution, and for the next 16 years he was in exile. Wandering about from Hong Kong to Singapore and other places in the Orient, he organized the Pao Huang Hwei (Empire Reform Society), the object of which was to modernize China. He also visited Great Britain and the United States, and other countries where the Chinese were in strength, and during 1911-1912 he took an active part in promoting the movement which resulted in overthrow of the monarchy and the establishment of the republic. In 1914 he returned to China, but he was still an ardent monarchist and hoped to see Confucianism adopted as the religion of the state. During 1917 he was one of the leaders in the attempt to restore Emperor Hsüan T'ung to the throne, and in the Cabinet then formed he was given the post of vice minister of the interior. When this monarchist coup failed he fled for safety to the foreign legations in Peking (Peiping), and thence made his way to internationalized Shanghai. There he lived in retirement until the end of his life, writing, lecturing, and collecting ancient pottery, porcelain, and other objects of art. He was termed "the Rousseau of China" and "the Modern Sage." Among his published works are *A New Commentary on the Chinese Classics* and *Modern Japan*.

KANGAR, käng'gär, town, Federation of Malaya, capital of the state of Perlis, on the Perlis River 25 miles north-northwest of Alor Star. It is served by the main line of the Malayan Railway. Pop. (1948) 3,948.

KANGAROO, a native name for a large hopping marsupial mammal found in Australia and a few neighboring islands. Its discovery is usually accredited to Captain James Cook in 1770, though it is now known to have been described by a Dutch navigator, Pelsart, as early as 1629. To most persons the name kangaroo connotes the large gray species of the genus *Macropus* (great foot) commonly seen in zoological gardens, but the family Macro-

podidae comprises a diversified assemblage of over one hundred species and subspecies, some small and rat-like, some as tall, when standing, as a man, and one genus of tree-living forms. The family belongs in the great subordinal group of vegetable-eating marsupials called Diprotodontia in reference to their having a single pair of front teeth or incisors in the lower jaw. These teeth are long and directed forward, with bladelike edges, which, shearing against the upper incisors, are efficient for cropping grass. The kangaroos feed chiefly on vegetable matter and the stomach (except in the primitive musk kangaroo mentioned below) is sacculated as in some other herbivorous mammals. The most striking feature, especially of the large "typical" kangaroos, is the small size of the anterior part of the body and the fore legs, together with the enormously enlarged hind legs and the long powerful tail, adaptations for progression by hopping. The strongly clawed fore feet are used as hands. The hind feet are greatly specialized for leaping, with the fourth toe enormously elongated, the fifth moderately so, the second and third united so as to appear like a single toe with two claws, (a condition called syndactyly, which is found in diprotodonts in general). The first toe, or hallux, is lacking in all except the primitive *Hypsiprymnodon*, mentioned below. A kangaroo

Kangaroo

in the standing position is supported by the hind feet and the tail. When moving slowly the short fore legs and the tail form a tripod briefly supporting the body while the hind feet are swung forward together. In rapid motion by hopping the fore feet do not touch the ground, and the powerful tail functions as a balancer and rudder. Some species can leap more than twenty feet. In fighting the kangaroo uses the tail as a prop, seizes its opponent with its hands, and delivers powerful downward slashing kicks with the strongly clawed hind feet. Dogs are sometimes killed in this manner. The marsupial pouch, on the abdomen, contains four teats, but usually only a single offspring is born. As in all marsupials the young at birth is almost incredibly small, and it was long believed that the mother transferred it to the pouch with her mouth. However, a considerable number of thoroughly reliable observations leave no doubt that the newborn kangaroo, aided by precociously developed claws on the fore feet, crawls or wriggles over the mother's fur, enters the pouch and applies its mouth to a teat all by its own efforts. Even in the larger kangaroos the newborn measures barely $\frac{3}{4}$ inch from nose to root of tail, slightly less than the house mouse at birth. The baby kangaroo remains attached to the teat for some weeks, and for several months it sleeps and spends more or less time in the marsupium.

The "typical" kangaroos, the nearly related wallabies and the remarkable tree kangaroos.

Perodolagus, which have become secondarily adapted to arboreal life, are placed in a subfamily, Macropodinae. A second subfamily, the Potoroidae, comprises the rabbit-sized rat kangaroos, or less adapted for leaping, and feeding chiefly on roots and underground fungi. One genus, *Settongia*, has a prehensile tail with which it carries grass to its nest. The most primitive member of the kangaroo family is the small rat-like musk kangaroo, *Hypsiprymnodon*. It is the only genus which retains the hallux or first digit of the hind foot, and which has a nonsacculated stomach, probably related to its diet, largely of insects and worms. It seems to represent a link with the Phalangers (q.v.).

See bibliography under MARSUPIALIA; and consult Froughton, E., *The Furred Animals of Australia* (New York 1947).

KANGAROO RAT, a small jumping rodent, *Dipodomys*, several species of which inhabit arid regions of western North America. They resemble, superficially, the jerboas (q.v.) of the Old World in having greatly elongated hind legs and tail. They have the habit of excavating extensive burrows in which they spend the daylight hours, coming forth at sundown to feed on plant material and to collect food, especially various seeds, which are carried home in external cheek pouches and stored in the burrow for winter use.

KANGWHA, käng'wä', island, Korea, at the mouth of the Han (Kan) River. Guarding the waterway to Seoul (Kyongsong, Keijo), the capital, it is of considerable importance. French forces attacked it unsuccessfully in 1866, but the forts were captured in 1871 by American sailors under Winfield Scott Schley (q.v.) from the squadron commanded by John Rodgers. In 1875 the Japanese also stormed and took the forts.

KANITZ, ká'nits, **Felix Philipp**, Hungarian archaeologist, ethnologist and art historian: b. Budapest, Aug. 2, 1829; d. Vienna, Jan. 5, 1904. Well educated and possessing private means, he traveled through Germany, Belgium, France and Italy and the South Slavic countries, devoting his time and attention, for the most part, to the study of the archaeology, art and ethnology of these countries. Among his published works are *Die römischen Funde in Serbien* (1861); *Katechismus der Ornamentik* (1870); *Das Königreich Serbien* (1904-1914).

KANKAKEE, käng-kä-ké', city, Illinois, and Kankakee County seat; on the Kankakee River; 4 miles southwest of Chicago; served by the Illinois Central and the New York Central railroads. Kankakee is a thriving industrial community and an important retail and shipping point for one of the richest agricultural regions in the world, the famous Illinois corn belt. Proximity to the great grain markets of Chicago is one of Kankakee's chief assets, while at the same time it has achieved in its own right a high commercial status. In addition to the fertile prairie soil, the natural resources of the section comprise limestone quarries, and the water power of the Kankakee River at this point has contributed appreciably to the city's development as an industrial center. Manufactures include furniture, stoves, textile machinery, foundry products, brick, tile, cut stone, knit goods, hosiery, paint,

farm implements, venetian blinds, and neon signs; and there are extensive railroad shops. The Kankakee State Hospital for the insane, established here in 1878, was one of the pioneers in cottage treatment and organized recreation in the care of mental patients. In the Central High School are 45 sculptures by George Gray Barnard, given by him to the school he had attended. Olivet Nazarene College, a coeducational school founded in 1907, is located here. The city's early history is closely associated with that of Bourbonnais, three miles to the north and now the seat of Olivet Nazarene College. Bourbonnais was the first settlement on the Kankakee River, dating from 1832. With the coming of the railroad in the early 1850's, Kankakee was formally laid out, and incorporation followed in 1855. Pop. (1940) 22,241; (1950) 25,856.

KANKAKEE, a river of northern Illinois, approximately 250 miles long, which has its rise in English Lake, Starke County, in northern Indiana, flows west and southwest and enters Kankakee County in Illinois. From where it receives the waters of the Iroquois from the south, the course changes to the northwest until it enters Grundy County, where it unites with the Des Plaines River to form the Illinois River.

KANNAPOLIS, kă-năp'ô-lis, unincorporated town, North Carolina, in Cabarrus and Rowan counties; 29 miles northeast of Charlotte; on the Southern Railway; founded by J. W. Cannon, Sr., in 1906. It has towel, bed linen, and blanket mills. Pop. (1950) 28,448.

KANO, kă'nô, in the British protectorate of northern Nigeria, (1) capital city of Kano Province which was annexed by Great Britain in 1903. Kano, 500 miles northeast of Lagos, is the start of many caravan routes and is the chief market and center of trade for the interior of Africa. It is located on a plateau at an altitude of 1,570 feet. Leather, brass, pottery, and cotton goods are extensively manufactured, and dyeing is carried on. On account of its industries Kano has been called the Manchester and Birmingham combined of the Dark Continent. The city has been a market center for over 1,000 years. The objectionable feature of the old market was the trade in slaves, but that disappeared under British rule. The wall surrounding Kano is 12 miles in circumference, is 40 feet thick at the base, and from 40 to 50 feet in height. The houses are chiefly of adobe and the streets are wide and clean. Kano was occupied by a British punitive expedition in 1903. There are Koranic schools, a Moslem law school, a modern hospital, and a mosque located here. Pop. (est. 1952) 130,000. (2) Kano, province of northern Nigeria, British West Africa, has an area of 17,602 square miles. It is said to have the densest population in Nigeria. The chief occupations are agriculture and stock raising, and the principal crops are corn, cotton, peanuts, and millet, much of which is exported. The average rainfall in Kano is from 30 to 40 inches a year; October to April is the dry season. The ruling class are the Fulahs, although the Hausas are in the majority. Efforts to Christianize the province have, in the main, failed and the majority of the people are Mohammedans. The province was one of the original Hausa states. See also Sokoto. Pop. (1931) 2,436,844.

KANSAS, kăn'zās, a Central state lying approximately in the geographic center of the United States. It is bounded on the north by Nebraska; on the northeast and east by Missouri; on the south by Oklahoma; and on the west by Colorado. The state was named for the Kansa tribe of Siouan Indians. When Europeans first became acquainted with the lower Missouri Valley, these Indians occupied what became northeastern Kansas, together with country to the northeastward.

State flag.

Land area	82,108 square miles
Water area	168 square miles
Total area	82,276 square miles
Latitude	37°—40° N.
Longitude	94°38'—102°1'34" W.
Altitude	700 to 4,135 feet
Population (1950)	1,905,299
Population (estimate for July 1, 1952)	1,971,000
Capital city—Topeka; Pop. (1950)	78,791
Admitted as a state	Jan. 29, 1861
Bird	Western Meadow Lark
Flower	Sunflower, approved March 12, 1903
Motto— <i>Ad Astra per Aspera</i> (To the stars through difficulties)	
Nicknames—Sunflower State, Jayhawker State, Wheat State	
Song	<i>Home on the Range</i>
Tree	Cottonwood

State seal.

Physical characteristics.—Topography.—Contrary to the prevailing opinion among those not personally acquainted with Kansas, the surface is not a monotonously level plain. It slopes eastward and southeastward from approximately 4,000 feet altitude near the northwestern corner to about 700 feet near the southeastern corner, or, from west to east, an average of more than seven feet per mile. The eastern third of the state (roughly, east of a line drawn through Abilene and Wichita), presents a wide variety of hills, but little level land, and is known to geographers as the Osage Plains. Originally, timber, such as oak, hickory, and walnut, with cottonwood in the wet bottoms, was found along all the streams as far west as the 97th meridian. Northeastern Kansas has glacial deposits, whose southernmost point is marked by boulders sev-

eral miles south of the Kansas River, near Lawrence. The bluestem pasture region occupies most of the western half of this eastern third of the state. It has been left in grass largely because of the rough topography associated with major rock outcrops such as the Flint Hills and the Chautauqua Hills. At the north, it includes most of Riley and Pottawatomie counties, and at the south, Cowley and Chautauqua counties in Kansas, and Osage County in Oklahoma. The central third of the state has much level land as well as hills. To the northward are the Smoky Hills Uplands, whose eastern slopes expose outcrops of Dakota sandstone. Further west are the Blue Hills Uplands. The Great Bend Prairie lies in the south central part of the state dominated by the Great Bend section of the Arkansas River. Sand hills are found in several places, especially along the south side of the Arkansas River, and at points along the Cimarron River and elsewhere. The High Plains, which comprise roughly the western third of the state, are much dissected and reshaped in Kansas by successive crust-warping movements, accumulation, and erosion, being covered to varying depths with materials transported by water and wind.

Geology.—The geological history must be described from the bottom upward. Above the pre-Cambrian granites and similar crystalline basement rocks lie the Cambrian and Ordovician formations, the latter being oil bearing. None of these rocks are exposed at the surface. Next higher in the Kansas geological series are Mississippian rocks, which are exposed only at the extreme southeastern corner of the state. They bear lead and zinc, as well as oil and gas. Above these are the Pennsylvanian rocks, formerly called the Coal Measures, whose outcrops occupy, at the surface, the eastern one fourth of the state. Although the surface slopes eastward and southeastward at an average rate of 25 feet per mile. The harder rocks, especially the limestones, form eastward-facing escarpments, which trend northeast to southwest across the state. Several coal formations occur in this series, the Cherokee group at the southeastern corner of the state being the oldest, the thickest, and of the highest quality. The Wabauunsee group is the uppermost of the Pennsylvanian strata, its exposures extending from Atchison County, near the northeastern corner, to the south line of the state in Cowley and Chautauqua counties. Permian rocks outcrop in east central Kansas, the Flint Hills escarpment forming the eastern exposure of this system. —The Permian series contains some gypsum and large salt deposits at minable depths. Above these are Cretaceous strata; the lower, especially the Dakota sandstone group, which occupies the Smoky Hills Uplands in north central Kansas, bear lignite coal. Tertiary and later deposits are represented in the High Plains, the erosion of the valleys exposing, at some points, Cretaceous or older strata.

Climate.—The climate of Kansas is subject to wide fluctuations characteristic of interior continental areas. Rainfall diminishes from an annual average of 40 inches in the southeast to 15 inches at the western boundary, and in seasonal distribution, 68 per cent of it falls in the east and 77 per cent in the west between April and August, inclusive. The growing season of frost-free days averages 186 days near the southeastern

d 154 days near the northwestern corner. **Vegetation.**—The eastern third of Kansas is ll-grass prairie, where the bluestem grasses are e conspicuous dominants in the native vegeta-on. The western third is short-grass country which blue grama and buffalo grass are the ore conspicuous dominants. The mid-third of e state is mostly a mixed-grass region repre-nting the overlapping of the range of the east-n and the western forms of vegetation. Kansas e-occupies also a transition position in the north-uth distribution of vegetation: some long-day ants extending southward into and across Kan-s, and some short-day plants extending north-ard into or across the state. Native animal istribution patterns are similar to the vegeta-onal patterns.

Rivers, Lakes, and Irrigation.—The drainage ttern may be described in three divisions: orthern Kansas drained by the Kansas-Smoky ill-Republican river system; southwestern Kan-s by the Arkansas River; and southeastern Kansas by the Marais des Cygnes which empties to the Missouri River; and the Verdigris and eoshio rivers which empty into the Arkansas iver in Oklahoma. The state has no natural kes, but several artificial ones were created for ecreational purposes as a part of the public orks program of the 1930's. The major irri-ation activities are associated historically with lversion of Arkansas River water in the vicinity f Garden City, but some pump irrigation is racticed on a small scale. In 1950, approx-ately 138,686 acres were irrigated, compared ith 47,312 in 1919, 71,290 in 1929, and 99,980 acres in 1939.

Political Division.—Cities.—

City	Industries
Coffeyville	Brick, oil.
Hutchinson	Grain market, milling, wholesale houses, salt mining and manufacture.
Kansas City (Kansas)	Grain and livestock marketing, processing facilities.
Lawrence	Flour mill, paper box factory.
Parsons	Railroad shops.
Pittsburg	Coal mining, brick and tile manufacture.
Shina	Grain market, milling, wholesale houses.
Topeka	State capital, headquarters state organiza-tions; railroad offices and shops.
Wichita	Grain and livestock marketing, processing facilities; airplane factories; wholesale houses.

For populations of other communities see back f state map.

Counties.—The state's 105 counties range in ize from Butler with 1,445 square miles to Wyandotte with 151 square miles. The list of omities with county seats follows:

County	County Seat	County	County Seat
Allen	Iola	Dickinson	Abilene
Anderson	Garnett	Doniphan	Troy
Atchison	Atchison	Douglas	Lawrence
Barber	Medicine Lodge	Edwards	Kinsley
Barton	Great Bend	Elk	Howard
Bourbon	Fort Scott	Ellis	Hays
Brown	Hiawatha	Ellsworth	Ellsworth
Butler	El Dorado	Finney	Garden City
Chase	Cottonwood Falls	Ford	Dodge City
Chautauqua	Sedan	Franklin	Ottawa
Cherokee	Columbus	Geary	Junction City
Cheyenne	St. Francis	Gove	Gove
Clark	Ashland	Graham	Hill City
Clay	Clay Center	Grant	Ulysses
Cloud	Concordia	Gray	Cimarron
Coffey	Burlington	Greeley	Tribune
Comanche	Coldwater	Greenwood	Eureka
Cowley	Winfield	Hamilton	Syracuse
Crawford	Girard	Harper	Anthony
Decatur	Oberlin	Harvey	Newton

County	County Seat	County	County Seat
Haskell	Sublette	Phillips	Phillipsburg
Hodgeman	Jetmore	Pottawatomie	Westmoreland
Jackson	Holton	Pratt	Pratt
Jefferson	Oskaloosa	Rawlins	Atwood
Jewell	Mankato	Reno	Hutchinson
Johnson	Olathe	Republic	Belleville
Kearny	Lakin	Rice	Lyons
Kingman	Kingman	Riley	Manhattan
Kiowa	Greensburg	Rooks	Stockton
Labette	Oswego	Rush	LaCrosse
Lane	Dighton	Russell	Russell
Leavenworth	Leavenworth	Saline	Salina
Lincoln	Lincoln	Scott	Scott City
Linn	Mound City	Sedgwick	Wichita
Logan	Russell Springs	Seward	Liberal
Lyon	Emporia	Shawnee	Topeka
Marion	Marion	Sheridan	Hoxie
Marshall	Marysville	Sherman	Goodland
McPherson	McPherson	Smith	Smith Center
Meade	Meade	Stafford	St. John
Miami	Paola	Stanton	Johnson
Mitchell	Beloit	Stevens	Hugoton
Montgomery	Independence	Sumner	Wellington
Morris	Council Grove	Thomas	Colby
Morton	Richfield	Trego	Wakeeney
Nemaha	Seneca	Wabaunsee	Alma
Neosho	Eric	Wallace	Sharon Springs
Ness	Ness City	Washington	Washington
Norton	Norton	Wichita	Leoti
Osage	Lyndon	Wilson	Fredonia
Osborne	Osborne	Woodson	Yates Center
Ottawa	Minneapolis	Wyandotte	Kansas City
Pawnee	Larned		

People.—In 1860, six years after the terri-tory was opened to settlement, Kansas contained 107,206 people, and by 1890, 1,428,108. In 1930, the population numbered 1,880,999; in 1940, 1,801,028; and in 1950, 1,905,299. The half-century, 1890-1940, added 372,920, and the decade, 1940-1950, 104,271, the major change indicated being the rural to urban trend. During the decade 1910 to 1920, the number of cities (2,500 and up) increased from 33 to 62, but in 1940 there were only 64 of that size, and 20 with more than 10,000 population. By 1950, according to the Bureau of the Census' new urban definition, the bulk of the population (52.1 per cent, or 993,220 persons) were living in urban areas. However, with only two cities above 100,000, the state remained pre-eminently a region of small towns and adjoining rural areas. In 1950, 903,468 Kansans lived in 68 incorporated places with 2,500 inhabitants or more. The state's total of 601 incorporated places had a combined population of 1,206,252. The state received a substantial foreign immigration: English, Ger-man, Swedish, Bohemian, Russian, and others, but not in sufficiently large proportions to in-fluence politically its behavior in any conspicuous manner. In 1950, the foreign-born constituted 2.0 per cent and the Negro 3.8 per cent of the population.

Prominent men and women of Kansas history include, among those notable in politics: Charles Curtis (North Topeka, 1860-1936), vice president of the United States under Herbert C. Hoover; Arthur Capper (Garnett, 1865-1951), proprietor and publisher of several Kansas papers and magazines, governor of Kansas, and United States senator; Victor Murdock (Burlingame, 1871-1945), newspaper man, congressman, and federal trade commis-sioner; and Herbert Spencer Hadley (Olathe, 1872-1927), who practiced law at Kansas City, Mo., and became at-torney general and governor of Missouri.

In the field of science there are: Edwin Emery Slosson (Albany, now Sabetha, 1865-1929), chemist, author of several nontechnical books on science; Vernon Lyman Kellogg (Emporia, 1867-1937), zoologist and author of scientific books; Ernest Fox Nichols (Leavenworth, 1869-1924), physicist, known especially for his experiments in measuring planetary heat, also for determining light pressure; Hamilton Perkins Cady (Morris County, 1874-1943), chemist, authority on helium and other rare gases; Karl Augustus Menninger (Topeka, 1893-), psychiatrist, member of the Menninger Foundation; and his brother William Claire Menninger (Topeka, 1899-), psychiatrist, also associated with the Menninger Founda-

tion and head of the United States Army Psychiatric Services.

We may name as the outstanding Kansas-born artist John Stuart Curry (Dunavant, 1897-1946), who painted murals for United States government buildings and the Kansas state capitol.

Those of literary fame include: William Allen White (Emporia, 1868-1944), famous newspaper editor and author of many books; Edgar Lee Masters (Garnett, 1869-1950), author and poet, widely known for his *Spoon River Anthology*; Dorothy Canfield Fisher (Lawrence, 1879-), author of many works of fiction and nonfiction; and Damon Runyon (Manhattan, 1884-1946), columnist and author, well-known portrayer of Broadway characters.

Other Kansans who have won fame are: Frank Irving Cobb (Shawnee County, 1869-1923), editorial writer on Detroit, Mich., papers and editor of the *New York World*; Walter Percy Chrysler (Wamego, 1875-1940), industrialist, manufacturer of automobiles; William Aiken Starrett (Lawrence, 1877-1932), builder of the Empire State Building in New York and other famous buildings; Walter Perry Johnson (Humbolt, 1887-1946), probably the world's greatest baseball pitcher; Osa Leighty Johnson (Chanute, 1894-1953), hunter of big game with the motion picture camera; and Amelia Earhart (Atchison, 1898-1937), aviatrix, first woman to cross Atlantic Ocean in airplane.

Others of national fame who, by residence in Kansas, have brought renown to the state are: John Brown (1800-1859), abolitionist; James Henry Lane (1814-1866), Free State advocate and United States senator; Charles Robinson (1818-1894), leader of Free State faction in Kansas and first governor of the state; Cyrus Kurtz Holliday (1826-1900), organizer and first president of what is now the Atchison, Topeka and Santa Fé Railroad; George Washington Glick (1827-1911), Democratic governor and Shorthorn cattle breeder; John J. Ingalls (1833-1900), author and United States senator; Preston B. Plumb (1837-1891), journalist and United States senator; Frank (Francis) Huntington Snow (1840-1908), entomologist and chancellor of the University of Kansas; William Alexander Harris (1841-1909), Kansas stockman and United States senator, also one of the first importers into the United States of the Cruckshank strain of Shorthorn cattle which changed the whole character of the Shorthorn breed in America; Eugene F. Ware (1841-1911), lawyer and poet, who wrote his verse under the name of Ironquill; Ed (Edgar Watson) Howe (1853-1937), editor of the Atchison *Daily Globe* and *E. W. Howe's Monthly*, as well as author of many books; Charles M. Sheldon (1857-1946), clergyman, and author of *In His Steps*; Francis J. Finn, S.J. (1859-1928), writer of many Catholic juveniles which have been translated into many languages, a few having Kansas backgrounds such as *Tom Playfair*, laid at St. Mary College; Frederick Funston (1865-1917), United States Army officer, who commanded a Kansas regiment in the Spanish American War and won fame by the capture of Aguinaldo, Filipino leader, Gen. James Guthrie Harbord (1866-1947), chief of supplies, World War I; Sven Birger Sandzén (1871-), Swedish artist who made Linsborg the art center of the Middle West; William M. Jardine (1879-), agronomist specializing in dry farming, college president, and United States secretary of agriculture (1925-29); Alfred Mossman Landon (1887-), governor of Kansas for two terms and Republican nominee for president of the United States in 1936; and Dwight David Eisenhower (1890-), commander of the Allied armies during World War II and 34th president of the United States. The two spaces reserved for Kansas in Statuary Hall in the Capitol at Washington, D.C., are occupied by statues of John J. Ingalls and George Washington Glick, both mentioned in this article.

A few others of note in the agricultural field are Earl G. Clark, wheat breeder of blackhull wheat and other important derivative varieties; John H. Parker, one of the leaders at Kansas State College in the development of Kanred and other varieties of wheat; Mark A. Carlton, wheat importer, introduced Karkov, a bread wheat, and several varieties of durum macaroni wheats; and Robert H. Hazlett, a leading Hereford cattle breeder of the United States.

Natural Resources.—The large native animals were mostly killed in the process of settlement: beaver, antelope, elk, deer, buffalo, turkeys, prairie chickens, etc.; yet enough smaller animals remain to afford a substantial income to trappers of low-value pelts.

Little commercial sawed lumber is produced, and that only for local uses, but forest lands, mostly farm woodlots, total 1,121,000 acres.

Coal.—The principal producing coal fields are in southeastern Kansas, in Cherokee and Crawford counties; but other important coal produc-

ing counties include Bourbon and Linn, and Osage and Franklin, representing two other fields. Coal was mined commercially in a small way in the Kansas area as early as 1846, according to William Hemsley Emory, chief engineer, officer of the Army of the West, reporting on his march westward with troops for the Mexican War. Coal beds near the surface were mined commercially in various parts of territorial Kansas during the late 1850's. The first deep shaft (722 feet) mine was at Leavenworth, in production in 1870, and the last to be operated at that place was the state penitentiary mine, officially abandoned by authority of the legislature in 1947. Kansas mining was done by drifting, by shaft, and by stripping methods.

Petroleum and Gas.—The first utilization of petroleum products was from oil seepages, or tar springs, near the present town of Paola, used for axle grease by wagon trains. Drilling for oil began in 1860 in the same vicinity only a few months after the Drake well was completed in Pennsylvania. Oil and natural gas were both discovered in Kansas in connection with drilling for that purpose, as well as while prospecting for water, salt, and coal. Paola was supplied with gas in 1884 and gas was used as fuel for glass works at Paola and Fort Scott, but soon abandoned. Strictly commercial production of gas dates from the Cherryvale well of 1889, and the Coffeyville and Iola wells of 1893. By 1893, gas was used for domestic purposes in Paola, Cherryvale, Osawatomie, Iola, Humboldt, and Coffeyville. At Iola, gas was used for smelting, and for brick and cement plants until the supply was gone. New development in south central Kansas opened additional fields. Instead of continuing to use the gas exclusively for local domestic and industrial fuel, in 1905 long distance pipe lines were laid to market gas for domestic use in distant cities. The world's largest proven gas field was opened in the Hugoton area of southwestern Kansas in 1927. Strictly commercial oil wells were completed in 1892-1893 near Neodesha, where the first oil refinery was built in 1897. Large scale production, however came only with the opening of the El Dorado pool and others in 1914-1917. Kansas oil production has come from the several stratigraphic divisions as follows: Ordovician rocks, 53 per cent; Silurian-Devonian, 10 per cent; Mississippian, 15 per cent; Pennsylvanian, 20 per cent; and gas from Cambrian rocks, 9.5 per cent; Ordovician, 22 per cent; Mississippian, 17 per cent; Pennsylvanian, 7.5 per cent; and Permian, 39 per cent.

Soils.—From the standpoint of parent materials, northeastern Kansas soils are derived from glacial accumulations; otherwise approximately the eastern two fifths of the state are derived from residual sandstones, shales, and limestones; the central and south central portions, as far west as the 100th meridian, from sandstones and shales; and the western third, south of the Arkansas River, from Great Plains material, and north of that river, from loess. According to soil classifications used in the U.S. Department of Agriculture, Yearbook, 1938, *Soils and Men*, the soils of the eastern portion of the state are prairie or allied planosols. North of the Arkansas River, except the extreme southwestern part which are chestnut, the soils are chernozems or allied planosols. South of the Arkansas River and east of a line through Great Bend are

chernozems, and most of the remainder are chestnut, the extreme western portion being brown soils.

Parks, Preserves, Reservations, and Other Points of Interest.—There are numerous state and municipal parks in Kansas but no national parks. The John Brown Battleground Memorial Park at Osawatomie commemorates John Brown's defense of Osawatomie against a raid of pro-slavery men. The Ottawa County State Park contains a game preserve and bird sanctuary in which the State Fish and Game Commission maintains a hatchery for quail and Chinese pheasants. There are also state quail hatcheries at Kingman and Pittsburg. The Robt Bird-Banding Station is a private refuge. Migratory birds are marked with leg bands so that their

KANSAS FARM AND CROP STATISTICS

	1949	1950	Unit	Value
Number of farms	131,394			
acres in farms	48,611,366			
average acreage per farm	370			
average value of land and buildings per farm				\$ 24,756
percentage of farm tenancy	29.9			
value of all farm products sold				764,728,153
All crops sold				327,727,260
Field crops sold				322,111,586
Vegetables sold				1,096,034
Fruits and nuts sold				1,071,598
All livestock and livestock products sold				436,743,738
Dairy products sold				48,089,011
Poultry and poultry products sold				39,637,317
Other livestock and livestock products sold				349,017,410
Forest products sold				257,155

tractors on farms	146,266			
automobiles on farms	133,606			

* Inventory items are as of April 1, 1950; production figures are for the 1949 calendar year.
(Source: U.S. Census of Agriculture: 1950.)

seasonal flights across the country can be studied. There is a small buffalo sanctuary in Scott County State Park. The Bartlett Arboretum is on the edge of Belle Plaine and contains more than 4,000 varieties of trees, shrubs, and plants. The spring display of tulips is well worth seeing. According to the United States Census of 1900 there were 1,165 Indians living on three reservations: the Potawatomi, near Mayetta, the Kickapoo, about 20 miles south of Sabetha, and the Sac and Fox, near Reserve. The Kickapoo Indians observe some of their ancestral rituals such as the New Year's Dance, Spring Dance, Corn Dance, and Harvest Dance.

Some other points of interest include Rock House, just west of the Ottawa County State Park. The city is an eroded area of balanced rocks and formations resembling toadstools, pyramids, and mesas. This erosion is still continuing. Leavenworth contains Fort Leavenworth, one of the best interior army defenses in the country, a federal penitentiary, the Command and General Staff School (a training school for United States Army officers) and a national cemetery. At Fort Leavenworth is the cavalry school maintained by the United States Army.

The geographic center of the United States is near Lebanon in Smith County, at 39° 50' north latitude and 98° 35' west longitude.

Production and Manufactures.—*Agriculture.*—The history of agriculture in Kansas is

different from that of states farther east. As the state occupies an area which is transitional between native forest and grass vegetation, its ecological requirements are different in terms of crops and tillage practices. The eastern, or tall-grass portion, lies at the western extension of the area adapted to corn, soft winter wheat, and other associated crops typical of the corn belt, but includes the bluestem pasture region. The central third, or mixed-grass area, is typical hard winter wheat country. The western third, the short-grass portion, raises hard winter wheat and the sorghums, and grazes livestock. Early Kansas agricultural history was dominated by traditional devotion to corn; but in the 20th century, with the recognition of hard winter wheat as the dominant crop of the central and western two thirds, Kansas became known principally as a wheat state. In spite of this reputation, however, the live-stock industry in its several departments, breeding, pasturing, feeding for market, and dairying, is important in all parts of the state, and yields a greater aggregate cash income than all field crops combined.

The bluestem pasture region of Kansas provides summer grazing for grass fattening or maturing of southwestern cattle, the contract grazing season being six months, April through September. The volume of such annual shipments to the bluestem pastures of Kansas are indicated in the following table.

Year	Cattle and calves	5-yr. average	Cattle and calves
1947	329,000	1942-1946	283,000
1937	190,000	1932-1936	204,000
1927	273,000	1925-1929	270,000

Mining.—Mineral production in the state in 1949, valued at \$335,699,000, placed Kansas ninth among the states of the Union in total value. (In 1900 production was valued at less than \$18 million.) Statistics in the following table are for 1950.

Mineral	Quantity	Value
Petroleum (bbl.)	104,959,000	\$275,000,000
Natural gas (Mcf.)	324,300,000	24,400,000
Cement (bbl.)	8,619,000	19,500,000
Stone		9,250,000
Coal (tons)	1,845,000	8,300,000
Zinc		7,611,000
Salt		5,911,000

Mining activities in Kansas employed about 17,700 persons as of June 1951.

Manufactures.—Manufacturing establishments in Kansas in 1950 employed an average of 87,304 workers whose wages totaled \$282,425,000. The total value added by manufacture was \$613,500,000. The state's two major industries were related to the production of transportation equipment and the processing of food products, which respectively employed 21,788 workers who received \$80,930,000 in wages, and 25,527 workers, who were paid wages totaling \$74,618,000.

Leading specific manufactured products in 1947, according to the federal *Census of Manufactures*, were as seen on the following page.

The relative importance of the state's major economic activities is illustrated in a comparison of production values for 1949, in which cash receipts for all farm products totaled \$764,728,153; mineral production was valued at \$335,699,000;

Industry group	Value added by mfr.*
Chemicals and allied products	\$66,990,000
Grain-mill products	66,753,000
Meat products	52,257,000
Transportation equipment	51,344,000
Petroleum and coal products	51,118,000
Machinery (nonelectrical)	28,024,000
Printing and publishing	26,201,000
Stone and clay products	17,527,000
Bakery products	9,079,000
Dairy products	8,971,000

* Value of products less cost of materials, supplies, fuel, electricity, and contract work

and the value added by manufacture in all manufacturing industries was \$499,492,000.

Transportation.—The principal direction of Kansas trade is northeast and southwest. The principal railroad systems are the Atchison, Topeka, and Santa Fe; Union Pacific; the Chicago, Rock Island, and Pacific; and the Missouri Pacific. Greater Kansas City is the most important marketing and trade center, with Wichita and Salina serving as interior centers. To a limited extent Denver and Omaha serve the state, especially by means of Chicago, Burlington, and Quincy Railroad connections with the northwestern counties. In 1951, railroad line mileage totaled 12,687.55. The only transportation outlet by water is the Missouri River barge service connecting with railroads at Kansas City. In 1951, Kansas had 197 commercial and municipal airports. All highways and roads in the state totaled 125,949 miles, of which 52,416 miles were surfaced.

Economic and Financial Factors.—**Banking.**—The banking provisions of the Kansas constitution specified charters for banks to be granted only under a general law, otherwise most of the constitutional provisions related primarily to banks of issue and were obsolete after 1865 when the federal ten per cent tax was imposed upon state bank notes. The history of banking falls into three major periods: (1) unregulated banking, 1861–1891; (2) loose regulation, 1891–1897; (3) strict regulation, 1897–. In 1897, Kansas had 283 state, 109 private, and 116 national banks; in 1902 the figures were 425, 38, and 146 respectively. The last private bank discontinued operation in 1943. Kansas experimented with compulsory deposit insurance, 1909–1929, but the system failed. By 1945, only 38 state banks had become members of the Federal Reserve System, and only 279, or 63 per cent, were members of the Federal Deposit Insurance Corporation. Kansas' experience with its own system was a contributing factor in explaining the limited membership in the federal insurance plan. National banks in Kansas on June 30, 1951, numbered 174, with total assets of \$958,469,000, and total deposits of \$896,249,000. On the same date the state's 434 state banks and three trust companies held deposits of \$695,458,223.69.

Finances.—Following is a statement of finances for the fiscal year 1950–1951.

Balance in treasury, beginning of fiscal year 1950–51	\$159,308,352.77
Receipts, all sources, 1950–51	208,925,585.72
Total	\$368,233,938.49
Disbursements, 1950–51	200,778,388.81
Balance, beginning of fiscal year 1951–52	\$167,455,549.68

State indebtedness on June 30, 1951, total \$4,250,000 in soldiers' bonus bonds.

Taxation.—Under the original provisions of the state constitution the traditional methods of taxation were recognized in the general property tax. A new trend became definite in 1925 in the sales tax on motor vehicle fuel, and in 1933 in the general sales tax of 2 per cent and the personal income tax. There is no poll tax.

Government.—The constitution of Kansas was drafted and adopted in 1859, based largely upon that of Ohio, and has not undergone an major revision. The governor and other state officers are elected for a two-year term, the House of Representatives for a two-year term (originally one, amended in 1876), the Senate for a four-year term. The state legislature consists of 40 senators and 125 representative. Sessions are held biennially in odd-numbered years. The elective state officers include the governor, lieutenant governor, secretary of state, auditor, treasurer, attorney general, state superintendent of public instruction, commissioner of insurance, and state printer. The supreme court consists of seven justices elected for terms of six years. The state is divided into six congressional districts. Elections are conducted under the secret ballot system, and since 1900 candidates are nominated at primary election held early in August of election years.

The most significant innovation in state government was the Legislative Council, with its research department, created in 1933. The council consists of ten senators, fifteen representatives, the lieutenant governor, and the speaker of the House of Representatives, and conducts investigations, prepares factual reports, and makes recommendations to the legislature. This procedure focuses the work of the legislature upon well prepared measures.

Kansas is exercised through counties, townships, and incorporated towns. The constitution prescribed a part of the county government; a board of three county commissioners, superintendent of public instruction, clerk of the district court, and probate judge; the offices of county treasurer and sheriff were implied, but not provided for specifically; and other offices were created by the legislature, clerk, register of deeds, attorney, and coroner. The political townships are subdivisions of the county, and are governed by three elective officers, trustee, treasurer, and clerk, who together constitute a township board. Incorporated towns are within the county organization, and are of three classes, according to size; 15,000 and 2,000 population being the dividing points among the first, second, and third class cities. Three forms of city government are current: council, commission, and manager plans.

Public Welfare.—The institutions under the control of the board of administration are the following: *Charitable Institutions*—State Hospital (Topeka), State Hospital (Osawatomie), State Hospital (Larned), State Hospital for Epileptics (Parsons), State Training School (Winfield), State Sanatorium for Tuberculosis (Norton), State Orphans' Home (Atchison). *Correctional Institutions*—State Penitentiary (Lansing), State Industrial Farm for Women (Lansing), State Industrial Reformatory (Hutchinson), Boys Industrial School (Topeka), Girls Industrial School (Beloit), Receiving Home for Children (Atchison).

The state social welfare program is administered under four categories: old age assistance, aid to the blind, aid to dependent children, and general assistance to persons not eligible under the other heads. The Social Welfare Act became law in 1937, after amendment of the constitution in 1936. The state board exercises general supervision, but the county welfare departments are the primary agencies for administration.

The labor department has jurisdiction over employment of women and children, unemployment compensation financed by a payroll tax of not to exceed three per cent, and workmen's compensation. Vocational rehabilitation is administered by a separate state board.

Education.—The state constitution directed the legislature to establish "a uniform system of common schools and schools of a higher grade embracing normal, preparatory, collegiate, and university departments," and it provided also for a state superintendent of public instruction. The legislature provided further that the common school districts be controlled by boards of three members elected at an annual school meeting of the eligible voters, except in cities of the first and second classes, which had their own boards of education, and that each county elect a county superintendent of public instruction. Education was free to all between the ages of 5 and 21, and compulsory for those between the ages of 7 and 16 years. The school system underwent little change until the Reorganization Acts of 1945, and 1947, intended to facilitate the consolidation of districts, accelerated changes in spite of the fact that the laws were declared unconstitutional. A state department of public instruction was provided, which included the state board of education and the state superintendent of public instruction. New financial legislation committed the state to contribute from

state tax funds to the support of all elementary schools, irrespective of need which had been specified in the act of 1937, and authorized in certain cases countywide tax levies for school purposes.

The high school facilities, which had been created from time to time, were reduced to four types of public high schools, and besides there were private and other schools accredited by the state. Thirteen public junior colleges were maintained by cities of the first and second classes, and one by a rural high school district. Six private junior colleges were approved by the state. Municipal universities were maintained by the cities of Wichita and Topeka.

State educational institutions under the control of the Kansas Board of Regents are:

Name	Date established
University of Kansas, Lawrence	1866
Kansas State College of Agriculture and Applied Science, Manhattan	1863
Kansas State Teachers College, Emporia	1863
Kansas State Teachers College, Pittsburg	1903
Fort Hays Kansas State College, Hays	1901
School for the Blind, Kansas City	1867
School for the Deaf, Olathe	1866
Kansas Vocational School, Topeka (Negro)	1917

Accredited private colleges include Baker University, Baldwin City; Bethel College, Newton; Bethany College, Lindsborg; College of Emporia, Emporia; Friends University, Wichita; Kansas Wesleyan University, Salina; Marymount College (women), Salina; McPherson College, McPherson; Mount St. Scholastica (women), Atchison; Ottawa University, Ottawa; St. Benedict's College (men), Atchison; Southwestern College, Winfield; Sterling College, Sterling; Saint Mary College (women), Leavenworth.

Haskell Institute, in Lawrence, was opened in 1884, as a nonreservation boarding school for Indians. It is a coeducational school and offers a 4-year high school course and a 2-year postgraduate commercial course.

Libraries.—The two largest libraries in the state are those of the state university and the state agricultural college. The State Historical Society holds the most complete collection of newspapers published in the state of any historical society in the United States. The State Historical Society is designated officially as the State Archives. The William A. Quayle Collection of Bibles at Baker University is one of the most significant of such collections in the United States.

History.—The area occupied by Kansas was visited by several early explorers, Spanish and French. In 1541, a Spanish expedition commanded by Francisco Vázquez Coronado marched across the plains which are now a part of the state. He was followed by exploring parties led by Juan de Oñate (1601), Charles Claude du Tisné (1719), and Étienne Venyard, the Sieur de Bourgmont (1724). Only Coronado left much impress upon the history of Kansas, and that by way of a Coronado legend because it became a subject of continuous controversy. American explorers, Meriwether Lewis and William Clark (1804–1806), Zebulon Montgomery Pike (1805–1807), and Stephen Harriman Long (1819–1820) left descriptions of parts of the area which contributed to the legend of the Great American Desert. French fur-trading families, René Auguste and Jean Pierre Chouteau, Pierre Laclède, and others trapped and traded with

the Indians there prior to the purchase of Louisiana (1803) by which the title to most of Kansas passed to the United States. Prairie and plains tribes of Indians occupied or hunted over the area and are usually referred to as the native tribes: Kansa, Osage, Pawnee, Cheyenne, Arapaho, Kiowa, and Comanche. In the 1820's and particularly after the General Removal Act of 1830, eastern Indians were moved across the Mississippi River and settled in the country immediately west of Arkansas, Missouri, and Iowa, and between the Platte and Red rivers. These are called the immigrant tribes, the most conspicuous of those located in Kansas being the Shawnee, Wyandot, Delaware, Potawatomi, Ottawa, and Kickapoo tribes.

The Santa Fé trail and the Oregon-California trail passed through what is now Kansas, and the agitation for a Pacific railroad and for the opening of the Indian country to settlement culminated in another removal of these Indian tribes, and in the enactment of the Kansas-Nebraska Bill (q.v.) in 1854. That law organized the Indian country north of 37° north latitude and as far west as the Rocky Mountains into two territories, Kansas and Nebraska, divided by the fortieth parallel of north latitude.

The peopling of Kansas became involved in the sectional slavery controversy of the 1850's because of organized efforts, both north and south, to control the economic, social, and political institutions of the embryo state. In spite of organized efforts, however, the flow of population to Kansas was from Missouri, the Ohio Valley, both north and south of the river, and from the Middle Atlantic states, and these majorities determined the antislavery and anti-Negro attitude of the territorial and early statehood periods. In line with this, Kansas was admitted as a state Jan. 29, 1861 under the free "white state" Wyandotte constitution of 1859. The high points of this controversial period of Kansas territorial history center around such topics as the New England Emigrant Aid Company (q.v.), the Missouri invasion and election frauds, the "bogus laws," the Wakarusa war, the "sack of Lawrence (q.v.)," the Potawatomi massacre committed by John Brown (q.v.), the Marais des Cygnes massacre, and the Jayhawker and Red Leg raids by Kansans into Missouri.

Kansas contributed to the Union Army during the American Civil War a larger number of soldiers in proportion to population than any other state, and after the war, Kansas drew an unusually high proportion of Union veterans from the westward migration. These historical facts and traditions made Kansas predominantly Republican in politics, and emphasized the role of the "old soldier" during the late 19th century era. The political life of the state was affected profoundly by reform movements: prohibition, by constitutional amendment in 1880, of the manufacture and sale of intoxicating liquor; the Farmers' Alliance and the Populist (People's) Party during the 1890's; the Progressive Movement of the early 20th century.

In July 1951 Kansas suffered its worst flood in recent times when torrential rains swept the Kansas (Kaw), Marais des Cygnes, Neosho, and other rivers over their banks to inundate between 1.5 and 3 million acres. Floodwaters drove 100,000 people in Kansas and Missouri from their homes and caused damage in Kansas estimated at above \$750,000,000 to farmlands and to more than

200 cities, including principally Hays, Salina, Manhattan, Topeka, Lawrence, and Kansas City.

Bibliography.—There is no modern history of a comprehensive character, and few substantial historical studies of periods or subjects. The more general work include: Andreas, A. T., and Cutler, W. JAMES C. MALIN,
Professor of History, University of Kansas.

KANSAS, Prohibition in.—When Kansas was first organized as a territory of the United States in 1854 by the terms of the Kansas-Nebraska Bill (q.v.), Maine's law of May 26, 1851, which prohibited the manufacture and sale of intoxicating liquors, had been in force only three years. However, the "Maine Law," as this act that succeeded Maine's less stringent prohibitory law of 1846 was called, stirred nationwide interest. To many public-spirited citizens the Maine experiment seemed the most practical method of combating the prevalent evil of excessive drinking in an epoch when Americans were perhaps not more inclined to over-indulgence than in the past, but when the Protestant churches, in particular the Methodist Church, had

ucceeded in awaking the public conscience to the moral and social evils attendant on drunkenness. Kansas, a frontier territory, viewed the experiment with eager concern, many of the settlers being former New Englanders imbued with strong Puritanical principles.

In 1856 Representative John Brown, Jr., a son of the famous antislavery crusader, presented to the territorial legislature a petition from the women of Topeka urging the passage of a "Maine Law." No action was taken on the petition, and Kansas became a state in 1861 without any mention of the prohibition issue in her constitution. But sentiment for statewide prohibition grew, and in 1880 the people adopted a prohibition amendment by a vote of 92,302 to 84,304. Five years later Maine followed this example by adding a prohibition clause to her state constitution.

Enforcement of statewide prohibition in Kansas was resisted in many communities. In some cities saloons were operated under a system of city fines in lieu of licenses. This hypocritical evasion of the law continued until enforcement was made effective in 1906 by Gov. Edward W. Hoch and Attorney General Fred S. Jackson who replaced recalcitrant local authorities with state attorney generals having authority to invoke the padlock law of 1901. A state repeal amendment was defeated in 1934 by 436,678 votes to 347,644. It was not until November 1948 that Kansas voted repeal of its 68-year-old prohibition amendment.

KANSAS, University of, a state educational institution, situated at Lawrence (except for technical division of medicine, at Kansas City). Establishment of a state university was provided for in the state constitution, and an act of the legislature incorporated the university in 1863. A preparatory department was opened in 1865, and the collegiate department a year later. The present organization includes the graduate school offering the usual advanced degrees, including Ph.D.; the college of liberal arts and sciences offering the B.A. and B.S. degrees; the schools of business, education, engineering and architecture, journalism, law, pharmacy; the school of fine arts offering majors in piano, voice, violin, organ, musical theory, commercial art, drawing and painting, design, occupational therapy, interior design, etc.; the four-year school of medicine, including nursing; the summer session of eight weeks; the extension division; the state geological survey. Graduates have made particularly outstanding records in science and engineering. The university is in direct contact with the high schools, admitting on certificate of school graduation. The natural history museum has notable collections in ornithology, vertebrate paleontology, and entomology (2,000,000 specimens). Plant value of the institution approximates \$12,390,000. Annual income is about \$7,000,000. The university enrolls about 2,500 resident students annually.

KANSAS CITY, Kans., the largest city in the state, on the Kansas and Missouri rivers, is one of the great centers of Midwest business activity; with its neighbor, Kansas City, Missouri, a focal point in the exchange of goods through many states. The stockyards are extensive and busy. There are flour mills, oil refineries, railroad shops, and factories turning out

a varied list of products. Strategically located in connection with the grain-growing region of the Southwest, Kansas City has unsurpassed grain storage facilities. The city has a Carnegie library, with a collection of fine paintings; a large number of public and parochial schools; several hospitals, of which one, together with a school of medicine, is maintained by the University of Kansas; churches of many denominations, service clubs, and parks and playgrounds, befitting its size and activity. When Lewis and Clark passed this way, in 1804, the site of the present city was completely undeveloped; about 1818 it was made part of an Indian reservation, and in 1843 it was acquired by the Wyandot Indians, a civilized group from Ohio, who actually founded the city, originally named for them, Wyandot City. This city was incorporated in 1859 as Wyandotte. The present metropolis came into being in the 1880's, through consolidation of several communities. The gas service is privately owned, but the water and electric systems are municipal. Commission government was adopted in 1909. Pop. (1940) 121,458; (1950) 129,553.

KANSAS CITY, Mo., second largest city in the state; located in the northwestern part of Jackson County, in the angle formed by the junction of the Kansas (or Kaw) and the Missouri rivers; near the geographic center of the United States. It is an important industrial, commercial, and banking city, a gateway to most of the western half of the United States, and a national hub of transportation.

Geography.—The average January temperature of Kansas City is 30°F.; the average July temperature, 79°F. The average annual precipitation is about 35 inches. At Twelfth Street and Grand Avenue, the altitude above sea level is about 884 feet. Topographically, Kansas City is divided into three parts. The first and largest consists of high bluffs facing the Kansas River and extending east and south into level upland. The second, the West Bottoms, includes the lowlands lying between the Missouri-Kansas state line on the west and the east bluff of the Kansas River. The third, the East Bottoms, takes in all of the lowland lying east of the foot of Grand Avenue where it runs into the Missouri River. The city covers an area of 82.18 square miles, including parts of Jackson County (in which the major part of the city is located) and Clay County. Separated from Kansas City by a state line is Kansas City, Kansas. The two cities are served by the same railroad terminals, street car service, and telephone system. The Kansas City metropolitan district covers 1,643 square miles and consists of four counties: Jackson and Clay counties in Missouri, and Johnson and Wyandotte counties in Kansas.

Population.—The city population is largely made up of native-born white people, many of whom are of Irish or Italian ancestry. About 10 per cent are Negro. The growth of the city may be seen in the following population statistics: 300 in 1838; 4,418 in 1860; 132,716 in 1890; 324,410 in 1920; 399,178 in 1940; 456,622 in 1950.

History.—In 1712, Etienne Veniard de Bourgmont led a French exploring expedition up the Missouri River as far as its junction with the Platte. In 1723 he returned and built a fort about 60 miles northeast of the present city. The fort was abandoned in 1727. Daniel Morgan

Boone, son of Daniel Boone, was probably the first American to set foot in what is now Kansas City; just before 1800, he trapped along the Big Blue River, which flows through the eastern part of the city. Lewis and Clark (see LEWIS AND CLARK EXPEDITION) camped for three days in 1804 at the mouth of the Kansas on their exploration of the Missouri River. In 1821, François Chouteau established the first permanent settlement, a trading post for the American Fur Company, within the present boundaries of Kansas City. In 1832, John Calvin McCoy opened a store four miles south of Chouteau's warehouse and in 1835 platted the town of Westport. For a time, that community thrived. Chouteau's settlement became known as Westport Landing, and from it supplies unloaded from steamboats were hauled to Westport. In 1849, an epidemic of Asiatic cholera almost ruined Westport. Meanwhile, in 1838, a group of men acquired a tract of land near Chouteau's settlement and, as the Kansas Town Company, offered lots for sale. The title was not cleared, however, until 1846, and development was slow at first. Kansas Town was also affected by the epidemic, but it soon began to enjoy prosperity. In 1850, it was incorporated as the Town of Kansas and, in 1853, re-incorporated as the City of Kansas which name it kept until 1889 when a new charter was adopted and the official name was changed to Kansas City.

Outfitting and supplying the overland trade furnished the main support of Westport and the City of Kansas up to the Civil War. During the war, a Union army repulsed a Confederate attack at the Battle of Westport (Oct. 21-23, 1864), and Kansas City remained in Union hands. The first railroad reached the city in 1865. Economically, however, the city was almost ruined, and it was not until after the Civil War that it began to make its great strides as a commercial center. The Hannibal Bridge, the first to span the Missouri River, was opened for traffic in 1869. By 1870, Kansas City had become the radiating point for eight different railroads. In that decade it became the center of the nation's cattle trade. By 1900, the city's population (including Westport, annexed a few years before) was 163,750 and its trade area extended south to the Gulf of Mexico, north to the Dakotas, and west to the Pacific Ocean. Largely a grain as well as a cattle center during the latter 1800's, between 1900 and 1914 the city acquired a wide variety of new industries including automobile assembly plants. Kansas City's war effort during World War I was directed largely toward supplying the nation's allies with foodstuffs. Meat packing and flour milling expanded rapidly. Following the war, Kansas underwent another period of rapid industrial expansion and skyscrapers began to change the city's skyline. In 1919, with a population of more than 300,000, the city provided for a city plan commission, and in 1923 adopted a comprehensive zoning ordinance. In the latter year, work was started on the Liberty Memorial, a column 280 feet high with two low buildings in classic style, designed by Harold Van Buren Mononigle, and the memorial was dedicated Nov. 11, 1926 by President Coolidge. The voters adopted a home rule charter for the city on Feb. 24, 1925, the fourth charter in the city's history. This charter provided for a council-manager type of government, replacing a mayor-council system with a bicameral legislative body.

During the depression of the 1930's, local

wholesaling and manufacturing activities were greatly reduced but the city began a ten-year plan of public construction and beautification. World War II brought a new era of industrialism to Kansas City. In the postwar period, the new manufacturing activity adjusted itself for the most part to peacetime demands, and new products and new markets developed.

Early on July 13, 1951, the central industrial and stockyards section of Kansas City was flooded by the Kansas River. The job of clearing the streets of silt, wreckage and dead animals, and of preventing disease, was undertaken chiefly by Disaster Corps, Inc., an emergency, nonprofit organization headed by contractors and builders.

Government.—Kansas City is governed under the home rule charter adopted in 1925 to which several amendments have since been made. The legislative body is composed of a mayor and council. The mayor and councilmen are elected for terms of four years. The mayor is the official head of the city and chairman of the council with one vote. Two councilmen are elected from each of the city's four election districts, one councilman by the voters of the district and the other (councilman-at-large) by city-wide vote, as are three municipal court judges. The council appoints the city clerk, city auditor, and city manager. The city manager is the administrative head of the city, and is responsible to the council for the effective management of the city's business in accordance with policies determined by the council. He prepares the annual budget, makes recommendations to the council concerning the affairs of the city, and is entitled to a seat in the council but no vote. He appoints, and may remove, all department heads under him. As of 1950, there were 13 departments under the city manager: fire, water, aviation, liquor control, public works, health, law, municipal court, traffic violation, municipal auditorium, research and budget, personnel, and welfare. (This last-named department was established in April 1910, and was the first, full, public welfare department in the United States.)

The park department is under the control of a board of three commissioners appointed by the mayor. The 120 miles of boulevards connecting the city parks are also under the board of park commissioners. The police department is controlled by a board of commissioners appointed by the governor, the mayor serving as ex-officio member. Members of the city plan commission, the board of zoning adjustment, and a number of other city agencies are appointed by the mayor.

The City Hall is a modern 30-story structure, completed in 1936. In 1950 the city operated two airports, a municipal market, municipal auditorium; one tuberculosis and two general hospitals with a combined bed capacity of 1,125; a municipal farm and women's reformatory, a water system, and many other city services. Following a long period of political machine control, a reform movement was started in 1940 which has made Kansas City noted for its efficient government.

Industries and Business.—The Kansas City area ranks at or close to the top in the United States as a cash winter wheat market, cattle and calf market, stocker and feeder cattle market, flour producing center, and livestock and meat packing center. The Kansas City stockyards cover 242 acres and can handle up to 175,000 animals daily. Grain elevators in the area have a capacity of 61,632,000 bushels.

The expansion during the 1920's, and again during and following World War II, has given the city a fine balance between agricultural and industrial manufacture. While meat packing and our milling remain the city's two leading industries, apparel and related products are among its most important manufactures. Other important industries in Kansas City are automobile assembling, metal products fabricating, printing and publishing, primary metals, and chemicals. The Midwest Research Institute and the Linda Hall Library of Science and Technology, both located in Kansas City, are dedicated to the creation of new industries for the entire Midwest. Kansas City is important as a warehousing center. It has a total of 33,000,000 cubic feet of cold storage space. It is also a market and distributing center for coal produced in the vicinity and for fuel oil from the great mid-continent oil fields. Natural gas is used in the city for home and industrial purposes. Proximity to the gas-producing fields of Kansas, Oklahoma, and Texas has been an important asset in the growth and development of Kansas City.

The city is the home of the 10th District Federal Reserve Bank. In 1948, 13 banks in Kansas City had total deposits of \$1,100,897,000, and the Kansas City area ranked eighth in the United States in bank clearings.

Transportation and Communication Facilities.—Kansas City's growth has from earliest days been due largely to the advantages in transportation which it had through its natural location or acquired through the foresight of its citizens. Kansas City is served by 12 major trunk railroads. Its union station, was, in 1950, the third largest in the United States. Seven Federal concrete highways connect Kansas City with all sections of the country. As of 1950, 14 bus lines had 201 daily schedules through well-equipped bus terminals, and over 125 truck lines served the city. Five major airline companies operated from Kansas City with about 150 daily scheduled flights. Kansas City's Municipal Airport is only five minutes north by cab from downtown hotels. Grandview, an auxiliary airport south of the city, is also maintained by the city government. River transportation of freight is carried on by the Federal Barge Line. In direct trade with foreign countries, Kansas City firms imported \$62,451,320 worth of commodities in 1949 and exported goods valued at \$28,446,441.

Eight radio stations and one television station serve the area (1950). The major newspaper is the *Kansas City Star*, an employee-owned, evening paper which publishes a morning edition, the *Kansas City Times*. As of Sept. 30, 1949 the combined average daily circulation of the *Star* and *Times* was 710,596. The *Weekly Kansas City Star* had a circulation of 431,878 and was the largest farm newspaper in the United States. It, too, is issued by the same publishers.

Educational, Cultural, and Recreational Facilities.—School facilities in 1950 included 5 senior high schools, 8 junior high schools, 2 junior-senior high schools, 8 four-year high schools, 131 elementary schools, 2 trade schools, 3 junior colleges, and 1 special school. There were also 69 Catholic schools and colleges and 2 Catholic seminaries in the city. Other denominational and non-denominational religious schools serve the people of some 40 other faiths who worship in Kansas City's 290 churches. The University of Kansas City, the Kansas City Art Institute, and

the Conservatory of Music also provide opportunity for higher education.

The Kansas City Public Library has a well-equipped main library and 14 branches located throughout the city. The Kansas City Museum contains exhibits of natural and industrial history of the Middle West as well as special collections of American Indian, Oriental, and other objects valued at more than \$2,000,000. William Rockhill Nelson Gallery of Art and Mary Atkin's Museum of Fine Arts contains paintings, sculpture, and other works of art valued at almost \$11,000,000. The Kansas City Philharmonic Orchestra is a nationally recognized musical organization.

There are 51 parks in Kansas City with a total acreage of 2,820. Swope Park, one of the largest city parks in the United States, contains 1,688 acres and includes boating facilities, a swimming pool, a zoo, and an outdoor theater. The city's recreation department provides extensive supervised recreation at playgrounds, community centers, and other places.

Ruppert Stadium, with a seating capacity of 17,500, is the home of the Kansas City Blues, an American Association baseball team. The American Royal Livestock and Horse Show, held in November of each year, attracts visitors from all over the country. The pavilion of the American Royal Building (1922) is a two-story reinforced concrete structure containing over seven acres of floor space. Kansas City's Municipal Auditorium, completed in 1936, seats 24,000 people in 32 separate units. The main arena seats 14,000 people. The auditorium also contains a theater, committee rooms, and three and a half acres of space for exhibition purposes.

Administrative Research Assistant, City of Kansas City, Missouri.

KANSAS INDIANS, a Siouan tribe which formerly occupied territory on the lower Kansas River in Kansas. Their chief historical importance is that they gave their name to the State of Kansas and to the river. They were closely related to the Osage Indians but lost their tribal identity through intermarriage. See KAW.
